简介

这是我个人用于复习的笔记，一本习题补注。由于我个人的复习特点，我把许多对我个人而言没什么复习价值的习题作了省略。为什么我没有用中文？因为我将来要学习的绝大多数数学课本都是全英的，国内目前的专业翻译速度慢、不全面，况且对于专业学习者来说，直接使用英文不会造成任何困扰，并且我不愿意花费额外的时间去翻译，所以我用英文。但我讨厌英文单词的冗长性，这会让我复习起来很不爽，所以我对许多常用词汇适当地作了简写。这份笔记的内容范围和标识说明，我已经在README中写得很清楚，不再赘述。这份笔记尚处于缓慢的编撰进度中。

1·B

1 *Prove that $\forall v \in V, -(-v) = v$.*

Solution:

$$\left.\begin{aligned} -(-v) + (-v) &= 0 \\ v + (-v) &= 0 \end{aligned}\right\} \Rightarrow \text{By the uniqnes of add inv, we are done.}$$

Or. $-(-v) = (-1)\big((-1)v\big) = \big((-1)(-1)\big)v = 1 \cdot v = v.$ ☐

---

2 *Suppose $a \in \mathbf{F}, v \in V$, and $av = 0$. Prove that $a = 0$ or $v = 0$.*

Solution:

Suppose $a \neq 0, \exists\, a^{-1} \in \mathbf{F}, a^{-1}a = 1$, hence $v = 1 \cdot v = (a^{-1}a)v = a^{-1}(av) = a^{-1} \cdot 0 = 0.$ ☐

---

3 *Suppose $v, w \in V$. Explain why $\exists\,!\, x \in V, v + 3x = w$.*

Solution:

[*Existns*] Let $x = \dfrac{1}{3}(w - v)$.

[*Uniqnes*] Suppose $v + 3x_1 = w$,(I) $v + 3x_2 = w$ (II). Then (I) $-$ (II) : $3(x_1 - x_2) = 0 \Rightarrow x_1 = x_2$. ☐

Or. $\quad v + 3x = w \quad \Leftrightarrow \quad 3x = w - v \quad \Leftrightarrow \quad x = \frac{1}{3}(w - v).$ ☐

---

5 *Show that in the def of a vecsp, the add inv condition can be replaced by [1.29].*

Hint: *Suppose V satisfies all conds in the def, except we've replaced the add inv cond with [1.29].*
Prove that the add inv is true.

Solution:

Using [1.31]. $0v = 0$ for all $v \in V \Longleftrightarrow (1 + (-1))v = 1 \cdot v + (-1)v = v + (-v) = 0.$ ☐

---

6 *Let ∞ and $-\infty$ denote two distinct objects, neither of which is in $\mathbf{R}$.*
Define an add and scalar multi on $\mathbf{R} \cup \{\infty, -\infty\}$ as you could guess.
The operations of real numbers is as usual. While for $t \in \mathbf{R}$ define

$$t\infty = \begin{cases} -\infty & \text{if } t < 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t > 0, \end{cases} \qquad t(-\infty) = \begin{cases} -\infty & \text{if } t > 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t < 0, \end{cases}$$

(I) $t + \infty = \infty + t = \infty + \infty = \infty$,
(II) $t + (-\infty) = (-\infty) + t = (-\infty) + (-\infty) = -\infty$,
(III) $\infty + (-\infty) = (-\infty) + \infty = 0$.

With these operations of add and scalar multi, is $\mathbf{R} \cup \{\infty, -\infty\}$ a vecsp over $\mathbf{R}$? Explain.

Solution:

Not a vecpsp, since the add and scalar mult is not assoc and distr.
By Assoc: $(a + \infty) + (-\infty) \neq a + (\infty + (-\infty))$.
Or. By Distr: $\infty = (2 + (-1))\infty \neq 2\infty + (-\infty) = \infty + (-\infty) = 0.$ ☐

Ended

1·C [1]: 7, 8, 9, 15, 16, 17, 18, 11; [2]: 12, 13; [3]:21, 23, 22, 24.

7 *Give a nontrivial $U \subseteq \mathbf{R}^2$,*
U is closed under taking add invs and under add, but is not a subsp of $\mathbf{R}^2$.

Solution: Let $U = \mathbf{Z}^2, (\mathbf{Z}^*)^2, (\mathbf{Q}^*)^2, \mathbf{Q}^2 \backslash \{0\}$, or $\mathbf{R}^2 \backslash \{0\}$.

---

8 *Give a nontrivial $U \subseteq \mathbf{R}^2$, U is closed under scalar multi, but is not a subsp of $\mathbf{R}^2$.*

Solution: Let $U = \{(x,y) \in \mathbf{R}^2 : x = 0 \vee y = 0\}$.

---

9 *A function $f : \mathbf{R} \to \mathbf{R}$ is called periodic if $\exists\, p \in \mathbf{N}^+$, $f(x) = f(x+p)$ for all $x \in \mathbf{R}$.*
Is the set of periodic functions $\mathbf{R} \to \mathbf{R}$ a subsp of $\mathbf{R}^{\mathbf{R}}$? Explain.

Solution: Denote the set by S.

Suppose $h(x) = \cos x + \sin \sqrt{2}x \in S$, since $\cos x, \sin \sqrt{2}x \in S$.

Assume $\exists\, p \in \mathbf{N}^+$ such that $h(x) = h(x+p), \forall x \in \mathbf{R}$. Let $x = 0 \Rightarrow h(0) = h(\pm p) = 1$.

Thus $1 = \cos p + \sin \sqrt{2}p = \cos p - \sin \sqrt{2}p$

$\Rightarrow \sin \sqrt{2}p = 0,\ \cos p = 1 \Rightarrow p = 2k\pi, k \in \mathbf{Z}$, while $p = \dfrac{m\pi}{\sqrt{2}}, m \in \mathbf{Z}$.

Hence $2k = \dfrac{m}{\sqrt{2}} \Rightarrow \sqrt{2} = \dfrac{m}{2k} \in \mathbf{Q}$. Contradiction! $\square$

Or. Because $[\mathrm{I}] : \cos x + \sin \sqrt{2}x = \cos(x+p) + \sin(\sqrt{2}x + \sqrt{2}p)$. By differentiating twice,

$[\mathrm{II}] : \cos x + 2\sin \sqrt{2}x = \cos(x+p) + 2\sin(\sqrt{2}x + \sqrt{2}p)$.

$$\left.\begin{array}{ll} [\mathrm{II}] - [\mathrm{I}] : & \sin \sqrt{2}x = \sin(\sqrt{2}x + \sqrt{2}p) \\ 2[\mathrm{I}] - [\mathrm{II}] : & \cos x = \cos(x+p) \end{array}\right\} \Rightarrow \text{Let } x = 0,\ p = \frac{m\pi}{\sqrt{2}} = 2k\pi. \text{ Contradicts.}$$ $\square$

• *Suppose U, W, V_1, V_2, V_3 are subsps of V.*

15 $$U + U \ni u + w \in U.$$ $\square$

16 $$U + W \ni u + w = w + u \in W + U.$$ $\square$

17 $$(V_1 + V_2) + V_3 \ni (v_1 + v_2) + v_3 = v_1 + (v_2 + v_3) \in V_1 + (V_2 + V_3).$$ $\square$

---

18 *Does the add on the subsps of V have an add identity? Which subsps have add invs?*

Solution: Suppose Ω is the additive identity.

(a) For any subsp U of V. $\Omega \subseteq U + \Omega = U \Rightarrow \Omega \subseteq U$. Let $U = \{0\}$, then $\Omega = \{0\}$.

(b) Now suppose W is an add inv of $U \Rightarrow U + W = \Omega$.

Note that $U + W \supseteq U, W \Rightarrow \Omega \supseteq U, W$. Thus $U = W = \Omega = \{0\}$. $\square$

---

11 *Prove that the intersection of every collection of subsps of V is a subsp of V.*

Solution: Suppose $\{U_\alpha\}_{\alpha \in \Gamma}$ is a collection of subsps of V; here Γ is an arbitrary index set.

We show that $\bigcap_{\alpha \in \Gamma} U_\alpha$, which equals the set of vecs that are in U_α for each $\alpha \in \Gamma$, is a subsp of V.

(一) $0 \in \bigcap_{\alpha \in \Gamma} U_\alpha$. Nonempty.

(二) $u, v \in \bigcap_{\alpha \in \Gamma} U_\alpha \Rightarrow u + v \in U_\alpha,\ \forall \alpha \in \Gamma \Rightarrow u + v \in \bigcap_{\alpha \in \Gamma} U_\alpha$. Closed under add.

(三) $u \in \bigcap_{\alpha \in \Gamma} U_\alpha, \lambda \in \mathbf{F} \Rightarrow \lambda u \in U_\alpha,\ \forall \alpha \in \Gamma \Rightarrow \lambda u \in \bigcap_{\alpha \in \Gamma} U_\alpha$. Closed under scalar multi.

Thus $\bigcap_{\alpha \in \Gamma} U_\alpha$ is nonempty subset of V that is closed under add and scalar multi. $\square$

---

12 *Suppose U, W are subsps of V. Prove that $U \cup W$ is a subsp of $V \iff U \subseteq W$ or $W \subseteq U$.*

SOLUTION:

(a) Suppose $U \subseteq W$. Then $U \cup W = W$ is a subsp of V.

(b) Suppose $U \cup W$ is a subsp of V. Suppose $U \not\subseteq W$ and $U \not\supseteq W$ ($U \cup W \neq U$ and W).

Then $\forall a \in U \wedge a \notin W, b \in W \wedge b \notin U,\ a + b \in U \cup W$.

$$\left.\begin{array}{l}\text{If } a+b \in U \Rightarrow b = (a+b) + (-a) \in U, \text{ contradicts!} \\ \text{If } a+b \in W \Rightarrow a = (a+b) + (-b) \in W, \text{ contradicts!}\end{array}\right\} \Rightarrow U \cup W = U \text{ or } W. \text{ Contradicts!}$$

Thus $U \subseteq W$ and $U \supseteq W$. $\square$

---

13 *Prove that the union of three subsps of V is a subsp of V if and only if one of the subsps contains the other two.*

This exercise is not true if we replace $\mathbf{F}$ *with a field containing only two elements.*

SOLUTION:

Suppose U_1, U_2, U_3 are subsps of V. Denote $U_1 \cup U_2 \cup U_3$ by $\mathcal{U}$.

(a) Suppose that one of the subsps contains the other two.

Then $\mathcal{U} = U_1, U_2$ or U_3 is a subsp of V.

(b) Suppose that $U_1 \cup U_2 \cup U_3$ is a subsp of V.

Distinctively notice that $A \cup B \cup C = (A \cup B) \cup (B \cup C) = (A \cup C) \cup (B \cup C) = (A \cup B) \cup (A \cup C)$.

Also note that, if $U \cup W = V$ is a vecsp, then in general U and W are not subsps of V.

Hence this literal trick is invalid.

(I) If any U_j is contained in the union of the other two, say $U_1 \subseteq U_2 \cup U_3$, then $\mathcal{U} = U_2 \cup U_3$.

By applying Problem (12) we conclude that one U_j contains the other two. Thus we are done.

(II) Assume that no U_j is contained in the union of the other two,

and no U_j contains the union of the other two.

Say $U_1 \not\subseteq U_2 \cup U_3$ and $U_1 \not\supseteq U_2 \cup U_3$.

$\exists\, u \in U_1 \wedge u \notin U_2 \cup U_3;\ v \in U_2 \cup U_3 \wedge v \notin U_1$. Let $W = \{v + \lambda u : \lambda \in \mathbf{F}\} \subseteq \mathcal{U}$.

Note that $W \cap U_1 = \emptyset$, for if $v + \lambda u \in U_1$ then $v + \lambda u - \lambda u = v \in U_1$.

又 $W \subseteq U_1 \cup U_2 \cup U_3$. Thus $W \subseteq U_2 \cup U_3$.

$\forall v + \lambda u \in W, \exists\, i \in \{2, 3\}, v + \lambda u \in U_i$.

Because U_2, U_3 are subsps and hence have at least one element.

If $U_2 = U_3$, then $\mathcal{U} = U_1 \cup U_2$ and by Problem (12) we are done.

Otherwise, $\exists$ distinct $\lambda, \mu \in \mathbf{F}, v + \lambda u, v + \mu u \in U_i$ for some $i \in \{2, 3\}$.

Then $u \in U_i$ while $u \notin U_2 \cup U_3$. Contradicts. $\square$

• **EXAMPLE:** *Suppose $U = \{(x, x, y, y) \in \mathbf{F}^4 : x, y \in \mathbf{F}\}, W = \{(x, x, x, y) \in \mathbf{F}^4 : x, y \in \mathbf{F}\}$. Prove that $U + W = \{(x, x, y, z) \in \mathbf{F}^4 : x, y, z \in \mathbf{F}\}$.*

Let T denote $\{(x, x, y, z) \in \mathbf{F}^4 : x, y, z \in \mathbf{F}\}$. By def, $U + W \subseteq T$.

And $T \ni (x, x, y, z) \Rightarrow (0, 0, y - x, y - x) + (x, x, x, -y + x + z) \in U + W$. Hence $T \subseteq U + W$. $\square$

---

21 *Suppose* $U = \{(x,y,x+y,x-y,2x) \in \mathbf{F}^5 : x,y \in \mathbf{F}\}$. *Find a* W *such that* $\mathbf{F}^5 = U \oplus W$.

SOLUTION:

Let $W = \{(0,0,z,w,u) \in \mathbf{F}^5 : z,w,u \in \mathbf{F}\}$. Then $U \cap W = \{0\}$.

And $\mathbf{F}^5 \ni (x,y,z,w,u) \Rightarrow (x,y,x+y,x-y,2x) + (0,0,z-x-y,w-x-y,u-2x) \in U + W$. ☐

---

23 *Give an example of vecsps* V_1, V_2, U *such that* $V_1 \oplus U = V_2 \oplus U$, *but* $V_1 \neq V_2$.

SOLUTION: $V = \mathbf{F}^2, U = \{(x,x) \in \mathbf{F}^2\}, V_1 = \{(x,0) \in \mathbf{F}^2\}, V_2 = \{(0,x) \in \mathbf{F}^2\}$.

---

22 *Suppose* $U = \{(x,y,x+y,x-y,2x) \in \mathbf{F}^5 : x,y \in \mathbf{F}\}$.
Find nonzero subsps W_1, W_2, W_3 *of* $\mathbf{F}^5$ *such that* $\mathbf{F}^5 = U \oplus W_1 \oplus W_2 \oplus W_3$.

SOLUTION:

(1) Let $W_1 = \{(0,0,z,0,0) \in \mathbf{F}^5\} \Rightarrow W_1 \cap U = \{0\}$. Now $U \oplus W_1 = \{(x,y,z,x-y,2x) \in \mathbf{F}^5\} = U_1$.
(2) Let $W_2 = \{(0,0,0,w,0) \in \mathbf{F}^5\} \Rightarrow W_2 \cap U_1 = \{0\}$. Now $U_1 \oplus W_2 = \{(x,y,z,w,2x) \in \mathbf{F}^5\} = U_2$.
(3) Let $W_3 = \{(0,0,0,0,u) \in \mathbf{F}^5\} \Rightarrow W_3 \cap U_2 = \{0\}$. Now $U_2 \oplus W_3 = \{(x,y,z,w,u) \in \mathbf{F}^5\} = U_3$.
Thus $\mathbf{F}^5 = ((U \oplus W_1) \oplus W_2) \oplus W_3$. ☐

---

24 *Let* $V_E = \{f \in \mathbf{R}^{\mathbf{R}} : f \text{ is even}\}, V_O = \{f \in \mathbf{R}^{\mathbf{R}} : f \text{ is odd}\}$. *Show that* $V_E \oplus V_O = \mathbf{R}^{\mathbf{R}}$.

SOLUTION:

(a) $V_E \cap V_O = \{f \in \mathbf{R}^{\mathbf{R}} : f(x) = f(-x) = -f(-x)\} = \{0\}$.

(b) $$\left.\begin{array}{r} f_e \in V_E \Longleftrightarrow f_e(x) = f_e(-x) \Longleftarrow \text{let } f_e(x) = \dfrac{g(x)+g(-x)}{2} \\ f_o \in V_O \Longleftrightarrow f_o(x) = -f_o(-x) \Longleftarrow \text{let } f_o(x) = \dfrac{g(x)-g(-x)}{2} \end{array}\right\} \Rightarrow \forall g \in \mathbf{R}^{\mathbf{R}}, g(x) = f_e(x) + f_o(x).$$ ☐

ENDED

2·A

[1]: 2; [2]: 1, 6, (4E 3, 14), 10; [3]: 11, 14, 16, 17.

2 (a) $[P]$ *A list* (v) *of length* 1 *in* V *is linely inde* $\Longleftrightarrow v \neq 0$. $[Q]$
(b) $[P]$ *A list* (v,w) *of length* 2 *in* V *is linely inde* $\Longleftrightarrow \forall \lambda, \mu \in \mathbf{F}, v \neq \lambda w, w \neq \mu v$. $[Q]$

SOLUTION:

(a) $Q \overset{1}{\Rightarrow} P : v \neq 0 \Rightarrow$ if $av = 0$ then $a = 0 \Rightarrow (v)$ linely inde.
$P \overset{2}{\Rightarrow} Q : (v)$ linely inde $\Rightarrow v \neq 0$, for if $v = 0$, then $av = 0 \not\Rightarrow a = 0$.

OR. | $\neg Q \overset{3}{\Rightarrow} \neg P : v = 0 \Rightarrow av = 0$ while we can let $a \neq 0 \Rightarrow (v)$ is linely dep.
| $\neg P \overset{4}{\Rightarrow} \neg Q : (v)$ linely dep $\Rightarrow av = 0$ while $a \neq 0 \Rightarrow v = 0$.

COMMENT: (1) with (3) and (2) with (4) will do as well. ☐

(b) $P \overset{1}{\Rightarrow} Q : (v,w)$ linely inde $\Rightarrow$ if $av + bw = 0$, then $a = b = 0 \Rightarrow$ no scalar multi.
$Q \overset{2}{\Rightarrow} P$: no scalar multi $\Rightarrow$ if $av + bw = 0$, then $a = b = 0 \Rightarrow (v,w)$ linely inde.

OR. | $\neg P \overset{3}{\Rightarrow} \neg Q : (v,w)$ linely dep $\Rightarrow$ if $av + bw = 0$, then a or $b \neq 0 \Rightarrow$ scalar multi
| $\neg Q \overset{4}{\Rightarrow} \neg P$: scalar multi $\Rightarrow$ if $av + bw = 0$, then a or $b \neq 0 \Rightarrow$ linely dep.

COMMENT: (1) with (3) and (2) with (4) will do as well. ☐

---

1 *Prove that* $[P]$ (v_1, v_2, v_3, v_4) *spans* $V \iff (v_1 - v_2, v_2 - v_3, v_3 - v_4, v_4)$ *also spans* V $[Q]$.

SOLUTION:

Notice that $V = \operatorname{span}(v_1, \dots, v_n) \iff \forall v \in V, \exists\, a_1, \dots, a_n \in \mathbf{F}, v = a_1 v_1 + \cdots + a_n v_n$.

Assume that $\forall v \in V, \exists\, a_1, \dots, a_4, b_1, \dots, b_4 \in \mathbf{F}$, (that is, if $\exists\, a_i$, then we are to find b_i, vice versa)

$$\begin{aligned} v &= a_1 v_1 + a_2 v_2 + a_3 v_3 + a_4 v_4 \\ &= b_1(v_1 - v_2) + b_2(v_2 - v_3) + b_3(v_3 - v_4) + b_4 v_4 \\ &= b_1 v_1 + (b_2 - b_1)v_2 + (b_3 - b_2)v_3 + (b_4 - b_3)v_4. \end{aligned}$$

Now we can let $b_i = \sum_{r=1}^{i} a_r$ if we are to prove Q with P already assumed;

or let $a_i = b_i - b_{i-1}$ with $b_0 = 0$, if we are to prove P with Q already assumed. □

---

6 *Prove that* $[P]$ (v_1, v_2, v_3, v_4) *is linely inde*

$\iff [Q]$ $(v_1 - v_2, v_2 - v_3, v_3 - v_4, v_4)$ *is linely inde.*

SOLUTION:

$$\begin{aligned} P \Rightarrow Q : &\ a_1(v_1 - v_2) + a_2(v_2 - v_3) + a_3(v_3 - v_4) + a_4 v_4 = 0 \\ &\Rightarrow a_1 v_1 + (a_2 - a_1)v_2 + (a_3 - a_2)v_3 + (a_4 - a_3)v_4 = 0 \\ &\Rightarrow a_1 = a_2 - a_1 = a_3 - a_2 = a_4 - a_3 = 0 \end{aligned}$$

$$\begin{aligned} Q \Rightarrow P : &\ a_1 v_1 + a_2 v_2 + a_3 v_3 + a_4 v_4 = 0 \\ &\Rightarrow a_1(v_1 - v_2) + (a_1 + a_2)(v_2 - v_3) + (a_1 + a_2 + a_3)(v_3 - v_4) + (a_1 + \cdots + a_4)v_4 = 0 \\ &\Rightarrow a_1 = a_1 + a_2 = a_1 + a_2 + a_3 = a_1 + \cdots + a_4 = 0. \end{aligned}$$

□

• *Suppose* $(v_1, \dots, v_m)$ *is a list of vecs in* V. *For each* k, *let* $w_k = v_1 + \cdots + v_k$.

(a) *Show that* $\operatorname{span}(v_1, \dots, v_m) = \operatorname{span}(w_1, \dots, w_m)$.

(b) *Show that* $[P]$ $(v_1, \dots, v_m)$ *is linely inde* $\iff (w_1, \dots, w_m)$ *is linely inde* $[Q]$.

SOLUTION:

(a) ***let*** $a_k = \sum_{j=1}^{k} b_j \Leftarrow\ a_1 v_1 + \cdots + a_m v_m = b_1 w_1 + \cdots + b_m w_m\ \Rightarrow$ ***let*** $b_1 = a_1,\ b_k = a_k - \sum_{j=1}^{k-1} b_j = \sum_{j=1}^{k} (-1)^{k-j} a_j$.

(b) $P \Rightarrow Q :\ b_1 w_1 + \cdots + b_m w_m = 0 = a_1 v_1 + \cdots + a_m v_m,$ where $0 = a_k = \sum_{j=1}^{k} b_k$.

$Q \Rightarrow P :\ a_1 v_1 + \cdots + a_m v_m = 0 = b_1 w_1 + \cdots + b_m w_m = 0,$ where $0 = b_1 = a_1,\ 0 = b_k = \sum_{j=1}^{k} (-1)^{k-j} a_j$

OR. Because $W = \operatorname{span}(v_1, \dots, v_m) = \operatorname{span}(w_1, \dots, w_m)$.

By [2.21](b), a list of length $(m-1)$ spans W, then by [2.23],

$(w_1, \dots, w_m)$ linely dep $\Rightarrow (v_1, \dots, v_m)$ linely dep. Conversely it is true as well. □

---

10 *Suppose* $(v_1, \dots, v_m)$ *is linely inde in* V *and* $w \in V$.

Prove that if $(v_1 + w, \dots, v_m + w)$ *is linely depe, then* $w \in \operatorname{span}(v_1, \dots, v_m)$.

SOLUTION:

Suppose $a_1(v_1 + w) + \cdots + a_m(v_m + w) = 0, \exists\, a_i \neq 0 \Rightarrow a_1 v_1 + \cdots + a_m v_m = 0 = -(a_1 + \cdots + a_m)w$.

Then $a_1 + \cdots + a_m \neq 0$, for if not, $a_1 v_1 + \cdots + a_m v_m = 0$ while $a_i \neq 0$ for some i, contradicts. □

OR. By contrapositive, $w \notin \operatorname{span}(v_1, \dots, v_m)$, similarly. □

OR. $\exists\, j \in \{1, \dots, m\}, v_j + w \in \operatorname{span}(v_1 + w, \dots, v_{j-1} + w)$. If $j = 1$ then $v_1 + w = 0$ and we are done.

If $j \geqslant 2$, then $\exists\, a_i \in \mathbf{F}, v_j + w = a_1(v_1 + w) + \cdots + a_{j-1}(v_{j-1} + w) \iff v_j + \lambda w = a_1 v_1 + \cdots + a_{j-1} v_{j-1}$.

Where $\lambda = 1 - (a_1 + \cdots + a_{j-1})$. Note that $\lambda \neq 0$, for if not, $v_j + \lambda w = v_j \in \operatorname{span}(v_1, \dots, v_{j-1})$, contradicts.

Now $w = \lambda^{-1}(a_1 v_1 + \cdots + a_{j-1} v_{j-1} - v_j) \Rightarrow w \in \operatorname{span}(v_1, \dots, v_m)$. □

---

11 *Suppose* $(v_1, \dots, v_m)$ *is linely inde in* V *and* $w \in V$.
Show that $[P]$ $(v_1, \dots, v_m, w)$ *is linely inde* $\Longleftrightarrow w \notin \operatorname{span}(v_1, \dots, v_m)$ $[Q]$.

Solution: $\neg Q \Rightarrow \neg P$: Suppose $w \in \operatorname{span}(v_1, \dots, v_m)$. Then $(v_1, \dots, v_m, w)$ is linely depe.
$\neg P \Rightarrow \neg Q$: Suppose $(v_1, \dots, v_m, w)$ is linely dep. Then by [2.21] $w \in \operatorname{span}(v_1, \dots, v_m)$. ☐

---

14 *Prove that* $[P]$ V *is infinite-dim* $\Longleftrightarrow$ $[Q]$ $\left|\begin{array}{l}\textit{there is a sequence } (v_1, v_2, \dots) \textit{ in } V \textit{ such that} \\ (v_1, \dots, v_m) \textit{ is linely inde for each } m \in \mathbf{N}^+.\end{array}\right.$

Solution:

$P \Rightarrow Q$: Suppose V is infinite-dim, so that no list spans V.
Step 1 Pick a $v_1 \neq 0$, (v_1) linely inde.
Step m Pick a $v_m \notin \operatorname{span}(v_1, \dots, v_{m-1})$, by Problem (10)(b), $(v_1, \dots, v_m)$ is linely inde.
This process recursively defines the desired sequence $(v_1, v_2, \dots)$.

$\neg P \Rightarrow \neg Q$: Suppose V is finite-dim and $V = \operatorname{span}(w_1, \dots, w_m)$.
Let $(v_1, v_2, \dots)$ be a sequence in V, then $(v_1, v_2, \dots, v_{m+1})$ must be linely dep.

Or. $Q \Rightarrow P$: Suppose there is such a sequence.
Choose an m. Suppose a linely inde list $(v_1, \dots, v_m)$ spans V.
(Similar to [2.16]) Then $\exists\, v_{m+1} \in V \backslash \operatorname{span}(v_1, \dots, v_m)$.
Hence no list spans V. Thus V is infinite-dim. ☐

---

16 *Prove that the vecsp of all continuous functions in* $\mathbf{R}^{[0,1]}$ *is infinite-dim.*

Solution: Denote the vecsp by U.

Choose an $m \in \mathbf{N}^+$. Suppose $a_0, \dots, a_m \in \mathbf{R}$ are such that $a_0 + a_1 x + \cdots + a_m x^m = 0$, $\forall x \in [0,1]$.
Then the poly has infinitely many roots and hence $a_0 = \cdots = a_m = 0$.
Thus $(1, x, \dots, x^m)$ is linely inde in $\mathbf{R}^{[0,1]}$. Similar to [2.16], U is infinite-dim. ☐

Or. Note that for $a_n = \dfrac{1}{n}$, $\quad a_1 < a_2 < \cdots < a_m, \quad \forall m \in \mathbf{N}^+$.

Suppose $f_n = \begin{cases} x - \dfrac{1}{n}, & x \in \left(\dfrac{1}{n}, 1\right) \\ 0, & x \in \left[0, \dfrac{1}{n}\right] \end{cases}$ $\Bigg|$ Then for any m, $f_1\left(\dfrac{1}{m}\right) = \cdots = f_m\left(\dfrac{1}{m}\right)$, while $f_{m+1}\left(\dfrac{1}{m}\right) \neq 0$.

Hence $f_{m+1} \notin \operatorname{span}(f_1, \dots, f_m)$. Thus by Problem (14), U is infinite-dim. ☐

---

17 *Suppose* $p_0, p_1, \dots, p_m \in \mathcal{P}_m(\mathbf{F})$ *such that* $p_k(2) = 0$ *for each* $k \in \{0, \dots, m\}$.
Prove that $(p_0, p_1, \dots, p_m)$ *is not linely inde in* $\mathcal{P}_m(\mathbf{F})$.

Solution:

Suppose $(p_0, p_1, \dots, p_m)$ is linely inde. Define $p \in \mathcal{P}_m(\mathbf{F})$ by $p(z) = z$ $\forall z \in \mathbf{F}$.
But $\forall a_i \in \mathbf{F}, z \neq a_0 p_0(z) + \cdots + a_m p_m(z)$, for if not, let $z = 2$, contradicts. Thus $z \notin \operatorname{span}(p_0, p_1, \dots, p_m)$.
Then $\operatorname{span}(p_0, p_1, \dots, p_m) \subsetneq \mathcal{P}_m(\mathbf{F})$ while the list $(p_0, p_1, \dots, p_m)$ has length $(m+1)$.
Hence $(p_0, p_1, \dots, p_m)$ is linely depe in $\mathcal{P}_m(\mathbf{F})$.
For if not, because $(1, z, \dots, z^m)$ of length $(m+1)$ spans $\mathcal{P}_m(\mathbf{F})$,
thus by [2.23] trivially, $(p_0, p_1, \dots, p_m)$ spans $\mathcal{P}_m(\mathbf{F})$. Contradicts. ☐

Or. Note that $\mathcal{P}_m(\mathbf{F}) = \operatorname{span}(\underbrace{1, z, \dots, z^m}_{\text{of length } (m+1)})$. $(p_0, p_1, \dots, p_m, z)$ of length $(m+2)$ is linely dep.

(See the above) Now $z \notin \operatorname{span}(p_0, p_1, \dots, p_m)$ and hence $(p_0, p_1, \dots, p_m)$ is linely dep. ☐

Ended

2·B [1]: 7, 1, (4E 9,5), 8.

7 *Prove or give a counterexample: If (v_1, v_2, v_3, v_4) is a basis of V and U is a subsp of V such that $v_1, v_2 \in U$ and $v_3 \notin U$ and $v_4 \notin U$, then (v_1, v_2) is a basis of U.*

Solution: A counterexample:

Let $V = \mathbf{R}^4$ and e_j be the j^{th} standard basis.

Let $v_1 = e_1, v_2 = e_2, v_3 = e_3 + e_4, v_4 = e_4$. Then $(v_1, \dots, v_4)$ is a basis of $\mathbf{R}^4$.

Let $U = \operatorname{span}(e_1, e_2, e_3) = \operatorname{span}(v_1, v_2, v_3 - v_4)$. Then $v_3 \notin U$ and (v_1, v_2) is not a basis of U. ☐

• **Note For "$\complement_V U \cap \{0\}$":**

"$\complement_V U \cap \{0\}$" is supposed to be a subsp W such that $V = U \oplus W$.

But if we let $u \in U \backslash \{0\}$ and $w \in W \backslash \{0\}$, then $\left.\begin{array}{l} w \in \complement_V U \cap \{0\} \\ u \pm w \in \complement_V U \cap \{0\} \end{array}\right\} \Rightarrow u \in \complement_V U \cap \{0\}$. Contradicts.

To fix this, denote the set $\{W_1, W_2 \dots\}$ by $\mathcal{S}_V U$, where for each W_i, $V = U \oplus W_i$. See also in (1.C.23).

---

1 *Find all vecsps that have exactly one basis.*

Solution: The trivial vecsp $\{0\}$ will do. Indeed, the only basis of $\{0\}$ is the empty list.

Now consider a field containing only the add identity 0 and the multi identity 1,

and we specify that $1 + 1 = 0$. Hence the vecsp $\{0, 1\}$ will do, the list (1) will be the unique basis.

Are there other vecsps? Suppose so.

(I) Consider $\mathbf{F} = \mathbf{R}$ or $\mathbf{C}$. Let $(v_1, \dots, v_m)$ be a basis of $V \neq \{0\}$.

While there are infinitely many bases distinct from this one. Hence we fail.

