

简介

这是我个人用于复习的「*Linear Algebra Done Right 3E/4E, by Sheldon Axler*」笔记，一本习题选答与课文补注。因为使用中文会给我编撰这份笔记带来额外的中英文输入法切换的工作成本，况且对于专业学习者，直接使用英文不会造成任何困扰。但英文词句的冗长性拖慢我复习的效率，所以我对许多常用术语作了简写。这份笔记的内容范围和标识说明，我已经在[自述](#)中写得很清楚，不再赘述。这份笔记尚处于缓慢的编撰进度中。

我目前还没有能力和资格评论原书好坏以及线性代数课程教材选用的问题。但作为原书的学习者，我可以说，这本书作为初学线性代数的第一教材，虽然不需要其他辅助教材，但要求学习者有足够的耐心和毅力：课文一次看不懂就多看几遍，一天看不懂就分三天看；习题一个小时做不出来，隔六个小时再尝试，一天做不出来，就隔天再尝试。我虽然没有学过除此以外的其他任何线性代数教材，但我认为这样钻研原书是值得的。

1 Prove that $\forall v \in V, -(-v) = v$.

SOLUTION: $-(-v) = (-1)((-1)v) = ((-1)(-1))v = 1 \cdot v = v$.

OR. Because $-(-v) + (-v) = 0$ 又 $v + (-v) = 0$. Now by the uniqueness of add inv. \square

2 Suppose $a \in \mathbf{F}, v \in V$, and $av = 0$. Prove that $a = 0$ or $v = 0$.

SOLUTION: Suppose $a \neq 0, \exists a^{-1} \in \mathbf{F}, a^{-1}a = 1$, hence $v = 1 \cdot v = (a^{-1}a)v = a^{-1}(av) = a^{-1} \cdot 0 = 0$. \square

3 Suppose $v, w \in V$. Explain why $\exists! x \in V, v + 3x = w$.

SOLUTION: $v + 3x = w \Leftrightarrow 3x = w - v \Leftrightarrow x = \frac{1}{3}(w - v)$. \square

OR. [Existence] Let $x = \frac{1}{3}(w - v)$.

[Uniqueness] If $v + 3x_1 = w, (I) v + 3x_2 = w (II)$. Then $(I) - (II) : 3(x_1 - x_2) = 0 \Rightarrow x_1 = x_2$. \square

5 Show that in the def of a vecsp, the add inv condition can be replaced by [1.29].

Hint: Suppose V satisfies all conds in the def, except we've replaced the add inv cond with [1.29].

Prove that the add inv is true.

Using [1.31]. $0v = 0$ for all $v \in V \Leftrightarrow (1 + (-1))v = 1 \cdot v + (-1)v = v + (-v) = 0$. \square

6 Let ∞ and $-\infty$ denote two distinct objects, neither of which is in \mathbf{R} .

Define an add and scalar multi on $\mathbf{R} \cup \{\infty, -\infty\}$ as you could guess.

The operations of real numbers is as usual. While for $t \in \mathbf{R}$ define

$$t\infty = \begin{cases} -\infty & \text{if } t < 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t > 0, \end{cases} \quad t(-\infty) = \begin{cases} -\infty & \text{if } t > 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t < 0, \end{cases}$$

$$(I) t + \infty = \infty + t = \infty + \infty = \infty,$$

$$(II) t + (-\infty) = (-\infty) + t = (-\infty) + (-\infty) = -\infty,$$

$$(III) \infty + (-\infty) = (-\infty) + \infty = 0.$$

With these operations of add and scalar multi, is $\mathbf{R} \cup \{\infty, -\infty\}$ a vecsp over \mathbf{R} ? Explain.

SOLUTION: Not a vecsp, since the add and scalar mult is not assoc and distr.

By Assoc: $(a + \infty) + (-\infty) \neq a + (\infty + (-\infty))$.

OR. By Distr: $\infty = (2 + (-1))\infty \neq 2\infty + (-\infty) = \infty + (-\infty) = 0$. \square

• TIPS: About the Field \mathbf{F} : Many choices.

EXAMPLE: $\mathbf{F} = \mathbf{Z}_m = \{K_0, K_1, \dots, K_{m-1}\}, \forall m - 1 \in \mathbf{N}^+$. [Using Euler's Theorem.]

• NOTE FOR [1.45]: If $\mathbf{F} = \{0, 1\}$. Prove that if $U + W$ is a direct sum, then $U \cap W = \{0\}$.

Because $\forall v \in U \cap W, \exists! (u, w) \in U \times W, v = u + w$.

If $U \cap W \neq \{0\}$, then (u, w) can be $(v, 0)$ or $(0, v)$, contradicts the uniqueness. \square

• **TIPS:** Suppose $U, W \subseteq V$. And U, W, V are vecsps $\Rightarrow U, W$ are subsp of V .

Then $U + W$ is also a subsp of V . Because $\forall u \in U, w \in U, u + w \in V$ since $u, w \in V$.

7 Give a nonempty $U \subseteq \mathbb{R}^2$,

U is closed under taking add invs and under add, but is not a subsp of \mathbb{R}^2 .

SOLUTION: ($0 \in U$; $v \in U \Rightarrow -v \in U$. And operations on U are the same as \mathbb{R}^2 .) Let $\mathbb{Z}^2, \mathbb{Q}^2$.

8 Give a nonempty $U \subseteq \mathbb{R}^2$, U is closed under scalar multi, but is not a subsp of \mathbb{R}^2 .

SOLUTION: Let $U = \{(x, y) \in \mathbb{R}^2 : x = 0 \vee y = 0\}$.

9 A function $f : \mathbb{R} \rightarrow \mathbb{R}$ is called periodic if $\exists p \in \mathbb{N}^+, f(x) = f(x + p)$ for all $x \in \mathbb{R}$.

Is the set of periodic functions $\mathbb{R} \rightarrow \mathbb{R}$ a subsp of $\mathbb{R}^{\mathbb{R}}$? Explain.

SOLUTION: Denote the set by S .

Suppose $h(x) = \cos x + \sin \sqrt{2}x \in S$, since $\cos x, \sin \sqrt{2}x \in S$.

Assume $\exists p \in \mathbb{N}^+$ such that $h(x) = h(x + p)$, $\forall x \in \mathbb{R}$. Let $x = 0 \Rightarrow h(0) = h(\pm p) = 1$.

Thus $1 = \cos p + \sin \sqrt{2}p = \cos p - \sin \sqrt{2}p$

$\Rightarrow \sin \sqrt{2}p = 0, \cos p = 1 \Rightarrow p = 2k\pi, k \in \mathbb{Z}$, while $p = \frac{m\pi}{\sqrt{2}}, m \in \mathbb{Z}$.

Hence $2k = \frac{m}{\sqrt{2}} \Rightarrow \sqrt{2} = \frac{m}{2k} \in \mathbb{Q}$. Contradiction! □

OR. Because [I] : $\cos x + \sin \sqrt{2}x = \cos(x + p) + \sin(\sqrt{2}x + \sqrt{2}p)$. By differentiating twice,

[II] : $\cos x + 2 \sin \sqrt{2}x = \cos(x + p) + 2 \sin(\sqrt{2}x + \sqrt{2}p)$.

$$\left. \begin{array}{l} \text{[II]} - \text{[I]} : \sin \sqrt{2}x = \sin(\sqrt{2}x + \sqrt{2}p) \\ 2\text{[I]} - \text{[II]} : \cos x = \cos(x + p) \end{array} \right\} \Rightarrow \text{Let } x = 0, p = \frac{m\pi}{\sqrt{2}} = 2k\pi. \text{ Contradicts.}$$
 □

• Suppose U, W, V_1, V_2, V_3 are subsp of V .

15 $U + U \ni u + w \in U$. **16** $U + W \ni u + w = w + u \in W + U$. □

17 $(V_1 + V_2) + V_3 \ni (v_1 + v_2) + v_3 = v_1 + (v_2 + v_3) \in V_1 + (V_2 + V_3)$. □

• $(U + W)_C \ni (u_1 + w_1) + i(u_2 + w_2) = (u_1 + iu_2) + (w_1 + iw_2) \in U_C + W_C$. □

18 Does the add on the subsp of V have an add identity? Which subsp have add invs?

SOLUTION: Suppose Ω is the unique add identity.

(a) For any subsp U of V . $\Omega \subseteq U + \Omega = U \Rightarrow \Omega \subseteq U$. Let $U = \{0\}$, then $\Omega = \{0\}$.

(b) Now suppose W is an add inv of $U \Rightarrow U + W = \Omega$.

Note that $U + W \supseteq U, W \Rightarrow \Omega \supseteq U, W$. Thus $U = W = \Omega = \{0\}$. □

11 Prove that the intersection of every collection of subsp of V is a subsp of V .

SOLUTION: Suppose $\{U_\alpha\}_{\alpha \in \Gamma}$ is a collection of subsp of V ; here Γ is an index set.

We show that $\bigcap_{\alpha \in \Gamma} U_\alpha$, which equals the set of vecs that are in U_α for each $\alpha \in \Gamma$, is a subsp of V .

(一) $0 \in \bigcap_{\alpha \in \Gamma} U_\alpha$. Nonempty.

(二) $u, v \in \bigcap_{\alpha \in \Gamma} U_\alpha \Rightarrow u + v \in U_\alpha, \forall \alpha \in \Gamma \Rightarrow u + v \in \bigcap_{\alpha \in \Gamma} U_\alpha$. Closed under add.

(三) $u \in \bigcap_{\alpha \in \Gamma} U_\alpha, \lambda \in \mathbb{F} \Rightarrow \lambda u \in U_\alpha, \forall \alpha \in \Gamma \Rightarrow \lambda u \in \bigcap_{\alpha \in \Gamma} U_\alpha$. Closed under scalar multi.

Thus $\bigcap_{\alpha \in \Gamma} U_\alpha$ is nonempty subset of V that is closed under add and scalar multi. □

12 Suppose U, W are subsp of V . Prove that $U \cup W$ is a subsp of $V \iff U \subseteq W$ or $W \subseteq U$.

SOLUTION: (a) Suppose $U \subseteq W$. Then $U \cup W = W$ is a subsp of V .

(b) Suppose $U \cup W$ is a subsp of V . Assume that $U \not\subseteq W, U \not\supseteq W$ ($U \cup W \neq U$ and W).
Then $\forall a \in U \wedge a \notin W, \forall b \in W \wedge b \notin U$, we have $a + b \in U \cup W$.
 $a + b \in U \Rightarrow b = (a + b) + (-a) \in U$, contradicts $\Rightarrow W \subseteq U$.
 $a + b \in W \Rightarrow a = (a + b) + (-b) \in W$, contradicts $\Rightarrow U \subseteq W$. | Contradicts the assumption. \square

13 Prove that the union of three subsp of V is a subsp of V if and only if one of the subsp contains the other two.

This exercise is not true if we replace \mathbf{F} with a field containing only two elements.

SOLUTION:

Suppose U_1, U_2, U_3 are subsp of V . Denote $U_1 \cup U_2 \cup U_3$ by \mathcal{U} .

(a) Suppose that one of the subsp contains the other two.

Then $\mathcal{U} = U_1, U_2$ or U_3 is a subsp of V .

(b) Suppose that $U_1 \cup U_2 \cup U_3$ is a subsp of V .

Distinctively notice that $A \cup B \cup C = (A \cup B) \cup (B \cup C) = (A \cup C) \cup (B \cup C) = (A \cup B) \cup (A \cup C)$.

Also note that, if $U \cup W = V$ is a vecsp, then in general U and W are not subsp of V .

Hence this literal trick is invalid.

(I) If any U_j is contained in the union of the other two, say $U_1 \subseteq U_2 \cup U_3$, then $\mathcal{U} = U_2 \cup U_3$.

By applying Problem (12) we conclude that one U_j contains the other two. Thus we are done.

(II) Assume that no U_j is contained in the union of the other two,

and no U_j contains the union of the other two. Say $U_1 \not\subseteq U_2 \cup U_3$ and $U_1 \not\supseteq U_2 \cup U_3$.

$\exists u \in U_1 \wedge u \notin U_2 \cup U_3; v \in U_2 \cup U_3 \wedge v \notin U_1$. Let $W = \{v + \lambda u : \lambda \in \mathbf{F}\} \subseteq \mathcal{U}$.

Note that $W \cap U_1 = \emptyset$, for if any $v + \lambda u \in W \cap U_1$ then $v + \lambda u - \lambda u = v \in U_1$.

Now $W \subseteq U_1 \cup U_2 \cup U_3 \Rightarrow W \subseteq U_2 \cup U_3$. $\forall v + \lambda u \in W, v + \lambda u \in U_i, i = 2, 3$.

If $U_2 \subseteq U_3$ or $U_2 \supseteq U_3$, then $\mathcal{U} = U_1 \cup U_i, i = 2, 3$. By Problem (12) we are done.

Otherwise, both $U_2, U_3 \neq \{0\}$. Because $W \subseteq U_2 \cup U_3$ has at least three elements.

There must be some U_i that contains at least two elements of W .

\exists distinct $\lambda_1, \lambda_2 \in \mathbf{F}, v + \lambda_1 u, v + \lambda_2 u \in U_i, i \in \{2, 3\}$.

Then $u \in U_i$ while $u \notin U_2 \cup U_3$. Contradicts. \square

EXAMPLE: Let $\mathbf{F} = \mathbf{Z}_2$. $U_1 = \{u, 0\}, U_2 = \{v, 0\}, U_3 = \{v + u, 0\}$. While $\mathcal{U} = \{0, u, v, v + u\}$ is a subsp.

• **EXAMPLE:** Suppose $U = \{(x, x, y, y) \in \mathbf{F}^4\}, W = \{(x, x, x, y) \in \mathbf{F}^4\}$.

Prove that $U + W = \{(x, x, y, z) \in \mathbf{F}^4\}$.

Let T denote $\{(x, x, y, z) \in \mathbf{F}^4 : x, y, z \in \mathbf{F}\}$. By def, $U + W \subseteq T$.

And $T \ni (x, x, y, z) \Rightarrow (0, 0, y - x, y - x) + (x, x, x, -y + x + z) \in U + W$. Hence $T \subseteq U + W$. \square

21 Suppose $U = \{(x, y, x + y, x - y, 2x) \in \mathbf{F}^5\}$. Find a W such that $\mathbf{F}^5 = U \oplus W$.

SOLUTION: Let $W = \{(0, 0, z, w, u) \in \mathbf{F}^5\}$. Then $U \cap W = \{0\}$.

And $\mathbf{F}^5 \ni (x, y, z, w, u) \Rightarrow (x, y, x + y, x - y, 2x) + (0, 0, z - x - y, w - x - y, u - 2x) \in U + W$.

23 Give an example of vecsps V_1, V_2, U such that $V_1 \oplus U = V_2 \oplus U$, but $V_1 \neq V_2$.

SOLUTION: $V = \mathbf{F}^2, U = \{(x, x) \in \mathbf{F}^2\}, V_1 = \{(x, 0) \in \mathbf{F}^2\}, V_2 = \{(0, x) \in \mathbf{F}^2\}$.

• **TIPS:** Suppose $V_1 \subseteq V_2$ in Exercise (23). Prove or give a counterexample: $V_1 = V_2$.

SOLUTION:

Because the subset V_1 of vecsp V_2 is closed under add and scalar multi, V_1 is a subspace of V_2 .