(II) Consider other $\mathbf{F}$. Note that a field contains at least 0 and 1

By ***some theories or facts*** given in the course of Elementary Abstract Algebra, we fail. ☐

• *Suppose $(v_1, \dots, v_m)$ is a list of vecs in V. For $k \in \{1, \dots, m\}$, let $w_k = v_1 + \cdots + v_k$. Show that $[P]\ B_V = (v_1, \dots, v_m) \Longleftrightarrow [Q]\ B_W = (w_1, \dots, w_m)$.*

Solution: Notice that $B_U = (u_1, \dots, u_n) \Longleftrightarrow \forall u \in U, \exists!\, a_i \in \mathbf{F}, u = a_1 u_1 + \cdots + a_n u_n$.

$P \Rightarrow Q: \forall v \in V, \exists!\, a_i \in \mathbf{F},\ v = a_1 v_1 + \cdots + a_m v_m \Rightarrow v = b_1 w_1 + \cdots + b_m v_m, \exists!\, b_k = \sum_{j=1}^{k} (-1)^{k-j} a_j$.

$Q \Rightarrow P: \forall v \in V, \exists!\, b_i \in \mathbf{F},\ v = b_1 w_1 + \cdots + b_m w_m \Rightarrow v = a_1 v_1 + \cdots + a_m v_m, \exists!\, a_k = \sum_{j=1}^{k} b_j$. ☐

• *Suppose V is finite-dim and U, W are subsps of V such that $V = U + W$. Let $B_U = (u_1, \dots, u_m)$, $B_W = (w_1, \dots, w_n)$. Prove that $\exists\, B_V$ consisting of vecs in $U \cup W$.*

Solution:

$V = \operatorname{span}(u_1, \dots, u_m) + \operatorname{span}(w_1, \dots, w_n) = \operatorname{span}(u_1, \dots, u_m, w_1, \dots, w_n)$. By [2.31], we get the basis ☐

---

8 *Suppose U and W are subsps of V such that $V = U \oplus W$. Let $B_U = (u_1, \dots, u_m)$, $B_W = (w_1, \dots, w_n)$. Prove that $B_V = (u_1, \dots, u_m, w_1, \dots, w_n)$.*

Solution:

$\forall v \in V, \exists!\, u \in U, w \in W, v = u + w = (a_1 u_1 + \cdots + a_m u_m) + (b_1 w_1 + \cdots + b_n w_n), \exists!\, a_i, b_i \in \mathbf{F}$

$\Rightarrow (a_1 u_1 + \cdots + a_m u_m) = -(b_1 w_1 + \cdots + b_n w_n) \in U \cap W = \{0\} \Rightarrow a_1 = \cdots = a_m = b_1 = \cdots = b_n = 0$ ☐

Ended

• **NOTE FOR** *linely inde sequence and [2.34]:*
"$V = \operatorname{span}(v_1, \dots, v_n, \dots)$" is an invalid expression.
If we allow using "infinite list", then we must guarantee that $(v_1, \dots, v_n, \dots)$ is a spanning "list" such that for all $v \in V$, there exists a smallest positive integer n such that $v = a_1 v_1 + \cdots + a_n v_n$,
The key point is, how can we guarantee that such a "list" exists?

2·C

[1]: 1, 9, 10; [2]: (4E 10); [3]: 7, (4E 14, 15, 16); [4]: 14, 17; [5]: 15.

1 (COROLLARY for [2.38,39])
Suppose U is a subsp of V such that $\dim V = \dim U$. Then $V = U$.

---

9 *Suppose $(v_1, \dots, v_m)$ is linely inde in V and $w \in V$.*
Prove that $\dim \operatorname{span}(v_1 + w, \dots, v_m + w) \geq m - 1$.

SOLUTION: Using the result of Problem (10) and (11) in 2.A.
Note that $v_i - v_1 = (v_i + w) - (v_1 + w) \in \operatorname{span}(v_1 + w, \dots, v_n + w)$, for each $i = 1, \dots, m$.
$(v_1, \dots, v_m)$ linely inde $\Rightarrow (v_1, v_2 - v_1, \dots, v_m - v_1)$ linely inde $\Rightarrow \underbrace{(v_2 - v_1, \dots, v_m - v_1)}_{\text{of length } (m-1)}$ linely inde.
又 $w \notin \operatorname{span}(v_1, \dots, v_m) \Rightarrow (v_1 + w, \dots, v_m + w)$ is linely inde.
Hence $m \geqslant \dim \operatorname{span}(v_1 + w, \dots, v_m + w) \geq m - 1$. □

---

10 *Suppose m is a positive integer and $p_0, p_1, \dots, p_m \in \mathcal{P}(\mathbf{F})$ are such that each p_k has degree k. Prove that $(p_0, p_1, \dots, p_m)$ is a basis of $\mathcal{P}_m(\mathbf{F})$.*

SOLUTION:
Using mathematical induction on m.
(i) For p_0, $\deg p_0 = 0 \Rightarrow \operatorname{span}(p_0) = \operatorname{span}(1)$.
(ii) Suppose for $i \geqslant 1, \operatorname{span}(p_0, p_1, \dots, p_i) = \operatorname{span}(1, x, \dots, x^i)$.
Then $\operatorname{span}(p_0, p_1, \dots, p_i, p_{i+1}) \subseteq \operatorname{span}(1, x, \dots, x^i, x^{i+1})$.
又$\deg p_{i+1} = i + 1$, $p_{i+1}(x) = a_{i+1} x^{i+1} + r_{i+1}(x)$; $a_{i+1} \neq 0$, $\deg r_{i+1} \leqslant i$.
$$\Rightarrow x^{i+1} = \frac{1}{a_{i+1}} \Big(p_{i+1}(x) - r_{i+1}(x) \Big) \in \operatorname{span}(1, x, \dots, x^i, p_{i+1}) = \operatorname{span}(p_0, p_1, \dots, p_i, p_{i+1}).$$
$\therefore x^{i+1} \in \operatorname{span}(p_0, p_1, \dots, p_i, p_{i+1}) \Rightarrow \operatorname{span}(1, x, \dots, x^i, x^{i+1}) \subseteq \operatorname{span}(p_0, p_1, \dots, p_i, p_{i+1})$.
Thus $\mathcal{P}_m(\mathbf{F}) = \operatorname{span}(1, x, \dots, x^m) = \operatorname{span}(p_0, p_1, \dots, p_m)$. □

OR. 用比较系数法. Denote the coefficient of x^i in $p \in \mathcal{P}(\mathbf{F})$ by $\xi_i(p)$.
Suppose $L = a_m p_m(x) + \cdots + a_1 p_1(x) + a_0 p_0(x) = 0 \cdot x^m + \cdots + 0 \cdot x + 0 \cdot 1 = R, \forall x \in \mathbf{F}$.
We use induction on m to show that $a_m = \cdots = a_0 = 0$.
(i) $k = m$, $\xi_m(L) = a_m \xi_m(p_m) = \xi_m(R) = 0$ 又 $\deg p_m = m$, $\xi_m(p_m) \neq 0 \Rightarrow a_m = 0$.
Now $L = a_{m-1} p_{m-1}(x) + \cdots + a_0 p_0(x)$.
(ii) $1 \leqslant k \leqslant m$, $\xi_k(L) = a_k \xi_k(p_k) = \xi_k(R) = 0$ 又 $\deg p_k = k$, $\xi_k(p_k) \neq 0 \Rightarrow a_k = 0$.
Now $L = a_{k-1} p_{k-1}(x) + \cdots + a_0 p_0(x)$. □

- (4E 2.C.10) *Suppose m is a positive integer. For $0 \leqslant k \leqslant m$, let $p_k(x) = x^k(1-x)^{m-k}$. Show that $(p_0, \dots, p_m)$ is a basis of $\mathcal{P}(\mathbf{F})$.*

  The basis in this exercise leads to what are called Bernstein polynomials. You can do a web search to learn how Bernstein polynomials are used to approximate continuous functions on $[0,1]$.

Solution: Using mathematical induction.

(i) $k = 0,1,2$, $p_m(x) = x^m$, $p_{m-1}(x) = x^{m-1} - x^m$, $p_{m-2}(x) = x^{m-2} + x^m - 2x^{m-1}$.

(ii) $k \geqslant 2$. Suppose for $p_{m-k}(x), \exists\,! a_i \in \mathbf{F}, x^{m-k} = p_{m-k}(x) + a_m x^m + \cdots + a_{m-k+1}x^{m-k+1}$.

Then for $p_{m-k-1}(x), \exists\,! c_i \in \mathbf{F}$,

$$x^{m-k-1} = p_{m-k-1}(x) + C_{k+1}^{1}(-1)^2 x^{m-k} + \cdots + C_{k+1}^{k}(-1)^{k+1}x^{m-1} + (-1)^{k-2}x^m$$

$$\Rightarrow c_{m-i} = C_{k+1}^{k+1-i}(-1)^{k-i}.$$

Thus for each x^i, $\exists\,! b_i \in \mathbf{F}, x^i = b_m p_m(x) + \cdots + b_{m-i}p_{m-i}(x)$

$$\Rightarrow \operatorname{span}(x^m, \dots, x, 1) = \operatorname{span}(\underbrace{p_m, \dots, p_1, p_0}_{\text{Basis}}).$$

□

Or. For any $m, k \in \mathbf{N}^+$ such that $k \leqslant m$. Define $p_{k,m}$ by $p_{k,m}(x) = x^k(1-x)^{m-k}$.

Define the statement $S(m)$ by $S(m) : \underbrace{(p_{0,m}, \dots, p_{m,m})}_{\dim \mathcal{P}_m(\mathbf{F}) = m+1}$ is linely inde (and therefore is a basis).

We use induction on to show that $S(m)$ holds for all $m \in \mathbf{N}^+$.

(i) $m = 1$. Suppose $a_0(1-x) + a_1 x = 0, \forall x \in \mathbf{F}$. Then $\begin{cases} x = 0 \Rightarrow a_0 = 0; \\ x = 1 \Rightarrow a_1. \end{cases}$

$m = 2$. Suppose $a_0(1-x)^2 + a_1(1-x)x + a_2x^2, \forall x \in \mathbf{F}$. Then $\begin{cases} x = 0 \Rightarrow a_0 + a_1 = 0; \\ x = 1 \Rightarrow a_2 = 0; \\ x = 2 \Rightarrow a_0 + 2a_1 = 0. \end{cases}$

(ii) $2 \leqslant m$. Assume that $S(m)$ holds.

Suppose $\sum_{k=0}^{m+2} a_k p_{k,m+2}(x) = \sum_{k=0}^{m+2} a_k x^k (1-x)^{m+2-k} = 0, \forall x \in \mathbf{F}$.

While $x = 0 \Rightarrow a_0 = 0;\ x = 1 \Rightarrow a_{m+2} = 0$. Then $\sum_{k=1}^{m+1} a_k x^k (1-x)^{m+2-k} = 0;$

And note that $\sum_{k=1}^{m+1} a_k x^k (1-x)^{m+2-k}$

$$= x(1-x)\sum_{k=1}^{m+1} a_k x^{k-1}(1-x)^{m+1-k}$$

$$= x(1-x)\sum_{k=0}^{m} a_{k+1} x^k (1-x)^{m-k} = x(1-x)\sum_{k=0}^{m} a_{k+1} p_{k,m}(x).$$

Hence $x(1-x)\sum_{k=0}^{m} a_{k+1}p_{k,m}(x) = 0, \forall x \in \mathbf{F} \Rightarrow \sum_{k=0}^{m} a_{k+1}p_{k,m}(x) = 0, \forall x \in \mathbf{F}\backslash\{0,1\}$.

Because $\sum_{k=0}^{m} a_{k+1}p_{k,m}(x)$ has infinitely many zeros. We have $\sum_{k=0}^{m} a_{k+1}p_{k,m}(x) = 0, \forall x \in \mathbf{F}$.

By assumption, $a_1 = \cdots = a_m = 0$, while $a_0 = a_{m+2} = 0$,

and also $a_{m+1} = 0$ (because $\sum_{k=0}^{m} a_{k+1}p_{k,m}(x) = a_{m+1}p_{m,m}(x) = a_{m+1}x^m = 0, \forall x \in \mathbf{F}.$)

Thus $(p_{0,m+2}, \dots, p_{m+2,m+2})$ is linely inde and $S(m+2)$ holds.

Since $\forall m \in \mathbf{N}^+, S(m) \Rightarrow S(m+2)$. We have $\left| \begin{matrix} \forall k \in \mathbf{N}, S(2k+1) \text{ holds} \\ \forall k \in \mathbf{N}^+, S(2k) \text{ holds} \end{matrix} \right\} \Rightarrow S(m)$ holds.

□

7 (a) *Let* $U = \{p \in \mathcal{P}_4(\mathbf{F}) : p(2) = p(5) = p(6)\}$. *Find a basis of* U.
(b) *Extend the basis in* (b) *to a basis of* $\mathcal{P}_4(\mathbf{F})$.
(c) *Find a subsp* W *of* $\mathcal{P}_4(\mathbf{F})$ *such that* $\mathcal{P}_4(\mathbf{F}) = U \oplus W$.

SOLUTION: Suppose $p(z) = az^4 + bz^3 + cz^2 + dz + e$ such that $p(2) = p(5) = p(6)$.

Then $\left| \begin{array}{r} p(2) = 16a + 8b + 4c + 2d + e \ \ (\mathrm{I}) \\ p(5) = 625a + 125b + 25c + 5d + e \ \ (\mathrm{II}) \\ p(6) = 1296a + 216b + 36c + 6d + e \ \ (\mathrm{III}) \end{array} \right\} \Rightarrow \left\{ \begin{array}{l} (\mathrm{II}) - (\mathrm{I}) = 0 \\ (\mathrm{III}) - (\mathrm{II}) = 0 \\ (\mathrm{III}) - (\mathrm{I}) = 0 \end{array} \right.$

You don't have to compute to know that the dimension of the set of solutions is 3.
(Because $\nexists\, p \in \mathcal{P}_2(\mathbf{F})$ with $1 \leqslant \deg p \leqslant 2, p(2) = p(5) = p(6)$.)
(a) A basis: $1, (z-2)(z-5)(z-6), z(z-2)(z-5)(z-6)$.
(b) Extend to a basis of $\mathcal{P}_4(\mathbf{F})$ as $1, z, z^2, (z-2)(z-5)(z-6), z(z-2)(z-5)(z-6)$.
(c) Let $W = \operatorname{span}(z, z^2) = \{az + bz^2 : a, b \in \mathbf{F}\}$, so that $\mathcal{P}_4(\mathbf{F}) = U \oplus W$. □

• **TIPS:**

(1) $\dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \dim(V_2 + V_3) - \dim\big(V_1 + (V_2 \cap V_3)\big)$.
(2) $\dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \dim(V_1 + V_3) - \dim\big(V_2 + (V_1 \cap V_3)\big)$.
(3) $\dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \dim(V_1 + V_2) - \dim\big(V_3 + (V_1 \cap V_2)\big)$.

For (1). Because $\dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim(V_2 \cap V_3) - \dim\big(V_1 + (V_2 \cap V_3)\big)$.
And $\dim(V_2 \cap V_3) = \dim V_2 + \dim V_3 - \dim(V_2 + V_3)$.

• *Suppose* V *is a 10-dim vecsp and* V_1, V_2, V_3 *are subsps of* V *with*
(a) $\dim V_1 = \dim V_2 = \dim V_3 = 7$. *Prove that* $V_1 \cap V_2 \cap V_3 \neq \{0\}$.
(b) $\dim V_1 + \dim V_2 + \dim V_3 > 2 \dim V$. *Prove that* $V_1 \cap V_2 \cap V_3 \neq \{0\}$.

SOLUTION:
(a) By TIPS, $\dim(V_1 \cap V_2 \cap V_3) \geq \dim V_1 + \dim V_2 + \dim V_3 - 2\dim V > 0$.
(b) By TIPS, $\dim(V_1 \cap V_2 \cap V_3) > 2\dim V - \dim(V_2 + V_3) - \dim(V_1 + (V_2 \cap V_3)) \geq 0$. □

• (4E 2.C.16)
Suppose V *is finite-dim and* U *is a subsp of* V *with* $U \neq V$. *Let* $n = \dim V, m = \dim U$.
Prove that $\exists\ (n-m)$ *subsps* $U_1, \dots, U_{n-m}$, *each of dim* $(n-1)$, *such that* $\bigcap\limits_{i=1}^{n-m} U_i = U$.

SOLUTION:
Let $(v_1, \dots, v_m)$ be a basis of U, extend to a basis of V as $(v_1, \dots, v_m, u_1, \dots, v_{n-m})$.
Define $U_i = \operatorname{span}(v_1, \dots, v_m, u_1, \dots, u_{i-1}, u_{i+1}, \dots, u_{n-m})$ for each i. Then $U \subseteq U_i$ for each i.
And because $\forall v \in \bigcap\limits_{i=1}^{n-m} U_i, v = v_0 + b_1 u_1 + \cdots + b_{n-m} u_{n-m} \in U_i \Rightarrow b_i = 0$ for each $i \Rightarrow v \in U$.
Hence $\bigcap\limits_{i=1}^{n-m} U_i \subseteq U$. □

EXAMPLE: Suppose $\dim V = 6, \dim U = 3$.

$(\overbrace{\underbrace{v_1, v_2, v_3}_{\text{Basis of U}}, v_4, v_5, v_6}^{\text{Basis of V}})$, define $\left| \begin{array}{l} U_1 = \operatorname{span}(v_1, v_2, v_3) \oplus \operatorname{span}(v_5, v_6) \\ U_2 = \operatorname{span}(v_1, v_2, v_3) \oplus \operatorname{span}(v_4, v_6) \\ U_3 = \operatorname{span}(v_1, v_2, v_3) \oplus \operatorname{span}(v_4, v_5) \end{array} \right\} \Rightarrow \dim U_i = 6 - 1,\ i = \underbrace{1, 2, 3}_{6-3=3}$. □

---

14 *Suppose that $V_1, \dots, V_m$ are finite-dim subsps of V.*
Prove that $V_1 + \cdots + V_m$ is finite-dim and $\dim(V_1 + \cdots + V_m) \leqslant \dim V_1 + \cdots + \dim V_m$.

SOLUTION:

Choose a basis $\mathcal{E}_i$ of $V_i \Rightarrow V_1 + \cdots + V_m = \operatorname{span}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m)$; $\dim V_i = \operatorname{card} \mathcal{E}_i$.
Then $\dim(V_1 + \cdots + V_m) = \dim \operatorname{span}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m)$.
又 $\dim \operatorname{span}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m) \leqslant \operatorname{card}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m) \leqslant \operatorname{card} \mathcal{E}_1 + \cdots + \operatorname{card} \mathcal{E}_m$.
Thus $\dim(V_1 + \cdots + V_m) \leqslant \dim V_1 + \cdots + \dim V_m$. ☐

COMMENT: $\dim(V_1 + \cdots + V_m) = \dim V_1 + \cdots + \dim V_m \Longleftrightarrow V_1 + \cdots + V_m$ *is a direct sum.*
For each i, $(V_1 + \cdots + V_i) \cap V_{i+1} = \{0\} \Longleftrightarrow V_1 + \cdots + V_m$ is a direct sum
$\Longleftrightarrow (\mathcal{E}_1 \cap \cdots \cap \mathcal{E}_{k-1}) \cap \mathcal{E}_k = \emptyset$ for each i 又 $\dim \operatorname{span}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m) = \operatorname{card}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m)$
$\Longleftrightarrow \dim \operatorname{span}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m) = \operatorname{card} \mathcal{E}_1 + \cdots + \operatorname{card} \mathcal{E}_m$
$\Longleftrightarrow \dim(V_1 + \cdots + V_m) = \dim V_1 + \cdots + \dim V_m$. ☐

---

17 *Suppose V_1, V_2, V_3 are subsps of a finite-dim vecsp, then*

$$\dim(V_1 + V_2 + V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \dim(V_1 \cap V_2) - \dim(V_1 \cap V_3) - \dim(V_2 \cap V_3) + \dim(V_1 \cap V_2 \cap V_3).$$

Explain why you might think and prove the formula above or give a counterexample.

SOLUTION:

[*Similar to*] Given three sets A, B and C.
Because $|X + Y| = |X| + |Y| - |X \cap Y|$; $(X \cup Y) \cap Z = (X \cap Z) \cup (Y \cap Z)$.
Now $|(A \cup B) \cup C| = |A \cup B| + |C| - |(A \cup B) \cap C|$.
And $|(A \cup B) \cap C| = |(A \cap C) \cup (B \cap C)| = |A \cap C| + |B \cap C| - |A \cap B \cap C|$.
Hence $|(A \cup B) \cup C| = |A| + |B| + |C| + |A \cap B \cap C| - |A \cap B| - |A \cap C| - |B \cap C|$.

Because $(V_1 + V_2) + V_3 = V_1 + (V_2 + V_3) = (V_1 + V_3) + V_2$.

$$\begin{aligned}\dim(V_1 + V_2 + V_3) &= \dim(V_1 + V_2) + \dim(V_3) - \dim\big((V_1 + V_2) \cap V_3\big) \quad (1)\\ &= \dim(V_2 + V_3) + \dim(V_1) - \dim\big((V_2 + V_3) \cap V_1\big) \quad (2)\\ &= \dim(V_1 + V_3) + \dim(V_2) - \dim\big((V_1 + V_3) \cap V_2\big) \quad (3)\end{aligned}$$

Notice that in general, $(X + Y) \cap Z \neq X \cap Z + Y \cap Z$.
For example, $X = \{(x, 0) \in \mathbf{R}^2 : x \in \mathbf{R}\}, Y = \{(0, y) \in \mathbf{R}^2 : y \in \mathbf{R}\}, Z = \{(z, z) \in \mathbf{R}^2 : z \in \mathbf{R}\}$.

• **COROLLARY:** *Suppose V_1, V_2 and V_3 are finite-dim vecsps, then* $\dfrac{(1) + (2) + (3)}{3}$:

$$\begin{aligned}\dim(V_1 + V_2 + V_3) = {} & \dim V_1 + \dim V_2 + \dim V_3 \\ & - \frac{\dim(V_1 \cap V_2) + \dim(V_1 \cap V_3) + \dim(V_2 \cap V_3)}{3} \\ & - \frac{\dim\big((V_1 + V_2) \cap V_3\big) + \dim\big((V_1 + V_3) \cap V_2\big) + \dim\big((V_2 + V_3) \cap V_1\big)}{3}.\end{aligned}$$

The formula above may seem strange because the right side does not look like an integer. ☐

• **TIPS:**

Suppose $v_1, \dots, v_n \in V$, $\dim \operatorname{span}(v_1, \dots, v_n) = n$. *Then $(v_1, \dots, v_n)$ is a basis of* $\operatorname{span}(v_1, \dots, v_n)$
Notice that $(v_1, \dots, v_n)$ is a spanning list of $\operatorname{span}(v_1, \dots, v_n)$ of length $n = \dim \operatorname{span}(v_1, \dots, v_n)$. ☐

---

15 *Suppose V is finite-dim and $\dim V = n \geqslant 1$.*
Prove that $\exists$ one-dim subsps $V_1, \dots, V_n$ of V such that $V = V_1 \oplus \cdots \oplus V_n$.

Solution:

Suppose $B_V = (v_1, \dots, v_n)$. Define V_i by $V_i = \operatorname{span}(v_i)$ for each $i \in \{1, \dots, n\}$.
Then $\forall v \in V, \exists ! a_i \in \mathbf{F}, v = a_1 v_1 + \cdots + a_n v_n$

$$\Rightarrow \exists ! u_i \in V_i, v = u_1 + \cdots + u_n \Rightarrow V = V_1 \oplus \cdots \oplus V_n. \qquad \square$$

• **Corollary:**
Suppose W is finite-dim, $\dim W = m$ and $w \in W \backslash \{0\}$.
Prove that $\exists B_W = (w_1, \dots, w_m)$ such that $w = w_1 + \cdots + w_m$.

[Proof]

By Problem (15), $\exists$ one-dim subsps $W_1, \dots, W_m$ of W such that $W = W_1 \oplus \cdots \oplus W_m$.
Note that $\dim W_i = \dim \operatorname{span}(w_i) = 1 \Rightarrow \forall x_i \in W_i, \exists ! c_i \in \mathbf{F}, x_i = c_i w_i$.
Suppose $w = x_1 + \cdots + x_m$, where each $x_i = c_i w_i \in W_i$. Then $(x_1, \dots, x_m)$ is also a basis of W. $\square$

Or. Note that $w \neq 0 \Rightarrow m \geqslant 1$. If $m = 1$ then let $w_1 = w$ and we are done. Suppose $m > 1$.
Extend (w) to a basis $(w, w_1, \dots, w_{m-1})$ of W. Let $w_m = w - w_1 - \cdots - w_{m-1}$.
又 $\operatorname{span}(w, w_1, \dots, w_{m-1}) = \operatorname{span}(w_1, \dots, w_m)$. Hence $(w_1, \dots, w_m)$ is also a basis of W. $\square$

• **New Theorem:** *Suppose V is finite-dim with $\dim V = n$ and U is a subsp of V with $U \neq V$.*
Prove that $\exists B_V = (v_1, \dots, v_n)$ such that each $v_k \notin U$.

Note that $U \neq V \Rightarrow n \geqslant 1$. We will construct B_V via the following process.
Step 1. $\exists v_1 \in V \backslash U \Rightarrow v_1 \neq 0$. If $\operatorname{span}(v_1) = V$ then we stop.
Step k. Suppose $(v_1, \dots, v_{k-1})$ is linely inde in V, each of which belongs to $V \backslash U$.
Note that $\operatorname{span}(v_1, \dots, v_{k-1}) \neq V$. And if $\operatorname{span}(v_1, \dots, v_{k-1}) \cup U = V$, then by (1.C.12),
(because $\operatorname{span}(v_1, \dots, v_{k-1}) \nsubseteq U$,) $U \subseteq \operatorname{span}(v_1, \dots, v_{k-1}) \Rightarrow \operatorname{span}(v_1, \dots, v_{k-1}) = V$.
Hence because $\operatorname{span}(v_1, \dots, v_{k-1}) \neq V$, it must be case that $\operatorname{span}(v_1, \dots, v_{k-1}) \cup U \neq V$.
Thus $\exists v_k \in V \backslash U$ such that $v_k \notin \operatorname{span}(v_1, \dots, v_{k-1})$.
By (2.A.11), $(v_1, \dots, v_k)$ is linely inde in V. If $\operatorname{span}(v_1, \dots, v_k) = V$, then we stop.
Because V is finite-dim, this process will stop after n steps. $\square$

Or. If $U = \{0\}$ then we are done. Suppose $\dim U \geqslant 1$.
Let $(u_1, \dots, u_m)$ be a basis of U, extend to a basis $(u_1, \dots, u_n)$ of V.
Then let $B_V = (u_1 - u_k, \dots, u_m - u_k, u_{m+1}, \dots, u_k, \dots, u_n)$. $\square$

3·A

• **Tips:** $T: V \to W$ *is linear* $\iff \left| \begin{array}{l} (一)\ \forall v,u \in V, T(v+u) = Tv + Tu; \\ (二)\ \forall v,u \in V, \lambda \in \mathbf{F}, T(\lambda v) = \lambda(Tv). \end{array} \right| \iff T(v+\lambda u) = Tv + \lambda Tu.$

$T \in \mathcal{L}(V,W) \iff T \in \mathcal{L}(V, \operatorname{range} T)$. And $\{T \in \mathcal{L}(V,W) : \operatorname{range} T \subseteq U\} = \mathcal{L}(V,U)$.

---

3 *Suppose $T \in \mathcal{L}(\mathbf{F}^n, \mathbf{F}^m)$. Prove that $\exists A_{j,k} \in \mathbf{F}$ such that for any $(x_1,\dots,x_n) \in \mathbf{F}^n$*

$$T(x_1,\dots,x_n) = \begin{pmatrix} A_{1,1}x_1 + \cdots + A_{1,n}x_n, \\ \vdots \qquad \ddots \qquad \vdots \\ A_{m,1}x_1 + \cdots + A_{m,n}x_n \end{pmatrix}$$

Solution:

Let $T(1,0,0,\dots,0,0) = (A_{1,1},\dots,A_{m,1})$, Note that $(1,0,\dots,0,0),\cdots,(0,0,\dots,0,1)$ is a basis of $\mathbf{F}^n$.
$T(0,1,0,\dots,0,0) = (A_{1,2},\dots,A_{m,2})$, Then by [3.5], we are done. ☐
$\vdots$
$T(0,0,0,\dots,0,1) = (A_{1,n},\dots,A_{m,n})$.

---

4 *Suppose $T \in \mathcal{L}(V,W)$, and $v_1,\dots,v_m \in V$ such that $(Tv_1,\dots,Tv_m)$ is linely inde in W. Prove that $(v_1,\dots,v_m)$ is linely inde.*

Solution: Suppose $a_1v_1 + \cdots + a_mv_m = 0$. Then $a_1Tv_1 + \cdots + a_mTv_m = 0$. Thus $a_1 = \cdots = a_m = 0$. ☐

---

5 *Because $\mathcal{L}(V,W) = \{T : V \to W \mid T \text{ is linear}\}$ is a subsp of W^V, $\mathcal{L}(V,W)$ is a vecsp.*

Comment: There is no guarantee that W is a vecsp. (although the minimal vecsp $\{0\} \subseteq W$)
Is it guaranteed that V is a vecsp? In other words,
if V is closed under add and scalar multi, then why, or why not, is V a vecsp? TODO

---

7 *Show that every linear map from a one-dim vecsp to itself is a multi by some scalar. More precisely, prove that if $\dim V = 1$ and $T \in \mathcal{L}(V)$, then $\exists \lambda \in \mathbf{F}, Tv = \lambda v, \forall v \in V$.*

Solution: Let u be a nonzero vec in $V \Rightarrow V = \operatorname{span}(u)$. Because $Tu \in V \Rightarrow Tu = \lambda u$ for some λ.
Suppose $v \in V \Rightarrow v = au$, $\exists!\, a \in \mathbf{F}$. Then $Tv = T(au) = \lambda au = \lambda v$. ☐

---

8 *Give a function $\varphi : \mathbf{R}^2 \to \mathbf{R}$ such that $\forall a \in \mathbf{R}, v \in \mathbf{R}^2, \varphi(av) = a\varphi(v)$ but φ is not linear.*

Solution: Define $T(x,y) = \begin{cases} x+y, \text{if } (x,y) \in \operatorname{span}(3,1), \\ 0, \quad \text{otherwise.} \end{cases}$ Or. Define $T(x,y) = \sqrt[3]{(x^3+y^3)}$. ☐

---

9 *Give a function $\varphi : \mathbf{C} \to \mathbf{C}$ such that $\forall w,z \in \mathbf{C}, \varphi(w+z) = \varphi(w) + \varphi(z)$ but φ is not linear. (Here $\mathbf{C}$ is thought of as a complex vecsp.)*

Solution: Suppose $V_{\mathbf{C}}$ is the complexification of a vecsp V. Suppose $\varphi : V_{\mathbf{C}} \to V_{\mathbf{C}}$.
Define $\varphi(u+iv) = u = \operatorname{Re}(u+iv)$ Or. Define $\varphi(u+iv) = v = \operatorname{Im}(u+iv)$. ☐

• *Prove that if $q \in \mathcal{P}(\mathbf{R})$ and $T : \mathcal{P}(\mathbf{R}) \to \mathcal{P}(\mathbf{R})$ is defined by $Tp = q \circ p$, then T is not linear.*

Solution: Because in general, $q \circ (p_1 + \lambda p_2)(x) = q(p_1(x) + \lambda p_2(x)) \neq (q \circ p_1)(x) + \lambda(q \circ p_2)(x)$.
Example: Let q be defined by $q(x) = x^2$, then $q \circ (1 + (-1)) = 0 \neq q(1) + q(-1) = 2$. ☐

---

10 *Suppose U is a subsp of V with $U \neq V$. Suppose $S \in \mathcal{L}(U,W)$ with $S \neq 0$ (which means that $\exists\, u \in U, Su \neq 0$).*

Define $T : V \to W$ by $Tv = \begin{cases} Sv, \text{ if } v \in U, \\ 0, \quad \text{if } v \in V \backslash U. \end{cases}$ Prove that T is not a linear map on V.

SOLUTION:

Suppose T is a linear map. And $v \in V \backslash U,\ u \in U$ such that $Su \neq 0$.
Then $v+u \in V \backslash U$, (for if not, $v = (v+u) - u \in U$) while $T(v+u) = 0 = Tv + Tu = 0 + Su \Rightarrow Su = 0$.
Hence we get a contradiction. □

---

11 *Suppose U is a subsp of finite-dim V. Suppose $S \in \mathcal{L}(U,W)$.*
Prove that $\exists\, T \in \mathcal{L}(V,W), Tu = Su, \forall u \in U$. (OR. $\exists\, T \in \mathcal{L}(V,W), T|_U = S.$)
In other words, every linear map on a subsp of V can be extended to a linear map on the entire V.