Suppose W is such that $V_2 = V_1 \oplus W$. Now $V_2 \oplus U = (V_1 \oplus W) \oplus U = (V_1 \oplus U) \oplus W = V_1 \oplus U$.

If $W \neq \{0\}$, then $V_1 \oplus U \subsetneq (V_1 \oplus U) \oplus W$, contradicts. Hence $W = \{0\}, V_1 = V_2$. \square

• Suppose V_1, V_2, U_1, U_2 are vecsps, $V_1 \oplus U_1 = V_2 \oplus U_2, V_1 \subseteq V_2, U_2 \subseteq U_1$.

Prove or give a counterexample: $V_1 = V_2, U_1 = U_2$.

V_1	U_1
V_2	U_2

SOLUTION: A counterexample: [Using notations in Chapter 2.]

Let $V = \mathbf{F}^3, B_V = (e_1, e_2, e_3), V_1 = \text{span}(e_1), U_1 = \text{span}(e_2, e_3), V_2 = \text{span}(e_1, e_2), U_2 = \text{span}(e_3)$.

Now $V_1 \subseteq V_2, U_2 \subseteq U_1$ and $V_1 \oplus U_1 = V_2 \oplus U_2$. But $V_1 \neq V_2, U_1 \neq U_2$. \square

24 Let $V_E = \{f \in \mathbf{R}^{\mathbf{R}} : f \text{ is even}\}, V_O = \{f \in \mathbf{R}^{\mathbf{R}} : f \text{ is odd}\}$. Show that $V_E \oplus V_O = \mathbf{R}^{\mathbf{R}}$.

SOLUTION: (a) $V_E \cap V_O = \{f \in \mathbf{R}^{\mathbf{R}} : f(x) = f(-x) = -f(-x)\} = \{0\}$.

$$(b) \left\{ \begin{array}{l} \text{Let } f_e(x) = \frac{1}{2}[g(x) + g(-x)] \Rightarrow f_e \in V_E \\ \text{Let } f_o(x) = \frac{1}{2}[g(x) - g(-x)] \Rightarrow f_o \in V_O \end{array} \right\} \Rightarrow \forall g \in \mathbf{R}^{\mathbf{R}}, g(x) = f_e(x) + f_o(x). \quad \square$$

Where $\lambda = 1 - (a_1 + \dots + a_{j-1})$. Note that $\lambda \neq 0$, for if not, $v_j + \lambda w = v_j \in \text{span}(v_1, \dots, v_{j-1})$, contradicts.

Show that $[P] (v_1, \dots, v_m, w) \text{ is linely inde} \iff w \notin \text{span}(v_1, \dots, v_m) [Q]$.

SOLUTION: $\neg Q \Rightarrow \neg P$: Suppose $w \in \text{span}(v_1, \dots, v_m)$. Then (v_1, \dots, v_m, w) is linely depe.

$\neg P \Rightarrow \neg Q$: Suppose (v_1, \dots, v_m, w) is linely dep. Then by [2.21](a), $w \in \text{span}(v_1, \dots, v_m)$. \square

SOLUTION:

$P \Rightarrow Q$: Suppose V is infinite-dim, so that no list spans V .

Step 1 Pick a $v_1 \neq 0$, (v_1) linely inde.

Step m Pick a $v_m \notin \text{span}(v_1, \dots, v_{m-1})$, by Problem (11), (v_1, \dots, v_m) is linely inde.

This process recursively defines the desired sequence (v_1, v_2, \dots) .

$\neg P \Rightarrow \neg Q$: Suppose V is finite-dim and $V = \text{span}(w_1, \dots, w_m)$.

Let (v_1, v_2, \dots) be a sequence in V , then $(v_1, v_2, \dots, v_{m+1})$ must be linely dep.

OR. $Q \Rightarrow P$: Suppose there is such a sequence.

Choose an m . Suppose a linely inde list (v_1, \dots, v_m) spans V .

Similar to [2.16]. $\exists v_{m+1} \in V \setminus \text{span}(v_1, \dots, v_m)$. Hence no list spans V . \square

16 Prove that the vecsp of all continuous functions in $\mathbb{R}^{[0,1]}$ is infinite-dim.

SOLUTION: Denote the vecsp by U .

Choose one $m \in \mathbb{N}^+$. Suppose $a_0, \dots, a_m \in \mathbb{R}$ are such that $p(x) = a_0 + a_1x + \dots + a_mx^m = 0, \forall x \in [0, 1]$.

Then p has infinitely many roots and hence each $a_k = 0$, otherwise $\deg p \geq 0$, contradicts [4.12].

Thus $(1, x, \dots, x^m)$ is linely inde in $\mathbb{R}^{[0,1]}$. Similar to [2.16], U is infinite-dim. \square

OR. Note that $\frac{1}{1} > \frac{1}{2} > \dots > \frac{1}{m}, \forall m \in \mathbb{N}^+$. Suppose $f_m = \begin{cases} x - \frac{1}{m}, & x \in \left(\frac{1}{m}, 1\right] \\ 0, & x \in \left[0, \frac{1}{m}\right] \end{cases}$

Then $f_1\left(\frac{1}{m}\right) = \dots = f_m\left(\frac{1}{m}\right) = 0 \neq f_{m+1}\left(\frac{1}{m}\right)$. Hence $f_{m+1} \notin \text{span}(f_1, \dots, f_m)$. By Problem (14). \square

17 Suppose $p_0, p_1, \dots, p_m \in \mathcal{P}_m(\mathbb{F})$ such that $p_k(2) = 0$ for each $k \in \{0, \dots, m\}$.

Prove that (p_0, p_1, \dots, p_m) is not linely inde in $\mathcal{P}_m(\mathbb{F})$.

SOLUTION:

Suppose (p_0, p_1, \dots, p_m) is linely inde. Define $p \in \mathcal{P}_m(\mathbb{F})$ by $p(z) = z$.

NOTICE that $\forall a_i \in \mathbb{F}, z \neq a_0p_0(z) + \dots + a_mp_m(z)$, for if not, let $z = 2$. Thus $z \notin \text{span}(p_0, p_1, \dots, p_m)$.

Then $\text{span}(p_0, p_1, \dots, p_m) \subsetneq \mathcal{P}_m(\mathbb{F})$ while the list (p_0, p_1, \dots, p_m) has length $(m+1)$.

Hence (p_0, p_1, \dots, p_m) is linely depe in $\mathcal{P}_m(\mathbb{F})$.

For if not, then because $(1, z, \dots, z^m)$ of length $(m+1)$ spans $\mathcal{P}_m(\mathbb{F})$,

by the steps in [2.23] trivially, (p_0, p_1, \dots, p_m) of length $(m+1)$ spans $\mathcal{P}_m(\mathbb{F})$. Contradicts. \square

OR. Note that $\mathcal{P}_m(\mathbb{F}) = \text{span}(\underbrace{1, z, \dots, z^m}_{\text{of length } (m+1)})$. Then $(p_0, p_1, \dots, p_m, z)$ of length $(m+2)$ is linely dep.

As shown above, $z \notin \text{span}(p_0, p_1, \dots, p_m)$. And hence by [2.21](a), (p_0, p_1, \dots, p_m) is linely dep. \square

7 Prove or give a counterexample: If (v_1, v_2, v_3, v_4) is a basis of V and U is a subsp of V such that $v_1, v_2 \in U$ and $v_3 \notin U$ and $v_4 \notin U$, then (v_1, v_2) is a basis of U .

SOLUTION: A counterexample: Let $V = \mathbb{R}^4$ and $B_V = (e_1, e_2, e_3, e_4)$ be std basis.

Let $v_1 = e_1, v_2 = e_2, v_3 = e_3 + e_4, v_4 = e_4$. Then (v_1, \dots, v_4) is a basis of \mathbb{R}^4 .

Let $U = \text{span}(e_1, e_2, e_3) = \text{span}(v_1, v_2, v_3 - v_4)$. Then $v_3 \notin U$ and (v_1, v_2) is not a basis of U . \square

• NOTE FOR " $\mathcal{C}_V U \cup \{0\}$ ": " $\mathcal{C}_V U \cup \{0\}$ " is supposed to be a subsp W such that $V = U \oplus W$.

But if we let $u \in U \setminus \{0\}$ and $w \in W \setminus \{0\}$, then
$$\left. \begin{array}{l} w \in \mathcal{C}_V U \cup \{0\} \\ u \pm w \in \mathcal{C}_V U \cup \{0\} \end{array} \right\} \Rightarrow u \in \mathcal{C}_V U \cup \{0\}. \text{ Contradicts.}$$

To fix this, denote the set $\{W_1, W_2, \dots\}$ by $\mathcal{S}_V U$, where for each W_i , $V = U \oplus W_i$. See also in (1.C.23).

• TIPS: Suppose V is finite-dim with $\dim V = n$ and U is a subsp of V with $U \neq V$.
Prove that $\exists B_V = (v_1, \dots, v_n)$ such that each $v_k \notin U$.

Note that $U \neq V \Rightarrow n \geq 1$. We will construct B_V via the following process.

Step 1. $\exists v_1 \in V \setminus U \Rightarrow v_1 \neq 0$. If $\text{span}(v_1) = V$ then we stop.

Step k. Suppose (v_1, \dots, v_{k-1}) is linely inde in V , each of which belongs to $V \setminus U$.

Note that $\text{span}(v_1, \dots, v_{k-1}) \neq V$. And if $\text{span}(v_1, \dots, v_{k-1}) \cup U = V$, then by (1.C.12),

[because $\text{span}(v_1, \dots, v_{k-1}) \not\subseteq U$,] $U \subseteq \text{span}(v_1, \dots, v_{k-1}) \Rightarrow \text{span}(v_1, \dots, v_{k-1}) = V$.

Hence because $\text{span}(v_1, \dots, v_{k-1}) \neq V$, it must be case that $\text{span}(v_1, \dots, v_{k-1}) \cup U \neq V$.

Thus $\exists v_k \in V \setminus U$ such that $v_k \notin \text{span}(v_1, \dots, v_{k-1})$.

By (2.A.11), (v_1, \dots, v_k) is linely inde in V . If $\text{span}(v_1, \dots, v_k) = V$, then we stop.

Because V is finite-dim, this process will stop after n steps. \square

OR. Suppose $U \neq \{0\}$. Let $B_U = (u_1, \dots, u_m)$. Extend to a basis (u_1, \dots, u_n) of V .

Then let $B_V = (u_1 - u_k, \dots, u_m - u_k, u_{m+1}, \dots, u_k, \dots, u_n)$. \square

1 Find all vecsp on whatever \mathbf{F} that have exactly one basis.

SOLUTION: The trivial vecsp $\{0\}$ will do. Indeed, the only basis of $\{0\}$ is the empty list $()$.

Now consider the field $\{0, 1\}$ containing only the add identity and multi identity, with $1 + 1 = 0$. Then the list (1) is the unique basis. Now the vecsp $\{0, 1\}$ will do.

COMMENT: All vecsp on such \mathbf{F} of dim 1 will do.

And more generally, consider $\mathbf{F} = \mathbb{Z}_m, \forall m - 1 \in \mathbb{N}^+$. For each $s, t \in \{1, \dots, m\}$,

$\mathbf{F} = \text{span}(K_s) = \text{span}(K_t)$. More than one basis. So are $\mathbb{Q}, \mathbb{R}, \mathbb{C}$ and all vecsp on such \mathbf{F} .

- **NOTE FOR linely inde sequence and [2.34]:** " $V = \text{span}(v_1, \dots, v_n, \dots)$ " is an invalid expression.

If we allow using "infinite list", then we must guarantee that (v_1, \dots, v_n, \dots) is a spanning "list" such that $\forall v \in V, \exists$ smallest $n \in \mathbb{N}^+, v = a_1 v_1 + \dots + a_n v_n$. Moreover, given a list (w_1, \dots, w_n, \dots) in W , we can prove that $\exists! T \in \mathcal{L}(V, W)$ with each $Tv_k = w_k$, which has less restrictions than [3.5].

But the key point is, how can we guarantee that such a "list" exists. **TODO: More details.**

SOLUTION: If $n = 1$ then let $v_1 = v$ and we are done. Suppose $n > 1$.

Extend (v) to a basis (v, v_1, \dots, v_{n-1}) of V . Let $v_n = v - v_1 - \dots - v_{n-1}$.

 (c) Find a subsp W of $\mathcal{P}_4(\mathbf{F})$ such that $\mathcal{P}_4(\mathbf{F}) = U \oplus W$.

SOLUTION: Using Problem (10).

NOTICE that $\nexists p \in \mathcal{P}(\mathbf{F})$ of deg 1 and 2, while $p \in U$. Thus $\dim U \leq \dim \mathcal{P}_4(\mathbf{F}) - 2 = 3$.

(a) Consider $B = (1, (z-2)(z-5)(z-6), z(z-2)(z-5)(z-6))$.

Let $a_0 + a_3(z-2)(z-5)(z-6) + a_4z(z-2)(z-5)(z-6) = 0 \Rightarrow a_0 = a_3 = a_4 = 0$.

Thus the list B is linely inde in U . Now $\dim U \geq 3 \Rightarrow \dim U = 3$. Thus $B_U = B$.

Prove that $\dim \text{span}(v_1 + w, \dots, v_m + w) \geq m - 1$.

Note that $v_i - v_1 = (v_i + w) - (v_1 + w) \in \text{span}(v_1 + w, \dots, v_m + w)$, for each $i = 1, \dots, m$.

10 Suppose $m \in \mathbf{N}^+$, $p_0, p_1, \dots, p_m \in \mathcal{P}(\mathbf{F})$ are such that each p_k has degree k .

Prove that (p_0, p_1, \dots, p_m) is a basis of $\mathcal{P}_m(\mathbf{F})$.

SOLUTION: Using mathematical induction on m .

(i) $k = 1$. $\deg p_0 = 0$; $\deg p_1 = 1 \Rightarrow \text{span}(p_0, p_1) = \text{span}(1, x)$.

(ii) $1 \leq k \leq m-1$. Assume that $\text{span}(p_0, p_1, \dots, p_k) = \text{span}(1, x, \dots, x^k)$.

Then $\text{span}(p_0, p_1, \dots, p_k, p_{k+1}) \subseteq \text{span}(1, x, \dots, x^k, x^{k+1})$.

又 $\deg p_{k+1} = k+1$, $p_{k+1}(x) = a_{k+1}x^{k+1} + r_{k+1}(x)$; $a_{k+1} \neq 0$, $\deg r_{k+1} \leq k$.

$$\Rightarrow x^{k+1} = \frac{1}{a_{k+1}}(p_{k+1}(x) - r_{k+1}(x)) \in \text{span}(1, x, \dots, x^k, p_{k+1}) = \text{span}(p_0, p_1, \dots, p_k, p_{k+1}).$$

$$\therefore x^{k+1} \in \text{span}(p_0, p_1, \dots, p_k, p_{k+1}) \Rightarrow \text{span}(1, x, \dots, x^k, x^{k+1}) \subseteq \text{span}(p_0, p_1, \dots, p_k, p_{k+1}).$$

Thus $\mathcal{P}_m(\mathbf{F}) = \text{span}(1, x, \dots, x^m) = \text{span}(p_0, p_1, \dots, p_m)$. □

We show that $a_m = \dots = a_0 = 0$ via the following process. So that (p_0, p_1, \dots, p_m) is linely inde.