SOLUTION:

Define $T \in \mathcal{L}(V,W)$ by $T(a_1u_1 + \cdots + a_nu_n + a_{n+1}u_{n+1} + \cdots + a_mu_m) = a_1Su_1 + \cdots + a_nSu_n$.
Where we let $B_U = (u_1, \dots, u_n), B_V = (u_1, \dots, u_n, \dots, u_m)$. □

---

12 *Suppose nonzero V is finite-dim and W is infinite-dim. Prove that $\mathcal{L}(V,W)$ is infinite-dim.*

SOLUTION:

Let $(v_1, \dots, v_n)$ be a basis of V. Let $(w_1, \dots, w_m)$ be linely inde in W for any $m \in \mathbf{N}^+$.
Define $T_{x,y} \in \mathcal{L}(V,W)$ by $T_{x,y}(v_z) = \delta_{zy}w_y, \forall x \in \{1, \dots, n\}, y \in \{1, \dots, m\}$, where $\delta_{zy} = \begin{cases} 0, & z \neq y, \\ 1, & z = y. \end{cases}$
Suppose $a_1T_{x,1} + \cdots + a_mT_{x,m} = 0$.
Then $(a_1T_{x,1} + \cdots + a_mT_{x,m})(v_x) = 0 = a_1w_1 + \cdots + a_mw_m \Rightarrow a_1 = \cdots = a_m = 0$. 又 m arbitrary.
Thus $(T_{x,1}, \dots, T_{x,m})$ is a linely inde list in $\mathcal{L}(V,W)$ for any x and length m. Hence by (2.A.14). □

---

13 *Suppose $(v_1, \dots, v_m)$ is linely depe in V and $W \neq \{0\}$.*
Prove that $\exists\, w_1, \dots, w_m \in W, \nexists\, T \in \mathcal{L}(V,W)$ such that $Tv_k = w_k, \forall k = 1, \dots, m$.

SOLUTION:

We prove by contradiction. By linear dependence lemma, $\exists\, j \in \{1, \dots, m\}, v_j \in \operatorname{span}(v_1, \dots, v_{j-1})$.
Fix j. Let $w_j \neq 0$, while $w_1 = \cdots = w_{j-1} = w_{j+1} = w_m = 0$.
Define T by $Tv_k = w_k$ for all k. Suppose $a_1v_1 + \cdots + a_mv_m = 0$ (where $a_j \neq 0$).
Then $T(a_1v_1 + \cdots + a_mv_m) = 0 = a_1w_1 + \cdots + a_mw_m = a_jw_j$ while $a_j \neq 0$ and $w_j \neq 0$. Contradicts. □

OR. We prove the contrapositive:

Suppose $\forall w_1, \dots, w_m \in W, \exists\, T \in \mathcal{L}(V,W), Tv_k = w_k$ for each w_k.

(We need to) Prove that $(v_1, \dots, v_n)$ is linely inde.

Suppose $\exists\, a_i \in \mathbf{F}, a_1v_1 + \cdots + a_nv_n = 0$. Choose a nonzero $w \in W$.
By assumption, for the list $(\overline{a_1}w, \dots, \overline{a_m}w), \exists\, T \in \mathcal{L}(V,W), Tv_k = \overline{a_k}w$ for each v_k.

$$\text{Now we have } 0 = T\Big(\sum_{k=1}^{m} a_kv_k\Big) = \sum_{k=1}^{m} a_kTv_k = \sum_{k=1}^{m} a_k\overline{a_k}w = \Big(\sum_{k=1}^{m} |a_k|^2\Big)w.$$

Then $\sum_{k=1}^{m} |a_k|^2 = 0 \Rightarrow a_k = 0$ for each k. Hence $(v_1, \dots, v_n)$ is linely inde. □

•Or (3.D.16) *Suppose V is finite-dim and $T \in \mathcal{L}(V)$ such that $\forall S \in \mathcal{L}(V), ST = TS$. Prove that $\exists \lambda \in \mathbf{F}, T = \lambda I$.*

Solution:

If $V = \{0\}$, then we are done. Now suppose $V \neq \{0\}$.

Assume that (v, Tv) is linely depe for every $v \in V$, then by (2.A.2.(b)), $Tv = \lambda_v v$ for some $\lambda_v \in \mathbf{F}$.

To prove that λ_v is independent of v

(in other words, for any two distinct v, w in $V \backslash \{0\}$, we have $\lambda_v \neq \lambda_w$), we discuss in two cases:

$$\left.\begin{array}{l}(-) \text{ If } (v,w) \text{ is linely inde, } \lambda_{v+w}(v+w) = T(v+w) = Tv + Tw = a_v v + a_w w \\ \qquad\qquad\qquad\qquad\qquad \Rightarrow (\lambda_{v+w} - \lambda_v)v + (\lambda_{v+w} - \lambda_w)w = 0 \\ (=) \text{ Otherwise, suppose } w = cv, a_w w = Tw = cTv = ca_v v = a_v w \Rightarrow (a_w - a_v)w \end{array}\right\} \Rightarrow a_w = a_v.$$

Now we prove the assumption by contradiction. Suppose (v, Tv) is linely inde for every $v \in V \backslash \{0\}$.

Fix one v. Extend to $(v, Tv, u_1, \dots, u_n)$ a basis of V.

Define $S \in \mathcal{L}(V)$ by $S(av + bTv + c_1 u_1 + \cdots + c_n u_n) = bv \Rightarrow S(Tv) = v = T(Sv) = 0$. Contradicts. □

Or. Let $(v_1, \dots, v_m)$ be a basis of V.

Define $\varphi \in \mathcal{L}(V, \mathbf{F})$ by $\varphi(v_1) = \cdots = \varphi(v_m) = 1$. Let $\lambda = \varphi(Tv_1) \in \mathbf{F}$.

For any $v \in V$, define $S_v \in \mathcal{L}(V)$ by $S_v u = \varphi(u)v$.

Then $Tv = T(\varphi(v_1)v) = T(S_v v_1) = S_v(Tv_1) = \varphi(Tv_1)v = \lambda v$.

□

• (4E 3.A.16)

Suppose V is finite-dim. Show that the only two-sided ideals of $\mathcal{L}(V)$ are $\{0\}$ and $\mathcal{L}(V)$.

A subsp $\mathcal{E}$ of $\mathcal{L}(V)$ is called a two-sided ideal of $\mathcal{L}(V)$ if $TE \in \mathcal{E}, ET \in \mathcal{E}, \ \forall E \in \mathcal{E}, T \in \mathcal{L}(V)$.

Solution:

Let $(v_1, \dots, v_n)$ be a basis of V. If $\mathcal{E} = 0$, then we are done.

Suppose $\mathcal{E} \neq 0$ and $\mathcal{E}$ is a two-sided ideal of $\mathcal{L}(V)$. Let $S \in \mathcal{E} \backslash \{0\}$.

Suppose $Sv_i \neq 0$ and $Sv_i = a_1 v_1 + \cdots + a_n v_n$, where $a_k \neq 0$.

Define $R_{x,y} \in \mathcal{L}(V)$ by $R_{x,y}(v_x) = v_y, R_{x,y}(v_z) = 0\ (z \neq x)$. Then for any $x, y \in \mathbf{N}^+$,

$(R_{k,y}S)(v_i) = a_k v_y \Rightarrow ((R_{k,y}S) \circ R_{x,i})(v_x) = a_k v_y, \ \ ((R_{k,y}S) \circ R_{x,i})(v_z) = 0\ (z \neq x)$.

Thus $R_{k,y} S R_{x,i} = a_k R_{x,y}$. Denote by $T_{x,y}$.

Getting $(\frac{1}{a_k} T_{1,1} + \cdots + \frac{1}{a_k} T_{n,n}) v_j = v_j$. So that $\sum_{r=1}^{n} \frac{1}{a_k} T_{r,r} = I$.

又 By assumption, $T_{x,y} \in \mathcal{E} \Rightarrow I \in \mathcal{E}$.

Hence for any $T \in \mathcal{L}(V), I \circ T = T \circ I = T \in \mathcal{E} \Rightarrow \mathcal{E} = \mathcal{L}(V)$.

□

(c) Suppose $T_{\mathbf{C}}$ is surj. $\forall w \in W, \exists\, u \in V, T(u + \mathrm{i}0) = Tu = w + \mathrm{i}0 = w \Rightarrow$ T is surj.
Suppose T is surj. $\forall w, x \in W, \exists\, u, v \in V, Tu = w, Tv = x$
$\Rightarrow \forall w + \mathrm{i}x \in W_{\mathbf{C}}, \exists\, u + \mathrm{i}v \in V, T(u + \mathrm{i}v) = w + \mathrm{i}x \Rightarrow T_{\mathbf{C}}$ is surj.

---

3 *Suppose $(v_1, \dots, v_m)$ in V. Define $T \in \mathcal{L}(\mathbf{F}^m, V)$ by $T(z_1, \dots, z_m) = z_1v_1 + \cdots + z_mv_m$.*
(a) *The surj of T corresponds to $(v_1, \dots, v_m)$ spanning V.*
(b) *The inje of T corresponds to $(v_1, \dots, v_m)$ being linely inde.*

---

7 *Suppose V is finite-dim with* $2 \leqslant \dim V$. *And* $\dim V \leqslant \dim W$, *if W is finite-dim.*
Show that $U = \big\{ T \in \mathcal{L}(V, W) : \operatorname{null} T \neq \{0\} \big\}$ is not a subsp of $\mathcal{L}(V, W)$.

Solution: *The set of all inje $T \in \mathcal{L}(V, W)$ is a not subsp either.*

Let $(v_1, \dots, v_n)$ be a basis of V, $(w_1, \dots, w_m)$ be linely inde in W.
(Let $\dim W = m$, if W is finite, otherwise, let $m \in \{n, n+1, \dots\}$; $2 \leqslant n \leqslant m$).
Define $T_1 \in \mathcal{L}(V, W)$ as $T_1 :\ v_1 \mapsto 0,\quad v_2 \mapsto w_2,\quad v_i \mapsto w_i$.
Define $T_2 \in \mathcal{L}(V, W)$ as $T_2 :\ v_1 \mapsto w_1,\quad v_2 \mapsto 0,\quad v_i \mapsto w_i,\quad i = 3, \dots, n$.
Thus $T_1 + T_2 \notin U$. □

Comment: If $\dim V = 0$, then $V = \{0\} = \operatorname{span}(\,)$. $\forall\ T \in \mathcal{L}(V, W), T$ is inje. Hence $U = \emptyset$.
If $\dim V = 1$, then $V = \operatorname{span}(v_0)$. Thus $U = \operatorname{span}(T_0)$, where $T_0v_0 = 0$.

---

8 *Suppose W is finite-dim with* $\dim W \geqslant 2$. *And* $\dim V \geqslant \dim W$, *if V is finite-dim.*
Show that $U = \big\{ T \in \mathcal{L}(V, W) : \operatorname{range} T \neq W \big\}$ is not a subsp of $\mathcal{L}(V, W)$.

Solution: *The set of all surj $T \in \mathcal{L}(V, W)$ is not a subspace either.*

Let $(v_1, \dots, v_n)$ be linely inde in V, $(w_1, \dots, w_m)$ be a basis of W.
(Let $n = \dim V$, if V is finite, otherwise we choose $n \in \{m, m+1, \dots\}$; $2 \leqslant m \leqslant n$).
Define $T_1 \in \mathcal{L}(V, W)$ as $T_1 :\ v_1 \mapsto 0,\quad v_2 \mapsto w_2,\quad v_j \mapsto w_j,\quad v_{m+i} \mapsto 0$.
Define $T_2 \in \mathcal{L}(V, W)$ as $T_2 :\ v_1 \mapsto w_1,\quad v_2 \mapsto 0,\quad v_j \mapsto w_j,\quad v_{m+i} \mapsto 0$.
(For each $j = 2, \dots, m;\ i = 1, \dots, n - m$, if V is finite, otherwise let $i \in \mathbf{N}^+$.) Thus $T_1 + T_2 \notin U$. □

Comment: If $\dim W = 0$, then $W = \{0\} = \operatorname{span}(\,)$. $\forall\ T \in \mathcal{L}(V, W), T$ is surj. Hence $U = \emptyset$.
If $\dim W = 1$, then $W = \operatorname{span}(v_0)$. Thus $U = \operatorname{span}(T_0)$, where $T_0v_0 = 0$.

---

11 *Suppose $S_1, \dots, S_n$ are linear and inje. $S_1 S_2 \dots S_n$ makes sence. Prove that $S_1 S_2 \dots S_n$ is inje.*

SOLUTION: $S_1 S_2 \dots S_n(v) = 0 \iff S_2 S_3 \dots S_n(v) = 0 \iff \cdots \iff S_n(v) = 0 \iff v = 0.$ □

---

9 *Suppose $(v_1, \dots, v_n)$ is linely inde. Prove that $\forall$ inje T, $(Tv_1, \dots, Tv_n)$ is linely inde.*

SOLUTION: $a_1 Tv_1 + \cdots + a_n Tv_n = 0 = T\left(\sum_{i=1}^n a_i v_i\right) \iff \sum_{i=1}^n a_i v_i = 0 \iff a_1 = \cdots = a_n = 0.$ □

---

10 *Suppose* $\operatorname{span}(v_1, \dots, v_n) = V$. *Show that* $\operatorname{span}(Tv_1, \dots, Tv_n) = \operatorname{range} T$.

SOLUTION:

(a) $\operatorname{range} T = \{Tv : v \in V\} = \{Tv : v \in \operatorname{span}(v_1, \dots, v_n)\} \Rightarrow Tv_1, \dots, Tv_n \in \operatorname{range} T \Rightarrow$ By [2.7].
OR. $\operatorname{span}(Tv_1, \dots, Tv_n) \ni a_1 Tv_1 + \cdots + a_n Tv_n = T(a_1 v_1 + \cdots + a_n v_n) \in \operatorname{range} T$.

(b) $\forall w \in \operatorname{range} T, \exists v \in V, w = Tv$. $(\exists a_i \in \mathbf{F}, v = a_1 v_1 + \cdots + a_n v_n) \Rightarrow w = a_1 Tv_1 + \cdots + a_n Tv_n$. □

---

16 *Suppose $\exists T \in \mathcal{L}(V)$ such that* $\operatorname{null} T, \operatorname{range} T$ *are finite-dim. Prove that V is finite-dim.*

SOLUTION:

Let $B_{\operatorname{range} T} = (Tv_1, \dots, Tv_n), B_{\operatorname{null} T} = (u_1, \dots, u_m)$.
$\forall v \in V, T(v - a_1 v_1 - \cdots - a_n v_n) = 0$, letting $Tv = a_1 Tv_1 + \cdots + a_n Tv_n$.
$\Rightarrow v - a_1 v_1 - \cdots - a_n v_n = b_1 u_1 + \cdots + b_m u_m$. Hence $V \subseteq \operatorname{span}(v_1, \dots, v_n, u_1, \dots, u_m)$. □

---

17 *Suppose V, W are finite-dim. Prove that $\exists$ inje $T \in \mathcal{L}(V, W) \iff$* $\dim V \leqslant \dim W$.

SOLUTION:

(a) Suppose $\exists$ inje T. Then $\dim V = \dim \operatorname{range} T \leqslant \dim W$.

(b) Suppose $\dim V \leqslant \dim W$. Let $B_V = (v_1, \dots, v_n), B_W = (w_1, \dots, w_m)$.
Define $T \in \mathcal{L}(V, W)$ by $Tv_i = w_i,\ i = 1, \dots, n\ (= \dim V)$. □

---

18 *Suppose V, W are finite-dim. Prove that $\exists$ surj $T \in \mathcal{L}(V, W) \iff$* $\dim V \geqslant \dim W$.

SOLUTION:

(a) Suppose $\exists$ surj T. Then $\dim V = \dim W + \dim \operatorname{null} T \Rightarrow \dim W \leqslant \dim V$.

(b) Suppose $\dim V \geqslant \dim W$. Let $B_V = (v_1, \dots, v_n), B_W = (w_1, \dots, w_m)$.
Define $T \in \mathcal{L}(V, W)$ by $T(a_1 v_1 + \cdots + a_m v_m + a_{m+1} v_{m+1} + \cdots + a_n v_n) = a_1 w_1 + \cdots + a_m w_m$. □

---

19 *Suppose V, W are finite-dim, U is a subsp of V.*
Prove that if $\underbrace{\dim U}_{m} \geqslant \underbrace{\dim V}_{m+n} - \underbrace{\dim W}_{p}$, *then* $\exists T \in \mathcal{L}(V, W)$, $\operatorname{null} T = U$.

SOLUTION:

Let $B_U = (u_1, \dots, u_m), B_V = (u_1, \dots, u_m, v_1, \dots, v_n), B_W = (w_1, \dots, w_p)$.
Define $T \in \mathcal{L}(V, W)$ by $T(a_1 v_1 + \cdots + a_n v_n + b_1 u_1 + \cdots + b_m u_m) = a_1 w_1 + \cdots + a_n w_n$. □

• (4E 3.B.21)
Suppose V is finite-dim, $T \in \mathcal{L}(V, W)$, U is a subsp of W. Let $\mathcal{K}_U = \{v \in V : Tv \in U\}$.
Prove that $\mathcal{K}_U$ is a subsp of V and $\dim \mathcal{K}_U = \dim \operatorname{null} T + \dim(U \cap \operatorname{range} T)$.

SOLUTION:

$\forall u, w \in \mathcal{K}_U, \lambda \in \mathbf{F}, T(u + \lambda w) = Tu + \lambda Tw \in U \Rightarrow \mathcal{K}_U$ is a subsp of V.
Define $S \in \mathcal{L}(\mathcal{K}_U, U)$ as $Rv = Tv$ for all $v \in \mathcal{K}_U$. Hence $\operatorname{range} R = U \cap \operatorname{range} T$.
Suppose $\exists v, Tv = 0$. 又 $0 \in U \Rightarrow Rv = 0$. Thus $\operatorname{null} T \subseteq \operatorname{null} R$. □

---

12 *Prove that* $\forall T \in \mathcal{L}(V,W), \exists$ *subsp* U *of* V *such that*
$U \cap \operatorname{null} T = \operatorname{null} T|_U = \{0\}$, $\operatorname{range} T = \{Tu : u \in U\} = \operatorname{range} T|_U$.
Which is equivalent to $T|_U : U \to \operatorname{range} T$ *being an iso.*

Solution:
By [2.34] (note that V can be infinite-dim), $\exists$ subsp U of V such that $V = U \oplus \operatorname{null} T$.
$\forall v \in V, \exists!\, w \in \operatorname{null} T, u \in U, v = w + u$. Then $Tv = T(w+u) = Tu \in \{Tu : u \in U\}$. $\square$

- **New Notation:**

Suppose $T \in \mathcal{L}(V,W)$ and $R = (Tv_1, \dots, Tv_n)$ is linely inde in range T.
Where $n = \dim \operatorname{range} T$ if finite-dim, otherwise $n \in \mathbf{N}^+$.
By (3.A.4), $L = (v_1, \dots, v_n)$ is linely inde in V.
Denote $\mathcal{K}_R$ by span L, if range T is finite-dim, otherwise, denote it by a vecsp in $\mathcal{S}_V \operatorname{null} T$.
Note that if range T is finite-dim, then $\mathcal{K}_R = \operatorname{range} T$ for any basis R of range T.

- **Comment:**

If range T is infinite-dim, we cannot write $\mathcal{K}_R = \operatorname{range} T$. For if we do so, we must guarantee that $\forall Tv \in \operatorname{range} T, \exists!\, n \in \mathbf{N}^+, Tv \in \operatorname{span}(Tv_1, \dots, Tv_n)$, where $(Tv_k)_{k=1}^{\infty}$ is linely inde.
So that range $T \subseteq$ span $(Tv_1, \cdots, Tv_n, \cdots)$. This would be invalid, as we have shown before.

- **New Theorem:** $\mathcal{K}_R \in \mathcal{S}_V \operatorname{null} T$. **Comment:** $\operatorname{null} T \in \mathcal{S}_V \mathcal{K}_R$.

Suppose range T is finite-dim. Otherwise, we are done immediately.

(a) $T\big(\sum_{i=1}^{n} a_i v_i\big) = 0 \Rightarrow \sum_{i=1}^{n} a_i T v_i = 0 \Rightarrow a_1 = \cdots = a_n = 0 \Rightarrow \mathcal{K}_R \cap \operatorname{null} T = \{0\}$.

(b) $\forall v \in V, Tv = \sum_{i=1}^{n} a_i T v_i \Rightarrow Tv - \sum_{i=1}^{n} a_i T v_i = T\big(v - \sum_{i=1}^{n} a_i v_i\big) = 0$

$\Rightarrow v - \sum_{i=1}^{n} a_i v_i \in \operatorname{null} T \Rightarrow v = \big(v - \sum_{i=1}^{n} a_i v_i\big) + \big(\sum_{i=1}^{n} a_i v_i\big) \Rightarrow \mathcal{K}_R + \operatorname{null} T = V$. $\square$

- *Suppose* V *is finite-dim,* $T \in \mathcal{L}(V,W), B_{\operatorname{range} T} = (Tv_1, \dots, Tv_n), B_V = (v_1, \dots, v_n, u_1, \dots, u_m)$.
Prove or give a counterexample: $(u_1, \dots, u_m)$ *is a basis of* $\operatorname{null} T$.

Solution: A counterexample:
Suppose $\dim V = 3, Tv_1 = Tv_2 = Tv_3 = w_1$. Then $\operatorname{span}(Tv_1, Tv_2, Tv_3) = \operatorname{span}(w_1)$.
Extend (v_i) to (v_1, v_2, v_3) for each i. But none of $(v_1, v_2), (v_1, v_3), (v_2, v_3)$ is a basis of null T. $\square$

Comment: $(v_2 - v_1, v_3 - v_1), (v_1 - v_2, v_3 - v_2)$ or $(v_1 - v_3, v_2 - v_3)$ are all bases of null T.
Always notice that $\mathcal{S}_V \operatorname{span}(v_1, \dots, v_n) = \{U_1, \cdots, \operatorname{null} T, \cdots, U_n, \cdots\}$

- *Suppose* V *is finite-dim,* X *is a subsp of* V*, and* Y *is a finite-dim subsp of* W.
Prove that if $\dim X + \dim Y = \dim V$, *then* $\exists\, T \in \mathcal{L}(V,W), \operatorname{null} T = X, \operatorname{range} T = Y$.

Solution:
Suppose $\dim X + \dim Y = \dim V$. Let $B_X = (u_1, \dots, u_n), B_Y = (w_1, \dots, w_m), B_V = (u_1, \dots, u_n, v_1, \dots, v_m)$.
Define $T \in \mathcal{L}(V,W)$ by $T(v_i) = w_i, T(u_j) = 0$.
Notice that $\forall v \in V, \exists!\, a_i, b_j \in \mathbf{F}, v = \sum_{i=1}^{m} a_i v_i + \sum_{i=1}^{n} b_i u_i$.
$v \in \operatorname{null} T \iff Tv = 0 \iff a_1 = \cdots = a_m = 0 \iff v \in X$.
$Y \ni w = a_1 w_1 + \cdots + a_m w_m = a_1 T v_1 + \cdots + a_m T v_m \in \operatorname{range} T$.
Or. range $T = \operatorname{span}(Tv_1, \dots, Tv_m, Tu_1, \dots, Tu_n) = \operatorname{span}(Tv_1, \dots, Tv_m) = \operatorname{span}(w_1, \dots, w_m) = Y$. $\square$

•OR (5.B.4) *Suppose $P \in \mathcal{L}(V)$ and $P^2 = P$. Prove that $V = \operatorname{null} P \oplus \operatorname{range} P$.*

SOLUTION:

(a) Suppose $v \in \operatorname{null} P \cap \operatorname{range} P$.

Then $\exists\, u \in V, v = Pu, Pv = 0 \Rightarrow v = Pu = P^2u = Pv = 0$. Hence $\operatorname{null} P \cap \operatorname{range} P = \{0\}$.

(b) Note that $v = Pv + (v - Pv)$ and $P^2v = Pv$ for all $v \in V$.

Then $P(v - Pv) = 0 \Rightarrow v - Pv \in \operatorname{null} P$. Hence $V = \operatorname{range} P + \operatorname{null} P$. □

OR. [*Only in Finite-dim*]

Let $(P^2v_1, \dots, P^2v_n)$ be a basis of range P^2. Then $(Pv_1, \dots, Pv_n)$ is linely inde in V.

Let $\mathcal{K} = \operatorname{span}(Pv_1, \dots, Pv_n) \Rightarrow V = \mathcal{K} \oplus \operatorname{null} P^2$. While $\mathcal{K} = \operatorname{range} P = \operatorname{range} P^2$; $\operatorname{null} P = \operatorname{null} P^2$. □

---

20 *Suppose W is finite-dim. Prove that $T \in \mathcal{L}(V, W)$ is inje $\Longleftrightarrow \exists\, S \in \mathcal{L}(W, V),\ ST = I_V$.*

SOLUTION:

(a) Suppose $\exists\, S \in \mathcal{L}(W, V),\ ST = I$. Then if $Tv = 0 \Rightarrow ST(v) = 0 = v$.

(b) Suppose T is inje. Let $R = B_{\operatorname{range} T} = (Tv_1, \dots, Tv_n)$.

Then $\mathcal{K}_R \oplus \operatorname{null} T = V$. And let $U \oplus \operatorname{range} T = W$.

Define $S \in \mathcal{L}(W, V)$ by $S(Tv_i) = v_i$ and $Su = 0$, where $i \in \{1, \dots, n\}, u \in U$. Thus $ST = I$. □

---

21 *Suppose W is finite-dim. Prove that $T \in \mathcal{L}(V, W)$ is surj $\Longleftrightarrow \exists\, S \in \mathcal{L}(W, V),\ TS = I_W$.*

SOLUTION:

(a) Suppose $\exists\, S \in \mathcal{L}(W, V),\ TS = I$. Then $\forall\, w \in W, TS(w) = w \in \operatorname{range} T \Rightarrow \operatorname{range} T = W$.

(b) Suppose T is surj. Let $R = B_{\operatorname{range} T} = B_W = (Tv_1, \dots, Tv_n)$

Then $\mathcal{K}_R \oplus \operatorname{null} T = V$. Define $S \in \mathcal{L}(W, V)$ by $S(Tv_i) = v_i$. Then $TS = I$. □

---

24 *Suppose that W is finite-dim and $S, T \in \mathcal{L}(V, W)$.*
Prove that $\operatorname{null} S \subseteq \operatorname{null} T \Longleftrightarrow \exists\, E \in \mathcal{L}(W)$ such that $T = ES$.

SOLUTION:

Suppose $\exists\, E \in \mathcal{L}(W)$ such that $T = ES$. Then $\operatorname{null} T = \operatorname{null} ES \supseteq \operatorname{null} S$.

Suppose $\operatorname{null} S \subseteq \operatorname{null} T$. Let $R = B_{\operatorname{range} S} = (Sv_1, \dots, Sv_n)$. Then $V = \mathcal{K}_R \oplus \operatorname{null} S$.

Define $E \in \mathcal{L}(W)$ by $E(Sv_i) = Tv_i,\ Eu = 0;$ for each $i = 1 \dots, n$ and $u \in \operatorname{null} S$.

Hence $\forall v \in V,\ (\exists!\, a_i \in \mathbf{F}, u \in \operatorname{null} S\,),\ Tv = a_1Tv_1 + \cdots + a_nTv_n = E(a_1Sv_1 + \cdots + a_nSv_n) \Rightarrow T = ES$.

OR. Extend R to a basis $(Sv_1, \dots, Sv_n, w_1, \dots, w_m)$ of W.

Define $E \in \mathcal{L}(W)$ by $E(Sv_k) = Tv_k,\ Ew_j = 0$. Because $\forall\, v \in V, \exists\, a_i \in \mathbf{F}, Sv = a_1Sv_1 + \cdots + a_nSv_n$.

Now $v - (a_1v_1 + \cdots + a_nv_n) \in \operatorname{null} S \Rightarrow v - (a_1v_1 + \cdots + a_nv_n) \in \operatorname{null} T \Rightarrow T(v - (a_1v_1 + \cdots + a_nv_n)) = 0$.

Thus $Tv = a_1v_1 + \cdots + a_nv_n$. Hence $E(Sv) = a_1E(Sv_1) + \cdots + a_nE(Sv_n) = a_1Tv_1 + \cdots + a_nTv_n = Tv$ □

---

25 *Suppose that V is finite-dim and $S, T \in \mathcal{L}(V, W)$.*
Prove that $\operatorname{range} S \subseteq \operatorname{range} T \Longleftrightarrow \exists\, E \in \mathcal{L}(V)$ such that $S = TE$.

SOLUTION:

Suppose $\exists\, E \in \mathcal{L}(V)$ such that $S = TE$. Then $\operatorname{range} S = \operatorname{range} TE \subseteq \operatorname{range} T$.

Suppose $\operatorname{range} S \subseteq \operatorname{range} T$. Let $(v_1, \dots, v_m)$ be a basis of V.

Because $\operatorname{range} S \subseteq \operatorname{range} T \Rightarrow Sv_i \in \operatorname{range} T$ for each i. Suppose $u_i \in V$ for each i such that $Tu_i = Sv_i$.

Thus defining $E \in \mathcal{L}(V)$ by $Ev_i = u_i$ for each $i \Rightarrow S = TE$. □

---

22 *Suppose U and V are finite-dim vecsps and $S \in \mathcal{L}(V, W), T \in \mathcal{L}(U, V)$.*
Prove that $\dim \operatorname{null} ST \leqslant \dim \operatorname{null} S + \dim \operatorname{null} T$.

SOLUTION:

Define $R \in \mathcal{L}(\operatorname{null} ST, V)$ by $Ru = Tu$ for all $u \in \operatorname{null} ST \subseteq U$.

$$\left.\begin{aligned} S(Tu) = 0 = S(Ru) \Rightarrow \operatorname{range} R \subseteq \operatorname{null} S \Rightarrow \dim \operatorname{range} R \leqslant \dim \operatorname{null} S \\ Tu = 0 = Ru \Rightarrow \operatorname{null} R \supseteq \operatorname{null} T \Rightarrow \dim \operatorname{null} R = \dim \operatorname{null} T \end{aligned}\right\} \Rightarrow \text{By [3.22], we are done.} \square$$

OR. For any $u \in U$, note that $u \in \operatorname{null} ST \iff S(Tu) = 0 \iff Tu \in \operatorname{null} S$.
Thus $\operatorname{null} ST = \mathcal{K}_{\operatorname{null} S \cap \operatorname{range} T} = \{u \in U : Tu \in \operatorname{null} S\}$. By Problem (4E 3B.21),
$\dim \operatorname{null} ST = \dim \operatorname{null} T + \dim(\operatorname{null} S \cap \operatorname{range} T) \leqslant \dim \operatorname{null} T + \dim \operatorname{null} S$. $\square$

COROLLARY: (1) If T is inje, then $\dim \operatorname{null} T = 0 \Rightarrow \dim \operatorname{null} ST \leqslant \dim \operatorname{null} S$.
(2) If T is surj, then $\operatorname{range} R = \operatorname{null} S \Rightarrow \dim \operatorname{null} ST = \dim \operatorname{null} S + \dim \operatorname{null} T$.
(3) If S is inje, then $\operatorname{range} R = \{0\} \Rightarrow \dim \operatorname{null} ST = \dim \operatorname{null} R = \dim \operatorname{null} T$.

---

23 *Suppose U and V are finite-dim vecsps and $S \in \mathcal{L}(V, W)$ and $T \in \mathcal{L}(U, V)$.*
Prove that $\dim \operatorname{range} ST \leqslant \min\{\dim \operatorname{range} S, \dim \operatorname{range} T\}$.

SOLUTION:

$\operatorname{range} ST = \{Sv : v \in \operatorname{range} T\} = \operatorname{span}(Su_1, \dots, Su_{\dim \operatorname{range} T})$, where $B_{\operatorname{range} T} = (u_1, \dots, u_{\dim \operatorname{range} T})$.
$\dim \operatorname{range} ST \leqslant \dim \operatorname{range} T$ 又 $\dim \operatorname{range} ST \leqslant \dim \operatorname{range} S$. $\square$

OR. Note that $\operatorname{range} S|_{\operatorname{range} T} = \operatorname{range} ST$.
Thus $\dim \operatorname{range} ST = \dim \operatorname{range} S|_{\operatorname{range} T} = \dim \operatorname{range} T - \dim \operatorname{null} S|_{\operatorname{range} T} \leqslant \operatorname{range} T$. $\square$

COROLLARY: (1) If S is inje, then $\dim \operatorname{range} ST = \dim \operatorname{range} T$.
(2) If T is surj, then $\dim \operatorname{range} ST = \dim \operatorname{range} S$.