Step 1. For $k = m$, $\xi_m(L) = a_m \xi_m(p_m) = \xi_m(R) = 0$ 又 $\deg p_m = m$, $\xi_m(p_m) \neq 0 \Rightarrow a_m = 0$.

Now $L = a_{m-1} p_{m-1}(x) + \dots + a_0 p_0(x)$.

Step k. For $0 \leq k \leq m$, we have $a_m = \dots = a_{k+1} = 0$.

Now $\xi_k(L) = a_k \xi_k(p_k) = \xi_k(R) = 0$ 又 $\deg p_k = k$, $\xi_k(p_k) \neq 0 \Rightarrow a_k = 0$.

Now if $k = 0$, then we are done. Otherwise, we have $L = a_{k-1} p_{k-1}(x) + \dots + a_0 p_0(x)$. □

• **TIPS:** Suppose $m \in \mathbf{N}^+$, $p_0, p_1, \dots, p_m \in \mathcal{P}_m(\mathbf{F})$ are such that the lowest term of each p_k is of $\deg k$. Prove that (p_0, p_1, \dots, p_m) is a basis of $\mathcal{P}_m(\mathbf{F})$.

SOLUTION: Using mathematical induction on m .

Let each p_k be defined by $p_k(x) = a_{k,k}x^k + \dots + a_{m,k}x^m$, where $a_{k,k} \neq 0$.

(i) $k = 1$. $p_m(x) = a_{m,m}x^m$; $p_{m-1}(x) = a_{m-1,m-1}x^{m-1} + a_{m,m-1}x^m \Rightarrow \text{span}(x^m, x^{m-1}) = \text{span}(p_m, p_{m-1})$.

(ii) $1 \leq k \leq m-1$. Assume that $\text{span}(x^m, \dots, x^{m-k}) = \text{span}(p_m, \dots, p_{m-k})$.

Then $\text{span}(p_m, \dots, p_{m-(k+1)}) \subseteq \text{span}(x^m, \dots, x^{m-(k+1)})$.

又 $p_{m-(k+1)}$ has the form $a_{m-(k+1),m-(k+1)}x^{m-(k+1)} + r_{m-(k+1)}(x)$;

where the lowest term of $r_{m-(k+1)} \in \mathcal{P}_m(\mathbf{F})$ is of $\deg(m-k)$.

$$\Rightarrow x^{m-(k+1)} = \frac{1}{a_{m-(k+1),m-(k+1)}}(p_{m-(k+1)}(x) - r_{m-(k+1)}(x)) \in \text{span}(x^m, \dots, x^{m-k}, p_{m-(k+1)})$$

$$= \text{span}(p_m, \dots, p_{m-k}, p_{m-(k+1)}).$$

$$\therefore x^{m-(k+1)} \in \text{span}(p_m, \dots, p_{m-k}, p_{m-(k+1)})$$

$$\Rightarrow \text{span}(x^m, \dots, x^{m-k}, x^{m-(k+1)}) \subseteq \text{span}(p_m, \dots, p_{m-k}, p_{m-(k+1)}).$$

Thus $\mathcal{P}_m(\mathbf{F}) = \text{span}(x^m, \dots, x, 1) = \text{span}(p_m, \dots, p_1, p_0)$. □

OR. 用比较系数法. Denote the coeff of x^k in $p \in \mathcal{P}(\mathbf{F})$ by $\xi_k(p)$.

Suppose $L = a_m p_m(x) + \dots + a_1 p_1(x) + a_0 p_0(x) = 0 \cdot x^m + \dots + 0 \cdot x + 0 \cdot 1 = R, \forall x \in \mathbf{F}$.

We show that $a_m = \dots = a_0 = 0$ via the following process. So that (p_0, p_1, \dots, p_m) is linely inde.

Step 1. For $k = 0$, $\xi_0(L) = a_0 \xi_0(p_0) = \xi_0(R) = 0$ 又 $\deg p_0 = 0$, $\xi_0(p_0) \neq 0 \Rightarrow a_0 = 0$.

Now $L = a_1 p_1(x) + \dots + a_m p_m(x)$.

Step k. For $0 \leq k \leq m$, we have $a_{k-1} = \dots = a_0 = 0$.

Now $\xi_k(L) = a_k \xi_k(p_k) = \xi_k(R) = 0$ 又 $\deg p_k = k$, $\xi_k(p_k) \neq 0 \Rightarrow a_k = 0$.

Now if $k = m$, then we are done. Otherwise, we have $L = a_{k+1} p_{k+1}(x) + \dots + a_m p_m(x)$. □

• **NOTE FOR [2.11]:** *Good definition for a general term always avoids undefined behaviours.*

If $\deg p = 0$, then $p(z) = a_0 \neq 0$, but not literally $a_0 z^0$, by which if p is defined, then it comes to 0^0 .
To make it clear, we specify that in $\mathcal{P}(\mathbb{F})$, $a_0 z^0 = a_0$, where z^0 appears just for notational convenience.
Because by definition, the term $a_0 z^0$ in a poly only represents the const term of the poly, which is a_0 .
For convenience, we assume that $z^0 = 1$ in formula deduction and poly def. Absolutely without 0^0 .

• (4E 10) Suppose m is a positive integer. For $0 \leq k \leq m$, let $p_k(x) = x^k(1-x)^{m-k}$.
Show that (p_0, \dots, p_m) is a basis of $\mathcal{P}_m(\mathbb{F})$.

SOLUTION: We may see $p_0 = 1$ and $p_m(x) = x^m$, from the expansion below, by the NOTE FOR [2.11] above.

Note that each $p_k(x) = \sum_{j=0}^{m-k} C_{m-k}^j (-1)^j \cdot x^{j+k} \cdot 1^j = \underbrace{(-1)^0 \cdot x^k \cdot 1^0}_{\text{of deg } k} + \underbrace{\sum_{j=1}^{m-k} C_{m-k}^j (-1)^j \cdot x^{j+k} \cdot 1^j}_{\text{of deg } m; \text{ denote it by } q_k(x)}$.
And, each $q_k \in \text{span}(x^{k+1}, \dots, x^m)$. Using TIPS above. \square

OR. Similar to the TIPS above. We will recursively prove that each $x^{m-k} \in \text{span}(p_m, \dots, p_{m-k})$.

(i) $k = 1$. $p_m(x) = x^m \in \text{span}(p_m)$; $p_{m-1}(x) = x^{m-1} - x^m \Rightarrow x^{m-1} \in \text{span}(p_{m-1}, p_m)$.

(ii) $k \in \{1, \dots, m-1\}$. Suppose for each $k \in \{0, \dots, k\}$, we have $x^{m-k} \in \text{span}(p_{m-k}, \dots, p_m)$, $\exists ! a_m \in \mathbb{F}$.

Note that $x^{m-(k+1)} = p_{m-(k+1)}(x) + \sum_{j=1}^{k+1} C_{k+1}^j (-1)^{j+1} x^{m-(k+1)+j} \in \text{span}(p_{m-(k+1)}, x^{m-k}, \dots, x^m)$.

Thus $x^{m-(k+1)} \in \text{span}(p_{m-(k+1)}, p_{m-k}, \dots, p_m)$. \square

COMMENT: The base step and the inductive step can be independent.

OR. For any $m, k \in \mathbb{N}^+$ such that $k \leq m$. Define $p_{k,m}$ by $p_{k,m}(x) = x^k(1-x)^{m-k}$.

Define the statement $S(m)$ by $S(m) : (p_{0,m}, \dots, p_{m,m})$ is linely inde (and therefore is a basis).

We use induction on to show that $S(m)$ holds for all $m \in \mathbb{N}^+$.

(i) $m = 0$. $p_{0,0} = 1$, and $ap_{0,0} = 0 \Rightarrow a = 0$.

$m = 1$. Let $a_0(1-x) + a_1x = 0, \forall x \in \mathbb{F}$. Then take $x = 1, x = 0 \Rightarrow a_1 = a_0 = 0$.

(ii) $1 \leq m$. Assume that $S(m)$ and $S(m-1)$ holds. Now we show that $S(m+1)$ holds.

Suppose $\sum_{k=0}^{m+1} a_k p_{k,m+1}(x) = \sum_{k=0}^{m+1} a_k [x^k(1-x)^{m+1-k}] = 0, \forall x \in \mathbb{F}$.

Now $a_0(1-x)^{m+1} + \sum_{k=1}^m a_k x^k(1-x)^{m+1-k} + a_{m+1}x^{m+1} = 0, \forall x \in \mathbb{F}$.

While $x = 0 \Rightarrow a_0 = 0$; and $x = 1 \Rightarrow a_{m+1} = 0$.

Then $0 = \sum_{k=1}^m a_k x^k(1-x)^{m+1-k}$

$= x(1-x) \sum_{k=1}^m a_k x^{k-1}(1-x)^{m-k}$, note that $m-k = (m-1) - (k-1)$

$= x(1-x) \sum_{k=0}^{m-1} a_{k+1} x^k(1-x)^{m-1-k} = x(1-x) \sum_{k=0}^{m-1} a_{k+1} p_{k,m-1}(x)$.

Hence $\sum_{k=0}^{m-1} a_{k+1} p_{k,m-1}(x) = 0, \forall x \in \mathbb{F} \setminus \{0, 1\}$. Which has infinitely many zeros.

Moreover, $\sum_{k=0}^{m-1} a_{k+1} p_{k,m-1}(x) = 0$. By assumption, $a_1 = \dots = a_{m-1} = a_m = 0$.

Thus $(p_{0,m+1}, \dots, p_{m+1,m+1})$ is linely inde and $S(m+1)$ holds. \square

14 Suppose V_1, \dots, V_m are finite-dim. Prove that $\dim(V_1 + \dots + V_m) \leq \dim V_1 + \dots + \dim V_m$.

SOLUTION: For each V_i , let $B_{V_i} = \mathcal{E}_i$. Then $V_1 + \dots + V_m = \text{span}(\mathcal{E}_1 \cup \dots \cup \mathcal{E}_m)$; $\dim V_i = \text{card } \mathcal{E}_i$.

Now $\dim(V_1 + \dots + V_m) = \dim \text{span}(\mathcal{E}_1 \cup \dots \cup \mathcal{E}_m) \leq \text{card}(\mathcal{E}_1 \cup \dots \cup \mathcal{E}_m) \leq \text{card } \mathcal{E}_1 + \dots + \text{card } \mathcal{E}_m$.

COROLLARY: $V_1 + \dots + V_m$ is direct

\Leftrightarrow For each $k \in \{1, \dots, m-1\}$, $(V_1 \oplus \dots \oplus V_k) \cap V_{k+1} = \{0\}$, $(\mathcal{E}_1 \cap \dots \cap \mathcal{E}_{k-1}) \cap \mathcal{E}_k = \emptyset$

$\Leftrightarrow \dim \text{span}(\mathcal{E}_1 \cup \dots \cup \mathcal{E}_m) = \text{card}(\mathcal{E}_1 \cup \dots \cup \mathcal{E}_m) = \text{card } \mathcal{E}_1 + \dots + \text{card } \mathcal{E}_m$

Explain why you might think and prove the formula above or give a counterexample.

SOLUTION:

[Similar to] Given three sets A, B and C .

Because $|X \cup Y| = |X| + |Y| - |X \cap Y|$; $(X \cup Y) \cap Z = (X \cap Z) \cup (Y \cap Z)$.

Now $|(A \cup B) \cap C| = |A \cap C| + |B \cap C| - |A \cap B \cap C|$.

And $|(A \cup B) \cap C| = |(A \cap C) \cup (B \cap C)| = |A \cap C| + |B \cap C| - |A \cap B \cap C|$.

Hence $|(A \cup B) \cap C| = |A| + |B| + |C| - |A \cap B \cap C| - |A \cap B| - |A \cap C| - |B \cap C|$.

Note that $(V_1 + V_2) + V_3 = V_1 + (V_2 + V_3) = (V_1 + V_3) + V_2$.

$$\dim(V_1 + V_2 + V_3) = \dim(V_1 + V_2) + \dim(V_3) - \dim((V_1 + V_2) \cap V_3) \quad (1)$$

$$= \dim(V_2 + V_3) + \dim(V_1) - \dim((V_2 + V_3) \cap V_1) \quad (2)$$

$$= \dim(V_1 + V_3) + \dim(V_2) - \dim((V_1 + V_3) \cap V_2) \quad (3).$$

Notice that in general, $(X + Y) \cap Z \neq X \cap Z + Y \cap Z$.

For example, $X = \{(x, 0) \in \mathbb{R}^2 : x \in \mathbb{R}\}, Y = \{(0, y) \in \mathbb{R}^2 : y \in \mathbb{R}\}, Z = \{(z, z) \in \mathbb{R}^2 : z \in \mathbb{R}\}$.

COMMENT: If $X \subseteq Y$, then $(X + Y) \cap Z = Y \cap Z$; $\dim(X + Y + Z) = \dim(Y) + \dim(Z) - \dim(Y \cap Z)$, and the wrong formul holds. Similar for $Y \subseteq Z, X \subseteq Z$, and $X, Y \subseteq Z$.

However, $(X + Y) \cap Z \supseteq (X \cap Z) + (Y \cap Z)$ holds. Because $\forall v \in (X \cap Z) + (Y \cap Z)$,

$\exists u = x_1 = z_1 \in X \cap Z, w = y_2 = z_2 \in Y \cap Z, v = u + w = x_1 + y_2 = z_1 + z_2 \in (X + Y) \cap Z$.

COMMENT: $\dim((X + Y) \cap Z) \geq \dim(X \cap Z) + \dim(Y \cap Z) - \dim(X \cap Y \cap Z)$.

• **COROLLARY:** Suppose V_1, V_2, V_3 are finite-dim, then $\frac{(1) + (2) + (3)}{3}$:

• **TIPS:** Because $\dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim(V_2 \cap V_3) - \dim(V_1 + (V_2 \cap V_3))$.

And $\dim(V_2 \cap V_3) = \dim V_2 + \dim V_3 - \dim(V_2 + V_3)$. We have (1), and (2), (3) similarly.

$$(1) \dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \dim(V_2 + V_3) - \dim(V_1 + (V_2 \cap V_3)).$$

$$(2) \dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \dim(V_1 + V_3) - \dim(V_2 + (V_1 \cap V_3)).$$

$$(3) \dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \dim(V_1 + V_2) - \dim(V_3 + (V_1 \cap V_2)).$$

Define $T \in \mathcal{L}(V, W)$ by $T(u_v + w_v) = Su_v$. □

OR. [Finite-dim Req] Define by $T\left(\sum_{i=1}^m a_i u_i\right) = \sum_{i=1}^m a_i S u_i$. Let $B_V = (\overbrace{u_1, \dots, u_n}^{B_U}, \dots, u_m)$. □

12 Suppose nonzero V is finite-dim and W is infinite-dim. Prove that $\mathcal{L}(V, W)$ is infinite-dim.

SOLUTION: Using (2.A.14).

Let $B_V = (v_1, \dots, v_n)$ be a basis of V . Let (w_1, \dots, w_m) be linely inde in W for any $m \in \mathbb{N}^+$.

Define $T_{x,y} : V \rightarrow W$ by $T_{x,y}(v_z) = \delta_{z,x} w_y, \forall x \in \{1, \dots, n\}, y \in \{1, \dots, m\}$, where $\delta_{z,x} = \begin{cases} 0, & z \neq x, \\ 1, & z = x. \end{cases}$
 $\forall v = \sum_{i=1}^n a_i v_i, u = \sum_{i=1}^n b_i v_i, \lambda \in \mathbb{F}, T_{x,y}(v + \lambda u) = (a_x + \lambda b_x) w_y = T_{x,y}(v) + \lambda T_{x,y}(u)$.

Linearity checked. Now suppose $a_1 T_{x,1} + \dots + a_m T_{x,m} = 0$.

Then $(a_1 T_{x,1} + \dots + a_m T_{x,m})(v_x) = 0 = a_1 w_1 + \dots + a_m w_m \Rightarrow a_1 = \dots = a_m = 0$. $\forall m$ arbitrary.

Thus $(T_{x,1}, \dots, T_{x,m})$ is a linely inde list in $\mathcal{L}(V, W)$ for any x and length m . Hence by (2.A.14). □

13 Suppose (v_1, \dots, v_m) is linely depe in V and $W \neq \{0\}$.

Prove that $\exists w_1, \dots, w_m \in W, \nexists T \in \mathcal{L}(V, W)$ such that $Tv_k = w_k, \forall k = 1, \dots, m$.

SOLUTION:

We prove by contradiction. By linear dependence lemma, $\exists j \in \{1, \dots, m\}, v_j \in \text{span}(v_1, \dots, v_{j-1})$.

Fix j . Let $w_j \neq 0$, while $w_1 = \dots = w_{j-1} = w_{j+1} = \dots = w_m = 0$. Define $T \in \mathcal{L}(V, W)$ by $Tv_k = w_k$ for each k .

Suppose $a_1 v_1 + \dots + a_m v_m = 0$, where $a_j \neq 0$.

Then $T(a_1 v_1 + \dots + a_m v_m) = 0 = a_1 w_1 + \dots + a_m w_m = a_j w_j$ while $a_j \neq 0$ and $w_j \neq 0$. Contradicts. □

OR. We prove the contrapositive: Suppose $\forall w_1, \dots, w_m \in W, \exists T \in \mathcal{L}(V, W), Tv_k = w_k$ for each w_k .

Now we show that (v_1, \dots, v_n) is linely inde. Suppose $\exists a_i \in \mathbb{F}, a_1 v_1 + \dots + a_n v_n = 0$.

Choose one $w \in W \setminus \{0\}$. By assumption, for $(\overline{a_1} w, \dots, \overline{a_m} w), \exists T \in \mathcal{L}(V, W), Tv_k = \overline{a_k} w$ for each v_k .

Now we have $0 = T\left(\sum_{k=1}^m a_k v_k\right) = \sum_{k=1}^m a_k T v_k = \sum_{k=1}^m a_k \overline{a_k} w = \left(\sum_{k=1}^m |a_k|^2\right) w$.

Then $\sum_{k=1}^m |a_k|^2 = 0 \Rightarrow$ each $a_k = 0$. Hence (v_1, \dots, v_n) is linely inde. □

• (4E 3.A.17) Suppose V is finite-dim. Show that all two-sided ideals of $\mathcal{L}(V)$ are $\{0\}$ and $\mathcal{L}(V)$.

A subsp \mathcal{E} of $\mathcal{L}(V)$ is called a two-sided ideal of $\mathcal{L}(V)$ if $TE \in \mathcal{E}, ET \in \mathcal{E}, \forall E \in \mathcal{E}, T \in \mathcal{L}(V)$.

SOLUTION: Let $B_V = (v_1, \dots, v_n)$. If $\mathcal{E} = 0$, then we are done.

Suppose $\mathcal{E} \neq 0$ and \mathcal{E} is a two-sided ideal of $\mathcal{L}(V)$. Let $S \in \mathcal{E} \setminus \{0\}$.

Suppose $Sv_i \neq 0$ and $Sv_i = a_1 v_1 + \dots + a_n v_n$, where $a_k \neq 0$.

Define $R_{x,y} \in \mathcal{L}(V)$ by $R_{x,y} : v_x \mapsto v_y, v_z \mapsto 0 (z \neq x)$. OR. $R_{x,y} v_z = \delta_{z,x} v_y$.

Then $(R_{1,1} + \dots + R_{n,n})v_j = v_j \Rightarrow \sum_{r=1}^n R_{r,r} = I$. Assume that each $R_{x,y} \in \mathcal{E}$.

Hence $\forall T \in \mathcal{L}(V), I \circ T = T \circ I = T \in \mathcal{E} \Rightarrow \mathcal{E} = \mathcal{L}(V)$. Now we prove the assumption.

Notice that $\forall x, y \in \mathbb{N}^+, (R_{k,y} S)(v_i) = a_k v_y \Rightarrow ((R_{k,y} S) \circ R_{x,i})(v_z) = \delta_{z,x} (a_k v_y)$.

Thus $R_{k,y} S R_{x,i} = a_k R_{x,y}$. Now $S \in \mathcal{E} \Rightarrow R_{k,y} S \in \mathcal{E} \Rightarrow R_{x,y} \in \mathcal{E}$. □

- (4E 3.B.32) Suppose V is finite-dim with $n = \dim V > 1$.

Show that if $\varphi : \mathcal{L}(V) \rightarrow \mathbf{F}$ is linear and $\forall S, T \in \mathcal{L}(V), \varphi(ST) = \varphi(S) \cdot \varphi(T)$, then $\varphi = 0$.

SOLUTION: Using notations in (4E 3.A.17). Using the result in NOTE FOR [3.60].

Suppose $\varphi \neq 0 \Rightarrow \exists i, j \in \{1, \dots, n\}, \varphi(R_{i,j}) \neq 0$. Because $R_{i,j} = R_{x,j} \circ R_{i,x}, \forall x = 1, \dots, n$
 $\Rightarrow \varphi(R_{i,j}) = \varphi(R_{x,j}) \cdot \varphi(R_{i,x}) \neq 0 \Rightarrow \varphi(R_{x,j}) \neq 0$ and $\varphi(R_{i,x}) \neq 0$.

Again, because $R_{i,x} = R_{y,x} \circ R_{i,y}, \forall y = 1, \dots, n$. Thus $\varphi(R_{y,x}) \neq 0, \forall x, y = 1, \dots, n$.

Let $k \neq i, j \neq l$ and then $\varphi(R_{i,j} \circ R_{l,k}) = \varphi(R_{l,k} \circ R_{i,j}) = \varphi(0) = 0 = \varphi(R_{l,k}) \cdot \varphi(R_{i,j})$
 $\Rightarrow \varphi(R_{l,k}) = 0$ or $\varphi(R_{i,j}) = 0$. Contradicts. \square

OR. Note that by (4E 3.A.17), $\exists S, T \in \mathcal{L}(V), ST - TS \neq 0$.

Then $\varphi(ST - TS) = \varphi(S)\varphi(T) - \varphi(T)\varphi(S) = 0 \Rightarrow ST - TS \in \text{null } \varphi \neq \{0\}$.

Note that $\forall E \in \text{null } \varphi, T \in \mathcal{L}(V), \varphi(ET) = \varphi(TE) = 0 \Rightarrow ET, TE \in \text{null } \varphi$.

Hence $\text{null } \varphi$ is a nonzero two-sided ideal of $\mathcal{L}(V)$. \square

- Suppose V is finite-dim. $T \in \mathcal{L}(V)$ is such that $\forall S \in \mathcal{L}(V), ST = TS$.

Prove that $\exists \lambda \in \mathbf{F}, T = \lambda I$.

SOLUTION: If $V = \{0\}$, then we are done. Now suppose $V \neq \{0\}$.

Assume that $\forall v \in V, (v, Tv)$ is linely depe, then by (2.A.2.(b)), $\exists \lambda_v \in \mathbf{F}, Tv = \lambda_v v$.

To prove that λ_v is independent of v , we discuss in two cases:

$$\left. \begin{array}{l} (-) \text{ If } (v, w) \text{ is linely inde, } \lambda_{v+w}(v+w) = T(v+w) = Tv + Tw = \lambda_v v + \lambda_w w \\ \quad \Rightarrow (\lambda_{v+w} - \lambda_v)v + (\lambda_{v+w} - \lambda_w)w = 0 \\ (=) \text{ Otherwise, suppose } w = cv, \lambda_w w = Tw = cTv = c\lambda_v v = \lambda_v w \Rightarrow (\lambda_w - \lambda_v)w = 0 \end{array} \right\} \Rightarrow \lambda_w = \lambda_v.$$

Now we prove the assumption. Assume that $\exists v \in V, (v, Tv)$ is linely inde. Let $B_V = (v, Tv, u_1, \dots, u_n)$.

Define $S \in \mathcal{L}(V)$ by $S(av + bTv + c_1 u_1 + \dots + c_n u_n) = bv \Rightarrow S(Tv) = v = T(Sv) = 0$. Contradicts. \square

OR. Let $B_V = (v_1, \dots, v_m)$.

Define $\varphi \in \mathcal{L}(V, \mathbf{F})$ by $\varphi(v_1) = \dots = \varphi(v_m) = 1$. Let $\lambda = \varphi(Tv_1) \in \mathbf{F}$.

For any $v \in V$, define $S_v \in \mathcal{L}(V)$ by $S_v u = \varphi(u)v$.

Then $Tv = T(\varphi(v_1)v) = T(S_v v_1) = S_v(Tv_1) = \varphi(Tv_1)v = \lambda v$. \square

OR. For each $k \in \{1, \dots, n\}$, define $S_k \in \mathcal{L}(V)$ by $S_k v_j = \begin{cases} v_k, & j = k, \\ 0, & j \neq k. \end{cases}$ OR. $S_k v_j = \delta_{j,k} v_k$

Note that $S_k \left(\sum_{i=1}^n a_i v_i \right) = a_k v_k$. Then $S_k v = v \iff \exists ! a_k \in \mathbf{F}, v = a_k v_k$.

Hence $S_k(Tv_k) = T(S_k v_k) = Tv_k \Rightarrow Tv_k = a_k v_k$.

Define $A^{(j,k)} \in \mathcal{L}(V)$ by $A^{(j,k)} v_j = v_k, A^{(j,k)} v_k = v_j, A^{(j,k)} v_x = 0, x \neq j, k$.

Then $\left\{ \begin{array}{l} A^{(j,k)} T v_j = T A^{(j,k)} v_j = T v_k = a_k v_k \\ A^{(j,k)} T v_j = A^{(j,k)} a_j v_j = a_j A^{(j,k)} v_j = a_j v_k \end{array} \right\} \Rightarrow a_k = a_j$. Hence a_k is inde of v_k . \square

- **TIPS 3:** Suppose $T \in \mathcal{L}(V, W)$. Prove that $Tv \neq 0 \Rightarrow v \neq 0$.

SOLUTION: Assume that $v = 0$. Then $Tv = T(0) = T(0 \cdot 0) = 0 \cdot T(0) = 0$.

OR. $T(0) = T(0 + 0) = T(0) + T(0) \Rightarrow T(0) = 0$. Contradicts. \square

- Given the fact that $\mathcal{L}(V, W)$ is a vecsp. Prove or give a counterexample: V, W are vecsp.

We can guarantee that $\{0\} \subseteq \mathcal{L}(V, W), \{0\} \subseteq V, \{0\} \subseteq W$.

And by [3.2], the additivity and homogeneity imply that V is closed under add and scalar multi.

(We cannot even guarantee that W^V is a vecsp.)

SOLUTION: **TODO: Too tricky to be answered by AI.**

(I) If $W^V = \{0\}$. Then $\mathcal{L}(V, W) = \{0\}$.

And $W = \{0\}$, for if not, $\exists w \in W \setminus \{0\}$, define a map f by $f(x) = w, \forall x \in V$.

And V might not be a vecsp. Example: ???

(II) If W^V is a nonzero vecsp. Then W is a vecsp.

(a) If $\mathcal{L}(V, W) = \{0\}$, then we cannot guarantee that V is a vecsp. Example: ???

(b) If not, then $\exists T \in \mathcal{L}(V, W), T \neq 0$. Which means $\exists v \in V, Tv \neq 0 \Rightarrow v \neq 0$.

Then both W and V have a nonzero element.

(i) If \exists inje $T \in \mathcal{L}(V, W)$, then $T(u + v) = T(v + u) \Rightarrow u + v = v + u$. etc. Hence V is a vecsp.

(ii) If not, then we cannot guarantee that V is a vecsp. Example: ???

(III) If W^V is not a vecsp, then W is not a vecsp. Example: ???

Which is equivalent to $T|_U : U \rightarrow \text{range } T$ being an iso.

SOLUTION: By [2.34] (note that V can be infinite-dim), \exists subsp U of V such that $V = U \oplus \text{null } T$.

$\forall v \in V, \exists! w \in \text{null } T, u \in U, v = w + u$. Then $Tv = T(w + u) = Tu \in \{Tu : u \in U\}$. \square

Because $\text{span}(Dx, Dx^2, Dx^3, \dots) \subseteq \text{range } D$, and $\deg Dx^n = n - 1$.

又 By (2.C.10), $\text{span}(Dx, Dx^2, Dx^3, \dots) = \text{span}(1, x, x^2, \dots) = \mathcal{P}(\mathbb{R})$.

Let $D(C) = 0, Dx^k = p_k$ of $\deg(k - 1)$, for all $C \in \mathbb{R} = \mathcal{P}_0(\mathbb{R})$ and for each $k \in \mathbb{N}^+$.

Because $B_{\mathcal{P}_m(\mathbb{R})} = (p_1, \dots, p_m, p_{m+1})$. And for all $p \in \mathcal{P}(\mathbb{R}), \exists ! m = \deg p \in \mathbb{N}^+$.

So that $\exists ! a_i \in \mathbb{R}, p = \sum_{i=1}^{m+1} a_i p_i \Rightarrow \exists q = \sum_{i=1}^{m+1} a_i x^i, Dq = p$. \square

OR. We will recursively define a sequence of polys $(p_k)_{k=0}^\infty$ where $Dp_0 = 1, Dp_k = x^k$ for each $k \in \mathbb{N}^+$.

So that $\forall p = \sum_{k=0}^{\deg p} a_k x^k \in \mathcal{P}(\mathbb{R}), Dq = p, \exists q = \sum_{k=0}^{\deg p} a_k p_k$.

(i) Because $\deg Dx = (\deg x) - 1 = 0, Dx = C \in \mathbb{F} \setminus \{0\}$. Let $p_0 = C^{-1}x \Rightarrow Dp_0 = C^{-1}Dx = 1$.

(ii) Suppose we have defined $Dp_0 = 1, Dp_k = x^k$ for each $k \in \{1, \dots, n\}$. Because $\deg D(x^{n+2}) = n + 1$.

Let $D(x^{n+2}) = a_{n+1}x^{n+1} + a_n x^n + \dots + a_1 x + a_0$, with $a_{n+1} \neq 0$.

Then $a_{n+1}^{-1}D(x^{n+2}) = x^{n+1} + a_{n+1}^{-1}(a_n Dp_n + \dots + a_1 Dp_1 + a_0 Dp_0)$

$\Rightarrow x^{n+1} = D[a_{n+1}^{-1}(x^{n+2} - a_n p_n - \dots - a_1 p_1 - a_0 p_0)]$. Thus defining p_{n+1} , so that $Dp_{n+1} = x^{n+1}$. \square

• **NOTE FOR Transpose:** [3.F.33] Define $\mathcal{T} : A \rightarrow A^t$. By [3.111], \mathcal{T} is linear. Because $(A^t)^t = A$.