• (a) *Suppose* $\dim V = 5$, $S, T \in \mathcal{L}(V)$ *are such that* $ST = 0$. *Prove that* $\dim \operatorname{range} TS \leqslant 2$.
(b) *Let* $\dim V = n$ *in* (a). *Prove that* $\dim \operatorname{range} TS \leqslant \left\lfloor \frac{n}{2} \right\rfloor$.
(c) *Give an example of* $S, T \in \mathcal{L}(\mathbf{F}^5)$ *with* $ST = 0$ *and* $\dim \operatorname{range} TS = 2$.

SOLUTION:

(a) By Problem (23), $\dim \operatorname{range} TS \leqslant \min\{\overbrace{\dim \operatorname{range} S}^{5-\dim \operatorname{null} T}, \overbrace{\dim \operatorname{range} T}^{5-\dim \operatorname{null} S}\}$.
We show that $\dim \operatorname{range} TS \leqslant 2$ by contradiction. Assume that $\dim \operatorname{range} TS \geqslant 3$.
Then $\min\{5 - \dim \operatorname{null} T, 5 - \dim \operatorname{null} S\} \geq 3 \Rightarrow \max\{\dim \operatorname{null} T, \dim \operatorname{null} S\} \leqslant 2$.
又 $\dim \operatorname{null} ST = 5 \leqslant \dim \operatorname{null} S + \dim \operatorname{null} T \leqslant 4$. Contradicts.

OR. $$\left.\begin{aligned} \dim \operatorname{null} S = 5 - \dim \operatorname{range} S \\ \dim \operatorname{range} TS \leqslant \dim \operatorname{range} S \end{aligned}\right\} \Rightarrow \dim \operatorname{null} S \leqslant 5 - \dim \operatorname{range} TS.$$

And $ST = 0 \Rightarrow \operatorname{range} T \subseteq \operatorname{null} S \Rightarrow \dim \operatorname{range} TS \leqslant \dim \operatorname{range} T \leqslant \dim \operatorname{null} S$.
Thus $\dim \operatorname{range} TS \leqslant 5 - \dim \operatorname{range} TS \Rightarrow \dim \operatorname{range} TS \leqslant \frac{5}{2}$. $\square$

(c) Let $(v_1, \dots, v_5)$ be a basis of $\mathbf{F}^5$. Define $S, T \in \mathcal{L}(\mathbf{F}^5)$ by:

$$\begin{aligned} T: &\quad v_1 \mapsto 0, \quad v_2 \mapsto 0, \quad v_i \mapsto v_i \ ; \\ S: &\quad v_1 \mapsto v_4, \quad v_2 \mapsto v_5, \quad v_i \mapsto 0 \ ; \qquad i = 3, 4, 5. \end{aligned}$$

$\square$

(b) By Problem (23), $\dim \operatorname{range} TS \leqslant \min\{\overbrace{\dim \operatorname{range} S}^{n-\dim \operatorname{null} T}, \overbrace{\dim \operatorname{range} T}^{n-\dim \operatorname{null} S}\}$. We prove by contradiction.

Assume that $\dim \operatorname{range} TS \geqslant \left\lfloor \frac{n}{2} \right\rfloor + 1$.

Then $\min\{n - \dim \operatorname{null} T, n - \dim \operatorname{null} S\} \geq \left\lfloor \frac{n}{2} \right\rfloor + 1$

$\Rightarrow \max\{\dim \operatorname{null} T, \dim \operatorname{null} S\} \leqslant n - \left\lfloor \frac{n}{2} \right\rfloor - 1$.

又 $\dim \operatorname{null} ST = n \leqslant \dim \operatorname{null} S + \dim \operatorname{null} T \leqslant 2(n - \left\lfloor \frac{n}{2} \right\rfloor - 1)$

$\Rightarrow \left\lfloor \frac{n}{2} \right\rfloor + 1 \leqslant \frac{n}{2}$. Contradicts. Thus $\dim \operatorname{range} TS \leqslant \left\lfloor \frac{n}{2} \right\rfloor$. □

OR. $\dim \operatorname{null} S = n - \dim \operatorname{range} S \leqslant n - \dim \operatorname{range} TS$.

And $ST = 0 \Rightarrow \dim \operatorname{range} TS \leqslant \dim \operatorname{range} T \leqslant \dim \operatorname{null} S \leqslant n - \dim \operatorname{range} TS$

$\Rightarrow 2 \dim \operatorname{range} TS \leqslant n \Rightarrow \dim \operatorname{range} TS \leqslant \frac{n}{2}$

$\Rightarrow \dim \operatorname{range} TS \leqslant \left\lfloor \frac{n}{2} \right\rfloor$ (because $\dim \operatorname{range} TS$ is an integer). □

---

26 *Prove that the differentiation map $D \in \mathcal{P}(\mathbf{R})$ is surj.*

SOLUTION:

[*Informal Proof*] | Note that $\deg Dx^n = n - 1$. Because $\operatorname{span}(Dx, Dx^2, \dots) \subseteq \operatorname{range} D$.
又 By (2.C.10), $\operatorname{span}(Dx, Dx^2, \dots) = \operatorname{span}(1, x, \dots) = \mathcal{P}(\mathbf{R})$.

[*Proper Proof*]

We will recursively define a sequence of polynomials $(p_k)_{k=0}^{\infty}$ where $Dp_k = x^k$.

(i) Because $\dim Dx = (\deg x) - 1 = 0$, we have $Dx = C \in \mathbf{F}$.

Define $p_0 = C^{-1}x$. Then $Dp_0 = C^{-1}Dx = 1$.

(ii) Suppose we have defined $p_0, \dots, p_n$ such that $Dp_k = x^k$ for each $k \in \{0, \dots, n\}$.

Because $\deg D(x^{n+2}) = n + 1$,

Let $D(x^{n+2}) = a_{n+1}x^{n+1} + a_n x^n + \cdots + a_1 x + a_0$, where $a_{n+1} \neq 0$.

Then $a_{n+1}^{-1} D(x^{n+2}) = x^{n+1} + a_{n+1}^{-1}(a_n Dp_n + \cdots + a_1 Dp_1 + a_0 Dp_0)$

$\Rightarrow x^{n+1} = D(a_{n+1}^{-1}(x^{n+2} - a_n p_n - \cdots - a_1 p_1 - a_0 p_0))$.

Thus defining $p_{n+1} = a_{n+1}^{-1}(x^{n+2} - a_n p_n - \cdots - a_1 p_1 - a_0 p_0)$, we have $Dp_{n+1} = x^{n+1}$.

Now we get $(p_k)_{k=0}^{\infty}$ by recursion. Hence $\forall p = \sum_{k=0}^{\deg p} a_k x^k \in \mathcal{P}(\mathbf{R}), \exists\, q = (\sum_{k=0}^{\deg p} a_k p_k), Dq = p$. □

---

27 *Suppose $p \in \mathcal{P}(\mathbf{R})$. Prove that $\exists\, q \in \mathcal{P}(\mathbf{R})$ such that $5q'' + 3q' = p$.*

SOLUTION: Define $B \in \mathcal{L}(\mathcal{P}(\mathbf{R}))$ by $B = 5D^2 + 3D \Rightarrow B(q) = 5q'' + 3q'$.

Note that $\deg Bx^n = n - 1$. Similar to Problem (26), we conclude that B is surj. □

---

28 *Suppose $T \in \mathcal{L}(V, W), B_{\operatorname{range} T} = (w_1, \dots, w_m)$.*
Prove that $\exists\, \varphi_1, \dots, \varphi_m \in \mathcal{L}(V, \mathbf{F})$ such that $\forall v \in V, Tv = \varphi_1(v)w_1 + \cdots + \varphi_m(v)w_m$.

SOLUTION:

Suppose $v_1, \dots, v_m \in V$ such that $Tv_i = w_i$ for each v_i. Then $(v_1, \dots, v_m)$ is linely inde.

Let $B_V = (v_1, \dots, v_m, u_1, \dots, u_n)$. Note that $\forall v \in V, v = \sum_{i=1}^{m} a_i v_i + \sum_{i=1}^{n} b_i u_i, \exists!\, a_i, b_i \in \mathbf{F}$.

Define $\varphi_i : V \to \mathbf{F}$ by $\varphi_i(v) = a_i v_i$ for each i. We now check the linearity.

$\forall v, u \in V\ (\exists!\, a_i, b_i, c_i, d_i \in \mathbf{F}), \lambda \in \mathbf{F}, \varphi_i(v + \lambda u) = a_i + \lambda c_i = \varphi(v) + \lambda\varphi(u)$. □

---

29 *Suppose* $\varphi \in \mathcal{L}(V, \mathbf{F})$. *Suppose* $u \in V \backslash \operatorname{null} \varphi$. *Prove that* $V = \operatorname{null} \varphi \oplus \{au : a \in \mathbf{F}\}$.

SOLUTION: If $\varphi = 0$ then we are done. Suppose $\varphi \neq 0$.

(a) $\forall\, v = cu \in \operatorname{null} \varphi \cap \{au : a \in \mathbf{F}\}, \varphi(v) = 0 = c\varphi(u) \Rightarrow c = 0$. Hence $\operatorname{null} \varphi \cap \{au : a \in \mathbf{F}\} = \{0\}$.

(b) $\forall\, v \in V, v = (v - \frac{\varphi(v)}{\varphi(u)}u) + \frac{\varphi(v)}{\varphi(u)}u.$ $\left| \begin{array}{l} v - \frac{\varphi(v)}{\varphi(u)}u \in \operatorname{null} \varphi \\ \frac{\varphi(v)}{\varphi(u)}u \in \{au : a \in \mathbf{F}\} \end{array} \right\} \Rightarrow V = \operatorname{null} \varphi \oplus \{au : a \in \mathbf{F}\}.$ □

COMMENT: $\varphi \neq 0 \Rightarrow \varphi(v_i) = a_i \neq 0$ for each v_i, for some linely inde list $(v_1, \dots, v_k)$.
Fix one v_k. Then $\forall j \in \{1, \dots, k-1, k+1, \dots, n\}$, $\operatorname{span}\{a_j v_k - a_k v_j\} \subseteq \operatorname{null} \varphi$.
Hence every vecsp in $\mathcal{S}_V \operatorname{null} \varphi$ is one-dim.

---

30 *Suppose* $\varphi_1, \varphi_2 \in \mathcal{L}(V, \mathbf{F})$ *and* $\operatorname{null} \varphi_1 = \operatorname{null} \varphi_2 = \operatorname{null} \varphi$. *Prove that* $\exists\, c \in \mathbf{F}, \varphi_1 = c\varphi_2$

SOLUTION:

If $\operatorname{null} \varphi = V$, then $\varphi_1 = \varphi_2 = 0$, we are done. Suppose $u \in V \backslash \operatorname{null} \varphi \Rightarrow \varphi_1(u), \varphi_2(u) \neq 0$.
By Problem (29), $V = \operatorname{null} \varphi \oplus \operatorname{span}(u)$. Hence for any $v \in V, v = w + a_v u, \exists !\, w \in \operatorname{null} \varphi, a_v \in \mathbf{F}$.

$\varphi_1(v) = a_v \varphi_1(u),\ \ \varphi_2(v) = a_v \varphi_2(u) \Rightarrow a_v = \frac{\varphi_1(v)}{\varphi_1(u)} = \frac{\varphi_2(v)}{\varphi_2(u)} \Rightarrow \frac{\varphi_1(u)}{\varphi_2(u)} = \frac{\varphi_1(v)}{\varphi_2(v)} = c \in \mathbf{F}.$ □

---

31 *Prove that* $\exists\, T_1, T_2 \in \mathcal{L}(\mathbf{R}^5, \mathbf{R}^2)$, $\operatorname{null} T_1 = \operatorname{null} T_2$ *and* $T_1 \neq cT_2, \forall c \in \mathbf{F}$.

SOLUTION:

Let $(v_1, \dots, v_5)$ be a basis of $\mathbf{R}^5$, (w_1, w_2) be a basis of $\mathbf{R}^2$. Define $T, S \in \mathcal{L}(V, W)$ by

$$\left. \begin{array}{lll} Tv_1 = w_1, & Tv_2 = w_2, & Tv_3 = Tv_4 = Tv_5 = 0 \\ Sv_1 = w_1, & Sv_2 = 2w_2, & Sv_3 = Sv_4 = Sv_5 = 0 \end{array} \right\} \Rightarrow \operatorname{null} T = \operatorname{null} S.$$

Suppose $T = \lambda S$. Then $w_1 = Tv_1 = \lambda S v_1 = \lambda w_1 \Rightarrow \lambda = 1$.
While $w_2 = Tv_2 = \lambda S v_2 = 2\lambda w_2 \Rightarrow \lambda = \frac{1}{2}$. Contradicts. □

• *Suppose* V *is finite-dim with* $\dim V > 1$.
Show that if $\varphi : \mathcal{L}(V) \to \mathbf{F}$ *is linear and* $\forall S, T \in \mathcal{L}(V), \varphi(ST) = \varphi(S) \cdot \varphi(T)$, *then* $\varphi = 0$.

SOLUTION: Using notations in (4E 3.A.16).

Suppose $\varphi \neq 0 \Rightarrow \exists\, i, j \in \{1, \dots, n\}, \varphi(R_{i,j}) \neq 0$.
Because $R_{i,j} = R_{x,j} \circ R_{i,x},\ \forall x = 1, \dots, n$

$$\Rightarrow \varphi(R_{i,j}) = \varphi(R_{x,j}) \cdot \varphi(R_{i,x}) \neq 0 \Rightarrow \varphi(R_{x,j}) \neq 0 \text{ and } \varphi(R_{i,x}) \neq 0.$$

Again, because $R_{i,x} = R_{y,x} \circ R_{i,y},\ \forall y = 1, \dots, n.$ Thus $\varphi(R_{y,x}) \neq 0,\ \forall x, y = 1, \dots, n$.
Let $l \neq i, k \neq j$ and then $\varphi(R_{l,k} \circ R_{i,j}) = \varphi(0) = 0 = \varphi(R_{l,k}) \cdot \varphi(R_{i,j})$
$\Rightarrow \varphi(R_{l,k}) = 0$ or $\varphi(R_{i,j}) = 0$. Contradicts. □

OR. Note that by (4E 3.A.16), $\exists\, S, T \in \mathcal{L}(V), ST - TS \neq 0$.
Then $\varphi(ST - TS) = \varphi(S)\varphi(T) - \varphi(T)\varphi(S) = 0 \Rightarrow ST - TS \in \operatorname{null} \varphi \neq \{0\}$.
Thus $\forall\, E \in \operatorname{null} \varphi, T \in \mathcal{L}(V), \varphi(ET) = \varphi(TE) = 0 \Rightarrow ET, TE \in \operatorname{null} \varphi$.
Hence $\operatorname{null} \varphi$ is a nonzero two-sided ideal of $\mathcal{L}(V)$. □

$$\begin{pmatrix}1&2\\3&4\end{pmatrix}\begin{pmatrix}5&6&7\\8&9&10\end{pmatrix} = \begin{pmatrix}\begin{pmatrix}1&2\end{pmatrix}\begin{pmatrix}5\\8\end{pmatrix} & \begin{pmatrix}1&2\end{pmatrix}\begin{pmatrix}6\\9\end{pmatrix} & \begin{pmatrix}1&2\end{pmatrix}\begin{pmatrix}7\\10\end{pmatrix}\\ \begin{pmatrix}3&4\end{pmatrix}\begin{pmatrix}5\\8\end{pmatrix} & \begin{pmatrix}3&4\end{pmatrix}\begin{pmatrix}6\\9\end{pmatrix} & \begin{pmatrix}3&4\end{pmatrix}\begin{pmatrix}7\\10\end{pmatrix}\end{pmatrix}$$
$$= \begin{pmatrix}1\times5+2\times8 & 1\times6+2\times9 & 1\times7+2\times10\\ 3\times5+4\times8 & 3\times6+4\times9 & 3\times7+4\times10\end{pmatrix} = \begin{pmatrix}21&24&27\\47&54&61\end{pmatrix}$$

• [4E 3.51] *Suppose* $C \in \mathbf{F}^{m,c}, R \in \mathbf{F}^{c,p}$.

(a) For $k = 1, \dots, p$, $\quad (CR)_{\cdot,k} = CR_{\cdot,k} = C_{\cdot,\cdot}R_{\cdot,k} = \sum_{r=1}^{c} C_{\cdot,r}R_{r,k} = R_{1,k}C_{\cdot,1} + \cdots + R_{c,k}C_{\cdot,c}$

Which means that each cols CR is a linear combination of the cols of C.

(b) For $j = 1, \dots, m$, $\quad (CR)_{j,\cdot} = C_{j,\cdot}R = C_{j,\cdot}R_{\cdot,\cdot} = \sum_{r=1}^{c} C_{j,r}R_{r,\cdot} = C_{j,1}R_{1,\cdot} + \cdots + C_{j,c}R_{c,\cdot}$

Which means that each rows CR is a linear combination of the rows of R.

• Column-Row Factorization (CR Factorization)

Suppose $A \in \mathbf{F}^{m,n}, A \neq 0$. *Let* $\left|\begin{array}{l} S_c = \operatorname{span}(A_{\cdot,1}, \dots, A_{\cdot,n}) \subseteq \mathbf{F}^{m,1}, \dim S_c = c. \\ S_r = \operatorname{span}(A_{1,\cdot}, \dots, A_{m,\cdot}) \subseteq \mathbf{F}^{1,n}, \dim S_r = r. \end{array}\right.$

Prove that $A = CR, \exists\, C \in \mathbf{F}^{m,c}, R \in \mathbf{F}^{c,n}$.

Solution: Notice that $A \neq 0 \Rightarrow c, r \geqslant 1$.

Let $(C_{\cdot,1}, \dots, C_{\cdot,c})$ be a basis of S_c, forming $C \in \mathbf{F}^{m,c}$.

Or. Let $(R_{1,\cdot}, \dots, R_{r,\cdot})$ be a basis of S_r, forming $R \in \mathbf{F}^{c,n}$.

Then for any k, $A_{\cdot,k} = R_{1,k}C_{\cdot,1} + \cdots + R_{c,k}C_{\cdot,c} = (CR)_{\cdot,k}, \exists!\, R_{1,k}, \dots, R_{c,k} \in \mathbf{F}$, forming $R \in \mathbf{F}^{c,n}$.

Or. For any k, $A_{j,\cdot} = C_{j,1}R_{1,\cdot} + \cdots + C_{j,c}R_{c,\cdot} = (CR)_{j,\cdot}, \exists!\, C_{j,1}, \dots, C_{j,c} \in \mathbf{F}$, forming $C \in \mathbf{F}^{m,c}$.

Now we have $A = CR$. TODO $\square$

Example:

$$A = \begin{pmatrix}10&7&4&1\\26&19&12&5\\46&33&20&7\end{pmatrix} \overset{(1)}{=} \begin{pmatrix}1&0\\0&1\\2&1\end{pmatrix}\begin{pmatrix}10&7&4&1\\26&19&12&5\end{pmatrix} \overset{(2)}{=} \begin{pmatrix}7&4\\19&12\\33&20\end{pmatrix}\begin{pmatrix}2&-1\\1&0\\0&1\\-1&2\end{pmatrix}$$

(I) $\begin{pmatrix}46&33&20&7\end{pmatrix} = 2\begin{pmatrix}10&7&4&1\end{pmatrix} + \begin{pmatrix}26&19&12&5\end{pmatrix}$. Hence $\dim S_r = 2$. Let $(A_{1,\cdot}, A_{2,\cdot})$ be the basis.

(II) $\begin{pmatrix}10\\26\\46\end{pmatrix} = 2\begin{pmatrix}7\\19\\33\end{pmatrix} - \begin{pmatrix}4\\12\\20\end{pmatrix}$; $\begin{pmatrix}1\\5\\7\end{pmatrix} = 2\begin{pmatrix}4\\12\\20\end{pmatrix} - \begin{pmatrix}7\\19\\33\end{pmatrix}$. Hence $\dim S_c = 2$. Let $(A_{\cdot,2}, A_{\cdot,3})$ be the basis.

• Column Rank Equals Row Rank (Using the notation and result above)

For each $A_{j,\cdot} \in S_r$, $A_{j,\cdot} = (CR)_{j,\cdot} = C_{j,1}R = C_{j,1}R_{1,\cdot} + \cdots + C_{j,c}R_{c,\cdot}$.

For each $A_{\cdot,k} \in S_c$, $A_{\cdot,k} = (CR)_{\cdot,k} = R_{1,k}C_{\cdot,1} + \cdots + R_{c,k}C_{\cdot,c} = (CR)_{\cdot,k}$.

$\Rightarrow \operatorname{span}(A_{1,\cdot}, \dots, A_{n,\cdot}) = S_r = \operatorname{span}(R_{1,\cdot}, \dots, R_{c,\cdot}) \Rightarrow \dim S_r = r \leqslant c = \dim S_c$.

$\Rightarrow \operatorname{span}(A_{\cdot,1}, \dots, A_{\cdot,m}) = S_r = \operatorname{span}(C_{\cdot,1}, \dots, C_{\cdot,r}) \Rightarrow \dim S_c = c \leqslant r = \dim S_r$.

Or. Apply the result to $A^t \in \mathbf{F}^{n,m} \Rightarrow \dim S_r^t = \dim S_c = c \leqslant r = \dim S_r = \dim S_c^t$. □

• (4E 3.C.17, Or 3.F.32) *Suppose $T \in \mathcal{L}(V)$ and $(u_1, \dots, u_n), (v_1, \dots, v_n)$ are bases of V. Prove that the following are equi.* *Here $A = \mathcal{M}(T)$ means $\mathcal{M}(T, (u_1, \dots, u_n), (v_1, \dots, v_n))$.*

(a) *T is inje.*

(b) *The cols of $\mathcal{M}(T)$ are linely inde in $\mathbf{F}^{n,1}$.*

(c) *The cols of $\mathcal{M}(T)$ span $\mathbf{F}^{n,1}$.*

(d) *The rows of $\mathcal{M}(T)$ span $\mathbf{F}^{1,n}$.*

(e) *The rows of $\mathcal{M}(T)$ are linely inde in $\mathbf{F}^{1,n}$.*

Solution: Using Tips in 2.C.

T is inje $\iff \dim V = \dim \operatorname{range} T + \dim \operatorname{null} T = \dim \operatorname{range} T$

$$\Delta \begin{cases} \iff (Tu_1, \dots, Tu_n) \text{ is a basis of } V; \ \dim \operatorname{range} T = \dim \operatorname{span}(\mathcal{M}(Tu_1), \dots, \mathcal{M}(Tu_n)) = n \\ \iff (\mathcal{M}(Tu_1), \dots, \mathcal{M}(Tu_n)) \text{ is a basis of } \mathbf{F}^{n,1}, \text{ as well as } (A_{\cdot,1}, \dots, A_{\cdot,n}) \end{cases}$$

$\left[\text{又} \dim S_c = \dim \operatorname{span}(A_{\cdot,1}, \dots, A_{\cdot,n}) = \dim \operatorname{span}(A_{1,\cdot}, \dots, A_{n,\cdot}) = \dim S_r = n \right]$ □

$\iff (A_{1,\cdot}, \dots, A_{n,\cdot})$ is a basis of $\mathbf{F}^{1,n}$.

Now we show that (Δ) properly.

$(a) \Rightarrow (b)$:

Suppose $b_1 A_{\cdot,1} + \cdots + b_n A_{\cdot,n} = \begin{pmatrix} b_1 A_{1,1} + \cdots + b_n A_{1,n} \\ \vdots \\ b_1 A_{n,1} + \cdots + b_n A_{n,n} \end{pmatrix} = 0$. Let $u = b_1 u_1 + \cdots + b_n u_n$.

$$\begin{aligned} \text{Then } Tu &= b_1 Tu_1 + \cdots + b_n Tu_n \\ &= b_1(A_{1,1}v_1 + \cdots + A_{n,1}v_n) + \cdots + b_n(A_{1,n}v_1 + \cdots + A_{n,n}v_n) \\ &= (b_1 A_{1,1} + \cdots + b_n A_{1,n})v_1 + \cdots + (b_1 A_{n,1} + \cdots + b_n A_{n,n})v_n \\ &= 0v_1 + \cdots + 0v_n = 0 \\ &\Rightarrow b_1 = \cdots = b_n = 0. \end{aligned}$$

Thus by (2.39), (b) holds.

$(b) \Rightarrow (a)$:

Suppose $u = b_1 u_1 + \cdots + b_n u_n \in \operatorname{null} T$.

Then $Tu = 0 = (b_1 A_{1,1} + \cdots + b_n A_{1,n})v_1 + \cdots + (b_1 A_{n,1} + \cdots + b_n A_{n,n})v_n$.

Thus $b_1 A_{1,1} + \cdots + b_n A_{1,n} = \cdots = b_1 A_{n,1} + \cdots + b_n A_{n,n} = 0$.

Which is equivalent to $\begin{pmatrix} b_1 A_{1,1} + \cdots + b_n A_{1,n} \\ \vdots \\ b_1 A_{n,1} + \cdots + b_n A_{n,n} \end{pmatrix} = b_1 A_{\cdot,1} + \cdots + b_n A_{\cdot,n} = 0 \Rightarrow b_1 = \cdots = b_n = 0$.

Thus by (2.39), (a) holds. □

- (4E 3.C.16, OR 3.E.11) *Suppose A is an m-by-n matrix with $A \neq 0$. Prove that* $\operatorname{rank} A = 1 \iff \exists\, (c_1, \dots, c_m) \in \mathbf{F}^m, (d_1, \dots, d_n) \in \mathbf{F}^n$ *such that* $A_{j,k} = c_j \cdot d_k$ *for every* $j = 1, \dots, m$ *and* $k = 1, \dots, n$.

SOLUTION:

Using the notation in CR Factorization.

(a) Suppose $A = \begin{pmatrix} c_1 \\ \vdots \\ c_m \end{pmatrix} \begin{pmatrix} d_1 & \cdots & d_n \end{pmatrix} = \begin{pmatrix} c_1 d_1 & \cdots & c_1 d_n \\ \vdots & \ddots & \vdots \\ c_m d_1 & \cdots & c_m d_n \end{pmatrix}$. $(\ \exists\, c_j, d_k \in \mathbf{F}, \forall j, k\ )$

Then $S_c = \left\{ \begin{pmatrix} c_1 d_1 \\ \vdots \\ c_m d_1 \end{pmatrix}, \begin{pmatrix} c_1 d_2 \\ \vdots \\ c_m d_2 \end{pmatrix}, \dots, \begin{pmatrix} c_1 d_n \\ \vdots \\ c_m d_n \end{pmatrix} \right\} = \operatorname{span} \left\{ \begin{pmatrix} c_1 \\ \vdots \\ c_m \end{pmatrix} \right\}$.

OR. $S_r = \operatorname{span} \left\{ \begin{matrix} \begin{pmatrix} c_1 d_1 & \cdots & c_1 d_n \end{pmatrix}, \\ \begin{pmatrix} c_2 d_1 & \cdots & c_2 d_n \end{pmatrix}, \\ \vdots \\ \begin{pmatrix} c_m d_1 & \cdots & c_m d_n \end{pmatrix} \end{matrix} \right\} = \operatorname{span} \left\{ \begin{pmatrix} d_1 & \dots & d_n \end{pmatrix} \right\}$. Hence $\operatorname{rank} A = 1$.

OR. Using also the result in [4E 3.51(a)].

Every col of A is a scalar multi of C. Then $\operatorname{rank} A \leqslant 1$ 又 $\operatorname{rank} A \geqslant 1$ $(\ A \neq 0\ )$.

(b) By CR Factorization, $\exists\, C = \begin{pmatrix} c_1 \\ \vdots \\ c_m \end{pmatrix} \in \mathbf{F}^{m,1}, R = \begin{pmatrix} d_1 & \cdots & d_n \end{pmatrix} \in \mathbf{F}^{1,n}$ such that $A = CR$.

OR. Not using CR Factorization. Suppose $\operatorname{rank} A = \dim S_c = \dim S_r = 1$.

Let $c_j = \dfrac{A_{j,1}}{A_{1,1}} = \dfrac{A_{j,2}}{A_{1,2}} = \cdots = \dfrac{A_{j,n}}{A_{1,n}}, \qquad d'_k = \dfrac{A_{1,k}}{A_{1,1}} = \dfrac{A_{2,k}}{A_{2,1}} = \cdots = \dfrac{A_{m,k}}{A_{m,1}}. \quad (\ \forall j, k\ )$

$\Rightarrow A_{j,k} = d'_k A_{j,1} = c_j A_{1,k} = c_j d'_k A_{1,1} = c_j d_k$. Letting $d_k = d'_k A_{1,1}$. ☐

---

1 *Suppose $T \in \mathcal{L}(V, W)$. Show that with resp to each choice of bases of V and W, the matrix of T has at least* $\dim \operatorname{range} T$ *nonzero entries.*

SOLUTION:

Let $B_{\operatorname{null} T} = (v_1, \dots, v_p), B_V = (v_1, \dots, v_n)$. Let $B_W = (w_1, \dots, w_m)$. Denote $\mathcal{M}(T, B_V, B_W)$ by A.

Because at most p of the v_k's can belong to $\operatorname{null} T \iff$ at least $n - p = q$ of the v_k's do not.
For $v_k \notin \operatorname{null} T, Tv_k = A_{1,k} w_1 + \cdots + A_{m,k} w_m \neq 0$. Thus col k has at least one nonzero entry.
Since there are $n - p = q$ choices of such k, A has at least $q = \dim \operatorname{range} T$ nonzero entries. ☐

OR. We prove by contradiction.
Suppose A has at most $(\ \dim \operatorname{range} T - 1)$ nonzero entries.
Then by Pigeon Hole Principle, at least one of $A_{\cdot, p+1}, \dots, A_{\cdot, n}$ equals 0.
Thus there are at most $(\ \dim \operatorname{range} T - 1)$ nonzero vecs in $Tv_{p+1}, \dots, Tv_n$.
While $\operatorname{range} T = \operatorname{span}(Tv_{p+1}, \dots, Tv_n) \Rightarrow \dim \operatorname{range} T = \dim \operatorname{span}(Tv_{p+1}, \dots, Tv_n)$. Contradicts. ☐

---

3 *Suppose V and W are finite-dim and $T \in \mathcal{L}(V,W)$. Prove that $\exists\, B_V, B_W$ such that [letting $A = \mathcal{M}(T, B_V, B_W)$] $A_{k,k} = 1, A_{i,j} = 0$, where $1 \leqslant k \leqslant \dim \operatorname{range} T, i \neq j$.*

SOLUTION:

Let $R = (Tv_1, \dots, Tv_n)$ be a basis of range T, extend to $B_W = (Tv_1, \dots, Tv_n, w_1, \dots, w_p)$.
Let $\mathcal{K}_R = \operatorname{span}(v_1, \dots, v_n)$. Let $(u_1, \dots, u_m)$ be a basis of null T. Then $B_V = (v_1, \dots, v_n, u_1, \dots, u_m)$. ☐

---

4 *Suppose $B_V = (v_1, \dots, v_m)$ and W is finite-dim. Suppose $T \in \mathcal{L}(V,W)$.
Prove that $\exists\, B_W = (w_1, \dots, w_n)$, $\mathcal{M}(T, B_V, B_W)^t_{\cdot,1} = \begin{pmatrix} 1 & 0 & \cdots & 0 \end{pmatrix}$ or $\begin{pmatrix} 0 & \cdots & 0 \end{pmatrix}$.*

SOLUTION: If $Tv_1 = 0$, then we are done. If not then extend (Tv_1). ☐

---

5 *Suppose $B_W = (w_1, \dots, w_n)$ and V is finite-dim. Suppose $T \in \mathcal{L}(V,W)$.
Prove that $\exists\, B_V = (v_1, \dots, v_m)$, $\mathcal{M}(T, B_V, B_W)_{1,\cdot} = \begin{pmatrix} 0 & \cdots & 0 \end{pmatrix}$ or $\begin{pmatrix} 1 & 0 & \cdots & 0 \end{pmatrix}$.*

SOLUTION:

Let $(u_1, \dots, u_n)$ be a basis of V. Denote $\mathcal{M}(T, (u_1, \dots, u_n), B_W)$ by A.
If $A_{1,\cdot} = 0$, then let $B_V = (u_1, \dots, u_n)$, we are done.
Otherwise, $\begin{pmatrix} A_{1,1} & \cdots & A_{1,m} \end{pmatrix} \neq 0$, choose one $A_{1,k} \neq 0$.

$$\text{Let } v_1 = \frac{u_k}{A_{1,k}}; \quad \begin{aligned} v_j &= u_{j-1} - A_{1,j-1} v_1 \quad && \text{for } j = 2, \dots, k; \\ v_i &= u_i - A_{1,i} v_1 && \text{for } i = k+1, \dots, n. \end{aligned}$$

Now because each $u_k \in \operatorname{span}(v_1, \dots, v_n) \Rightarrow V = \operatorname{span}(v_1, \dots, v_n), B_V = (v_1, \dots, v_n)$.