$\mathcal{T}^2 = I$, $\mathcal{T} = \mathcal{T}^{-1} \Rightarrow \mathcal{T}$ is an iso of $\mathbf{F}^{m,n}$ onto $\mathbf{F}^{n,m}$. Define $\mathcal{C}_k : A \rightarrow A_{\cdot,k}$, $\mathcal{R}_j : A \rightarrow A_{j,\cdot}$, $\mathcal{E}_{j,k} : A \rightarrow A_{j,k}$.

Now we show that (a) $\mathcal{T}\mathcal{R}_j = \mathcal{C}_j\mathcal{T}$, (b) $\mathcal{T}\mathcal{C}_k = \mathcal{R}_k\mathcal{T}$, and (c) $\mathcal{T}\mathcal{E}_{j,k} = \mathcal{E}_{k,j}\mathcal{T}$.

Prove, with p specified below, that $\exists C \in \mathbf{F}^{m,p}, R \in \mathbf{F}^{p,n}, A = CR$.

(a) Suppose $S_c = \text{span}(A_{\cdot,1}, \dots, A_{\cdot,n}) \subseteq \mathbf{F}^{m,1}, \dim S_c = c$, the col rank. Let $p = c$.

(b) Suppose $S_r = \text{span}(A_{1,\cdot}, \dots, A_{m,\cdot}) \subseteq \mathbf{F}^{1,n}, \dim S_r = r$, the row rank. Let $p = r$.

SOLUTION: Using [4E 3.51]. Notice that $A \neq 0 \Rightarrow c, r \geq 1$.

• **TIPS 2:** Suppose p is a poly of n variables in \mathbf{F} .

Prove that $\mathcal{M}(p(T_1, \dots, T_n)) = p(\mathcal{M}(T_1), \dots, \mathcal{M}(T_n))$.

Where the linear maps T_1, \dots, T_n are such that $p(T_1, \dots, T_n)$ makes sense. See [5.16,17,20].

SOLUTION: Suppose the poly p is defined by $p(x_1, \dots, x_n) = \sum_{k_1, \dots, k_n} \alpha_{k_1, \dots, k_n} \prod_{i=1}^n x_i^{k_i}$.

Note that $\mathcal{M}(T^x S^y) = \mathcal{M}(T)^x \mathcal{M}(S)^y$; $\mathcal{M}(T^x + S^y) = \mathcal{M}(T)^x + \mathcal{M}(S)^y$.

Then $\mathcal{M}(p(T_1, \dots, T_n)) = \mathcal{M}(\sum_{k_1, \dots, k_n} \alpha_{k_1, \dots, k_n} \prod_{i=1}^n T_i^{k_i})$
 $= \sum_{k_1, \dots, k_n} \alpha_{k_1, \dots, k_n} \prod_{i=1}^n \mathcal{M}(T_i^{k_i}) = p(\mathcal{M}(T_1), \dots, \mathcal{M}(T_n))$. \square

• **COROLLARY:** Suppose τ is an algebraic property. Then τ holds for linear maps $\iff \tau$ holds for matrices.

Each $\alpha_k \in \{1, \dots, n\}$. Now $p(T_1, \dots, T_n) = p(T_{\alpha_1}, \dots, T_{\alpha_n})$
 $\iff p(\mathcal{M}(T_1), \dots, \mathcal{M}(T_n)) = p(\mathcal{M}(T_{\alpha_1}), \dots, \mathcal{M}(T_{\alpha_n}))$.

13 Prove that the distr holds for matrix add and matrix multi.

Suppose A, B, C are matrices such that $A(B + C)$ make sense, we prove the left distr.

SOLUTION: Suppose $A \in \mathbf{F}^{m,n}$ and $B, C \in \mathbf{F}^{n,p}$.

Note that $[A(B + C)]_{j,k} = \sum_{r=1}^n A_{j,r}(B + C)_{r,k} = \sum_{r=1}^n (A_{j,r}B_{r,k} + A_{j,r}C_{r,k}) = (AB + AC)_{j,k}$.

OR. Define T, S, R such that $\mathcal{M}(T) = A, \mathcal{M}(S) = B, \mathcal{M}(R) = C$.

$A(B + C) = \mathcal{M}(T(S + R)) \stackrel{[3.9]}{=} \mathcal{M}(TS + TR) = AB + AC$.

OR. $T(S + R) = TS + TR \Rightarrow \mathcal{M}(T(S + R)) = \mathcal{M}(TS + TR) \Rightarrow A(B + C) = AB + AC$. \square

1 Suppose $T \in \mathcal{L}(V, W)$. Show that for each pair of B_V and B_W ,

$A = \mathcal{M}(T, B_V, B_W)$ has at least $n = \dim \text{range } T$ nonzero entries.

SOLUTION:

Using [3.B TIPS (4)]. Let $U \oplus \text{null } T = V$; $B_U = (v_1, \dots, v_n), B_V = (v_1, \dots, v_m)$.

For each $k \in \{1, \dots, n\}, Tv_k \neq 0 \iff A_{\cdot,k} \neq 0$. Hence every such $A_{\cdot,k}$ has at least one nonzero entry. \square

OR. We prove by contradiction. Suppose A has at most $(n - 1)$ nonzero entries.

Then by Pigeon Hole Principle, at least one of $A_{\cdot,1}, \dots, A_{\cdot,n}$ equals 0.

Thus there are at most $(n - 1)$ nonzero vecs in Tv_1, \dots, Tv_n .

$\nexists \text{range } T = \text{span}(Tv_1, \dots, Tv_n) \Rightarrow \dim \text{range } T = \dim \text{span}(Tv_1, \dots, Tv_n) \leq n - 1$. Contradicts. \square

6 Suppose V and W are finite-dim and $T \in \mathcal{L}(V, W)$.

Prove that $\dim \text{range } T = 1 \iff \exists B_V, B_W$, all entries of $A = \mathcal{M}(T, B_V, B_W)$ equal 1.

SOLUTION:

(a) Suppose $B_V = (v_1, \dots, v_n), B_W = (w_1, \dots, w_m)$ are the bases such that all entries of A equal 1.

Then $Tv_i = w_1 + \dots + w_m$ for all $i = 1, \dots, n$. Because w_1, \dots, w_m is linely inde, $w_1 + \dots + w_m \neq 0$.

(b) Suppose $\dim \text{range } T = 1$. Then $\dim \text{null } T = \dim V - 1$.

Let $B_{\text{null } T} = (u_2, \dots, u_n)$. Extend to a basis (u_1, u_2, \dots, u_n) of V .

Let $w_1 = Tv_1 - w_2 - \dots - w_m$. Extend to B_W . Let $v_1 = u_1, v_i = u_1 + u_i$. Extend to B_V . \square

OR. Suppose $B_{\text{range } T} = (w)$. By [2.C NOTE FOR (15)], $\exists B_W = (w_1, \dots, w_m), w = w_1 + \dots + w_m$.

By [2.C TIPS], \exists a basis (u_1, \dots, u_n) of V such that each $u_k \notin \text{null } T$.

Now each $Tu_k \in \text{range } T = \text{span}(w) \Rightarrow Tu_k = \lambda_k w, \exists \lambda_k \in \mathbf{F} \setminus \{0\}$.

Let $v_k = \lambda_k^{-1} u_k \neq 0$, so that each $Tv_k = w = w_1 + \dots + w_m$. Thus $B_V = (v_1, \dots, v_n)$ will do. \square

3 Suppose V and W are finite-dim and $T \in \mathcal{L}(V, W)$. Prove that $\exists B_V, B_W$ such that

SOLUTION: Using [3.B TIPS (4)]. Let $B_{\text{range } T} = (Tv_1, \dots, Tv_n), B_V = (v_1, \dots, v_n, u_1, \dots, u_m)$. □

COMMENT: Let each $Tv_k = w_k$. Extend $B_{\text{range } T}$ to $B_W = (w_1, \dots, w_n, \dots, w_p)$. See [3.D NOTE FOR [3.60]].

4 Suppose $B_V = (v_1, \dots, v_m)$ and W is finite-dim. Suppose $T \in \mathcal{L}(V, W)$.

SOLUTION: If $Tv_1 = 0$, then we are done. If not then extend (Tv_1) to B_W . □

5 Suppose $B_W = (w_1, \dots, w_n)$ and V is finite-dim. Suppose $T \in \mathcal{L}(V, W)$.

Prove that $\exists B_V = (v_1, \dots, v_m), \mathcal{M}(T, B_V, B_W)_{1,1} = (0 \ \dots \ 0)$ or $(1 \ 0 \ \dots \ 0)$.

SOLUTION:

Let (u_1, \dots, u_n) be a basis of V . Denote $\mathcal{M}(T, (u_1, \dots, u_n), B_W)$ by A .

If $A_{1,1} = 0$, then $B_V = (u_1, \dots, u_n)$ and we are done. Otherwise, suppose $A_{1,k} \neq 0$.

Let $v_1 = \frac{u_k}{A_{1,k}}$, so that $Tv_1 = 1w_1 + \frac{A_{2,k}}{A_{1,k}}w_2 + \dots + \frac{A_{n,k}}{A_{1,k}}w_n$.

Let $v_j = u_{j-1} - A_{1,j-1}v_1$ for each $j \in \{2, \dots, k\}$. Let $v_i = u_i - A_{1,i}v_1$ for $i \in \{k+1, \dots, n\}$.

NOTICE that $Tu_i = A_{1,i}w_1 + \dots + A_{n,i}w_n$. 又 Each $u_i \in \text{span}(v_1, \dots, v_n) = V$. Let $B_V = (v_1, \dots, v_n)$. □

OR. Using Problem (4). Let B_W be the B_V .

Now $\exists B_V$, such that $\mathcal{M}(T', B_W, B_V)_{1,1} = (1 \ 0 \ \dots \ 0)^t$ or $(0 \ \dots \ 0)^t$.

Which is equiv to $\exists B_V$ [Using (3.F.31)] such that $\mathcal{M}(T, B_V, B_W)_{1,1} = (1 \ 0 \ \dots \ 0)$ or $(0 \ \dots \ 0)$. □

2 Suppose V is finite-dim and $\dim V > 1$.

Prove that the set U of non-inv operators on V is not a subsp of $\mathcal{L}(V)$.

The set of inv operators is not either. Although multi identity/inv, and commutativity for vec multi hold.

SOLUTION: Let $B_V = (v_1, \dots, v_n)$. [If $\dim V = 1$, then $U = \{0\}$ is a subsp of $\mathcal{L}(V)$.]

Define $S, T \in \mathcal{L}(V)$ by $S(a_1v_1 + \dots + a_nv_n) = a_1v_1, T(a_1v_1 + \dots + a_nv_n) = a_2v_1 + \dots + a_nv_n$.

Hence $S, T \in U$ while $S + T \notin U$. □

• **TIPS:** Suppose $U \oplus X = W \oplus Y$, and X, Y are iso. Prove that U, W are iso.

SOLUTION: Let ζ be an iso of X onto Y . That is, $\forall y \in Y, \exists! x \in X, \zeta(x) = y$.

$\forall u \in U, \exists! w \in W, y \in Y, u = w + y \Rightarrow \exists! x \in X, u = w + \zeta(x)$. Define $\pi : u \mapsto w$.

Now suppose $u_1, u_2 \in U$, then each $u_i = w_i + \zeta(x_i), \exists! w_i \in W, x_i \in X$.

Linearity: $\forall \lambda \in \mathbb{F}, \pi(u_1 + \lambda u_2) = w_1 + \lambda w_2 = \pi(u_1) + \lambda \pi(u_2)$.

Injectivity: $\pi(u_1) = \pi(u_2) \Rightarrow w_1 = w_2 \Rightarrow \zeta(x_1) = \zeta(x_2) \Rightarrow x_1 = x_2 \Rightarrow u_1 = u_2$.

Surjectivity: $\forall w \in W, \pi(w) = w \in \text{range } \pi$. Thus π is an iso of U onto W . □

3 Suppose V and W are iso, U is a subsp of V , and $S \in \mathcal{L}(U, W)$.

Prove that $\exists \text{ inv } T \in \mathcal{L}(V, W), Tu = Su, \forall u \in U \iff S \text{ is inje.}$ [See also (3.A.11).]

Let $Y \oplus \text{range } S = W$. Then by TIPS, X and Y are iso. Let $E : X \rightarrow Y$ be an iso.

Define $T \in \mathcal{L}(V, W)$ by $Tu = Su, Tw = Ew$ for all $u \in U, w \in X$.

OR. [Req V Finite-dim] Let $B_U = (u_1, \dots, u_m)$. Then $S \text{ inje} \Rightarrow (Su_1, \dots, Su_m)$ linely inde.

Extend to $B_V = (u_1, \dots, u_m, v_1, \dots, v_n), B_W = (Su_1, \dots, Su_m, w_1, \dots, w_n)$.

Define $T \in \mathcal{L}(V, W)$ by $T(u_i) = Su_i; Tv_j = w_j$, for each u_i and v_j . □

8 Suppose $T \in \mathcal{L}(V, W)$ is **surj**. Prove that $\exists \text{ subsp } U \text{ of } V, T|_U : U \rightarrow W \text{ is an iso.}$

SOLUTION: [Req $\text{range } T$ Finite-dim] Let $B_{\text{range } T} = B_W = (Tv_1, \dots, Tv_m), B_U = (v_1, \dots, v_m)$. □

OR. By (3.B.12). Note that $\text{range } T = W$. □

18 Show that V and $\mathcal{L}(\mathbf{F}, V)$ are iso vecsps.

SOLUTION:

(a) $\Psi(v) = \Psi_v = 0 \Rightarrow \forall \lambda \in \mathbf{F}, \Psi_v(\lambda) = \lambda v = 0 \Rightarrow v = 0$. Hence Ψ is inje.

(b) $\forall T \in \mathcal{L}(\mathbf{F}, V)$, let $v = T(1) \Rightarrow T(\lambda) = \lambda v = \Psi_v(\lambda), \forall \lambda \in \mathbf{F} \Rightarrow T = \Psi(T(1))$. Hence Ψ is surj. □

OR. Define $\Phi \in \mathcal{L}(\mathcal{L}(\mathbf{F}, V), V)$ by $\Phi(T) = T(1)$.

(a) Suppose $\Phi(T) = 0 = T(1) = \lambda T(1) = T(\lambda), \forall \lambda \in \mathbf{F} \Rightarrow T = 0$. Thus Φ is inje.

(b) For any $v \in V$, define $T \in \mathcal{L}(\mathbf{F}, V)$ by $T(\lambda) = \lambda v$. Then $\Phi(T) = T(1) = v$. Thus Φ is surj. □

SOLUTION: [See also in (3.A).] Using NOTE FOR [3.60].

Let $B_V = (v_1, \dots, v_n)$. If $\mathcal{E} = 0$, then we are done. Suppose $\mathcal{E} \neq 0$ and \mathcal{E} is a two-sided ideal of $\mathcal{L}(V)$.

We show that each U_i is iso to V_i . Then U is finite-dim \implies its subsp U_i is finite-dim, so is V_i .