And $Tv_1 = T(\frac{u_k}{A_{1,k}}) = \frac{1}{A_{1,k}}(A_{1,k}w_1 + \cdots + A_{n,k}w_n) = 1w_1 + \cdots + \frac{A_{n,k}}{A_{1,k}} w_n$.

$$\forall j \in \{2, \dots, k, \underbrace{k+2, \dots, n+1}_{i \in \{k+1, \dots, n\}}\},\ Tv_j = T(u_{j-1} - A_{1,j-1}v_1) = Tu_{j-1} - T(\frac{A_{1,j-1}u_k}{A_{1,k}})$$

$$= A_{1,j-1}w_1 + \cdots + A_{n,j-1}w_n - A_{1,j-1}(1w_1 + \cdots + \frac{A_{n,k}}{A_{1,k}} w_n) = 0w_1 + \cdots + (A_{n,j-1} - \frac{A_{1,j-1}A_{n,k}}{A_{1,k}})w_n.$$ ☐

---

6 *Suppose V and W are finite-dim and $T \in \mathcal{L}(V,W)$.
Prove that $\dim \operatorname{range} T = 1 \iff \exists\, B_V, B_W$, all entries of $A = \mathcal{M}(T, B_V, B_W)$ equal 1.*

SOLUTION:

(a) Suppose $B_V = (v_1, \dots, v_n), B_W = (w_1, \dots, w_m)$ are the bases such that all entries of A equal 1.

Then $Tv_i = w_1 + \cdots + w_m$ for all $i = 1, \dots, n$. Because $w_1, \dots, w_n$ is linely inde, $w_1 + \cdots + w_n \neq 0$.

(b) Suppose $\dim \operatorname{range} T = 1$. Then $\dim \operatorname{null} T = \dim V - 1$.
Let $(u_2, \dots, u_n)$ be a basis of null T. Extend it to a basis of V as $(u_1, u_2, \dots, u_n)$.
Let $w_1 = Tv_1 - w_2 - \cdots - w_m$. Extend to a basis of W and we have B_W.
Let $v_1 = u_1, v_i = u_1 + u_i$. Extend to a basis of V and we have B_V. ☐

OR. Suppose range T has a basis (w).
By (2.C.15 [COROLLARY]), $\exists\, B_W = (w_1, \dots, w_m)$ such that $w = w_1 + \cdots + w_m$.
By (2.C [NEW THEOREM]), $\exists$ a basis $(u_1, \dots, u_n)$ of V such that each $u_k \notin \operatorname{null} T$.
$\forall k \in \{1, \dots, n\}, Tu_k \in \operatorname{range} T = \operatorname{span}(w) \Rightarrow Tu_k = \lambda_k w, \exists\, \lambda_k \in \mathbf{F} \backslash \{0\}$.
Let $v_k = \lambda_k^{-1} u_k \neq 0 \Rightarrow B_V = (v_1, \dots, v_n)$. Hence for each $v_k, Tv_k = w = w_1 + \cdots + w_m$. ☐

• **NOTE FOR [3.49]:** $\because [(AC)_{\cdot,k}]_{j,1} = (AC)_{j,k} = \sum_{r=1}^{n} A_{j,r}C_{r,k} = \sum_{r=1}^{n} A_{j,r}(C_{\cdot,k})_{r,1} = (AC_{\cdot,k})_{j,1}$

$\therefore (AC)_{\cdot,k} = A_{\cdot,\cdot}C_{\cdot,k} = AC_{\cdot,k}$ □

15 *Suppose $A \in \mathbf{F}^{n,n}, j,k \in \{1,\dots,n\}$. Show that $(A^3)_{j,k} = \sum_{p=1}^{n}\sum_{r=1}^{n} A_{j,p}A_{p,r}A_{r,k}$.*

SOLUTION: $(AAA)_{j,k} = (AA)_{j,\cdot}A_{\cdot,k} = \sum_{p=1}^{n}(A_{j,p}A_{p,\cdot})A_{\cdot,k} = \sum_{p=1}^{n}\sum_{r=1}^{n}A_{j,p}A_{p,r}A_{r,k}$.

OR. $(AAA)_{j,k} = \sum_{r=1}^{n}(AA)_{j,r}A_{r,k} = \sum_{r=1}^{n}\big(\sum_{p=1}^{n}A_{j,p}A_{p,r}\big)A_{r,k}$

$= \sum_{r=1}^{n}\big[A_{j,1}(A_{1,r}A_{r,k}) + \cdots + A_{j,n}(A_{n,r}A_{r,k})\big]$

$= A_{j,1}\sum_{r=1}^{n}A_{1,r}A_{r,k} + \cdots + A_{j,n}\sum_{r=1}^{n}A_{n,r}A_{r,k} = \sum_{p=1}^{n}\sum_{r=1}^{n}A_{j,p}A_{p,r}A_{r,k}$. □

• *Prove that the commutativity does not hold in $\mathbf{F}^{m,n}$.*

SOLUTION:

Suppose $\dim V = n, \dim W = m$ and the commutativity holds in $\mathbf{F}^{n,m}$.

$\forall T \in \mathcal{L}(V,W), S \in \mathcal{L}(W,V), \mathcal{M}(TS) = \mathcal{M}(T)\mathcal{M}(S) = \mathcal{M}(S)\mathcal{M}(T) = \mathcal{M}(ST)$.

Hence $ST = TS$. Which in general is not true. (See 3.D) □

• (10.A.3, OR 4E 3.D.19) *Suppose V is finite-dim and $T \in \mathcal{L}(V)$.*
Prove that $\forall B_V \neq B'_V,\ \mathcal{M}(T,B_V) = \mathcal{M}(T,B'_V) \iff T = \lambda\mathcal{M}(I), \exists\lambda \in \mathbf{F}$.

SOLUTION: [Compare with the first solution of (3.D.16) in 3.A]

Suppose $T = \lambda I$ for some $\lambda \in \mathbf{F}$. Then $T = \lambda\mathcal{M}(I)$.

Suppose $\forall B_V \neq B'_V,\ \mathcal{M}(T,B_V) = \mathcal{M}(T,B'_V)$. If $T = 0$, then we are done.

Suppose $T \neq 0$, and $v \in V\backslash\{0\}$. Assume that (v,Tv) is linely inde.

Extend (v,Tv) to $B_V = (v,Tv,u_3,\dots,u_n)$. Let $B = \mathcal{M}()(T,B_V)$.

$\Rightarrow Tv = B_{1,1}v + B_{2,1}(Tv) + B_{3,1}u_3 + \cdots + B_{n,1}u_n \Rightarrow B_{2,1} = 1, B_{i,1} = 0,\ \forall i \neq 2$.

By assumption, $A = \mathcal{M}(T,B'_V) = B, \forall B'_V = (v,w_2,\dots,w_n)$. Then $A_{2,1} = 1, A_{i,1} = 0, \forall i \neq 2$.

$\Rightarrow Tv = w_2$, which is not true if we let $w_2 = u_3,\ w_3 = Tv,\ w_j = u_j, \forall j \in \{4,\dots,n\}$. Contradicts.

Hence (v,Tv) is linely depe $\Rightarrow \forall v \in V, \exists\lambda_v \in \mathbf{F}, Tv = \lambda_v v$.

Now we show that λ_v is independent of v, that is, to show that for all $v \neq w \in V\backslash 0, \lambda_v = \lambda_w$.

$$\left.\begin{array}{l}(v,w) \text{ is linely inde} \Rightarrow T(v+w) = \lambda_{v+w}(v+w) = \lambda_v v + \lambda_w w = Tv + Tw \\ (v,w) \text{ is linely depe, } w = cv \Rightarrow Tw = \lambda_w w = \lambda_w cv = c\lambda_v v = T(cv)\end{array}\right\} \Rightarrow T = \lambda I, \exists\lambda \in \mathbf{F}.$$ □

OR. Conversely, denote $\mathcal{M}(T,B_V)$ by A, where $B_V = (u_1,\dots,u_m)$ is arbitrary.

Fix one $B_V = (v_1,\dots,v_m)$ and then $(v_1,\dots,\frac{1}{2}v_k,\dots,v_m)$ is also a basis for any given $k \in \{1,\dots,m\}$.

Fix one k. Now we have $T(\frac{1}{2}v_k) = A_{1,k}v_1 + \cdots + A_{k,k}(\frac{1}{2}v_k) + \cdots + A_{m,k}v_m$

$\Rightarrow Tv_k = 2A_{1,k}v_1 + \cdots + A_{k,k}v_k + \cdots + 2A_{m,k}v_m = A_{1,k}v_1 + \cdots + A_{k,k}v_k + \cdots + A_{m,k}v_m$.

Then $A_{j,k} = 2A_{j,k} \Rightarrow A_{j,k} = 0$ for all $j \neq k$. Thus $Tv_k = A_{k,k}v_k, \forall k \in \{1,\dots,m\}$.

Now we show that $A_{k,k} = A_{j,j}$ for all $j \neq k$. Choose j,k such that $j \neq k$.

Consider the basis $B'_V = (v'_1,\dots,v'_j,\dots,v'_k,\dots,v'_m)$,

where $v'_j = v_k,\ v_k{}' = v_j$ and $v'_i = v_i$ for all $i \in \{1,\dots,m\} \setminus \{j,k\}$.

Remember that $\mathcal{M}(T,B'_V) = \mathcal{M}(T,B_V) = A$.

Hence $T(v'_k) = A_{1,k}v'_1 + \cdots + A_{k,k}v'_k + \cdots + A_{m,k}v'_m = A_{k,k}v'_k = A_{k,k}v_j$, while $T(v'_k) = T(v_j) = A_{j,j}v_j$.

Thus $A_{k,k} = A_{j,j}$. □

• *Suppose V is finite-dim and $T \in \mathcal{L}(V)$.*

$$\left.\begin{array}{l}(Tv_1,\dots,Tv_n) \text{ is a basis of } V \text{ for some basis } (v_1,\dots,v_n) \text{ of } V \iff T \text{ is surj} \\ (Tv_1,\dots,Tv_n) \text{ is a basis of } V \text{ for every basis } (v_1,\dots,v_n) \text{ of } V \iff T \text{ is inje}\end{array}\right\} \iff T \text{ is inv.}$$

• *Suppose $T \in \mathcal{L}(V)$ and $V = \operatorname{span}(Tv_1,\dots,Tv_m)$. Prove that $V = \operatorname{span}(v_1,\dots,v_m)$.*

Solution:

Because $V = \operatorname{span}(Tv_1,\dots,Tv_m) \Rightarrow T$ is surj, 又 V is finite-dim $\Rightarrow T$ is inv $\Rightarrow T^{-1}$ is inv.
$\forall v \in V, \exists a_i \in \mathbf{F}, v = a_1Tv_1+\dots+a_mTv_m \Rightarrow T^{-1}v = a_1v_1+\dots+a_mv_m \Rightarrow \operatorname{range} T^{-1} \subseteq \operatorname{span}(v_1,\dots,v_m)$.

Or. Reduce $(Tv_1,\dots,Tv_m)$ to a basis of V as $(Tv_{\alpha_1},\dots,Tv_{\alpha_k})$, where $k = \dim V$ and $\alpha_i \in \{1,\dots,k\}$.
Then $(v_{\alpha_1},\dots,v_{\alpha_k})$ is linely inde of length k, hence is a basis of V, contained in the list $(v_1,\dots,v_m)$. □

•Or (10.A.1) *Suppose $T \in \mathcal{L}(V), B_V = (v_1,\dots,v_n)$. Prove that $\mathcal{M}(T,B_V)$ is inv $\iff T$ is inv.*

Solution: Notice that $\mathcal{M} \in \mathcal{L}(\mathcal{L}(V),\mathbf{F}^{n,n})$ is an iso.

(a) $T^{-1}T = TT^{-1} = I \Rightarrow \mathcal{M}(T^{-1})\mathcal{M}(T) = \mathcal{M}(T)\mathcal{M}(T^{-1}) = I \Rightarrow \mathcal{M}(T^{-1}) = \mathcal{M}(T)^{-1}$.

(b) $\mathcal{M}(T)\mathcal{M}(T)^{-1} = \mathcal{M}(T)^{-1}\mathcal{M}(T) = I$. $\exists!\, S \in \mathcal{L}(V)$ such that $\mathcal{M}(T)^{-1} = \mathcal{M}(S)$
$\Rightarrow \mathcal{M}(T)\mathcal{M}(S) = \mathcal{M}(S)\mathcal{M}(T) = I = \mathcal{M}(TS) = \mathcal{M}(ST)$
$\Rightarrow \mathcal{M}^{-1}\mathcal{M}(TS) = \mathcal{M}^{-1}\mathcal{M}(ST) = I = TS = ST \Rightarrow S = T^{-1}$. □

• *Suppose $T \in \mathcal{L}(V,W)$ is inv. Show that T^{-1} is inv and $(T^{-1})^{-1} = T$.*

Solution:
$$\left.\begin{array}{l}TT^{-1} = (T^{-1})^{-1}T^{-1} = I \in \mathcal{L}(V) \\ T^{-1}T = T^{-1}(T^{-1})^{-1} = I \in \mathcal{L}(W)\end{array}\right\} \Rightarrow T = (T^{-1})^{-1}, \text{ by the uniqnes of inverse.}$$ □

---

1 *Suppose $T \in \mathcal{L}(U,V), S \in \mathcal{L}(V,W)$ are inv. Prove that ST is inv and $(ST)^{-1} = T^{-1}S^{-1}$.*

Solution:
$$\left.\begin{array}{l}(ST)(T^{-1}S^{-1}) = STT^{-1}S^{-1} = I \in \mathcal{L}(W) \\ (T^{-1}S^{-1})(ST) = T^{-1}S^{-1}ST = I \in \mathcal{L}(V)\end{array}\right\} \Rightarrow (ST)^{-1} = T^{-1}S^{-1}, \text{ by the uniqnes of inv.}$$ □

---

2 *Suppose V is finite-dim and $\dim V > 1$.*
Prove that the set of non-inv operators on V is not a subsp of $\mathcal{L}(V)$.
The set of inv operators is not either, although multi identity/inv, and commutativity for vec multi holds.

Solution:

Denote the set by U. Suppose $\dim V = n > 1$. Let $(v_1,\dots,v_n)$ be a basis of V. Define $S,T \in \mathcal{L}(V)$ by
$S(a_1v_1+\dots+a_nv_n) = a_1v_1, T(a_1v_1+\dots+a_nv_n) = a_2v_1+\dots+a_nv_n$. Hence $S+T = I$ is inv. □

Comment: If $\dim V = 1$, then $U = \{0\}$ is a subsp of $\mathcal{L}(V)$.

---

3 *Suppose V is finite-dim, U is a subsp of V, and $S \in \mathcal{L}(U,V)$.*
Prove that $\exists$ inv $T \in \mathcal{L}(V), Tu = Su, \forall u \in U \iff S$ is inje. [*Compare this with (3.A.11).*]

Solution:

(a) $Tu = Su$ for every $u \in U \Rightarrow u = T^{-1}Su \Rightarrow S$ is inje. Or. $\operatorname{null} S = \operatorname{null} T \cap U = \{0\} \cap U = \{0\}$.

(b) Suppose $(u_1,\dots,u_m)$ be a basis of U and S is inje $\Rightarrow (Su_1,\dots,Su_m)$ is linely inde in V.
Extend these to bases of V as $(u_1,\dots,u_m,v_1,\dots,v_n)$ and $(Su_1,\dots,Su_m,w_1,\dots,w_n)$.
Define $T \in \mathcal{L}(V)$ by $T(u_i) = Su_i$; $Tv_j = w_j$, for each $i \in \{1,\dots,m\}, j \in \{1,\dots,n\}$. □

---

4 *Suppose that W is finite-dim and $S, T \in \mathcal{L}(V, W)$.*
Prove that $\operatorname{null} S = \operatorname{null} T\,(=U) \iff S = ET,\ \exists$ *inv* $E \in \mathcal{L}(W)$.

SOLUTION:

Define $E \in \mathcal{L}(W)$ by $E(Tv_i) = Sv_i,\ \ E(w_j) = x_j$, for each $i \in \{1, \dots, m\}, j \in \{1, \dots, n\}$. Where:

Let $B_{\operatorname{range} T} = \mathcal{L}(Tv_1, \dots, Tv_m)$, extend to $B_W = (Tv_1, \dots, Tv_m, w_1, \dots, w_n)$. Let $\mathcal{K} = \operatorname{span}(v_1, \dots, v_m)$. 又 $\operatorname{null} S = \operatorname{null} T \Longrightarrow V = \mathcal{K} \oplus \operatorname{null} S \Leftrightarrow \mathcal{K} \in \mathcal{S}_V \operatorname{null} S$. $\Rightarrow \operatorname{span}(Sv_1, \dots, Sv_m) = \operatorname{range} S$ 又 $\dim \operatorname{range} T = \dim \operatorname{range} S = m$. Hence $B_{\operatorname{range} S} = (Sv_1, \dots, Sv_m)$. Thus we let $B'_W = (Sv_1, \dots, Sv_m, x_1, \dots, x_n)$.	$\therefore E$ is inv and $S = ET$.

Conversely, $S = ET \Rightarrow \operatorname{null} S = \operatorname{null} ET$.

Then $v \in \operatorname{null} ET \iff ET(v) = 0 \iff Tv = 0 \iff v \in \operatorname{null} T$. Hence $\operatorname{null} ET = \operatorname{null} T = \operatorname{null} S$. ☐

---

5 *Suppose that V is finite-dim and $S, T \in \mathcal{L}(V, W)$.*
Prove that $\operatorname{range} S = \operatorname{range} T\,(=R) \iff S = TE,\ \exists$ *inv* $E \in \mathcal{L}(V)$.

SOLUTION:

Define $E \in \mathcal{L}(V)$ as $E:\ v_i \mapsto r_i\ ;\quad u_j \mapsto s_j;$ for each $i \in \{1, \dots, m\}, j \in \{1, \dots, n\}$. Where:

Let $B_R = \mathcal{L}(Tv_1, \dots, Tv_m);\ B'_R = (Sr_1, \dots, Sr_m)$ such that $\forall\, i, Tv_i = Sr_i$. Let $B_{\operatorname{null} T} = (u_1, \dots, u_n);\ B_{\operatorname{null} S} = (s_1, \dots, s_n)$. Thus $B_V = (v_1, \dots, v_m, u_1, \dots, u_n);\ B'_V = (r_1, \dots, r_m, s_1, \dots, s_n)$.	$\therefore E$ is inv and $S = TE$.

Conversely, $S = TE \Rightarrow \operatorname{range} S = \operatorname{range} TE$.

Then $w \in \operatorname{range} S \iff \exists\, v \in V, Sv = TE(v) = T\big(E(v)\big) = w \in \operatorname{range} T$. Hence $\operatorname{range} S = \operatorname{range} T$. ☐

---

6 *Suppose V and W are finite-dim and $S, T \in \mathcal{L}(V, W)$.*
Prove that $S = E_2 T E_1, \exists$ inv $E_1 \in \mathcal{L}(V), E_2 \in \mathcal{L}(W)$ $\iff \dim \operatorname{null} S = \dim \operatorname{null} T = n$.

SOLUTION:

Define $E_1:\ \ v_i \mapsto r_i\ ;\quad u_j \mapsto s_j;$ for each $i \in \{1, \dots, m\}, j \in \{1, \dots, n\}$.
Define $E_2: Tv_i \mapsto Sr_i\ ;\ \ x_j \mapsto y_j;$ for each $i \in \{1, \dots, m\}, j \in \{1, \dots, n\}$. Where:

Let $B_{\operatorname{range} T} = \mathcal{L}(Tv_1, \dots, Tv_m);\ B_{\operatorname{range} S} = (Sr_1, \dots, Sr_m)$. Extend to $B_W = (Tv_1, \dots, Tv_m, x_1, \dots, x_p);\ B'_W = (Sr_1, \dots, Sr_m, y_1, \dots, y_p)$. Let $B_{\operatorname{null} T} = (u_1, \dots, u_n);\ B_{\operatorname{null} S} = (s_1, \dots, s_n)$. Thus $B_V = (v_1, \dots, v_m, u_1, \dots, u_n);\ B'_V = (r_1, \dots, r_m, s_1, \dots, s_n)$.	$\therefore E_1, E_2$ are inv and $S = E_2 T E_1$.

Conversely, $S = E_2 T E_1 \Rightarrow \dim \operatorname{null} S = \dim \operatorname{null} E_2 T E_1$.

$v \in \operatorname{null} E_2 T E_1 \iff E_2 T E_1(v) = 0 \iff TE_1(v) = 0$. Hence $\operatorname{null} E_2 T E_1 = \operatorname{null} TE_1 = \operatorname{null} S$.

又 By (3.B.22.COROLLARY), E is inv $\Rightarrow \dim \operatorname{null} TE_1 = \dim \operatorname{null} T = \dim \operatorname{null} S$. ☐

---

8 *Suppose V is finite-dim and $T: V \to W$ is a* ***surj*** *linear map of V onto W.*
Prove that there is a subsp U of V such that $T|_U$ is an iso of U onto W.

SOLUTION:

Let $B_{\operatorname{range} T} = B_W = (w_1, \dots, w_m) \Rightarrow \forall w_i, \exists\,!\, v_i \in V, Tv_i = w_i$. Let $B_{\mathcal{K}} = (v_1, \dots, v_m)$.
Then $\dim \mathcal{K} = \dim W$. Thus $T|_{\mathcal{K}}$ is an iso of $\mathcal{K}$ onto W. ☐

OR. By Problem (12) in (3.B), there is a subsp U of V such that
$U \cap \operatorname{null} T = \{0\} = \operatorname{null} T|_U, \operatorname{range} T = \{Tu : u \in U\} = \operatorname{range} T|_U$. ☐

---

9 *Suppose V is finite-dim and $S, T \in \mathcal{L}(V)$. Prove that ST is inv $\iff$ S and T are inv.*

Solution:

Suppose S, T are inv. Then $(ST)(T^{-1}S^{-1}) = (T^{-1}S^{-1})(ST) = I$. Hence ST is inv.

Suppose ST is inv. Let $R = (ST)^{-1} \Rightarrow R(ST) = (ST)R = I$.

$$\left.\begin{array}{l} Tv = 0 \Rightarrow v = R(ST)v = RS(Tv) = 0 \\ \forall v \in V, v = (ST)Rv = S(TRv) \in \operatorname{range} S \end{array}\right\} \Rightarrow T \text{ is inje, } S \text{ is surj. While } V \text{ is finite-dim.}$$ □

Or. Because by Problem (23) in 3.B, $\dim V = \dim \operatorname{range} ST \leqslant \min\{\operatorname{range} T, \operatorname{range} S\}$. □

---

10 *Suppose V is finite-dim and $S, T \in \mathcal{L}(V)$. Prove that $ST = I \iff TS = I$.*

Solution:

Suppose $ST = I$. $$\left.\begin{array}{l} Tv = 0 \Rightarrow v = STv = 0 \\ v \in V \Rightarrow v = S(Tv) \in \operatorname{range} S \end{array}\right\} \Rightarrow T \text{ is inje, } S \text{ is surj. While } V \text{ is finite-dim.}$$

Or. By Problem (9), V is finite-dim and $ST = I$ is inv $\Rightarrow S, T$ are inv.

$S\big((TS)v\big) = ST(Sv) = Sv \Rightarrow (TS)v = v \Rightarrow S$ is inv.

Or. $ST = I \Rightarrow S = T^{-1} \Rightarrow S^{-1} = T$. 又 $S = S \Rightarrow TS = S^{-1}S = I$.

Reversing the roles of S and T, we conclude that $TS = I \Rightarrow ST = I$. □

---

11 *Suppose V is finite-dim, $S, T, U \in \mathcal{L}(V)$ and $STU = I$. Show that T is inv and $T^{-1} = US$.*

Solution: Using Problem (9) and (10). *This result can fail without the hypothesis that V is finite-dim.*

$(ST)U = U(ST) = (US)T = T(US) = S(TU) = (TU)S = I$.

$\Rightarrow U^{-1} = ST, \qquad T^{-1} = US, \qquad S^{-1} = TU$. □

Example: $V = \mathbf{R}^\infty, S(a_1, a_2, \dots) = (a_2, \dots)$; $T(a_1, \dots) = (0, a_1, \dots)$; $U = I \Rightarrow STU = I$ but T is not inv.

---

13 *Suppose V is finite-dim, $R, S, T \in \mathcal{L}(V)$ are such that RST is surj. Prove that S is inje.*

Solution: By Problem (1) and (9), Notice that V is finite-dim. Then RST is inv.

$$\text{Let } X = (RST)^{-1} \left|\begin{array}{l} Tv = 0 \Rightarrow v = X(RSTv) = 0 \Rightarrow T \text{ is inje.} \\ \forall v \in V, v = (RST)Xv \in \operatorname{range} R \Rightarrow R \text{ is surj.} \end{array}\right\} \Rightarrow S = R^{-1}(RST)T^{-1} \text{ is inv.}$$ □

Or. $(RST)^{-1} = \big((RS)T\big)^{-1} = T^{-1}(RS)^{-1} = T^{-1}S^{-1}R^{-1}$. □

---

15 *Prove that every linear map from $\mathbf{F}^{n,1}$ to $\mathbf{F}^{m,1}$ is given by a matrix multi.*
In other words, prove that if $T \in \mathcal{L}(\mathbf{F}^{n,1}, \mathbf{F}^{m,1})$, then $\exists A \in \mathbf{F}^{m,n}, Tx = Ax, \forall x \in \mathbf{F}^{n,1}$.

Solution:

Let $B_1 = (E_1, \dots, E_n), B_2 = (R_1, \dots, R_m)$ be the standard bases of $\mathbf{F}^{n,1}, \mathbf{F}^{m,1}$.

$\forall k = 1, \dots, n$, suppose $T(E_k) = A_{1,k}R_1 + \dots + A_{m,k}R_m, \exists A_{j,k} \in \mathbf{F}$, forming $A = \begin{pmatrix} A_{1,1} & \cdots & A_{1,n} \\ \vdots & \ddots & \vdots \\ A_{m,1} & \cdots & A_{m,n} \end{pmatrix}$. □

Or. Let $A = \mathcal{M}(T, B_1, B_2)$. Note that $\mathcal{M}(x, B_1) = x, \mathcal{M}(y, B_2) = y$.

Hence $Tx = \mathcal{M}(Tx, B_2) = \mathcal{M}(T, B_1, B_2)\mathcal{M}(x, B_1) = Ax$, by [3.65]. □

•Or (10.A.2) *Suppose $A, B \in \mathbf{F}^{n,n}$. Prove that $AB = I \iff BA = I$.*

Solution: Using Problem (10) and (15).

Define $T, S \in \mathcal{L}(\mathbf{F}^{n,1}, \mathbf{F}^{n,1})$ by $Tx = Ax, Sx = Bx$ for all $x \in \mathbf{F}^{n,1}$. Then $\mathcal{M}(T) = A, \mathcal{M}(S) = B$.

Thus $AB = I \Leftrightarrow A(Bx) = x \iff T(Sx) = x \Leftrightarrow TS = I \iff ST = I \iff \mathcal{M}(S)\mathcal{M}(T) = BA = I$. □

• **NOTE FOR [3.60]:** Suppose $B_V = (v_1, \dots, v_n)$, $B_W = (w_1, \dots, w_m)$.

Define $E_{i,j} \in \mathcal{L}(V,W)$ by $E_{i,j}(v_x) = \delta_{ix} w_j$; $\delta_{ix} = \begin{cases} 0, & i \neq x \\ 1, & i = x \end{cases}$ **COROLLARY:** $E_{l,k}E_{i,j} = \delta_{jl}E_{i,k}$.

Denote $\mathcal{M}(E_{i,j})$ by $\mathcal{E}^{(j,i)}$. And $\left(\mathcal{E}^{(j,i)}\right)_{l,k} = \begin{cases} 0, & i \neq k \vee j \neq l \\ 1, & i = k \wedge j = l \end{cases}$

Because $\mathcal{L}(V,W)$ and $\mathbf{F}^{m,n}$ are iso. And $T = \mathcal{M}^{-1}\mathcal{M}(T)$; $E_{i,j} = \mathcal{M}^{-1}\mathcal{E}^{(j,i)}$.

Hence $\forall T \in \mathcal{L}(V,W)$, $\exists! A_{i,j} \in \mathbf{F} \left(\forall i \in \{1, \dots, m\}, j \in \{1, \dots, n\} \right)$, $\mathcal{M}(T) = A = \begin{pmatrix} A_{1,1} & \cdots & A_{1,n} \\ \vdots & \ddots & \vdots \\ A_{m,1} & \cdots & A_{m,n} \end{pmatrix}$.

$$\text{Thus } A = \begin{pmatrix} A_{1,1}\mathcal{E}^{(1,1)} + & \cdots & +A_{1,n}\mathcal{E}^{(1,n)} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{m,1}\mathcal{E}^{(m,1)} + & \cdots & +A_{m,n}\mathcal{E}^{(m,n)} \end{pmatrix} \iff \begin{pmatrix} A_{1,1}E_{1,1} + & \cdots & +A_{1,n}E_{n,1} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{m,1}E_{1,m} + & \cdots & +A_{m,n}E_{n,m} \end{pmatrix} = T.$$

$$\therefore \mathcal{L}(V,W) = \operatorname{span} \underbrace{\begin{pmatrix} E_{1,1}, & \cdots & ,E_{n,1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ E_{1,m}, & \cdots & ,E_{n,m} \end{pmatrix}}_{B}; \quad \mathbf{F}^{m,n} = \operatorname{span} \underbrace{\begin{pmatrix} \mathcal{E}^{(1,1)}, & \cdots & ,\mathcal{E}^{(1,n)}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ \mathcal{E}^{(m,1)}, & \cdots & ,\mathcal{E}^{(m,n)} \end{pmatrix}}_{B_{\mathcal{M}}}.$$

Hence by [2.42] and [3.61], we conclude that B is a basis of $\mathcal{L}(V,W)$ and that $B_{\mathcal{M}}$ is a basis of $\mathbf{F}^{m,n}$.

• *Suppose V, W are finite-dim, U is a subsp of V.*
Let $\mathcal{E} = \{T \in \mathcal{L}(V,W) : U \subseteq \operatorname{null} T\} = \{T \in \mathcal{L}(V,W) : T|_U = 0\}$.
(a) *Show that $\mathcal{E}$ is a subsp of $\mathcal{L}(V,W)$.*
(b) *Find a formula for $\dim \mathcal{E}$ in terms of $\dim V$, $\dim W$ and $\dim U$.*
Hint: *Define $\Phi : \mathcal{L}(V,W) \to \mathcal{L}(U,W)$ by $\Phi(T) = T|_U$. What is $\operatorname{null} \Phi$? What is $\operatorname{range} \Phi$?*

SOLUTION:

(a) $\forall S, T \in \mathcal{E}, \lambda \in \mathbf{F}, \forall u \in U, Su = \lambda Tu = (S + \lambda T)u = 0 \Rightarrow (S + \lambda T) \in \mathcal{E}$.

(b) Define Φ as in the hint.

Because $T \in \operatorname{null} \Phi \iff \Phi(T) = 0 \iff \forall u \in U, Tu = 0 \iff T \in \mathcal{E}$.

Hence $\operatorname{null} \Phi = \mathcal{E}$.

Because $S \in \mathcal{L}(U,W) \Rightarrow \exists T \in \mathcal{L}(V,W), \Phi(T) = S$, by (3.A.11) $\Rightarrow S \in \operatorname{range} T$.

Hence $\operatorname{range} \Phi = \mathcal{L}(U,W)$.