Let $B_U = (v_1, \dots, v_M) \left\{ \begin{array}{l} \text{Define } R_i \in \mathcal{L}(V_i, U_i) \text{ by } R_i(u_i) = (0, \dots, 0, u_i, 0, \dots, 0) \\ \text{Define } S_i \in \mathcal{L}(U, V_i) \text{ by } S_i(u_1, \dots, u_i, \dots, u_m) = u_i \end{array} \right\} \Rightarrow \left\{ \begin{array}{l} R_i S_j|_{U_j} = \delta_{ij} I_{U_j}, \\ S_i R_j = \delta_{ij} I_{V_j}. \end{array} \right. \square$

4 Prove that $\mathcal{L}(V_1 \times \cdots \times V_m, W)$ and $\mathcal{L}(V_1, W) \times \cdots \times \mathcal{L}(V_m, W)$ are iso.

SOLUTION: Using notation in Problem (2): $R_i : u_i \mapsto (0, \dots, u_i, \dots, 0)$; $S_i : (u_1, \dots, u_m) \mapsto u_i$.

Note that $T(u_1, \dots, u_m) = T(u_1, 0, \dots, 0) + \cdots + T(0, \dots, u_m)$.

Define $\varphi : T \mapsto (T_1, \dots, T_m)$ by $\varphi(T) = (TR_1, \dots, TR_m)$.

Define $\psi : (T_1, \dots, T_m) \mapsto T$ by $\psi(T_1, \dots, T_m) = T_1 S_1 + \cdots + T_m S_m$. $\left. \begin{array}{l} \text{Define } \varphi : T \mapsto (T_1, \dots, T_m) \text{ by } \varphi(T) = (TR_1, \dots, TR_m) \\ \text{Define } \psi : (T_1, \dots, T_m) \mapsto T \text{ by } \psi(T_1, \dots, T_m) = T_1 S_1 + \cdots + T_m S_m \end{array} \right\} \Rightarrow \psi = \varphi^{-1}.$ \square

5 Prove that $\mathcal{L}(V, W_1 \times \cdots \times W_m)$ and $\mathcal{L}(V, W_1) \times \cdots \times \mathcal{L}(V, W_m)$ are iso.

SOLUTION: Using notation in Problem (2): $R_i : u_i \mapsto (0, \dots, u_i, \dots, 0)$; $S_i : (u_1, \dots, u_m) \mapsto u_i$.

Note that $T_i : v \mapsto w_i$, $\left\{ \begin{array}{l} \text{Define } \varphi : T \mapsto (T_1, \dots, T_m) \text{ by } \varphi(T) = (S_1 T, \dots, S_m T) \\ \text{Define } \psi : (T_1, \dots, T_m) \mapsto T \text{ by } \psi(T_1, \dots, T_m) = R_1 T_1 + \cdots + R_m T_m \end{array} \right\} \Rightarrow \psi = \varphi^{-1}.$ \square

6 For $m \in \mathbb{N}^+$, define V^m by $\underbrace{V \times \cdots \times V}_{m \text{ times}}$. Prove that V^m and $\mathcal{L}(\mathbb{F}^m, V)$ are iso.

SOLUTION:

Define $T : (v_1, \dots, v_m) \mapsto \varphi$, where $\varphi : (a_1, \dots, a_m) \mapsto v$ is defined by $\varphi(a_1, \dots, a_m) = a_1 v_1 + \cdots + a_m v_m$.

(a) Suppose $T(v_1, \dots, v_m) = 0$. Then $\forall (a_1, \dots, a_m) \in \mathbb{F}^m$, $\varphi(a_1, \dots, a_m) = a_1 v_1 + \cdots + a_m v_m = 0$

For each k , let $a_k = 1, a_j = 0$ for all $j \neq k$. Then each $v_k = 0 \Rightarrow (v_1, \dots, v_m) = 0$. Thus T is inj.

(b) Suppose $\psi \in \mathcal{L}(\mathbb{F}^m, V)$. Let (e_1, \dots, e_m) be the std basis of \mathbb{F}^m . Then $\forall (b_1, \dots, b_m) \in \mathbb{F}^m$,

$\left[T(\psi(e_1), \dots, \psi(e_m)) \right] (b_1, \dots, b_m) = b_1 \psi(e_1) + \cdots + b_m \psi(e_m) = \psi(b_1 e_1 + \cdots + b_m e_m) = \psi(b_1, \dots, b_m).$

Thus $T(\psi(e_1), \dots, \psi(e_m)) = \psi$. Hence T is surj. \square

3 Give an example of a vecsp V and its two subsp U_1, U_2 such that

$U_1 \times U_2$ and $U_1 + U_2$ are iso but $U_1 + U_2$ is not a direct sum. $[V \text{ must be infinite-dim.}]$

SOLUTION: NOTE that at least one of U_1, U_2 must be infinite-dim. And at least one must be finite-dim??

Let $V = \mathbb{F}^\infty = U_1$, $U_2 = \{(x, 0, \dots) \in \mathbb{F}^\infty : x \in \mathbb{F}\}$. Then $V = U_1 + U_2$ is not a direct sum.

Define $T \in \mathcal{L}(U_1 \times U_2, U_1 + U_2)$ by $T((x_1, x_2, \dots), (x, 0, \dots)) = (x, x_1, x_2, \dots)$ $\left\{ \Rightarrow S = T^{-1} \right.$

Define $S \in \mathcal{L}(U_1 + U_2, U_1 \times U_2)$ by $S(x, x_1, x_2, \dots) = ((x_1, x_2, \dots), (x, 0, \dots))$ $\left. \right\} \Rightarrow S = T^{-1}.$ \square

- **NOTE FOR [3.79, 3.83]:** If $U = \{0\}$, then $v + U = v + \{0\} = \{v\}$, $V/U = V/\{0\} = \{\{v\} : v \in V\}$.
If $U = \emptyset$, then $v + U = v + \emptyset = \emptyset$, $V/U = V/\emptyset = \{\emptyset\}$.

- **COMMENT:** If U is merely a subset of V , then [3.85, 3.86] do not hold, and V/U is not a vecsp.
Because $((v - w) + u) \in U$ or $u - u' \in U$ needs that U is closed under add.
And because $(v - \hat{v}) + (w - \hat{w}) \in U$ and $\lambda(v - \hat{v}) \in U$ assume that U is a subsp.

- **NOTE FOR [3.85]:** $v + U = w + U \iff v \in w + U, w \in v + U$
 $\iff v - w \in U \iff (v + U) \cap (w + U) \neq \emptyset$.

- (4E 8) Suppose $T \in \mathcal{L}(V, W), w \in \text{range } T$. Prove that $\{u \in V : Tu = w\} = u + \text{null } T$.

SOLUTION: Let $\mathcal{K}_u = \{u \in V : Tu = w\}$. [Not a vecsp.] Suppose $u \in \mathcal{K}_u$. Then $u + \text{null } T \subseteq \mathcal{K}_u$.

And $\forall u' \in \mathcal{K}_u, u' - u \in \text{null } T \Rightarrow u' \in u + \text{null } T$. Now $\mathcal{K}_u \subseteq u + \text{null } T$. □

- 7 Suppose $v, x \in V$, and U, W are subsp of V . Prove that $v + U = x + W \Rightarrow U = W$.

SOLUTION: (a) $\forall u_1 \in U, \exists w_1 \in W, v + u_1 = x + w_1$. Let $u_1 = 0$, then $v = x + w'_1 \Rightarrow v - x \in W$.

(b) $\forall w_2 \in W, \exists u_2 \in U, v + u_2 = x + w_2$. Let $w_2 = 0$, then $x = v + u'_2 \Rightarrow x - v \in U$.

Now $x + U = v + U = x + W = v + W$. Thus $\{v + u : u \in U\} = \{v + w : w \in W\} \Rightarrow U = W$.

OR. $\pm(v - x) \in U \cap W \Rightarrow \begin{cases} u_1 = (x - v) + w_1 \in W \Rightarrow U \subseteq W \\ w_2 = (v - x) + u_2 \in U \Rightarrow W \subseteq U \end{cases} \Rightarrow U = W$. □

- 8 Suppose A is a nonempty subset of V .

Prove that A is a translate of some subsp of $V \iff \lambda v + (1 - \lambda)w \in A, \forall v, w \in A, \lambda \in \mathbb{F}$.

SOLUTION:

(a) Suppose $A = a + U$. Then $\lambda(a + u_1) + (1 - \lambda)(a + u_2) = a + (\lambda(u_1 - u_2) + u_2) \in A$.

(b) Suppose $\lambda v + (1 - \lambda)w \in A, \forall v, w \in A, \lambda \in \mathbb{F}$. Suppose $\underline{a} \in A$ and let $A' = \{x - a : x \in A\}$.

Then $0 \in A'$ and $\forall (v - a), (w - a) \in A', \lambda \in \mathbb{F}$,

(I) $\lambda(v - a) = [\lambda v + (1 - \lambda)a] - a \in A'$.

(II) Because $\lambda(v - a) + (1 - \lambda)(w - a) = [\lambda v + (1 - \lambda)w] - a \in A'$.

Let $\lambda = \frac{1}{2}$ here and use (I) above by $\lambda = 2$, we have $(v - a) + (w - a) \in A'$.

OR. Note that $v, a \in A \Rightarrow \lambda v + (1 - \lambda)a = 2v - a \in A$. Similarly $2w - a \in A$.

Now $(v - \frac{1}{2}a) + (w - \frac{1}{2}a) = v + w - a \in A \Rightarrow v + w - 2a = (v - a) + (w - a) \in A'$.

Thus $A' = -a + A$ is a subsp of V . Hence $a + A' = a + \{x - a : x \in A\} = A$ is a translate. □

- 9 Suppose $A = v + U$ and $B = x + W$ for some $v, x \in V$ and some subsp U, W of V .

Prove that $A \cap B$ is either a translate of some subsp of V or is \emptyset .

SOLUTION: $\forall v + u, x + w \in A \cap B \neq \emptyset, \lambda \in \mathbb{F}, \lambda(v + u) + (1 - \lambda)(x + w) \in A \cap B$. By Problem (8). □

OR. Let $A = v + U, B = x + W$. Suppose $\alpha \in (v + U) \cap (x + W) \neq \emptyset$.

Then $\alpha - v \in U \Rightarrow \alpha + U = v + U = A$, and $\alpha - x \in W \Rightarrow \alpha + W = x + W = B$.

We show that $A \cap B = \alpha + (U \cap W)$. Note that $\alpha + (U \cap W) \subseteq A \cap B$.

And $\forall \beta = \alpha + u = \alpha + w \in A \cap B \Rightarrow u = w \in U \cap W \Rightarrow \beta \in \alpha + (U \cap W)$. □

10 Prove that the intersection of any collection of translates of subspaces is either a translate of some subspace or \emptyset .

SOLUTION: Suppose $\{A_\alpha\}_{\alpha \in \Gamma}$ is a collection of translates of subspaces of V , where Γ is an index set.

$\forall x, y \in \bigcap_{\alpha \in \Gamma} A_\alpha \neq \emptyset, \lambda \in \mathbf{F}, \lambda x + (1 - \lambda)y \in A_\alpha$ for each α . By Problem (8). \square

OR. Let each $A_\alpha = w_\alpha + V_\alpha$. Suppose $x \in \bigcap_{\alpha \in \Gamma} (w_\alpha + V_\alpha) \neq \emptyset$.

Then $x - w_\alpha \in V_\alpha \implies x + V_\alpha = w_\alpha + V_\alpha = A_\alpha$, for each α .

We show that $\bigcap_{\alpha \in \Gamma} A_\alpha = \bigcap_{\alpha \in \Gamma} (x + V_\alpha) = x + \bigcap_{\alpha \in \Gamma} V_\alpha$.

$y \in \bigcap_{\alpha \in \Gamma} A_\alpha \iff$ for each α , $y = x + v_\alpha \in A_\alpha$

\iff each $v_\alpha = y - x \in \bigcap_{\alpha \in \Gamma} V_\alpha \iff y \in x + \bigcap_{\alpha \in \Gamma} V_\alpha$. \square

11 Suppose $A = \{\lambda_1 v_1 + \dots + \lambda_m v_m : \sum_{i=1}^m \lambda_i = 1\}$, where each $v_i \in V, \lambda_i \in \mathbf{F}$.

(a) Prove that A is a translate of some subspace of V

(b) Prove that if B is a translate of some subspace of V and $\{v_1, \dots, v_m\} \subseteq B$, then $A \subseteq B$.

(c) Prove that A is a translate of some subspace of V of dimension less than m .

SOLUTION:

(a) By Problem (8), $\forall u, w \in A, \lambda \in \mathbf{F}, \lambda u + (1 - \lambda)w = \left(\lambda \sum_{i=1}^m a_i + (1 - \lambda) \sum_{i=1}^m b_i\right)v_i \in A$. \square

(b) Suppose $B = v + U$, where $v \in V$ and U is a subspace of V . Let each $v_k = v + u_k \in B, \exists! u_k \in U$.

$\forall w \in A, w = \sum_{i=1}^m \lambda_i v_i = \sum_{i=1}^m \lambda_i (v + u_i) = \sum_{i=1}^m \lambda_i v + \sum_{i=1}^m \lambda_i u_i = v + \sum_{i=1}^m \lambda_i u_i \in v + U = B$. \square

OR. Let $v = \lambda_1 v_1 + \dots + \lambda_m v_m \in A$. To show that $v \in B$, use induction on m by k .

(i) $k = 1, v = \lambda_1 v_1 \implies \lambda_1 = 1$. $\forall v_1 \in B$. Hence $v \in B$.

$k = 2, v = \lambda_1 v_1 + \lambda_2 v_2 \implies \lambda_2 = 1 - \lambda_1$. $\forall v_1, v_2 \in B$. By Problem (8), $v \in B$.

(ii) $2 \leq k < m$. Assume that $v = \lambda_1 v_1 + \dots + \lambda_k v_k \in A \subseteq B$. $\left(\forall \lambda_i \text{ such that } \sum_{i=1}^k \lambda_i = 1\right)$

For $u = \mu_1 v_1 + \dots + \mu_k v_k + \mu_{k+1} v_{k+1} \in A$. $\forall i = 1, \dots, k, \exists \mu_i \neq 1$, fix one such i by ι .

Then $\sum_{i=1}^{k+1} \mu_i - \mu_\iota = 1 - \mu_\iota \implies \left(\sum_{i=1}^{k+1} \frac{\mu_i}{1 - \mu_\iota}\right) - \frac{\mu_\iota}{1 - \mu_\iota} = 1$.

Let $w = \underbrace{\frac{\mu_1}{1 - \mu_\iota} v_1 + \dots + \frac{\mu_{\iota-1}}{1 - \mu_\iota} v_{\iota-1} + \frac{\mu_{\iota+1}}{1 - \mu_\iota} v_{\iota+1} + \dots + \frac{\mu_{k+1}}{1 - \mu_\iota} v_{k+1}}_{k \text{ terms}}$.

Let $\lambda_i = \frac{\mu_i}{1 - \mu_\iota}$ for $i = 1, \dots, \iota - 1$; $\lambda_j = \frac{\mu_{j+1}}{1 - \mu_\iota}$ for $j = \iota, \dots, k$. Then,

$\left. \begin{array}{l} \sum_{i=1}^k \lambda_i = 1 \implies w \in B \\ v_\iota \in B \implies u' = \lambda w + (1 - \lambda)v_\iota \in B \end{array} \right\} \implies \text{Let } \lambda = 1 - \mu_\iota. \text{ Thus } u' = u \in B \implies A \subseteq B$. \square

(c) If $m = 1$, then let $A = v_1 + \{0\}$ and we are done.