Thus $\dim \operatorname{null} \Phi = \dim \mathcal{E} = \dim \mathcal{L}(V,W) - \dim \operatorname{range} \Phi = (\dim V - \dim U) \dim W$. □

OR. Extend $(u_1, \dots, u_m)$ a basis of U to $(u_1, \dots, u_m, v_1, \dots, v_n)$ a basis of V. Let $p = \dim W$.
(See NOTE FOR [3.60])

$$\forall\, T \in \mathcal{E}, k \in \{1, \dots, m\}, TE_{k,k} = 0 \Rightarrow \operatorname{span} \underbrace{\begin{Bmatrix} E_{1,1}, & \cdots & ,E_{m,1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ E_{1,p}, & \cdots & ,E_{m,p} \end{Bmatrix}}_{\text{Denote it by R}} \cap\, \mathcal{E} = \{0\}.$$

$$\text{又 } W = \operatorname{span} \begin{Bmatrix} E_{m+1,1}, & \cdots & ,E_{n,1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ E_{m+1,p}, & \cdots & ,E_{n,p} \end{Bmatrix} \subseteq \mathcal{E}. \text{ Where } \mathcal{L}(V,W) = R \oplus W \Rightarrow \mathcal{L}(V,W) = R + \mathcal{E}.$$

Then $\dim \mathcal{E} = \dim \mathcal{L}(V,W) - \dim R - \dim(R \cap \mathcal{E}) = (\dim V - \dim U) \dim W$. □

∘ *Suppose V is finite-dim and $S \in \mathcal{L}(V)$. Define $\mathcal{A} \in \mathcal{L}\big(\mathcal{L}(V)\big)$ by $\mathcal{A}(T) = ST$.*

(a) *Show that* $\dim \operatorname{null} \mathcal{A} = (\dim V)(\dim \operatorname{null} S)$.

(b) *Show that* $\dim \operatorname{range} \mathcal{A} = (\dim V)(\dim \operatorname{range} S)$.

SOLUTION:

(a) $\forall T \in \mathcal{L}(V),\ ST = 0 \iff \operatorname{range} T \subseteq \operatorname{null} S$.

Thus $\operatorname{null} \mathcal{A} = \big\{T \in \mathcal{L}(V) : \operatorname{range} T \subseteq \operatorname{null} S\big\} = \mathcal{L}(V, \operatorname{null} S)$.

(b) $\forall R \in \mathcal{L}(V)$, $\operatorname{range} R \subseteq \operatorname{range} S \iff \exists\, T \in \mathcal{L}(V), R = ST$, by (3.B 25).

Thus $\operatorname{range} \mathcal{A} = \big\{R \in \mathcal{L}(V) : \operatorname{range} R \subseteq \operatorname{range} S\big\} = \mathcal{L}(V, \operatorname{range} S)$.

□

OR. Using NOTE FOR [3.60].

Let $B_{\operatorname{range} S} = (\underbrace{w_1, \dots, w_m}_{Sv_i = w_i}), B_{\mathcal{K}} = (v_1, \dots, v_m); (w_1, \dots, w_n), (v_1, \dots, v_n)$ are bases of V.

Define $E_{i,j} \in \mathcal{L}(V)$ by $E_{i,j}(v_x) = \delta_{ix} w_i$.

Thus $S = E_{1,1} + \cdots + E_{m,m}$; $\quad \mathcal{M}\big(S, (v_1, \dots, v_n), (w_1, \dots, w_n)\big) = \begin{pmatrix} 1 & 0 & \cdots & 0 & 0 & \cdots & 0 \\ 0 & 1 & \cdots & 0 & 0 & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & 1 & 0 & \cdots & 0 \\ 0 & 0 & \cdots & 0 & 0 & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & 0 & 0 & \cdots & 0 \end{pmatrix}$.

Define $R_{i,j} \in \mathcal{L}(V)$ by $R_{i,j}(w_x) = \delta_{ix} v_i$.

Let $E_{j,k} R_{i,j} = Q_{i,k}, \quad R_{j,k} E_{i,j} = G_{i,k}$.

Because $\forall T \in \mathcal{L}(V),\ \exists\,!\, A_{i,j} \in \mathbf{F},\quad T = \begin{pmatrix} A_{1,1}R_{1,1}+ & \cdots & +A_{1,m}R_{m,1}+ & \cdots & +A_{1,n}R_{n,1} \\ + & \cdots & + & \cdots & + \\ \vdots & \ddots & \vdots & \ddots & \vdots \\ + & \cdots & + & \cdots & + \\ A_{m,1}R_{1,m}+ & \cdots & +A_{m,m}R_{m,m}+ & \cdots & +A_{m,n}R_{n,m} \\ + & \cdots & + & \cdots & + \\ \vdots & \ddots & \vdots & \ddots & \vdots \\ + & \cdots & + & \cdots & + \\ A_{n,1}R_{1,n}+ & \cdots & +A_{n,m}R_{m,n}+ & \cdots & +A_{n,n}R_{n,n} \end{pmatrix}$.

$$\Rightarrow \mathcal{A}(T) = ST = \Big(\sum_{r=1}^{m} E_{r,r}\Big)\Big(\sum_{i=1}^{n}\sum_{j=1}^{n} A_{i,j}R_{j,i}\Big)$$

$$= \sum_{i=1}^{m}\sum_{j=1}^{n} A_{i,j}Q_{j,i} = \begin{pmatrix} A_{1,1}Q_{1,1}+ & \cdots & +A_{1,m}Q_{m,1}+ & \cdots & +A_{1,n}Q_{n,1} \\ + & \cdots & + & \cdots & + \\ \vdots & \ddots & \vdots & \ddots & \vdots \\ + & \cdots & + & \cdots & + \\ A_{m,1}Q_{1,m}+ & \cdots & +A_{m,m}Q_{m,m}+ & \cdots & +A_{m,n}Q_{n,m} \end{pmatrix}.$$

Thus $\operatorname{null} \mathcal{A} = \operatorname{span} \begin{pmatrix} R_{1,m+1}, & \cdots & ,R_{n,m+1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ R_{1,n}', & \cdots & ,R_{n,n}' \end{pmatrix}$, $\quad \operatorname{range} \mathcal{A} = \operatorname{span} \begin{pmatrix} Q_{1,1}, & \cdots & ,Q_{n,1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ Q_{1,m}', & \cdots & ,Q_{n,m}' \end{pmatrix}$.

Hence (a) $\dim \operatorname{null} \mathcal{A} = n \times (n - m)$; $\quad$ (b) $\dim \operatorname{range} \mathcal{A} = n \times m$. □

• **COMMENT:** Define $\mathcal{B} \in \mathcal{L}(\mathcal{L}(V))$ by $\mathcal{B}(T) = TS$. Similarly to Problem $(\circ)$,

(a) $\forall T \in \mathcal{L}(V), TS = 0 \Longleftrightarrow \operatorname{range} S \subseteq \operatorname{null} T$.

Thus $\operatorname{null} \mathcal{B} = \{T \in \mathcal{L}(V) : \operatorname{range} S \subseteq \operatorname{null} T\} = \{T \in \mathcal{L}(V) : T|_{\operatorname{range} S} = 0\}$.

(b) $\forall R \in \mathcal{L}(V), \operatorname{null} S \subseteq \operatorname{null} R \Longleftrightarrow \exists\, T \in \mathcal{L}(V), R = TS$, by (3.B.24).

Thus $\operatorname{range} \mathcal{B} = \{R \in \mathcal{L}(V) : \operatorname{null} S \subseteq \operatorname{null} R\} = \{R \in \mathcal{L}(V) : R|_{\operatorname{null} S} = 0\}$.

Hence $\dim \operatorname{null} \mathcal{B} = (\dim V - \dim \operatorname{range} S)(\dim V)$;
$\dim \operatorname{range} \mathcal{B} = (\dim V - \dim \operatorname{null} S)(\dim V)$. □

OR. Using NOTE FOR [3.60] and the notation in Problem $(\circ)$.

$$\mathcal{B}(T) = TS = \Big(\sum_{i=1}^{n}\sum_{j=1}^{n} A_{i,j}R_{j,i}\Big)\Big(\sum_{r=1}^{m} E_{r,r}\Big) = \sum_{i=1}^{n}\sum_{j=1}^{m} A_{i,j}G_{j,i} = \begin{pmatrix} A_{1,1}G_{1,1}+ & \cdots & +A_{1,m}G_{m,1} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{m,1}G_{1,m}+ & \cdots & +A_{m,m}G_{m,m} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{n,1}G_{1,n}+ & \cdots & +A_{n,m}G_{m,n} \end{pmatrix}.$$

Thus $\operatorname{null} \mathcal{B} = \operatorname{span}\begin{pmatrix} R_{m+1,1}, & \cdots & ,R_{n,1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ R_{m+1,n}, & \cdots & ,R_{n,n} \end{pmatrix}$,

$\operatorname{range} \mathcal{B} = \operatorname{span}\begin{pmatrix} G_{1,1}, & \cdots & ,G_{m,1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ G_{1,n}, & \cdots & ,G_{m,n} \end{pmatrix}$. Hence (a) $\dim \operatorname{null} \mathcal{B} = n \times (n-m)$;
(b) $\dim \operatorname{range} \mathcal{B} = n \times m$. □

---

17 *Suppose V is finite-dim. Show that the only two-sided ideals of $\mathcal{L}(V)$ are $\{0\}$ and $\mathcal{L}(V)$.*

A subsp $\mathcal{E}$ of $\mathcal{L}(V)$ is called a two-sided ideal of $\mathcal{L}(V)$ if $TE \in \mathcal{E}, ET \in \mathcal{E},\ \forall E \in \mathcal{E}, T \in \mathcal{L}(V)$.

SOLUTION: Using NOTE FOR [3.60]. Let $(v_1, \dots, v_n)$ be a basis of V. If $\mathcal{E} = 0$, then we are done.

Suppose $\mathcal{E} \neq 0$ and $\mathcal{E}$ is a two-sided ideal of $\mathcal{L}(V)$.

Then $\forall E_{i,j} \in \mathcal{E}$, $(\forall x, y = 1, \dots, n)$, by assumption, $E_{j,x}E_{i,j} = E_{i,x} \in \mathcal{E}, E_{i,j}E_{y,i} = E_{y,j} \in \mathcal{E}$.

Again, $E_{y,x'}, E_{y',x} \in \mathcal{E}$ for all $x', y', x, y = 1, \dots, n$. Thus $\mathcal{E} = \mathcal{L}(V)$. □

•OR (10.A.4) *Suppose that $(\beta_1, \dots, \beta_n)$ and $(\alpha_1, \dots, \alpha_n)$ are bases of V.*
Let $T \in \mathcal{L}(V)$ be such that $T\alpha_k = \beta_k, \forall k$. Prove that $\mathcal{M}(T, \alpha \to \alpha) = \mathcal{M}(I, \beta \to \alpha)$

For ease of notation, let $\mathcal{M}(T, \alpha \to \beta) = \mathcal{M}(T, (\alpha_1, \dots, \alpha_n), (\beta_1, \dots, \beta_n))$, $\mathcal{M}(T, \alpha \to \alpha) = \mathcal{M}(T, (\alpha_1, \dots, \alpha_n))$.

SOLUTION:

Denote $\mathcal{M}(T, \alpha \to \alpha)$ by A and $\mathcal{M}(I, \beta \to \alpha)$ by B.

$\forall k \in \{1, \dots, n\}, Iu_k = u_k = B_{1,k}\alpha_1 + \cdots + B_{n,k}\alpha_n = Tv_k = A_{1,k}\alpha_1 + \cdots + A_{n,k}\alpha_n \Rightarrow A = B$. □

OR. Note that $\mathcal{M}(T, \alpha \to \beta) = I$. Hence $\mathcal{M}(T, \alpha \to \alpha) = \mathcal{M}(I, \beta \to \alpha)\underbrace{\mathcal{M}(T, \alpha \to \beta)}_{=\mathcal{M}(I, \beta \to \beta)} = \mathcal{M}(I, \beta \to \alpha)$. □

OR. Note that $\mathcal{M}(T, \beta \to \beta)\mathcal{M}(I, \alpha \to \beta) = \mathcal{M}(T, \alpha \to \beta) = I$.

$\mathcal{M}(T, \alpha \to \alpha) = \mathcal{M}(I, \alpha \to \beta)^{-1}\Big(\underbrace{\mathcal{M}(T, \beta \to \beta)\mathcal{M}(I, \alpha \to \beta)}_{=\mathcal{M}(T, \alpha \to \beta)}\Big) = \mathcal{M}(I, \beta \to \alpha)$. □

COMMENT: Denote $\mathcal{M}(T, \beta \to \beta)$ by A'.

$u_k = Iu_k = B_{1,k}\alpha_1 + \cdots + B_{n,k}\alpha_n,\ \forall\, k \in \{1, \dots, n\}$.

又 $Tu_k = T(B_{1,k}\alpha_1 + \cdots + B_{n,k}\alpha_n) = B_{1,k}\beta_1 + \cdots + B_{n,k}\beta_n = A'_{1,k}\beta_1 + \cdots + A'_{n,k}\beta_n \Rightarrow A' = B$.

OR. $\mathcal{M}(T, \beta \to \beta) = \mathcal{M}(T, \alpha \to \beta)\mathcal{M}(I, \beta \to \alpha) = B$.

---

16 *Suppose V is finite-dim and $S \in \mathcal{L}(V)$ such that $\forall T \in \mathcal{L}(V), ST = TS$.*
Prove that $\exists \lambda \in \mathbf{F}, S = \lambda I$.

SOLUTION: Using the notation and result in ($\circ$).

Suppose $ST = TS$ for every $T \in \mathcal{L}(V)$. If $S = 0$, we are done. Now suppose $S \neq 0$.

Let $S = E_{1,1} + \cdots + E_{m,m} \Rightarrow \mathcal{M}(S, B_{\mathcal{K}}) = \mathcal{M}(I, B_{\operatorname{range} S}, B_{\mathcal{K}})$.

Then $\forall k \in \{m+1, \dots, n\}, 0 \neq SR_{k,1} = R_{k,1}S$. Hence $n = \dim V = \dim \operatorname{range} S = m$.

NOTICE that $R_{i,j}S = SR_{i,j} \iff Q_{i,j} = G_{i,j}$. Thus $Q_{i,j}(w_i) = w_j = a_{i,i}v_j = G_{i,j}(a_{1,i}v_1 + \cdots + a_{n,i}v_n)$.

Where $a_{i,j} = \mathcal{M}\big(I, (w_1, \dots, w_n), (v_1, \dots, v_n)\big)_{i,j} \iff w_i = Iw_i = a_{1,i}v_1 + \cdots + a_{n,i}v_n$;

And For each j, for all i. Thus $a_{i,i} = a_{k,k} = \lambda, \forall\, k \neq i$.

Hence $w_i = \lambda v_i \Rightarrow \mathcal{M}(S) = \mathcal{M}\big(\lambda I, (v_1, \dots, v_n)\big) \Rightarrow S = \mathcal{M}^{-1}(\mathcal{M}(\lambda I))\lambda I$. ☐

---

18 *Show that V and $\mathcal{L}(\mathbf{F}, V)$ are iso vecsps.*

SOLUTION:

Define $\Psi \in \mathcal{L}\big(V, \mathcal{L}(\mathbf{F}, V)\big)$ by $\Psi(v) = \Psi_v$; where $\Psi_v \in \mathcal{L}(\mathbf{F}, V)$ and $\Psi_v(\lambda) = \lambda v$.

(a) $\Psi(v) = \Psi_v = 0 \Rightarrow \forall \lambda \in \mathbf{F}, \Psi_v(\lambda) = \lambda v = 0 \Rightarrow v = 0$. Hence Ψ is inje.

(b) $\forall T \in \mathcal{L}(\mathbf{F}, V)$, let $v = T(1) \Rightarrow T(\lambda) = \lambda v = \Psi_v(\lambda), \forall \lambda \in \mathbf{F} \Rightarrow T = \Psi\big(T(1)\big)$. Hence Ψ is surj. ☐

OR. Define $\Phi \in \mathcal{L}\big(\mathcal{L}(\mathbf{F}, V), V\big)$ by $\Phi(T) = T(1)$.

(a) Suppose $\Phi(T) = 0 = T(1) = \lambda T(1) = T(\lambda), \forall \lambda \in \mathbf{F} \Rightarrow T = 0$. Thus Φ is inje.

(b) For any $v \in V$, define $T \in \mathcal{L}(\mathbf{F}, V)$ by $T(\lambda) = \lambda v$. Then $\Phi(T) = T(1) = v$. Thus Φ is surj. ☐

COMMENT: $\Phi = \Psi^{-1}$.

• *Suppose $q \in \mathcal{P}(\mathbf{R})$. Prove that $\exists\, p \in \mathcal{P}(\mathbf{R}), q(x) = (x^2 + x)p''(x) + 2xp'(x) + p(3)$.*

SOLUTION:

Note that $\deg\big[(x^2 + x)p''(x) + 2xp'(x) + p(3)\big] = \deg p$.

Define $T_n : \mathcal{P}_n(\mathbf{R}) \to \mathcal{P}_n(\mathbf{R})$ by $T_n(p) = (x^2 + x)p''(x) + 2xp'(x) + p(3)$. Then $T_n \in \mathcal{L}\big(\mathcal{P}_n(\mathbf{R})\big)$.

And note that $T_n(p) = 0 \Rightarrow \deg(T_n p) = -\infty = \deg p \Rightarrow p = 0$. Thus T_n is inv.

$\forall q \in \mathcal{P}(\mathbf{R})$, if $q = 0$, let $m = 0$; if $q \neq 0$, let $m = \deg q$, we have $q \in \mathcal{P}_m(\mathbf{R})$.

Hence $\exists\, p \in \mathcal{P}_m(\mathbf{R}), q(x) = T_m(p) = (x^2 + x)p''(x) + 2xp'(x) + p(3)$ for all $x \in \mathbf{R}$. ☐

---

19 *Suppose $T \in \mathcal{L}\big(\mathcal{P}(\mathbf{R})\big)$ is inje. $\deg Tp \leqslant \deg p$ for every nonzero $p \in \mathcal{P}(\mathbf{R})$.*
(a) *Prove that T is surj;* (b) *Prove that for every nonzero p, $\deg Tp = \deg p$.*

SOLUTION:

(a) T is inje $\iff \forall n \in \mathbf{N}^+, T|_{\mathcal{P}_n(\mathbf{R})} : \mathcal{P}_n(\mathbf{R}) \to \mathcal{P}_n(\mathbf{R})$ is inje and therefore is inv $\iff T$ is surj.

(b) Using mathematical induction.

(i) $\deg p = 0 \Rightarrow p = C \Rightarrow \deg Tp = \deg p = 0$;

$\deg p = -\infty \Rightarrow p = 0 \Rightarrow \deg Tp = \deg p = -\infty$.

(ii) Assume that $\forall s \in \mathcal{P}_n(\mathbf{R}), \deg s = \deg Ts$.

Suppose $\exists\, r \in \mathcal{P}_{n+1}(\mathbf{R}),\ \deg Tr \leqslant n < \deg r = n + 1$.

Then by (a), $\exists\, s \in \mathcal{P}_n(\mathbf{R}),\ T(s) = (Tr)$.

又 T is inje $\Rightarrow s = r$. While $\deg s = \deg Ts = \deg Tr < \deg r$.

Contradicts. Thus $\forall p \in \mathcal{P}_{n+1}(\mathbf{R}), \deg Tp = \deg p$. ☐

ENDED

3·E

1 *A function $T : V \to W$ is linear $\iff$ T is a subspace of $V \times W$.*

---

2 *Suppose $V_1 \times \cdots \times V_m$ is finite-dim. Prove that each V_j is finite-dim.*

Solution:

For any $k \in \{1, \dots, m\}$, define $p_k : V_1 \times \cdots \times V_m \to V_k$ by $p_k(v_1, \dots, v_m) = v_k$.
Then p_k is a surj linear map. By [3.22], range $p_k = V_k$ is finite-dim. $\square$

Or. Denote $V_1 \times \cdots \times V_m$ by U. Denote $\{0\} \times \cdots \{0\} \times V_i \times \{0\} \cdots \times \{0\}$ by U_i.
Let $(v_1, \dots, v_M)$ be a basis of U. Note that $\forall u_i \in V_i, \in U_i \subseteq U$, for each i.

$$\left.\begin{array}{l}\text{Define } R_i \in \mathcal{L}(V_i, U) \text{ by } R_i(u_i) = (0, \dots, 0, u_i, 0, \dots, 0) \\ \text{Define } S_i \in \mathcal{L}(U, V_i) \text{ by } S_i(u_1, \dots, u_i, \dots, u_m) = u_i\end{array}\right\} \Rightarrow S_i|_{U_i} = R_i^{-1}|_{U_i}.$$

Thus U_i and V_i are iso. 又 U_i is a subsp of a finite-dim vecsp U. $\square$

---

3 *Give an example of a vecsp V and its two subsps U_1, U_2 such that $U_1 \times U_2$ and $U_1 + U_2$ are iso but $U_1 + U_2$ is not a direct sum.*

Solution: V must be infinite-dim. For if not, both U_1 and U_2 are finite-dim subsps. By [3.76, 3.78].
Note *that at least one of U_1, U_2 must be infinite-dim. And at least one must be infinite-dim???* TODO
For if not, $U_1 \times U_2$ is finite-dim and $\dim(U_1 \times U_2) = \dim(U_1 + U_2) = \dim U_1 + \dim U_2$.
Let $V = \mathbf{F}^\infty = U_1$, $U_2 = \{(x, 0, \cdots) \in \mathbf{F}^\infty : x \in \mathbf{F}\}$.

$$\left.\begin{array}{l}\text{Define } T \in \mathcal{L}(U_1 \times U_2, U_1 + U_2) \text{ by } T\big((x_1, x_2, \cdots), (x, 0, \cdots)\big) = (x, x_1, x_2, \cdots) \\ \text{Define } S \in \mathcal{L}(U_1 + U_2, U_1 \times U_2) \text{ by } S(x, x_1, x_2, \cdots) = \big((x_1, x_2, \cdots), (x, 0, \cdots)\big)\end{array}\right\} \Rightarrow S = T^{-1}.$$
$\square$

---

4 *Prove that $\mathcal{L}(V_1 \times \cdots \times V_m, W)$ and $\mathcal{L}(V_1, W) \times \cdots \times \mathcal{L}(V_m, W)$ are iso.*

Solution: Using the notation in Problem (2).

Note that $T(u_1, \dots, u_m) = T(u_1, 0, \dots, 0) + \cdots + T(0, \dots, u_m)$.

$$\left.\begin{array}{l}\text{Define } \varphi : T \mapsto (T_1, \dots, T_m) \text{ by } \varphi(T) = (TR_1, \dots, TR_m). \\ \text{Define } \psi : (T_1, \dots, T_m) \mapsto T \text{ by } \psi(T_1, \dots, T_m) = T_1 S_1 + \cdots + T_m S_m.\end{array}\right\} \Rightarrow \psi = \varphi^{-1}.$$
$\square$

---

5 *Prove that $\mathcal{L}(V, W_1 \times \cdots \times W_m)$ and $\mathcal{L}(V, W_1) \times \cdots \times \mathcal{L}(V, W_m)$ are iso.*

Solution: Using the notation in Problem (2).

Note that $Tv = (w_1, \dots, w_m)$. Define $T_i \in \mathcal{L}(V, W_i)$ by $T_i(v) = w_i$.

$$\left.\begin{array}{l}\text{Define } \varphi : T \mapsto (T_1, \dots, T_m) \text{ by } \varphi(T) = (S_1 T, \dots, S_m T). \\ \text{Define } \psi : (T_1, \dots, T_m) \mapsto T \text{ by } \psi(T_1, \dots, T_m) = T_1 S_1 + \cdots + T_m S_m.\end{array}\right\} \Rightarrow \psi = \varphi^{-1}.$$
$\square$

---

6 *For $m \in \mathbf{N}^+$, define V^m by $\underbrace{V \times \cdots \times V}_{m \text{ times}}$. Prove that V^m and $\mathcal{L}(\mathbf{F}^m, V)$ are iso.*

Solution:

Define $T : (v_1, \dots, v_m) \to \varphi$, where $\varphi : (a_1, \dots, a_m) \mapsto v$ is defined by $\varphi(a_1, \dots, a_m) = a_1 v_1 + \cdots + a_m v_m$.

(a) Suppose $T(v_1, \dots, v_m) = 0$. Then $\forall\ (a_1, \dots, a_n) \in \mathbf{F}^m$, $\varphi(a_1, \dots, a_m) = a_1 v_1 + \cdots + a_m v_m = 0$
$\Rightarrow (v_1, \dots, v_m) = 0 \Rightarrow T$ is inje.

(b) Suppose $\psi \in \mathcal{L}(\mathbf{F}^m, V)$. Let $(e_1, \dots, e_m)$ be the standard basis of $\mathbf{F}^m$. Then $\forall\ (b_1, \dots, b_n) \in \mathbf{F}^m$,
$\Big[T\big(\psi(e_1), \dots, \psi(e_m)\big)\Big](b_1, \dots, b_m) = b_1\psi(e_1) + \cdots + b_m\psi(e_m) = \psi(b_1 e_1 + \cdots + b_m e_m) = \psi(b_1, \dots, b_m)$.
Thus $T\big(\psi(e_1), \dots, \psi(e_m)\big) = \psi$. Hence T is surj. $\square$

---

14 *Suppose* $U = \{(x_1, x_2, \cdots) \in \mathbf{F}^\infty : x_k \neq 0$ *for only finitely many* $k\}$.
(a) *Show that* U *is a subsp of* $\mathbf{F}^\infty$. [*Do it in your mind*]
(b) *Prove that* $\mathbf{F}^\infty / U$ *is infinite-dim.*

SOLUTION: For ease of notation, denote the p^{th} term of $u = (x_1, \cdots, x_p, \cdots) \in \mathbf{F}^\infty$ by $u[p]$.

For each $r \in \mathbf{N}^+$, let $e_r[p] = \begin{cases} 1, (p-1) \equiv 0 \pmod r \\ 0, \text{otherwise} \end{cases}$ | simply $e_r = (1, \underbrace{0, \cdots, 0}_{(p-1)\ times}, 1, \underbrace{0, \cdots, 0}_{(p-1)\ times}, 1, \cdots)$.

Choose one $m \in \mathbf{N}^+$. Let $a_1(e_1 + U) + \cdots + a_m(e_m + U) = 0 + U \Rightarrow \exists\, u \in U, a_1 e_1 + \cdots + a_m e_m = u$.

Suppose $u = (x_1, \cdots, x_L, 0, \cdots)$, where L is the largest such that $u[L] \neq 0$.

Let $s \in \mathbf{N}^+$ be such that $h = s \cdot m! + 1 > L$ and $e_1[h] = \cdots = e_m[h] = 1$.

Note that by definition, $e_r[s \cot m! + 1 + p] = e_r[p+1] = 1 \iff p \equiv 0 \,(\bmod r\,) \iff r \,|\, p$.

Now for any $p \in \{1, \dots, m\}$, $u[h+p] = \left(\sum_{r=1}^{m} a_r e_r\right)[p+1] = \sum_{k=1}^{\tau(p)} a_{p_k} = 0$ $\quad(\Delta)$

where $1 = p_1 \leqslant \cdots \leqslant p_{\tau(p)} = p$ are all the distinct factors of p.

Let $q = p_{\tau(p)-1}$. Notice that $\tau(q) = \tau(p) - 1$ and $q_k = p_k, \forall k \in \{1, \dots, \tau(q)\}$.

Again by (Δ), $\left(\sum_{r=1}^{m} a_r e_r\right)[h+q] = \sum_{k=1}^{\tau(p)-1} a_{p_k} = 0$. Thus $a_{p_{\tau(p)}} = a_p = 0$ for any $p \in \{1, \dots, m\}$.

Hence $\forall m \in \mathbf{N}^+$, $(e_1, \dots, e_m)$ is linely inde in $\mathbf{F}^\infty$, so is $(e_1 + U, \dots, e_m + U)$ in $\mathbf{F}^\infty/U$. By (2.A.14). □

OR. For each $r \in \mathbf{N}^+$, let $e_r[p] = \begin{cases} 1, \text{if } 2^r \,|\, p \\ 0, \text{otherwise} \end{cases}$.

Similarly, let $m \in \mathbf{N}^+$ and $a_1(e_1 + U) + \cdots + a_m(e_m + U) = 0 \Rightarrow a_1 e_1 + \cdots + a_m e_m = u \in U$.

Suppose L is the largest such that $u[L] \neq 0$. And l is such that $2^{ml} > L$.

Then $\forall k \in \{1, \dots, m\}, u[2^{ml} + 2^k] = \left(\sum_{r=1}^{m} a_r e_r\right)[2^k] = a_1 + \cdots + a_k = 0$.

Thus $a_1 = \cdots = a_m = 0$ and $(e_1, \dots, e_m)$ is linely inde. Similarly. □

---

7 *Suppose* $v, x \in V$ *and* U *and* W *are subsps of* V. *Prove that* $v + U = x + W \Rightarrow U = W$.

SOLUTION:

(a) $\forall u_1 \in U, \exists\, w_1 \in W, v + u_1 = x + w_1$, let $u_1 = 0$, now $v = x + w_1' \Rightarrow v - x \in W$.
(b) $\forall w_2 \in W, \exists\, u_2 \in U, v + u_2 = x + w_2$, let $w_2 = 0$, now $x = v + u_2' \Rightarrow x - v \in U$.

Thus $\pm(v - x) \in U \cap W \Rightarrow \left\{ \begin{array}{l} u_1 = (x - v) + w_1 \in W \Rightarrow U \subseteq W \\ w_2 = (v - x) + u_2 \in U \Rightarrow W \subseteq U \end{array} \right\} \Rightarrow U = W.$ □

- Let $U = \{(x, y, z) \in \mathbf{R}^3 : 2x + 3y + 5z = 0\}$. Suppose $A \subseteq \mathbf{R}^3$.
  Then A is a translate of $U \iff \exists\, c \in \mathbf{R}, A = \{(x, y, z) \in \mathbf{R}^3 : 2x + 3y + 5z = c\}$.

- *Suppose* $T \in \mathcal{L}(V, W)$ *and* $c \in W$. *Prove that* $U = \{x \in V : Tx = c\}$ *is either* $\emptyset$ *or is a translate of* $\operatorname{null} T$.

SOLUTION:

If $c \in W$ but $c \notin \operatorname{range} T$, then $U = \emptyset$, we are done. Now suppose $c \in \operatorname{range} T$ and $x \in U$.
$\forall x + y \in x + \operatorname{null} T$ ($\forall y \in \operatorname{null} T$), $x + y \in U$. Hence $x + \operatorname{null} T \subseteq U$.
$\forall u \in U, u - x \in \operatorname{null} T \Rightarrow u = x + (u - x)x + \operatorname{null} T$. Hence $U \subseteq x + \operatorname{null} T$. □

COROLLARY: *The set of solutions to a system of linear equations such as* [3.28] *is either* $\emptyset$ *or a translate.*

---

8 *Suppose A is a nonempty subset of V.*
Prove that A is a translate of some subsp of $V \iff \lambda v + (1-\lambda)w \in A$, $\forall v, w \in A, \lambda \in \mathbf{F}$.

SOLUTION:

Suppose $A = a + U$. Then $\forall a + u_1, a + u_2 \in A, \lambda \in \mathbf{F}$,
$\lambda(a + u_1) + (1-\lambda)(a + u_2) = a + \big(\lambda(u_1 - u_2) + u_2\big) \in A$.

Suppose $\lambda v + (1-\lambda)w \in A, \forall v, w \in A, \lambda \in \mathbf{F}$. Suppose $a \in A$ and let $A' = \{x - a : x \in A\}$.

Then $0 \in A'$ and $\forall x - a, y - a \in A'$, $(\forall x, y \in A)$, $\lambda \in \mathbf{F}$,
(I) $\lambda(x-a) = [\lambda x + (1-\lambda)a] - a \in A'$.
(II) $\lambda(x-a) + (1-\lambda)(y-a) = \frac{1}{2}(x-a) + \frac{1}{2}(y-a) = \frac{1}{2}x + (1-\frac{1}{2})y - a \in A'$.
OR. By (I), $2 \times [\frac{1}{2}(x-a) + \frac{1}{2}(y-a)] = (x-a) + (y-a) \in A'$.
Thus A' is a subsp of V. Hence $a + A' = \{(x-a) + a : x \in A\} = A$ is a translate. □

OR. Suppose $x - a, y - a \in A', \lambda \in \mathbf{F}$.
Note that $x, a \in A \Rightarrow \lambda x + (1-\lambda)a = 2x - a \in A$. Similarly $2y - a \in A$.
(I) $(x - \frac{1}{2}a) + (y - \frac{1}{2}a) = x + y - a \in A \Rightarrow x + y - 2a = (x-a) + (y-a) \in A'$.
(II) $\lambda(x-a) = (\lambda x + (1-\lambda)a) - a \in A'$.
Thus $-x + A$ is a subsp of V. Hence $A = x + (-x + A)$ is a translate of the subsp $(-x + A)$. □

---

9 *Suppose $A_1 = v + U_1$ and $A_2 = w + U_2$ for some $v, w \in V$ and some subsps U_1, U_2 of V.*
Prove that the intersection $A_1 \cap A_2$ is either a translate of some subsp of V or is $\emptyset$.

SOLUTION:

Suppose $v + u_1, w + u_2 \in A_1 \cap A_2 \neq \emptyset$. By Problem (8),
$\forall \lambda \in \mathbf{F}, \lambda(v + u_1) + (1-\lambda)(w + u_2) \in A_1 \cap A_2$. Thus $A_1 \cap A_2$ is a translate of some subsp of V. □

OR. Let $A_1 = v + U_1, A_2 = w + U_2$. Suppose $x \in (v + U_1) \cap (w + U_2) \neq \emptyset$.
Then $\exists u_1 \in U_1, x = v + u_1 \Rightarrow x - v \in U_1$, $\exists u_2 \in U_2, x = w + u_2 \Rightarrow x - w \in U_2$.
Note that by [3.85], $A_1 = v + U_1 = x + U_1, A_2 = w + U_2 = x + U_2$. We show that $A_1 \cap A_2 = x + (U_1 \cap U_2)$.
(a) $y \in A_1 \cap A_2 \Rightarrow \exists u_1 \in U_1, u_2 \in U_2, y = x + u_1 = x + u_2 \Rightarrow u_1 = u_2 \in U_1 \cap U_2 \Rightarrow y \in x + (U_1 \cap U_2)$.
(b) $y = x + u \in x + (U_1 \cap U_2) = (x + U_1) \cap (x + U_2) \Rightarrow y \in A_1 \cap A_2$. □

---

10 *Prove that the intersection of any collection of translates of subsps of V*
is either a translate of some subsp or $\emptyset$.

SOLUTION:

Suppose $\{A_\alpha\}_{\alpha \in \Gamma}$ is a collection of translates of subsps of V, where Γ is an arbitrary index set.

Suppose $x, y \in \bigcap_{\alpha \in \Gamma} A_\alpha \neq \emptyset$, then by Problem (8), $\forall \lambda \in \mathbf{F}, \lambda x + (1-\lambda)y \in A_\alpha$ for every $\alpha \in \Gamma$.
Thus $\bigcap_{\alpha \in \Gamma} A_\alpha$ is a translate of some subsp of V. □

OR. Let $A_\alpha = w_\alpha + V_\alpha$ for each $\alpha \in \Gamma$. Suppose $x \in \bigcap_{\alpha \in \Gamma} (w_\alpha + V_\alpha) \neq \emptyset$.
Then for each $A_\alpha, \exists v_\alpha \in V_\alpha, x = w_\alpha + v_\alpha \Rightarrow x - w_\alpha \in V_\alpha \Rightarrow A_\alpha = w_\alpha + V_\alpha = x + V_\alpha$.
(a) $y \in \bigcap_{\alpha \in \Gamma} A_\alpha \Rightarrow \forall \alpha \in \Gamma, \exists v_\alpha, y = x + v_\alpha \Rightarrow \forall \alpha, \beta \in \Gamma, v_\alpha = v_\beta \Rightarrow y \in x + \bigcap_{\alpha \in \Gamma} V_\alpha$.
(b) $y = x + v \in x + \bigcap_{\alpha \in \Gamma} V_\alpha = \bigcap_{\alpha \in \Gamma} (x + V_\alpha) \Rightarrow y \in \bigcap_{\alpha \in \Gamma} A_\alpha$. Hence $\bigcap_{\alpha \in \Gamma} A_\alpha = x + \bigcap_{\alpha \in \Gamma} V_\alpha$. □

---

11 *Suppose* $A = \{\lambda_1 v_1 + \cdots + \lambda_m v_m : \sum_{i=1}^m \lambda_i = 1\}$, *where each* $v_i \in V, \lambda_i \in \mathbf{F}$.

(a) *Prove that* A *is a translate of some subsp of* V

(b) *Prove that if* B *is a translate of some subsp of* V *and* $\{v_1, \ldots, v_m\} \subseteq B$, *then* $A \subseteq B$.

(c) *Prove that* A *is a translate of some subsp of* V *of dim less than* m.

SOLUTION:

(a) By Problem (8), $\forall u, w \in A, \lambda \in \mathbf{F}, \exists a_i, b_i \mathbf{F}$,
$\lambda u + (1-\lambda)w = \left(\lambda \sum_{i=1}^m a_i + (1-\lambda) \sum_{i=1}^m b_i\right) v_i \in A.$ □

(b) Suppose $B = v + U$, where $v \in V$ and U is a subsp of V. Suppose $\exists !\, u_k \in U, v_k = v + u_k \in B$.
Then for all $v = \sum_{i=1}^m \lambda_i v_i \in A$, $v = \sum_{i=1}^m \lambda_i (v + u_i) = v + \sum_{i=1}^m \lambda_i u_i \in v + U = B$. □

OR. Let $v = \lambda_1 v_1 + \cdots + \lambda_m v_m \in A$. To show that $v \in B$, use induction on m by k.

(i) $k = 1, v = \lambda_1 v_1 \Rightarrow \lambda_1 = 1$. 又 $v_1 \in B$. Hence $v \in B$.
$k = 2, v = \lambda_1 v_1 + \lambda_2 v_2 \Rightarrow \lambda_2 = 1 - \lambda_1$. 又 $v_1, v_2 \in B$. By Problem (8), $v \in B$.

(ii) $2 \leqslant k \leqslant m$, we assume that $v = \lambda_1 v_1 + \cdots + \lambda_k v_k \in A \subseteq B$. $\left(\forall \lambda_i \text{ such that } \sum_{i=1}^k \lambda_i = 1\right)$

For $u = \mu_1 v_1 + \cdots + \mu_k v_k + \mu_{k+1} v_{k+1} \in A$. $\forall i = 1, \ldots, k$, $\exists \mu_i \neq 1$, fix one such i by ι.

Then $\sum_{i=1}^{k+1} \mu_i - \mu_\iota = 1 - \mu_\iota \Rightarrow \left(\sum_{i=1}^{k+1} \frac{\mu_i}{1-\mu_\iota}\right) - \frac{\mu_\iota}{1-\mu_\iota} = 1.$

Let $w = \underbrace{\frac{\mu_1}{1-\mu_\iota} v_1 + \cdots + \frac{\mu_{\iota-1}}{1-\mu_\iota} v_{\iota-1} + \frac{\mu_{\iota+1}}{1-\mu_\iota} v_{\iota+1} + \cdots + \frac{\mu_{k+1}}{1-\mu_\iota} v_{k+1}}_{k \text{ terms}}.$

Let $\lambda_i = \frac{\mu_i}{1-\mu_\iota}$ for $i = 1, \ldots, \iota - 1$; $\lambda_j = \frac{\mu_{j+1}}{1-\mu_\iota}$ for $j = \iota, \ldots, k$. Then,

$$\left.\begin{array}{r} \sum_{i=1}^k \lambda_i = 1 \Rightarrow w \in B \\ v_\iota \in B \Rightarrow u' = \lambda w + (1-\lambda) v_\iota \in B \end{array}\right\} \Rightarrow \text{Let } \lambda = 1 - \mu_\iota. \text{ Thus } u' = u \in B \Rightarrow A \subseteq B.$$ □

(c) If $m = 1$, then let $A = v_1 + \{0\}$ and we are done.
Choose one $k \in \{1, \ldots, m\}$. Given $\lambda_i \in \mathbf{F}$, where $i \in \{1, \ldots, k-1, k+1, \ldots, m\}$.
Let $\lambda_k = 1 - \lambda_1 - \cdots - \lambda_{k-1} - \lambda_{k+1} - \cdots - \lambda_m$
Then $\lambda_1 v_1 + \cdots + \lambda_k v_k + \cdots + \lambda_m v_m = v_k + \sum_{i=1}^m \lambda_i (v_i - v_k)$.
Thus $A = v_k + \operatorname{span}(v_1 - v_k, \ldots, v_{k-1} - v_k, v_{k+1} - v_k, \ldots, v_m - v_k)$. □

---

18 *Suppose* $T \in \mathcal{L}(V, W)$ *and* U *is a subsp of* V. *Let* π *denote the quotient map.*
Prove that $\exists S \in \mathcal{L}(V/U, W), T = S \circ \pi \iff U \subseteq \operatorname{null} T$.

SOLUTION:

(a) Suppose $U \subseteq \operatorname{null} T$. Define $S \in \mathcal{L}(V/U, W)$ by $S(v + U) = Tv$. Then $S \circ \pi = T$.
Now we show that this map is *well-defined*.
$v_1 + U = v_2 + U \iff (v_1 - v_2) \in U \iff S((v_1 - v_2) + U) = T(v_1 - v_2) = 0 \iff Tv_1 = Tv_2$.

(b) Suppose $\exists S, T = S \circ \pi$. Then $\forall u \in U, Tu = S \circ \pi(u) = S(0 + U) = 0 \Rightarrow U \subseteq \operatorname{null} T$. □

---

20 *Define* $\Gamma : \mathcal{L}(V/U, W) \to \mathcal{L}(V, W)$ *by* $\Gamma(S) = S \circ \pi$. *Prove that:*

(a) Γ *is linear:* By [3.9] distr and [3.6].

(b) Γ *is inje:* $\Gamma(S) = 0 = S \circ \pi \iff \forall v \in V, S(\pi(v)) = 0 \iff \forall v + U \in V/U, S(v + U) = 0 \iff S = 0$.

(c) $\operatorname{range} \Gamma = \{T \in \mathcal{L}(V, W) : U \subseteq \operatorname{null} T\}$: By Problem (18). □

- TODO**Note For [3.88, 3.90, 3.91]:** Suppose $W \in \mathcal{S}_V U$ Then V/U and W are iso.
  For any $W \in \mathcal{S}_V U$, because $V = U \oplus W$. $\forall v \in V, \exists!\, u_v \in U, w_v \in W, v = u_v + w_v$.
  Define $T \in \mathcal{L}(V, W)$ by $T(v) = w_v$. Hence $\operatorname{null} T = U,\ \operatorname{range} T = W$.
  Then $\tilde{T} \in \mathcal{L}(V/\operatorname{null} T, W)$ is defined by $\tilde{T}(v + U) = Tv = w_v$. $\left(\pi \circ \tilde{T} = I_{V/U}, \tilde{T} \circ \pi = I_W = T\right)$
  Thus $\tilde{T}$ is inje (by [3.91(b)]) and surj $\left(\operatorname{range} \tilde{T} = \operatorname{range} T = W\right)$, and therefore is an iso.

---

12 *Suppose U is a subsp of V such that V/U is finite-dim. Prove that is V is iso to $U \times (V/U)$.*

Solution:

Let $(v_1 + U, \dots, v_n + U)$ be a basis of V/U.

Note that $\forall v \in V, \exists!\, a_i \in \mathbf{F}, v + U = \sum_{i=1}^{n} a_i(v_i + U) = \left(\sum_{i=1}^{n} a_i v_i\right) + U$
$\Rightarrow (v - a_1 v_1 - \cdots - a_n v_n) \in U \Rightarrow \exists!\, u \in U, v = \sum_{i=1}^{n} a_i v_i + u$.
Thus define $\varphi \in \mathcal{L}\big(V, U \times (V/U)\big)$ by $\varphi(v) = (u,\, v + U)$,
and $\psi \in \mathcal{L}\big(U \times (V/U), V\big)$ by $\psi(u, v + U) = v + u$, where $\exists!\, a_i \in \mathbf{F}, v = \sum_{i=1}^{n} a_i v_i + U$. □

Or. Define $T \in \mathcal{L}(V/U, V)$ by $T(v_k + U) = v_k$. Notice that $\pi \circ T = I \in \mathcal{L}(V/U)$.
Define $S \in \mathcal{L}\big(U \times (V/U), V\big)$ by $S(u, v + U) = u + T(v + U)$.
If $S(u, v + U) = u + T(v + U) = 0$,
then $\pi\big(S(u, v + U)\big) = v + U = 0 \Rightarrow u = -T(v + U) = 0$. Hence S is inje.
$\forall v \in V, \exists!\, a_i \in \mathbf{F}, v + U = a_1 v_1 + \cdots + a_m v_m + U \Rightarrow \exists!\, u \in U, v = a_1 v_1 + \cdots + a_m v_m + u$.
$S(u, a_1 v_1 + \cdots + a_m v_m + U) = u + T(a_1 v_1 + \cdots + a_m v_m + U) = v$. Hence S is surj. □

- (4E 3.E.14) *Suppose $V = U \oplus W$, $(w_1, \dots, w_m)$ is a basis of W.*
  Prove that $(w_1 + U, \dots, w_m + U)$ is a basis of V/U.

Solution:

Note that $\forall v \in V, \exists!\, u \in U, w \in W, v = u + w$. 又 $\exists!\, c_i \in \mathbf{F}, w = \sum_{i=1}^{m} c_i w_i \Rightarrow v = \sum_{i=1}^{m} c_i w_i + u$.
Hence $\forall v + U \in V/U, \exists!\, c_i \in \mathbf{F}, v + U = \sum_{i=1}^{m} c_i w_i + U = c_1(w_1 + U) + \cdots + c_m(w_m + U)$. □

---

13 *Suppose $(v_1 + U, \dots, v_m + U)$ is a basis of V/U and $(u_1, \dots, u_n)$ is a basis of U.*
Prove that $(v_1, \dots, v_m, u_1, \dots, u_n)$ is a basis of V.

Solution: Notice that $(v_1, \dots, v_m)$ is linely inde.
By Problem (12), U and V/U are finite-dim $\Rightarrow U \times (V/U)$ is finite-dim, so is V.
$\dim V = \dim\big(U \times (V/U)\big) = \dim U + \dim V/U = m + n$.
又 Each $v_i \notin U \Rightarrow (v_1, \dots, v_m, u_1, \dots, u_n)$ is linely inde. □

Or. Note that $\forall v \in V, \exists!\, a_i \in \mathbf{F}, v + U = \sum_{i=1}^{m} a_i v_i + U \Rightarrow \exists!\, b_i \in \mathbf{F}, v - \sum_{i=1}^{m} a_i v_i = \sum_{i=1}^{m} b_i u_i \in U$
$\Rightarrow \forall v \in V, \exists!\, a_i, b_j \in \mathbf{F}, v = \sum_{i=1}^{m} a_i v_i + \sum_{j=1}^{m} b_j u_j$. □

Or. Note that $\sum_{i=1}^{m} a_i v_i \in U \iff \left(\sum_{i=1}^{m} a_i v_i\right) + U = 0 + U \iff a_1 = \cdots = a_m = 0$.
Hence $\operatorname{span}(v_1, \dots, v_m) \cap U = \{0\} \Rightarrow \operatorname{span}(v_1, \dots, v_m) \oplus U = V$. By (2.B.8), we are done. □

---

15 *Suppose* $\varphi \in \mathcal{L}(V, \mathbf{F}) \backslash \{0\}$. *Prove that* $\dim V/(\operatorname{null}\varphi) = 1$.

Solution:

By (3.B.29), $\exists\, u \in V, V = \operatorname{null}\varphi \oplus \{au : a \in \mathbf{F}\}$. By (4E 3.E.14), $(u + \operatorname{null}\varphi)$ is a basis of $V/\operatorname{null}\varphi$.

Or. By [3.91] (d), $\dim \operatorname{range}\varphi = 1 = \dim V/(\operatorname{null}\varphi)$. $\square$

---

16 *Suppose* $\dim V/U = 1$. *Prove that* $\exists\, \varphi \in \mathcal{L}(V, \mathbf{F})$ *such that null* $\varphi = U$.

Solution:

Suppose V_0 is a subsp of V such that $V = U \oplus V_0$. Then V_0 and V/U are iso. $\dim V_0 = 1$.
Define $\varphi \in \mathcal{L}(V, \mathbf{F})$ by $\varphi(v_0) = 1, \varphi(u) = 0$, where $v_0 \in V_0, u \in U$. $\square$

Or. Let $(w + U)$ be a basis of V/U. Then $\forall v \in V, \exists!\, a \in \mathbf{F}, v + U = aw + U$.
Define $\varphi : V \to \mathbf{F}$ by $\varphi(v) = a$. Assume that φ is linear.
Then $u \in U \iff u + U = 0w + U \iff \varphi(u) = 0 \iff u \in \operatorname{null}\varphi$. Thus $U = \operatorname{null}\varphi$. $\square$
Now we prove the assumption.
$\forall x, y \in V, \lambda \in \mathbf{F}, \exists!\, a, b \in \mathbf{F}, x + U = aw + U, \lambda y + U = \lambda bw + U \Rightarrow (x + \lambda y) + U = (a + \lambda b)w + U$.
Then $\varphi(x + \lambda y) = a + \lambda b = \varphi(x) + \lambda\varphi(y)$.

---

17 *Suppose* V/U *is finite-dim.* W *is a subsp of* V.
(a) *Show that if* $V = U + W$, *then* $\dim W \geqslant \dim V/U$.
(b) *Find a* W *such that* $\dim W = \dim V/U$ *and* $V = U \oplus W$.

Solution: Let $(w_1, \dots, w_n)$ be a basis of W

(a) $\forall v \in V, \exists\, u \in U, w \in W$ such that $v = u + w \Rightarrow v + U = w + U$
And $\exists!\, a_i \in \mathbf{F}, v + U = (a_1 w_1 + \dots + a_n w_n) + U$. Then $V/U \subseteq \operatorname{span}(w_1 + U, \dots, w_n + U)$.
Hence $\dim V/U = \dim \operatorname{span}(w_1 + U, \dots, w_n + U) \leqslant \dim W$.

(b) Let $W \in \mathcal{S}_V U$. In other words, reduce $(w_1 + U, \dots, w_n + U)$
to a basis $(w_1 + U, \dots, w_m + U)$ of V/U and let $W = \operatorname{span}(w_1, \dots, w_m)$. $\square$

Or. Let $(v_1 + U, \dots, v_m + U)$ be a basis of V/U and define $T \in \mathcal{L}(V/U, V)$ by $T(v_k + U) = v_k$.
Note that $\pi \circ T = I$. By (3.B.20), T is inje. And $(v_1, \dots, v_m)$ is linely inde.
Let $W = \operatorname{range} T = \operatorname{span}(v_1, \dots, v_m)$. Then $T \in \mathcal{L}(V/U, W)$ is an iso. Thus $\dim W = \dim V/U$.
And $\forall v \in V, \exists!\, a_i \in \mathbf{F}, v + U = a_1 v_1 + \dots + a_m v_m + U$
$\Rightarrow v - (a_1 v_1 + \dots + a_m v_m) \in U \Rightarrow \exists!\, w \in W, u \in U, v = w + u$. $\square$

Ended

3·F

[1]; [2] ; [3] ; [4] ; [5]; [6] ; [7] .

• *By* (3.D.18), $\varphi : V \to \mathcal{L}(\mathbf{F}, V)$ *is an iso. Now we prove that*
$(v_1, \dots, v_m)$ *is linely inde* $\iff (\varphi(v_1), \dots, \varphi(v_m))$ *is linely inde.*

Solution:

(a) Notice that φ is inje and by (3.B.9). $\square$

Or. Suppose $(v_1, \dots, v_m)$ is linely inde and $\vartheta \in \operatorname{span}(\varphi(v_1), \dots, \varphi(v_m))$.
Let $\vartheta = 0 = a_1\varphi(v_1) + \dots + a_m\varphi(v_m)$. Then $\vartheta(1) = 0 = a_1 v_1 + \dots + a_m v_m \Rightarrow a_1 = \dots = a_m = 0$. $\square$

(b) Suppose $(\varphi(v_1), \dots, \varphi(v_m))$ is linely inde and $v \in \operatorname{span}(v_1, \dots, v_m)$.
Let $v = 0 = a_1 v_1 + \dots + a_m v_m$. Then $\varphi(v) = a_1\varphi(v_1) + \dots + a_m\varphi(v_m) = 0 \Rightarrow a_1 = \dots = a_m = 0$. $\square$

• (4E 3.F.5) *Suppose* $T \in \mathcal{L}(V, W)$ *and* $(w_1, \dots, w_m)$ *is a basis of* range T.
Hence $\forall v \in V$, $Tv = \varphi_1(v)w_1 + \cdots + \varphi_m(v)w_m$, $\exists!\, \varphi_1(v), \dots, \varphi_m(v)$,
thus defining functions $\varphi_1, \dots, \varphi_m$ *from* V *to* $\mathbf{F}$. *Show that each* $\varphi_i \in V'$.

Solution:

For each w_i, $\exists\, v_i \in V$, $Tv_i = w_i$, getting a linely inde list $(v_1, \dots, v_m)$.
Now we have $Tv = a_1 Tv_1 + \cdots + a_m Tv_m$, $\forall v \in V$, $\exists!\, a_i \in \mathbf{F}$.
Let $(\psi_1, \dots, \psi_m)$ be the dual basis of range T. Then $\big(T'(\psi_i)\big)(v) = \psi_i \circ T(v) = a_i$.
Thus letting $\varphi_i = \psi_i \circ T$. □

• (4E 3.F.6) *Suppose* $\varphi, \beta \in V'$. *Prove that* $\operatorname{null}\varphi \subseteq \operatorname{null}\beta \iff \beta = c\varphi$. $\exists\, c \in \mathbf{F}$.

Solution: Using (3.B.29, 30)

(a) Suppose $\operatorname{null}\varphi \subseteq \operatorname{null}\beta$. Choose a $u \notin \operatorname{null}\beta$. $V = \operatorname{null}\beta \oplus \{au : a \in \mathbf{F}\}$.
If $\operatorname{null}\varphi = \operatorname{null}\beta$, then let $c = \dfrac{\beta(u)}{\varphi(u)}$, we are done.
Otherwise, suppose $u' \in \operatorname{null}\beta$, but $u' \notin \operatorname{null}\varphi$, then $V = \operatorname{null}\varphi \oplus \{bu' : b \in \mathbf{F}\}$.
$\forall v \in V, v = w + au = w' + bu'$, $\exists!\, w, w' \in \operatorname{null}\varphi, a, b \in \mathbf{F}$.
Thus $\beta(v) = a\beta(u)$, $\varphi(v) = b\varphi(u')$. Let $c = \dfrac{a\beta(u)}{b\varphi(u')}$. We are done

(b) Suppose $\beta = c\varphi$ for some $c \in \mathbf{F}$.
If $c = 0$, then $\operatorname{null}\beta = V \supseteq \operatorname{null}\varphi$, we are done.
Otherwise, $\left.\begin{array}{l} \forall v \in \operatorname{null}\varphi, \varphi(v) = 0 = \beta(v) \Rightarrow \operatorname{null}\varphi \subseteq \operatorname{null}\beta. \\ \forall v \in \operatorname{null}\beta, \beta(v) = 0 = \varphi(v) \Rightarrow \operatorname{null}\beta \subseteq \operatorname{null}\varphi. \end{array}\right\} \Rightarrow \operatorname{null}\varphi = \operatorname{null}\beta$
$\Rightarrow \operatorname{null}\varphi \subseteq \operatorname{null}\beta$. □

---

5 *Prove that* $(V_1 \times \cdots \times V_m)'$ *and* $V'_1 \times \cdots \times V'_m$ *are iso.*

Solution: Using notations in (3.E.2).

$$\left.\begin{array}{l} \text{Define } \varphi : (V_1 \times \cdots \times V_m)' \to V'_1 \times \cdots \times V'_m \\ \quad \text{by } \varphi(T) = (T \circ R_1, \dots, T \circ R_m) = (R'_1(T), \dots, R'_m(T)). \\ \text{Define } \psi : V'_1 \times \cdots \times V'_m \to (V_1 \times \cdots \times V_m)' \\ \quad \text{by } \psi(T_1, \dots, T_m) = T_1S_1 + \cdots + T_mS_m = S'_1(T_1) + \cdots + S'_m(T_m). \end{array}\right\} \Rightarrow \psi = \varphi^{-1}.$$ □

• (4E 3.F.8) *Suppose* $(v_1, \dots, v_n)$ *is a basis of* V *and* $(\varphi_1, \dots, \varphi_n)$ *is the dual basis of* V'.

$$\left.\begin{array}{l} \textit{Define } \Gamma : V \to \mathbf{F}^n \textit{ by } \Gamma(v) = (\varphi_1(v), \dots, \varphi_n(v)). \\ \textit{Define } \Lambda : \mathbf{F}^n \to V \textit{ by } \Lambda(a_1, \dots, a_n) = a_1v_1 + \cdots + a_nv_n. \end{array}\right\} \Rightarrow \Lambda = \Gamma^{-1}.$$

---

9 *Suppose* $(v_1, \dots, v_n)$ *is a basis of* V *and* $(\varphi_1, \cdots, \varphi_n)$ *is the correspd dual basis of* V'.
Suppose $\psi \in V'$. *Prove that* $\psi = \psi(v_1)\varphi_1 + \cdots + \psi(v_n)\varphi_n$.

Solution: $\psi(v) = \psi\big(\sum_{i=1}^n a_iv_i\big) = \sum_{i=1}^n a_i\psi(v_i) = \sum_{i=1}^n \psi(v_i)\varphi_i(v) = [\psi(v_1)\varphi_1 + \cdots + \psi(v_n)\varphi_n](v)$ □

Comment: For other basis $(u_1, \dots, u_n)$ and the dual basis $(\rho_1, \dots, \rho_n)$, $\psi = \psi(u_1)\rho_1 + \cdots + \psi(u_n)\rho_n$.

---

35 *Prove that* $\big(\mathcal{P}(\mathbf{R})\big)'$ *and* $\mathbf{R}^\infty$ *are iso.*

Solution:

Define $\theta \in \mathcal{L}\Big(\big(\mathcal{P}(\mathbf{R})\big)', \mathbf{R}^\infty\Big)$ by $\theta(\varphi) = \big(\varphi(1), \varphi(x), \cdots, \varphi(x^n), \cdots\big)$.

Inje: $\theta(\varphi) = 0 \Rightarrow \forall x^k$ in the basis $(1, x, \dots, x^n)$ of $\mathcal{P}_n(\mathbf{R})$ ($\forall n$), $\varphi(x^k) = 0 \Rightarrow \varphi = 0$.

Surj: $\forall \left(a_k\right)_{k=1}^{\infty} \in \mathbf{F}^{\infty}$, let ψ be such that $\forall k, \psi(x^k) = a_k$ and thus $\theta(\psi) = \left(a_k\right)_{k=1}^{\infty}$.
Hence θ is an iso from $\left(\mathcal{P}(\mathbf{R})\right)'$ onto $\mathbf{R}^{\infty}$. $\square$

---

7 *Show that the dual basis of $(1, x, \dots, x_m)$ of $\mathcal{P}_m(\mathbf{R})$ is $(\varphi_0, \varphi_1, \dots, \varphi_m)$, where $\varphi_k = \dfrac{p^{(k)}(0)}{k!}$.*
Here $p^{(k)}$ denotes the k^{th} derivative of p, with the understanding that the 0^{th} derivative of p is p.

Solution:

$$\forall j, k \in \mathbf{N},\ (x^j)^{(k)} = \begin{cases} j(j-1)\dots(j-k+1)\cdot x^{(j-k)}, & j \geq k. \\ j(j-1)\dots(j-j+1) = j!, & j = k. \\ 0, & j \leqslant k. \end{cases} \Bigg| \text{ Then } (x^j)^{(k)}(0) = \begin{cases} 0, & j \neq k. \\ k!, & j = k. \end{cases} \quad \square$$

---

8 *Suppose $m \in \mathbf{N}^+$.*
(a) By [2.C.10], $B = \left(1, x-5, \dots, (x-5)^m\right)$ is a basis of $\mathcal{P}_m(\mathbf{R})$.
(b) $\varphi_k = \dfrac{p^{(k)}(5)}{k!}$ for each $k = 0, 1, \dots, m$. Then $(\varphi_0, \varphi_1, \dots, \varphi_m)$ is the dual basis of B.

---

13 *Define $T : \mathbf{R}^3 \to \mathbf{R}^2$ by $T(x, y, z) = (4x + 5y + 6z, 7x + 8y + 9z)$.*
Let $(\varphi_1, \varphi_2), (\psi_1, \psi_2, \psi_3)$ denote the dual basis of the standard basis of $\mathbf{R}^2$ and $\mathbf{R}^3$.
(a) *Describe the linear functionals $T'(\varphi_1), T'(\varphi_2) \in \mathcal{L}(\mathbf{R}^3, \mathbf{R})$*
For any $(x, y, z) \in \mathbf{R}^3$, $\left(T'(\varphi_1)\right)(x, y, z) = 4x + 5y + 6z$, $\left(T'(\varphi_2)\right)(x, y, z) = 7x + 8y + 9z$.
(b) *Write $T'(\varphi_1)$ and $T'(\varphi_2)$ as linear combinations of ψ_1, ψ_2, ψ_3.*
$T'(\varphi_1) = 4\psi_1 + 5\psi_2 + 6\psi_3$, $T'(\varphi_2) = 7\psi_1 + 8\psi_2 + 9\psi_3$. $\square$

---

14 *Define $T : \mathcal{P}(\mathbf{R}) \to \mathcal{P}(\mathbf{R})$ by $(Tp)(x) = x^2 p(x) + p''(x)$ for each $x \in \mathbf{R}$.*
(a) *Suppose $\varphi \in \mathcal{P}(\mathbf{R})'$ is defined by $\varphi(p) = p'(4)$. Describe $T'(\varphi) \in \mathcal{P}(\mathbf{R})'$.*
$\left(T'(\varphi)\right)(p) = \left[x^2 p(x) + p''(x)\right]'(4) = \left[2xp(x) + x^2 p'(x) + p'''(x)\right](4) = 8p(4) + 16p'(4) + p'''(4)$.
(b) *Suppose $\varphi \in \mathcal{P}(\mathbf{R})'$ is defined by $\varphi(p) = \int_0^1 p(x)\mathrm{d}x$. Evaluate $\left(T'(\varphi)\right)(x^3)$.*
$\left(T'(\varphi)\right)(x^3) = \int_0^1 (x^5 + 6x)\mathrm{d}x = \int_0^1 \left(\frac{1}{6}x^6 + 3x^2\right)'\mathrm{d}x = \frac{6}{19}$. $\square$

---

12 *Because $I_V{}'(\varphi) = \varphi \circ I_V = \varphi,\ \forall \varphi \in V'$. We have $I_{V'} = I_V{}'$.*

---

15 *Suppose W is finite-dim, $T \in \mathcal{L}(V, W)$.*
Then $T' = 0 \Longleftrightarrow T'(\varphi) = \varphi \circ T = 0$ for all $\varphi \in V' \Longleftrightarrow T = 0$.

• *Suppose V, W are finite-dim, $T \in \mathcal{L}(V, W)$.*
Then by $[3.108]$ and $[3.110]$, T is inv $\Longleftrightarrow T'$ is inv.

---

16 *Suppose V and W are finite-dim. Define Γ by $\Gamma(T) = T'$ for any $T \in \mathcal{L}(V, W)$.*
Prove that Γ is an iso of $\mathcal{L}(V, W)$ onto $\mathcal{L}(W', V')$.

Solution:

V, W are finite-dim $\Rightarrow \dim \mathcal{L}(V, W) = \dim \mathcal{L}(W', V')$. And by [3.101], Γ is linear.

又 Suppose $\Gamma(T) = T' = 0$. By Problem (15), $T = 0$. Thus T is inje $\Rightarrow$ T is inv. $\square$

---

4 *Suppose V is finite-dim and U is a subsp of $V, U \neq V$.*
Prove that $\exists\, \varphi \in V' \backslash \{0\}, \varphi(u) = 0$ for all $u \in U$.

Solution:

Let $(u_1, \dots, u_m)$ be a basis of U, extend to $(u_1, \dots, u_m, u_{m+1}, \dots, u_{m+n})$ a basis of V.

Choose a $k \in \{1, \dots, n\}$. Define $\varphi \in V'$ by $\varphi(u_i) = \begin{cases} 1, & \text{if } i = m+k. \\ 0, & \text{otherwise.} \end{cases}$

Or. Equivalent to proving that $U^0 \neq \{0\}$. By [3.106], $\dim U^0 = \dim V - \dim U > 0$. $\square$

• *Suppose V is a vecsp and $U \subseteq V$.*

17 $U^0 = \{\varphi \in V' : U \subseteq null\varphi\}$. Noticing $\varphi \in V', U \subseteq \operatorname{null}\varphi \iff \forall u \in U, \varphi(u) = 0$.

18 $U = \{0\} \iff \forall \varphi \in V', U \subseteq \operatorname{null}\varphi \iff U^0 = V'$.

19 $U = V \iff U^0_V = \{0\} = V^0_V$. By the inverse and contrapositive of Problem (4).

20, 21 *Suppose U and W are subsets of V. Prove that $U \subseteq W \iff W^0 \subseteq U^0$.*

Solution:

(a) Suppose $U \subseteq W$. Then $\forall w \in W, u \in U, \varphi \in W^0, \varphi(w) = 0 = \varphi(u) \Rightarrow \varphi \in U^0$. Thus $W^0 \subseteq U^0$.