Fix one $k \in \{1, \dots, m\}$. For $\lambda_1, \dots, \lambda_{k-1}, \lambda_{k+1}, \dots, \lambda_m \in \mathbf{F}$. Let $\lambda_k = 1 - \lambda_1 - \dots - \lambda_{k-1} - \lambda_{k+1} - \dots - \lambda_m$
 $\implies \lambda_1 v_1 + \dots + \lambda_k v_k + \dots + \lambda_m v_m = v_k + \sum_{i=1}^m \lambda_i (v_i - v_k)$. $A = v_k + \text{span}(v_1 - v_k, \dots, v_m - v_k)$. \square

14 Suppose $U = \{(x_1, x_2, \dots) \in \mathbf{F}^\infty : x_k \neq 0 \text{ for only finitely many } k\}$.

(a) Show that U is a subsp of \mathbf{F}^∞ . [Do it in your mind]

(b) Prove that \mathbf{F}^∞/U is infinite-dim.

SOLUTION: For ease of notation, denote the p^{th} term of $u = (x_1, \dots, x_p, \dots) \in \mathbf{F}^\infty$ by $u[p]$.

For each $r \in \mathbf{N}^+$, let $e_r[p] = \begin{cases} 1, & (p-1) \equiv 0 \pmod{r} \\ 0, & \text{otherwise} \end{cases}$ simply $e_r = (1, \underbrace{0, \dots, 0}_{(p-1) \text{ times}}, 1, \underbrace{0, \dots, 0}_{(p-1) \text{ times}}, 1, \dots)$.

Choose one $m \in \mathbf{N}^+$. Let $a_1(e_1 + U) + \dots + a_m(e_m + U) = 0 + U \Rightarrow \exists u \in U, a_1e_1 + \dots + a_me_m = u$.

Suppose $u = (x_1, \dots, x_L, 0, \dots)$, where L is the largest such that $u[L] \neq 0$.

Let $s \in \mathbf{N}^+$ be such that $h = s \cdot m! + 1 > L$ and $e_1[h] = \dots = e_m[h] = 1$.

Note that by definition, $e_r[s \cdot m! + 1 + p] = e_r[p + 1] = 1 \iff p \equiv 0 \pmod{r} \iff r | p$.

Now for any $p \in \{1, \dots, m\}$, $u[h + p] = \left(\sum_{r=1}^m a_r e_r \right) [p + 1] = \sum_{k=1}^{\tau(p)} a_{p_k} = 0$ (Δ)

where $1 = p_1 \leq \dots \leq p_{\tau(p)} = p$ are all the distinct factors of p .

Let $q = p_{\tau(p)-1}$. Notice that $\tau(q) = \tau(p) - 1$ and $q_k = p_k, \forall k \in \{1, \dots, \tau(q)\}$.

Again by (Δ), $\left(\sum_{r=1}^m a_r e_r \right) [h + q] = \sum_{k=1}^{\tau(q)-1} a_{p_k} = 0$. Thus $a_{p_{\tau(p)}} = a_p = 0$ for any $p \in \{1, \dots, m\}$.

Hence $\forall m \in \mathbf{N}^+$, (e_1, \dots, e_m) is linely inde in \mathbf{F}^∞ , so is $(e_1 + U, \dots, e_m + U)$ in \mathbf{F}^∞/U . By (2.A.14). □

OR. For each $r \in \mathbf{N}^+$, let $e_r[p] = \begin{cases} 1, & \text{if } 2^r | p \\ 0, & \text{otherwise} \end{cases}$.

Similarly, let $m \in \mathbf{N}^+$ and $a_1(e_1 + U) + \dots + a_m(e_m + U) = 0 \Rightarrow a_1e_1 + \dots + a_me_m = u \in U$.

Suppose L is the largest such that $u[L] \neq 0$. And l is such that $2^{ml} > L$.

Then $\forall k \in \{1, \dots, m\}, u[2^{ml} + 2^k] = \left(\sum_{r=1}^m a_r e_r \right) [2^k] = a_1 + \dots + a_k = 0$.

Thus $a_1 = \dots = a_m = 0$ and (e_1, \dots, e_m) is linely inde. Similarly. □

• **NOTE FOR [3.88, 3.90, 3.91]:** Suppose $W \in \mathcal{S}_V U$. Then V/U is iso to W .

Because $\forall v \in V, \exists! u_v \in U, w_v \in W, v = u_v + w_v$. Define $T \in \mathcal{L}(V)$ by $T(v) = w_v$.

Hence $\text{null } T = U$, $\text{range } T = W$, $\text{range } T \oplus \text{null } T = V$.

Then $\tilde{T} \in \mathcal{L}(V/\text{null } T, V)$ is defined by $\tilde{T}(v + U) = \tilde{T}(w'_v + U) = Tw'_v = w_v$. [See TIPS below]

Now $\pi \circ \tilde{T} = I_{V/U}$, $\tilde{T} \circ \pi|_W = I_W = T|_W$. Hence \tilde{T} is an iso of V/U onto W .

• **TIPS:** Suppose U is a subsp of V . Define $S \in \mathcal{L}(V/U, V)$ by $S(v + U) = v$.

Then $\text{range } S$ is the *purest* in $\mathcal{S}_V U$. Now $\text{null } S = \{0\}$, $U \oplus \text{range } S = V$.

Let $E = S \circ \pi$. Because S is inje and π is surj, $\text{null } E = \text{null } \pi = U$, $\text{range } E = \text{range } S$.

Then $\text{range } E \oplus \text{null } E = V$. NOTICE that $E : V \rightarrow W$ is the *purest eraser*. Now we explain why:

EXAMPLE: Let $V = \mathbf{F}^2, B_U = (e_1), B_W = (e_2 - e_1) \Rightarrow U \oplus W = V$.

Notice that $T(e_2 - e_1) = (e_2 - e_1)$, while $(e_2 - e_1) + U = e_2 + U$, but

because $e_2 = v_1 + (e_2 - e_1)$, now still, $\tilde{T}((e_2 - e_1) + U) = e_2 - e_1 = Te_2$.

In contrast, $S((e_2 - e_1) + U) = S(e_2 + U) = e_2$, $E(e_2 - e_1) = e_2$.

And $\text{range } E = \text{range } S = \text{span}(e_2)$ is the *purest* in $\mathcal{S}_V U$.

12 Suppose U is a subsp of V . Prove that V is iso to $U \times (V/U)$.

SOLUTION:

[Req V/U Finite-dim] Let $B_{V/U} = (v_1 + U, \dots, v_n + U)$.

Note that $\forall v \in V, \exists! a_i \in \mathbf{F}, v + U = \sum_{i=1}^n a_i(v_i + U) = \left(\sum_{i=1}^n a_i v_i\right) + U$

$\Rightarrow (v - a_1 v_1 - \dots - a_n v_n) \in U \Rightarrow \exists! u \in U, v = \sum_{i=1}^n a_i v_i + u$.

Thus define $\varphi \in \mathcal{L}(V, U \times (V/U))$ and $\psi \in \mathcal{L}(U \times (V/U), V)$

OR. Define $S \in \mathcal{L}(V/U, V)$ by $S(v + U) = v$.

By NOTE FOR [3.88, 90, 91], $\text{range } S \oplus U = V$. Thus $\forall v \in V, \exists! u \in U, w \in \text{range } S, v = u + w$.

Define $T \in \mathcal{L}(U \times (V/U), V)$ by $T(u, v + U) = u + S(v + U) = u + w = v$. Then T is surj.

And $T(u, v + U) = u + S(v + U) = 0 \Rightarrow \pi(T(u, v + U)) = v + U = 0$, and $u = -S(v + U) = 0$.

OR. Define $R \in \mathcal{L}(V, U \times (V/U))$ by $R(v) = (u, (w + U))$. Now $R \circ T = I_{U \times (V/U)}$, $T \circ R = I_V$. \square

 $\Rightarrow \forall v \in V, \exists! a_i, b_j \in \mathbf{F}, v = \sum_{i=1}^m a_i v_i + \sum_{j=1}^n b_j u_j$. \square

OR. Note that $B = (v_1, \dots, v_m)$ is linely inde. Now we show that $\text{span } B \cap U = \{0\}$.

Then by Problem (12) and [3.76], $\dim V = \dim(U \times (V/U)) = n + m$.

While $\dim[\text{span}(v_1, \dots, v_m) \oplus U] = m + n$ and $[\text{span}(v_1, \dots, v_m) \oplus U] \subseteq V$. Hence by (2.B.8). \square

17 Suppose V/U is finite-dim, W is a subsp of V .

(a) Show that if $V = U + W$, then $\dim W \geq \dim V/U$.

(b) Show that $\exists W \in \mathcal{S}_V U, \dim W = \dim V/U$.

SOLUTION: Let $B_W = (w_1, \dots, w_n)$.

(a) $\forall v \in V, \exists u \in U, w \in W, v = u + w \implies v + U = w + U = (a_1 w_1 + \dots + a_n w_n) + U, \exists! a_i \in \mathbb{F}$.

Then $V/U \subseteq \text{span}(w_1 + U, \dots, w_n + U)$. Hence $\dim V/U \leq \dim \text{span}(w_1 + U, \dots, w_n + U)$.

(b) Reduce $(w_1 + U, \dots, w_n + U)$ to $B_{V/U} = (w_1 + U, \dots, w_m + U)$, and let $W = \text{span}(w_1, \dots, w_m)$. \square

Note that $\pi \circ \tilde{T} = I$. By (3.B.20), \tilde{T} is inje. And (v_1, \dots, v_m) is linely inde.

Let $W = \text{range } \tilde{T} = \text{span}(v_1, \dots, v_m)$. Then $\tilde{T} \in \mathcal{L}(V/U, W)$ is an iso. Thus $\dim W = \dim V/U$.

And $\forall v \in V, \exists! a_i \in \mathbb{F}, v + U = a_1 v_1 + \dots + a_m v_m + U \implies \exists! w \in W, u \in U, v = w + u$. \square

Prove that $\exists S \in \mathcal{L}(V/U, W), T = S \circ \pi \iff U \subseteq \text{null } T$.

SOLUTION:

(a) Suppose $\exists S \in \mathcal{L}(V/U, W), T = S \circ \pi$. Then $U = \text{null } \pi \subseteq \text{null } (S \circ \pi) = \text{null } T$.

(b) Suppose $U = \text{null } \pi \subseteq \text{null } T$. By (3.B.24), we are done. OR. Define $S : (v + U) \mapsto Tv$.

31 Suppose V is finite-dim and $B_{V'} = (\varphi_1, \dots, \varphi_n)$. Show that the correspd B_V exists.

SOLUTION:

Using (3.B.29). Let $\varphi_i(u_i) = 1$ and then $V = \text{null } \varphi_i \oplus \text{span}(u_i)$ for each φ_i .

Suppose $a_1 u_1 + \dots + a_n u_n = 0$. Then $0 = \varphi_i(a_1 u_1 + \dots + a_n u_n) = a_i$ for each i .

Thus $B_V = (\varphi_1, \dots, \varphi_n)$. And $\varphi_i(u_x) = \delta_{i,x}$. □

OR. For each $k \in \{1, \dots, n\}$, define $\Gamma_k = \{1, \dots, k-1, k+1, \dots, n\}$ and $U_k = \bigcap_{j \in \Gamma_k} \text{null } \varphi_j$.

By Problem (30) OR (4E 2.C.16), $\dim U_k = 1$. Thus $\exists u_k \in V, U_k = \text{span}(u_k) \neq 0$.

又 By Problem (30), $(\text{null } \varphi_1) \cap \dots \cap (\text{null } \varphi_n) = \{0\} = U \cap \text{null } \varphi_k$.

Then if $\varphi_k(u_k) = 0 \Rightarrow u_k \in \text{null } \varphi_k$ while $u_k \in U \Rightarrow u_k \in \{0\}$, contradicts.

Thus $\varphi_k(u_k) \neq 0$. Let $v_k = (\varphi_k(u_k))^{-1} u_k \Rightarrow \varphi_k(v_k) = 1$. Now for $j \neq k, u_k \in \text{null } \varphi_j \Rightarrow \varphi_j(v_k) = 0$.

Prove, using the pattern of [3.104], that $\dim U + \dim U^0 = \dim V$.

SOLUTION:

By Problem (31) and the COMMENT in Problem (26), $B_U = (v_1, \dots, v_m) \iff B_{U^0} = (\varphi_{m+1}, \dots, \varphi_n)$. \square

37 Suppose U is a subsp of V and π is the quotient map. Thus $\pi' \in \mathcal{L}((V/U)', V')$.

(a) Show that π' is inje: Because π is surj. Use [3.108].

(b) Show that $\text{range } \pi' = U^0$: By [3.109](b), $\text{range } \pi' = (\text{null } \pi)^0 = U^0$.

(c) Conclude that π' is an iso from $(V/U)'$ onto U^0 : Immediately.

SOLUTION: OR. Using (3.E.18), also see (3.E.20).

(a) $\pi'(\varphi) = 0 \iff \forall v \in V (\forall v + U \in V), \varphi(\pi(v)) = \varphi(v + U) = 0 \iff \varphi = 0$.

(b) $\psi \in \text{range } \pi' \iff \exists \varphi \in (V/U)', \psi = \varphi \circ \pi \iff \text{null } \psi \supseteq U \iff \psi \in U^0$. Hence $\text{range } \pi' = U^0$. \square

• Suppose U is a subsp of V . Prove that $(V/U)'$ is iso to U^0 . [Another proof of [3.106]]

SOLUTION:

Define $\xi : U^0 \rightarrow (V/U)'$ by $\xi(\varphi) = \tilde{\varphi}$, where $\tilde{\varphi} \in (V/U)'$ is defined by $\tilde{\varphi}(v + U) = \varphi(v)$.

We show that ξ is inje and surj.

Inje: $\xi(\varphi) = 0 = \tilde{\varphi} \Rightarrow \forall v \in V (\forall v + U \in V/U), \tilde{\varphi}(v + U) = \varphi(v) = 0 \Rightarrow \varphi = 0$.

Surj: $\Phi \in (V/U)' \Rightarrow \forall u \in U, \Phi(u + U) = \Phi(0 + U) = 0 \Rightarrow U \subseteq \text{null } (\Phi \circ \pi) \Rightarrow \xi(\Phi \circ \pi) = \Phi$. \square

OR. Define $\nu : (V/U)' \rightarrow U^0$ by $\nu(\Phi) = \Phi \circ \pi$. Now $\nu \circ \xi = I_{U^0}$, $\xi \circ \nu = I_{(V/U)'}$, $\Rightarrow \xi = \nu^{-1}$. \square

4 Suppose U is a subsp of V and $U \neq V$. Prove that $\underbrace{\exists \varphi \in V' \setminus \{0\}, \varphi(u) = 0 \text{ for all } u \in U}_{\iff U_V^0 \neq \{0\}}$.

SOLUTION:

Let X be such that $V = U \oplus X$. Then $X \neq \{0\}$. Suppose $s \in X$ and $s \neq 0$.

Let Y be such that $X = \text{span}(s) \oplus Y$. Now $V = U \oplus (\text{span}(s) \oplus Y)$.

Define $\varphi \in V'$ by $\varphi(u + \lambda s + y) = \lambda$. Hence $\varphi \neq 0$ and $\varphi(u) = 0$ for all $u \in U$. \square

OR. [Req V Finite-dim] By [3.106], $\dim U^0 = \dim V - \dim U > 0$. Then $U^0 \neq \{0\}$.

OR. Let $B_V = (\underbrace{u_1, \dots, u_m}_{B_U}, v_1, \dots, v_n)$ with $n \geq 1$. Let $B_{V'} = (\psi_1, \dots, \psi_m, \varphi_1, \dots, \varphi_n)$. Let $\varphi = \varphi_i$.

OR. Define $\varphi \in V'$ by $\varphi(u_1) = \dots = \varphi(u_m) = 0$ and $\varphi(v_1) = \dots = \varphi(v_n) = 1$. \square

COMMENT: Another proof of [3.108]: T is surj $\iff T'$ is inje.

(a) Suppose T' is inje. Note that $T'(\psi) = 0 \Rightarrow \psi = 0$.

Then $\nexists \psi \in W' \setminus \{0\}, (T'(\psi))(v) = \psi(Tv) = 0$ for all $w \in \text{range } T (\forall v \in V)$.

Thus if we assume that $\text{range } T \neq W$ then contradicts. Hence $\text{range } T = W$.

(b) Suppose T is surj. Then $(\text{range } T)^0 = W_W^0 = \{0\} = \text{null } T'$. \square

- (c) Prove that \tilde{i}' is an iso from V'/U^0 onto U' : By (a), (b) and [3.91](d).

SOLUTION:

- (a) $\forall \varphi \in V', i'(\varphi) = \varphi \circ i = \varphi|_U$. Thus $i'(\varphi) = 0 \iff \forall u \in U, \varphi(u) = 0 \iff \varphi \in U^0$.

• Suppose $T \in \mathcal{L}(V, W)$. Prove that $\text{range } T' = (\text{null } T)^0$. [Another proof of [3.109](b)]

SOLUTION:

Suppose $\Phi \in (\text{null } T)^0$. Because by (3.B.12), $T|_U : U \rightarrow \text{range } T$ is an iso; $V = U \oplus \text{null } T$.
And $\forall v \in V, \exists ! u_v \in U, w_v \in \text{null } T, v = u_v + w_v$. Define $\iota \in \mathcal{L}(V, U)$ by $\iota(v) = u_v$.
Let $\psi = \Phi \circ (T^{-1}|_{\text{range } T})$. Then $T'(\psi) = \psi \circ T = \Phi \circ (T^{-1}|_{\text{range } T} \circ T|_V)$.
Where $T^{-1}|_{\text{range } T} : \text{range } T \rightarrow U$; $T : V \rightarrow \text{range } T$. Note that $T^{-1}|_{\text{range } T} \circ T|_V = I$.
By [3.B TIPS (3)], $\Phi = \Phi \circ \iota$. Thus $T'(\psi) = \psi \circ T = \Phi \circ \iota = \Phi$. □

• Suppose $T \in \mathcal{L}(V, W)$. Using [3.108], [3.110].

15 Suppose $T \in \mathcal{L}(V, W)$. Prove that $T' = 0 \iff T = 0$.

SOLUTION:

Suppose $T = 0$. Then $\forall \varphi \in W', T'(\varphi) = \varphi \circ T = 0$. Hence $T' = 0$.

Suppose $T' = 0$. Then $\text{null } T' = W' = (\text{range } T)^0$, by [3.107](a).

[W can be infinite-dim] By Problem (25),

$$\text{range } T = \{w \in W : \varphi(w) = 0, \forall \varphi \in (\text{range } T)^0\} = \{w \in W : \varphi(w) = 0, \forall \varphi \in W'\}.$$

Now we prove that if $\forall \varphi \in W', \varphi(w) = 0$, then $w = 0$. So that $\text{range } T = \{0\}$ and we are done.

Assume that $w \neq 0$. Then let U be such that $W = U \oplus \text{span}(w)$.

Define $\psi \in W'$ by $\psi(u + \lambda w) = \lambda$. So that $\psi(w) = 1 \neq 0$. □

12 NOTICE that $I_{V'} : V' \rightarrow V'$. Now $\forall \varphi \in V', I_{V'}(\varphi) = \varphi = \varphi \circ I_V = I_V'(\varphi)$. Thus $I_{V'} = I_V'$.

16 Suppose V, W are finite-dim. Define Γ by $\Gamma(T) = T'$ for any $T \in \mathcal{L}(V, W)$.

Prove that Γ is an iso of $\mathcal{L}(V, W)$ onto $\mathcal{L}(W', V')$.

SOLUTION: By [3.101], Γ is linear.

Suppose $\Gamma(T) = T' = 0$. By Problem (15), $T = 0$. Thus Γ is inje.

Because V, W are finite-dim. $\dim \mathcal{L}(V, W) = \dim \mathcal{L}(W', V')$. Now Γ inje \Rightarrow inv. □

COMMENT: Let $X = \{T \in \mathcal{L}(V, W) : \text{range } T \text{ is finite-dim}\}$.

Let $Y = \{\mathcal{T} \in \mathcal{L}(W', V') : \text{range } \mathcal{T} \text{ is finite-dim}\}$.

Then $\Gamma|_X$ is an iso of X onto Y , even if V and W are infinite-dim.

The inje of $\Gamma|_X$ is equiv to the inje of Γ , as shown before.

Now we show that $\Gamma|_X$ is surj without the cond that V or W is finite-dim.

Suppose $\mathcal{T} \in Y$. Let $B_{\text{range } \mathcal{T}} = (\varphi_1, \dots, \varphi_m)$, with the correspd (v_1, \dots, v_m) . Let $\varphi_k = \mathcal{T}(\psi_k)$.

• (4E 3.F.6) Suppose $\varphi, \beta \in V'$. Prove that $\text{null } \varphi \subseteq \text{null } \beta \iff \beta = c\varphi, \exists c \in \mathbf{F}$.

COROLLARY: $\text{null } \varphi = \text{null } \beta \iff \beta = c\varphi, \exists c \in \mathbf{F} \setminus \{0\}$.

SOLUTION:

Using (3.B.29, 30).

(a) Suppose $\text{null } \varphi \subseteq \text{null } \beta$. Suppose $u \notin \text{null } \beta$, then $u \notin \text{null } \varphi$.

Now $V = \text{null } \beta \oplus \text{span}(u) = \text{null } \varphi \oplus \text{span}(u)$. By (1.C TIPS), $\text{null } \beta = \text{null } \varphi$. Let $c = \frac{\beta(u)}{\varphi(u)}$.

OR. We discuss in two cases. If $\text{null } \varphi = \text{null } \beta$, then we are done.

Otherwise, $\text{null } \beta \neq \text{null } \varphi$. Then $\exists u' \in \text{null } \beta \setminus \text{null } \varphi$.

Now $V = \text{null } \varphi \oplus \text{span}(u') = \text{null } \varphi \oplus \text{span}(u)$. $\forall v \in V, v = w + au = w' + bu', \exists! w, w' \in \text{null } \varphi$.

Thus $\beta(v) = a\beta(u), \varphi(v) = b\varphi(u')$. Let $c = \frac{a\beta(u)}{b\varphi(u')}$. We are done.

NOTICE that by (b) below, we have $\text{null } \beta \subseteq \text{null } \varphi, u = u'$. Thus contradicts the assumption.

(b) Suppose $\beta = c\varphi$ for some $c \in \mathbf{F}$. If $c = 0$, then $\text{null } \beta = V \supseteq \text{null } \varphi$, we are done.

Otherwise, $\left. \begin{array}{l} \forall v \in \text{null } \varphi, \varphi(v) = 0 = \beta(v) \Rightarrow \text{null } \varphi \subseteq \text{null } \beta \\ \forall v \in \text{null } \beta, \beta(v) = 0 = \varphi(v) \Rightarrow \text{null } \beta \subseteq \text{null } \varphi \end{array} \right\} \Rightarrow \text{null } \varphi = \text{null } \beta$. □

OR. By (3.B.24), $\text{null } \varphi \subseteq \text{null } \beta \iff \exists E \in \mathcal{L}(\mathbf{F}), \beta = E \circ \varphi$. (if E is inv, then $\text{null } \varphi = \text{null } \beta$)

Now we show that $[P] \exists E \in \mathcal{L}(\mathbf{F}), \beta = E \circ \varphi \iff \exists c \in \mathbf{F}, \beta = c\varphi$. [Q].

$[P] \Rightarrow [Q]$: Let $c = E(1)$. Then $\forall v \in V, \beta(v) = E(\varphi(v)) = \varphi(v)E(1) = c\varphi(v)$. ($E(1) \neq 0$)

$[Q] \Rightarrow [P]$: Define $E \in \mathcal{L}(\mathbf{F})$ by $E(x) = cx$. Then $\forall v \in V, \beta(v) = c\varphi(v) = E(\varphi(v))$. ($c \neq 0$) □

Now $\Gamma'(\Psi(x_1, \dots, x_m)) = x_1 \varphi_1 + \dots + x_m \varphi_m$.

Define $\Phi : \mathbf{F}^m \rightarrow (\mathbf{F}^m)'$ by $\Phi = \Psi \circ \Gamma$. $\Phi(x_1, \dots, x_m) = x_1 \varphi_1 + \dots + x_m \varphi_m$. Thus by (4E 3.B.3),

(c) the inje of Φ correspds to $(\varphi_1, \dots, \varphi_m)$ spanning V' ; $\text{又 } \Phi = \Psi \circ \Gamma$ inje $\iff \Gamma$ inje.

(d) the surj of Φ correspds to $(\varphi_1, \dots, \varphi_m)$ being linely inde; $\text{又 } \Phi = \Psi \circ \Gamma$ surj $\iff \Gamma$ surj. □

35 Prove that $(\mathcal{P}(\mathbf{F}))'$ is iso to \mathbf{F}^∞ .

SOLUTION:

Define $\theta \in \mathcal{L}((\mathcal{P}(\mathbf{F}))', \mathbf{F}^\infty)$ by $\theta(\varphi) = (\varphi(1), \varphi(z), \dots, \varphi(z^n), \dots)$.

Inje: $\theta(\varphi) = 0 \Rightarrow \forall z^k$ in the basis $(1, z, \dots, z^n)$ of $\mathcal{P}_n(\mathbf{F})$ ($\forall n$), $\varphi(z^k) = 0 \Rightarrow \varphi = 0$.

[NOTICE that $\forall p \in \mathcal{P}(\mathbf{R}), \exists ! a_i \in \mathbf{F}, m = \deg p, p = a_0 z + a_1 z^2 + \dots + a_m z^m \in \mathcal{P}_m(\mathbf{F})$.]

Surj: $\forall (a_k)_{k=1}^\infty \in \mathbf{F}^\infty$, let ψ be such that $\forall k, \psi(z^k) = a_k$ [by [3.5]] and thus $\theta(\psi) = (a_k)_{k=1}^\infty$. \square

COMMENT: NOTICE that $\mathcal{P}(\mathbf{F})$ is not iso to \mathbf{F}^∞ , so is $\mathcal{P}(\mathbf{F})$ to $(\mathcal{P}(\mathbf{F}))'$

But if we let $\mathbf{F}^\infty = \{(a_1, \dots, a_n, \underbrace{0, \dots, 0}_{\text{all zero}}) \in \mathbf{F}^\infty \mid \exists ! n \in \mathbf{N}^+\}$. Then $\mathcal{P}(\mathbf{F})$ is iso to \mathbf{F}^∞ .

7 Show that the dual basis of $(1, x, \dots, x^m)$ of $\mathcal{P}_m(\mathbf{R})$ is $(\varphi_0, \varphi_1, \dots, \varphi_m)$, where $\varphi_k(p) = \frac{p^{(k)}(0)}{k!}$.

Here $p^{(k)}$ denotes the k^{th} derivative of p , with the understanding that the 0^{th} derivative of p is p .

SOLUTION:

$$\forall j, k \in \mathbf{N}, (x^j)^{(k)} = \begin{cases} j(j-1) \dots (j-k+1) \cdot x^{(j-k)}, & j \geq k. \\ j(j-1) \dots (j-j+1) = j! & j = k. \\ 0, & j \leq k. \end{cases} \quad \text{Then } (x^j)^{(k)}(0) = \begin{cases} 0, & j \neq k. \\ k!, & j = k. \end{cases} \quad \square$$

OR. Because $\forall j, k \in \{1, \dots, m\}$ such that $j \neq k$, $\varphi_k(x^j) = \frac{(x^j)^{(k)}(0)}{k!} = \frac{0}{k!} = 0$; $\varphi_k(x^k) = \frac{(x^k)^{(k)}(0)}{k!} = 1$.

Thus $\frac{p^{(k)}(0)}{k!}$ act exactly the same as φ_k on the same basis $(1, \dots, x^m)$, hence is just another def of φ_k . \square

EXAMPLE: Suppose $m \in \mathbf{N}^+$. By [2.C.10], $B = (1, x-5, \dots, (x-5)^m)$ is a basis of $\mathcal{P}_m(\mathbf{R})$.

Let $\varphi_k = \frac{p^{(k)}(5)}{k!}$ for each $k = 0, 1, \dots, m$. Then $(\varphi_0, \varphi_1, \dots, \varphi_m)$ is the dual basis of B .

34 The double dual space of V , denoted by V'' , is defined to be the dual space of V' .

In other words, $V'' = \mathcal{L}(V', \mathbf{F})$. Define $\Lambda : V \rightarrow V''$ by $(\Lambda v)(\varphi) = \varphi(v)$.

(a) Show that Λ is a linear map from V to V'' .

(b) Show that if $T \in \mathcal{L}(V)$, then $T'' \circ \Lambda = \Lambda \circ T$, where $T'' = (T')'$.

(c) Show that if V is finite-dim, then Λ is an iso from V onto V'' .

Suppose V is finite-dim. Then V and V' are iso, and finding an iso from V onto V' generally requires choosing a basis of V . In contrast, the iso Λ from V onto V'' does not require a choice of basis and thus is considered more natural.

SOLUTION:

(a) $\forall \varphi \in V', v, w \in V, a \in \mathbf{F}, (\Lambda(v+aw))(\varphi) = \varphi(v+aw) = \varphi(v) + a\varphi(w) = (\Lambda v)(\varphi) + a(\Lambda w)(\varphi)$.

Thus $\Lambda(v+aw) = \Lambda v + a\Lambda w$. Hence Λ is linear.

(b) $(T''(\Lambda v))(\varphi) = ((\Lambda v) \circ T')(\varphi) = (\Lambda v)(T'(\varphi))$
 $= (T'(\varphi))(v) = (\varphi \circ T)(v) = \varphi(Tv) = (\Lambda(Tv))(\varphi)$.

Hence $T''(\Lambda v) = (\Lambda(Tv)) \Rightarrow T'' \circ \Lambda = \Lambda \circ T$.

(c) Suppose $\Lambda v = 0$. Then $\forall \varphi \in V', (\Lambda v)(\varphi) = \varphi(v) = 0 \Rightarrow v = 0$. Thus Λ is inje.

又 Because V is finite-dim. $\dim V = \dim V' = \dim V''$. Hence Λ is an iso. \square