(b) Suppose $W^0 \subseteq U^0$. Then $\varphi \in W^0 \Rightarrow \varphi \in U^0$. Hence $\operatorname{null}\varphi \supseteq W \Rightarrow \operatorname{null}\varphi \supseteq U$. Thus $W \supseteq U$. $\square$

Corollary: $W^0 = U^0 \iff U = W$.

---

22 *Suppose U and W are subsps of V. Prove that $(U+W)^0 = U^0 \cap W^0$.*

Solution:

(a) $\left.\begin{array}{l} U \subseteq U+W \\ W \subseteq U+W \end{array}\right\} \Rightarrow \left.\begin{array}{l} (U+W)^0 \subseteq U^0 \\ (U+W)^0 \subseteq W^0 \end{array}\right\} \Rightarrow (U+W)^0 \subseteq U^0 \cap W^0.$

(b) $\forall \varphi \in U^0 \cap W^0, \varphi(u+w) = 0$, where $u \in U, w \in W \Rightarrow \varphi \in (U+W)^0$. Thus $(U+W)^0 \supseteq U^0 \cap W^0$ $\square$

---

23 *Suppose U and W are subsets of V. Prove that $(U \cap W)^0 = U^0 + W^0$.*

Solution:

(a) $\left.\begin{array}{l} U \cap W \subseteq U \\ U \cap W \subseteq W \end{array}\right\} \Rightarrow \left.\begin{array}{l} (U \cap W)^0 \supseteq U^0 \\ (U \cap W)^0 \supseteq W^0 \end{array}\right\} \Rightarrow (U \cap W)^0 \supseteq U^0 + W^0 \supseteq U^0 \cap W^0.$

(b) $\forall \varphi \in U^0, \psi \in W^0$ and $\forall v \in U \cap W$, $(\varphi + \psi)(v) = \varphi(v) + \psi(v) = 0$. Thus $U^0 + W^0 \subseteq (U \cap W)^0$ $\square$

• **Corollary:** *Suppose $\{V_{\alpha_i}\}_{\alpha_i \in \Gamma}$ is a collection of subsps of V.*

Then $\left(\sum_{\alpha_i \in \Gamma} V_{\alpha_i}\right)^0 = \bigcap_{\alpha_i \in \Gamma} (V^0_{\alpha_i})$; *And* $\left(\bigcap_{\alpha_i \in \Gamma} V_{\alpha_i}\right)^0 = \sum_{\alpha_i \in \Gamma} (V^0_{\alpha_i})$.

---

24 *Suppose V is finite-dim and U is a subsp of V.*
Prove, using the pattern of [3.104], that $\dim U + \dim U^0 = \dim V$.

Solution:

Let $(u_1, \dots, u_m)$ be a basis of U, extend to a basis of V as $(u_1, \dots, u_m, \dots, u_n)$,
and let $(\varphi_1, \dots, \varphi_m, \dots, \varphi_n)$ be the dual basis.

(a) Suppose $\varphi \in \operatorname{span}(\varphi_{m+1}, \dots, \varphi_n)$, then $\exists\, a_i \in \mathbf{F}, \varphi = a_{m+1}\varphi_{m+1} + \cdots + a_n\varphi_n$.

For all $u \in U$, $\varphi(u) = 0$. Thus $\varphi \in U^0$, getting $\operatorname{span}(\varphi_{m+1}, \dots, \varphi_n) \subseteq U^0$.

(b) Suppose $\varphi \in U^0$, then $\exists\, a_i \in \mathbf{F}, \varphi = a_1\varphi_1 + \dots + a_m\varphi_m + \dots + a_n\varphi_n$.

For all $u_i \in U, 0 = \varphi(u_i) = \sum_{i=1}^{n} \varphi(u_i) = a_i$. Then $\varphi = a_{m+1}\varphi_{m+1} + \dots + a_n\varphi_n$.

Thus $\varphi \in \operatorname{span}(\varphi_{m+1}, \dots, \varphi_n)$, getting $\operatorname{span}(\varphi_{m+1}, \dots, \varphi_n) \supseteq U^0$.

Hence $\operatorname{span}(\varphi_{m+1}, \dots, \varphi_n) = U^0$, $\dim U^0 = n - m = \dim V - \dim U$. □

---

25 *Suppose U is a subsp of V. Explain why $U = \{v \in V : \varphi(v) = 0, \forall \varphi \in U^0\}$.*

Solution: Note that $U = \{v \in V : v \in U\}$ is a subsp of V and $\varphi(v) = 0$ for every $\varphi \in U^0 \iff v \in U$. □

---

26 *Suppose V is finite-dim, Ω is a subsp of V'. Prove that $\Omega = \{v \in V : \varphi(v) = 0, \forall \varphi \in \Omega\}^0$.*

Solution: Using the corollary in Problem (20, 21).

Suppose $U = \{v \in V : \forall \varphi \in \Omega, \varphi(v) = 0\}$.

Getting $U^0 = \{v \in V : \forall \varphi \in \Omega, \varphi(v) = 0\}^0$. We need to show that $\Omega = U^0$.

(a) $\forall \varphi \in \Omega, v \in U, \varphi(v) = 0 \Rightarrow \varphi \in U^0 \Rightarrow \Omega \subseteq U^0$.

(b) $v \in U \Leftrightarrow \begin{cases} \forall \varphi \in \Omega, \varphi(v) = 0 \\ \forall \psi \in U^0, \psi(v) = 0 \end{cases}$ Thus $\Omega \supseteq U^0$. □

---

27 *Suppose $T \in \mathcal{L}(\mathcal{P}_5(\mathbf{R}))$ and $\operatorname{null} T' = \operatorname{span}(\varphi)$, where $\varphi \in ((\mathcal{P}_5(\mathbf{R}))')$ defined by $\varphi(p) = p(8)$. Prove that $\operatorname{range} T = \{p \in \mathcal{P}_5(\mathbf{R}) : p(8) = 0\}$.*

Solution:

By Problem (26), $\operatorname{span}(\varphi) = \{p \in \mathcal{P}_5(\mathbf{R}) : \psi(p) = 0, \forall \psi \in \operatorname{span}(\varphi)\}^0$,

Hence $\operatorname{span}(\varphi) = \{p \in \mathcal{P}_5(\mathbf{R}) : \varphi(p) = p(8) = 0\}^0$, 又 $\operatorname{span}(\varphi) = \operatorname{null} T' = (\operatorname{range} T)^0$.

By the corollary in Problem (20, 21), $\operatorname{range} T = \{p \in \mathcal{P}_5(\mathbf{R}) : p(8) = 0\}$. □

28, 29 *Suppose V, W are finite-dim, $T \in \mathcal{L}(V, W)$.*

(a) *Suppose $\exists\, \varphi \in W', \operatorname{null} T' = \operatorname{span}(\varphi)$. Prove that $\operatorname{range} T = \operatorname{null} \varphi$.*

(b) *Suppose $\exists\, \varphi \in V', \operatorname{range} T' = \operatorname{span}(\varphi)$. Prove that $\operatorname{null} T = \operatorname{null} \varphi$.*

Solution: Using Problem (26), [3.107] and [3.109].

Because $\operatorname{span}(\varphi) = \{v \in V : \forall \psi \in \operatorname{span}(\varphi), \psi(v) = 0\}^0 = \{v \in V : \varphi(v) = 0\}^0 = (\operatorname{null} \varphi)^0$.

(a) $(\operatorname{range} T)^0 = \operatorname{null} T' = \operatorname{span}(\varphi) = (\operatorname{null} \varphi)^0 \iff \operatorname{range} T = \operatorname{null} \varphi$.

(b) $(\operatorname{null} T)^0 = \operatorname{range} T' = \operatorname{span}(\varphi) = (\operatorname{null} \varphi)^0 \iff \operatorname{null} T = \operatorname{null} \varphi$. □

---

31 *Suppose V is finite-dim and $(\varphi_1, \dots, \varphi_n)$ is a basis of V'. Show that there exists a basis of V whose dual basis is $(\varphi_1, \dots, \varphi_n)$.*

Solution: Using Problem (29) and (30) in (3,B).

$\forall \varphi_i, \operatorname{null} \varphi_i \oplus \{au_i : a \in \mathbf{F}\} = V$.

Because $\varphi_1, \dots, \varphi_m$ is linely inde. $\operatorname{null} \varphi_i \neq \operatorname{null} \varphi_j$ for each $i, j \in \mathbf{N}^+$ such that $i \neq j$.

Thus $(u_1, \dots, u_m)$ is linely inde, for if not, then $\exists\, i, j$ such that $\operatorname{null} \varphi_i = \operatorname{null} \varphi_j$, contradicts.

又 $\dim V' = m = \dim V$. Then $(u_1, \dots, u_m)$ is a basis of V whose dual basis is $(\varphi_1, \dots, \varphi_n)$. □

• *Suppose V is finite-dim and $\varphi_1, \dots, \varphi_m \in V'$. Prove that the following sets are the same.*

(a) $\operatorname{span}(\varphi_1, \dots, \varphi_m)$

(b) $\big((\operatorname{null} \varphi_1) \cap \dots \cap (\operatorname{null} \varphi_m)\big)^0$

(c) $\{\varphi \in V' : (\operatorname{null}\varphi_1) \cap \cdots \cap (\operatorname{null}\varphi_m) \subseteq \operatorname{null}\varphi\}$

Solution: By Problem (17), (b) and (c) are equi. By Problem (26) and the corollary in Problem (23),

$$\left.\begin{aligned} &\big((\operatorname{null}\varphi_1) \cap \cdots \cap (\operatorname{null}\varphi_m)\big)^0 = (\operatorname{null}\varphi_1)^0 + \cdots + (\operatorname{null}\varphi_m)^0. \\ &\text{又}\ \operatorname{span}(\varphi_i) = \{v \in V : \forall \psi \in \operatorname{span}(\varphi_i), \psi(v) = 0\}^0 = (\operatorname{null}\varphi_i)^0. \end{aligned}\right\} \Rightarrow (a) = (b).$$ □

Corollary: **30** *Suppose V is finite-dim and $\varphi_1, \dots, \varphi_m$ is a linely inde list in V'. Then $\dim\big((\operatorname{null}\varphi_1) \cap \cdots \cap (\operatorname{null}\varphi_m)\big) = (\dim V) - m$.*

---

6 *Define $\Gamma : V' \to \mathbf{F}^m$ by $\Gamma(\varphi) = \big(\varphi(v_1), \dots, \varphi(v_m)\big)$, where $v_1, \dots, v_m \in V$.*
(a) *Show that $\operatorname{span}(v_1, \dots, v_m) = V \iff \Gamma$ is inje.*
(b) *Show that $(v_1, \dots, v_m)$ is linely inde $\iff \Gamma$ is surj.*

Solution:

(a) $\begin{cases} \text{Suppose } \Gamma \text{ is inje. Then let } \Gamma(\varphi) = 0, \text{ getting } \varphi = 0 \Leftrightarrow \operatorname{null}\varphi = V = \operatorname{span}(v_1, \dots, v_m). \\ \text{Suppose } \operatorname{span}(v_1, \dots, v_m) = V. \text{ Then let } \Gamma(\varphi) = 0, \text{ getting } \varphi(v_i) = 0 \text{ for each } i, \\ \qquad \operatorname{null}\varphi = \operatorname{span}(v_1, \dots, v_m) = V, \text{ thus } \varphi = 0, \Gamma \text{ is inje.} \end{cases}$

(b) $\begin{cases} \text{Suppose } \Gamma \text{ is surj. Then let } \Gamma(\varphi_i) = e_i \text{ for each } i, \text{ where } (e_1, \dots, e_m) \text{ is the standard basis of } \mathbf{F}^m. \\ \qquad \text{Then } (\varphi_1, \dots, \varphi_m) \text{ is linely inde, suppose } a_1 v_1 + \cdots + a_m v_m = 0, \\ \qquad \text{then for each } i, \text{ we have } \varphi_i(a_1 v_1 + \cdots + a_m v_m) = a_i = 0. \text{ Thus } (v_1, \dots, v_n) \text{ is linely inde.} \\ \text{Suppose } (v_1, \dots, v_m) \text{ is linely inde. Let } (\varphi_1, \dots, \varphi_m) \text{ be the dual basis of } \operatorname{span}(v_1, \dots, v_m). \\ \qquad \text{Thus for each } (a_1, \dots, a_m) \in \mathbf{F}^m, \varphi = a_1\varphi_1 + \cdots + a_m\varphi_m \text{ so that } \Gamma(\varphi) = (a_1, \dots, a_m). \end{cases}$ □

• *Define $\Gamma : V \to \mathbf{F}^m$ by $\Gamma(v) = \big(\varphi_1(v), \dots, \varphi_m(v)\big)$, where $\varphi_1, \dots, \varphi_m \in V'$.*
(c) *Show that $\operatorname{span}(\varphi_1, \dots, \varphi_m) = V' \iff \Gamma$ is inje.*
(d) *Show that $(\varphi_1, \dots, \varphi_m)$ is linely inde $\iff \Gamma$ is surj.*

Solution:

(c) $\begin{cases} \text{Suppose } \Gamma \text{ is inje. Then } \Gamma(v) = 0 \Leftrightarrow \forall i, \varphi_i(v) = 0 \Leftrightarrow v \in (\operatorname{null}\varphi_1) \cap \cdots \cap (\operatorname{null}\varphi_m) \Leftrightarrow v = 0. \\ \qquad \text{Getting } (\operatorname{null}\varphi_1) \cap \cdots \cap (\operatorname{null}\varphi_m) = \{0\}. \text{ By Problem } (\bullet) \text{ above, } \operatorname{span}(\varphi_1, \dots, \varphi_m) = V' \\ \text{Suppose } \operatorname{span}(\varphi_1, \dots, \varphi_m) = V'. \text{ Again by Problem } (\bullet), (\operatorname{null}\varphi_1) \cap \cdots \cap (\operatorname{null}\varphi_m) = \{0\}. \\ \qquad \text{Thus } \Gamma(v) = 0 \Rightarrow \forall i, \varphi_i(v) = 0 \Rightarrow v = 0. \end{cases}$

(d) $\begin{cases} \text{Suppose } (\varphi_1, \dots, \varphi_m) \text{ is linely inde. Then by Problem (31), } (v_1, \dots, v_m) \text{ is linely inde.} \\ \qquad \text{Thus for any } (a_1, \dots, a_m) \in \mathbf{F}, \text{ by letting } v = \sum_{i=1}^m a_i v_i, \text{ then } \varphi_i(v) = a_i \Rightarrow \Gamma(v) = (a_1, \dots, a_m). \\ \text{Suppose } \Gamma \text{ is surj. Let } e_1, \dots, e_m \text{ be a basis of } \mathbf{F}^m. \\ \qquad \text{For every } e_i, \exists\, v_i \in V \text{ such that } \Gamma(v_i) = (\varphi_1(v_i), \dots, \varphi_m(v)) = e_i, \\ \qquad \text{fix } v_i\ (\Rightarrow (v_1, \dots, v_m) \text{ is linely inde}). \text{ Thus } \varphi_i(v_i) = 1, \varphi_i(v_j) = 0. \\ \qquad \text{Hence } (\varphi_1, \dots, \varphi_m) \text{ is the dual basis of the basis } v_1, \dots, \varphi_m \text{ of } \operatorname{span}(v_1, \dots, v_m). \end{cases}$ □

---

33 *Suppose $A \in \mathbf{F}^{m,n}$. Define $T : A \to A^t$. Prove that T is an iso of $\mathbf{F}^{m,n}$ onto $\mathbf{F}^{n,m}$*

Solution: By [3.111], T is linear. Note that $(A^t)^t = A$.
(a) For any $B \in \mathbf{F}^{n,m}$, let $A = B^t$ so that $T(A) = B$. Thus T is surj.
(b) If $T(A) = 0$ for some $A \in \mathbf{F}^{n,m}$, then $A = 0$. Thus T is inje,
for if not, $\exists\, j, k \in \mathbf{N}^+$ such that $A_{j,k} \neq 0$, then $T(A)_{k,j} \neq 0$, contradicts. □

---

32 *Suppose $T \in \mathcal{L}(V)$, and $(u_1, \dots, u_m), (v_1, \dots, v_m)$ are bases of V. Prove that T is inv $\iff$ the rows of $\mathcal{M}\big(T, (u_1, \dots, u_m), (v_1, \dots, v_m)\big)$ form a basis of $\mathbf{F}^{1,n}$.*

Solution: Note that T is inveritlbe $\iff T'$ is inv. And $\mathcal{M}(T') = \mathcal{M}(T)^t = A^t$, denote it by B.

Let $(\varphi_1, \dots, \varphi_m)$ be the dual basis of $v_1, \dots, v_m$, $(\psi_1, \dots, \psi_m)$ be the dual basis of $(u_1, \dots, u_m)$.

(a) Suppose T is inv, so is T'. Because $T'(\varphi_1), \dots, T'(\varphi_m)$ is linely inde.

Noticing that $T'(\varphi_i) = B_{1,i}\psi_1 + \cdots + B_{m,i}\psi_m$.

Thus the cols of B, namely the rows of A, are linely inde (check it by contradiction).

(b) Suppose the rows of A are linely inde, so are the cols of B.

Then $(T'(\varphi_1), \dots, T'(\varphi_m))$ is a basis of range T', namely V'. Thus T' is surj.

Hence T' is inv, so is T. □

---

34 *The double dual space of V, denoted by V'', is defined to be the dual space of V'. In other words, $V'' = \mathcal{L}(V', \mathbf{F})$. Define $\Lambda : V \to V''$ by $(\Lambda v)(\varphi) = \varphi(v)$.*

(a) *Show that Λ is a linear map from V to V''.*

(b) *Show that if $T \in \mathcal{L}(V)$, then $T'' \circ \Lambda = \Lambda \circ T$, where $T'' = (T')'$.*

(c) *Show that if V is finite-dim, then Λ is an iso from V onto V''.*

Suppose V is finite-dim. Then V and V' are iso, but finding an iso from V onto V' generally requires choosing a basis of V. In contrast, the iso Λ from V onto V'' does not require a choice of basis and thus is considered more natural.

Solution:

(a) $\forall \varphi \in V'$, $\forall v, w \in V, a \in \mathbf{F}$, $(\Lambda(v + aw))(\varphi) = \varphi(v + aw) = \varphi(v) + a\varphi(w) = (\Lambda v)(\varphi) + a(\Lambda w)(\varphi)$.

Thus $\Lambda(v + aw) = \Lambda v + a\Lambda w$. Hence Λ is linear.

(b) $(T''(\Lambda v))(\varphi) = ((\Lambda v) \circ (T'))(\varphi) = (\Lambda v)(T'(\varphi)) = (T'(\varphi))(v) = (\varphi \circ T)(v) = \varphi(Tv) = (\Lambda(Tv))(\varphi)$.

Hence $T''(\Lambda v) = (\Lambda(Tv))$, getting $T'' \circ \Lambda = \Lambda \circ T$.

(c) Suppose $\Lambda v = 0$. Then $\forall \varphi \in V', (\Lambda v)(\varphi) = \varphi(v) = 0 \Rightarrow v = 0$. Thus Λ is inje.

又 Because V is finite-dim. $\dim V = \dim V' = \dim V''$. Hence Λ is an iso. □

---

36 *Suppose U is a subsp of V. Define $i : U \to V$ by $i(u) = u$. Thus $i' \in \mathcal{L}(V', U')$.*

(a) *Show that null $i' = U^0$:* $\operatorname{null} i' = (\operatorname{range} i)^0 = U^0 \Leftarrow \operatorname{range} i = U$. □

(b) *Prove that if V is finite-dim, then* range *$i' = U'$:* $\operatorname{range} i' = (\operatorname{null} i)_U{}^0 = (\{0\})_U^0 = U'$. □

(c) *Prove that if V is finite-dim, then $\tilde{i'}$ is an iso from V'/U^0 onto U':*

The iso in (c) is natural in that it does not depend on a choice of basis in either vecsp.

Solution: Note that $\tilde{i'} : V'/\operatorname{null} i' \to \operatorname{range} i' \Rightarrow \tilde{i'} : V'/U^0 \to U'$. By (a), (b) and [3.91(d)]. □

---

37 *Suppose U is a subsp of V and π is the quotient map. Thus $\pi' \in \mathcal{L}\big((V/U)', V'\big)$.*

(a) *Show that π' is inje: Because π is surj. Use [3.108].* □

(b) *Show that $\pi' = U^0$.*

(c) *Conclude that π' is an iso from $(V/U)'$ onto U^0.*

The iso in (c) is natural in that it does not depend on a choice of basis in either vecsp.

In fact, there is no assumption here that any of these vecsps are finite-dim.

Solution: [3.109] is not available. Using (3.E.18), also see (3.E.20).

(b) $\psi \in \operatorname{range} \pi' \iff \exists\, \varphi \in (V/U)', \psi = \varphi \circ \pi \iff \operatorname{null} \psi \supseteq U \iff \psi \in U^0$. Hence range $\pi' = U^0$.

(c) $\psi \in U^0 \iff \operatorname{null} \psi \supseteq U \iff \exists\, \varphi \in (V/U)', \psi = \varphi \circ \pi = \pi(\varphi)$. Thus π' is surj. And by (a). □

Ended

• **NOTE FOR [4.8]:** *division algorithm for polynomials*

Suppose $p, s \in \mathcal{P}(\mathbf{F})$, with $s \neq 0$. Then $\exists!\, q, r \in \mathcal{P}(\mathbf{F})$ such that $p = sq + r$ and $\deg r < \deg s$. Another Proof:

Suppose $\deg p \geqslant \deg s$. Then $(\underbrace{1, z, \dots, z^{\deg s - 1}}_{\text{of length } \deg s}, \underbrace{s, zs, \cdots, z^{\deg p - \deg s} s}_{\text{of length } (\deg p - \deg s + 1)})$ is a basis of $\mathcal{P}_{\deg p}(\mathbf{F})$.

Because $q \in \mathcal{P}(\mathbf{F}), \exists!\, a_i, b_j \in \mathbf{F}$,

$q = a_0 + a_1 z + \cdots + a_{\deg s - 1} z^{\deg s - 1} + b_0 s + b_1 zs + \cdots + b_{\deg p - \deg s} z^{\deg p - \deg s} s$

$= \underbrace{a_0 + a_1 z + \cdots + a_{\deg s - 1} z^{\deg s - 1}}_{r} + s\, \underbrace{(b_0 + b_1 z + \cdots + b_{\deg p - \deg s} z^{\deg p - \deg s})}_{q}.$

With r, q as defined uniquely above, we are done. □

• **NOTE FOR [4.11]:** *each zero of a poly corresponds to a degree-one factor;* Another Proof:

First suppose $p(\lambda) = 0$. Write $p(z) = a_0 + a_1 z + \cdots + a_m z^m, \exists!\, a_0, a_1, \dots, a_m \in \mathbf{F}$ for all $z \in \mathbf{F}$.

Then $p(z) = p(z) - p(\lambda) = a_1(z - \lambda) + \cdots + a_m(z^m - \lambda^m)$ for all $z \in \mathbf{F}$.

Hence $\forall k \in \{1, \dots, m\}, z^k - \lambda^k = (z - \lambda)(z^{k-1}\lambda^0 + z^{k-2}\lambda^1 + \cdots + z^{k-(j+1)}\lambda^j + \cdots + z\lambda^{k-2} + z^0\lambda^{k-1})$.

Thus $p(z) = \sum_{j=1}^{m} a_j (z - \lambda) \sum_{i=1}^{k} \lambda^{i-1} z^{k-i} = (z - \lambda) \sum_{j=1}^{m} a_j \sum_{i=1}^{k} \lambda^{i-1} z^{k-i} = (z - \lambda) q(z)$.

• **NOTE FOR [4.13]:** *fundamental theorem of algebra, first version*

Every nonconst poly with complex coefficients has a zero in $\mathbf{C}$. Another Proof:

For any $w \in \mathbf{C}, k \in \mathbf{N}^+$, by polar coordinates, $\exists\, r \geqslant 0, \theta \in \mathbf{R}, r(\cos\theta + \mathrm{i}\sin\theta) = w$.

By De Moivre' theorem, $w^k = [r(\cos\theta + \mathrm{i}\sin\theta)]^k = r^k(\cos k\theta + \mathrm{i}\sin k\theta)$.

Hence $\left(r^{1/k}(\cos\frac{\theta}{k} + \mathrm{i}\sin\frac{\theta}{k})\right)^k = w$. Thus every complex number has a k^{th} *root*.

Suppose a nonconst $p \in \mathcal{P}(\mathbf{C})$ with highest-order nonzero term $c_m z_m$.

Then $|p(z)| \to \infty$ as $|z| \to \infty$ (because $\dfrac{|p(z)|}{|z_m|} \to |c_m|$ as $|z| \to \infty$).

Thus the continuous function $z \to |p(z)|$ has a global minimum at some point $\zeta \in \mathbf{C}$.

To show that $p(\zeta) = 0$, assume $p(\zeta) \neq 0$. Define $q \in \mathcal{P}(\mathbf{C})$ by $q(z) = \dfrac{p(z + \zeta)}{p(\zeta)}$.

The function $z \to |q(z)|$ has a global minimum value of 1 at $z = 0$.

Write $q(z) = 1 + a_k z^k + \cdots + a_m z^m$, where $k \in \mathbf{N}^+$ is the smallest such that $a_k \neq 0$.

Let $\beta \in \mathbf{C}$ be such that $\beta^k = -\dfrac{1}{a_k}$.

There is a const $c > 1$ so that if $t \in (0, 1)$, then $|q(t\beta)| \leqslant |1 + a_k t^k \beta^k| + t^{k+1} c = 1 - t^k(1 - tc)$.

Now letting $t = 1/(2c)$, we get $|q(t\beta)| < 1$. Contradicts. Hence $p(\zeta) = 0$, as desired. □

• *Prove that if $w, z \in \mathbf{C}$, then $||w| - |z|| \leqslant |w - z|$.*

SOLUTION:

$$\begin{aligned} |w - z|^2 &= (w - z)(\overline{w} - \overline{z}) \\ &= |w|^2 + |z|^2 - (w\overline{z} + \overline{w}z) \\ &= |w|^2 + |z|^2 - (\overline{\overline{w}z} + \overline{w}z) \\ &= |w|^2 + |z|^2 - 2Re(\overline{w}z) \\ &\geq |w|^2 + |z|^2 - 2|\overline{w}z| \\ &= |w|^2 + |z|^2 - 2|w||z| = ||w| - |z||^2. \end{aligned}$$

□

Geometric interpretation: The length of each side of a triangle is greater than or equal to the difference of the lengths of the two other sides.

• *Suppose V is on $\mathbf{C}$ and $\varphi \in V'$. Define $\sigma : V \to \mathbf{R}$ by $\sigma(v) = \mathrm{Re}\,\varphi(v)$ for each $v \in V$.*

Show that $\varphi(v) = \sigma(v) - \mathrm{i}\sigma(\mathrm{i}v)$ for all $v \in V$.

SOLUTION:

Notice that $\varphi(v) = \operatorname{Re}\varphi(v) + \mathrm{i}\operatorname{Im}\varphi(v) = \sigma(v) + \mathrm{i}\operatorname{Im}\varphi(v)$.
又 $\operatorname{Re}\varphi(\mathrm{i}v) = \operatorname{Re}(\mathrm{i}\varphi(v)) = -\operatorname{Im}\varphi(v) = \sigma(\mathrm{i}v)$.
Hence $\varphi(v) = \sigma(v) - \mathrm{i}\sigma(\mathrm{i}v)$. □

---

2 *Suppose $m \in \mathbf{N}^+$. Is the set $U = \{0\} \cup \{p \in \mathcal{P}(\mathbf{F}) : \deg p = m\}$ a subsp of $\mathcal{P}(\mathbf{F})$?*

SOLUTION:

$x^m, x^m + x^{m-1} \in U$ but $\deg\left[(x^m + x^{m-1}) - (x^m)\right] \neq m \Rightarrow (x^m + x^{m-1}) - (x^m) \notin U$.
Hence U is not closed under add, and therefore is not a subsp. □

---

3 *Suppose $m \in \mathbf{N}^+$. Is the set $U = \{0\} \cup \{p \in \mathcal{P}(\mathbf{F}) : 2|\deg p\}$ a subsp of $\mathcal{P}(\mathbf{F})$?*

SOLUTION:

$x^2, x^2 + x \in U$ but $\deg\left[(x^2 + x) - (x^2)\right]$ is odd and hence $(x^2 + x) - (x^2) \notin U$.
Thus U is not closed under add, and therefore is not a subsp. □

---

5 *Suppose that $m \in \mathbf{N}, z_1, \dots, z_{m+1}$ are distinct elements of $\mathbf{F}$, and $w_1, \dots, w_{m+1} \in \mathbf{F}$. Prove that $\exists!\, p \in \mathcal{P}_m(\mathbf{F})$ such that $p(z_k) = w_k$ for each $k = 1, \dots, m+1$.*

SOLUTION:

Define $T : \mathcal{P}_m(\mathbf{F}) \to \mathbf{F}^{m+1}$ by $Tq = \big(q(z_1), \dots, q(z_m), q(z_{m+1})\big)$. As can be easily checked, T is linear.
We need to show that T is surj, so that such p exists; and that T is inje, so that such p is unique.
$Tq = 0 \iff q(z_1) = \cdots = q(z_m) = q(z_{m+1}) = 0$
$\iff q = 0 \in \mathcal{P}_m(\mathbf{F})$, for if not, q of deg m has at least $m+1$ distinct roots. Contradicts [4.12].
$\dim \operatorname{range} T = \dim \mathcal{P}_m(\mathbf{F}) - \dim \operatorname{null} T = m + 1 = \dim \mathbf{F}^{m+1}$. 又 $\operatorname{range} T \subseteq \mathbf{F}^{m+1}$. Hence T is surj. □

---

6 *Suppose $p \in \mathcal{P}_m(\mathbf{C})$ has degree m. Prove that*
p has m distinct zeros $\iff$ p and its derivative p' have no zeros in common.

SOLUTION:

(a) Suppose p has m distinct zeros. By [4.14] and $\deg p = m$, let $p(z) = c(z-\lambda_1)\cdots(z-\lambda_m), \exists!\, c, \lambda_i \in \mathbf{C}$.

For each $j \in \{1, \dots, m\}$, let $\dfrac{p(z)}{(z-\lambda_j)} = q_j \in \mathcal{P}_{m-1}(\mathbf{C})$, then $p(z) = (z-\lambda_j)q_j(z)$ and $q_j(\lambda_j) \neq 0$.

$p'(z) = (z-\lambda_j){q_j}'(z) + q_j(z) \Rightarrow p'(\lambda_j) = q_j(\lambda_j) \neq 0$, as desired.

(b) To prove the implication on the other direction, we prove the contrapositive:
Suppose p has less than m distinct roots.
We must show that p and its derivative p' have at least one zero in common.
Let λ be a zero of p, then write $p(z) = (z-\lambda)^n q(z), \exists!\, n \in \mathbf{N}^+, q \in \mathcal{P}_{m-n}(\mathbf{C})$.
$p'(z) = (z-\lambda)^n q'(z) + n(z-\lambda)^{n-1} q(z) \Rightarrow p'(\lambda) = 0$, λ is a common root of p' and p. □

---

7 *Prove that every $p \in \mathcal{P}(\mathbf{R})$ of odd degree has a zero.*

SOLUTION:

Using the notation and proof of [4.17]. $\deg p = 2M + m$ is odd $\Rightarrow$ m is odd. Hence λ_1 exists. □

OR. Using calculus only.

Suppose $p \in \mathcal{P}_m(\mathbf{F}), \deg p = m, m$ is odd.

Let $p(x) = a_0 + a_1 x + \cdots + a_m x^m$. Then $a_m \neq 0$. Denote $|a_m|^{-1} a_m$ by δ

Write $p(x) = x^m \left(\frac{a_0}{x^m} + \frac{a_1}{x^{m-1}} + \cdots + \frac{a_{m-1}}{x} + a_m \right)$.

Thus $p(x)$ is continuous, and $\lim_{x \to -\infty} p(x) = -\delta\infty$; $\lim_{x \to \infty} p(x) = \delta\infty$.

Hence we conclude that p has at least one real zero. $\square$

---

8 *For $p \in \mathcal{P}(\mathbf{R})$, define $Tp : \mathbf{R} \to \mathbf{R}$ by $(Tp)(x) = \begin{cases} \dfrac{p(x) - p(3)}{x - 3} & \text{if } x \neq 3, \\ p'(3) & \text{if } x = 3 \end{cases}$ for all $x \in \mathbf{R}$.*

Show that $Tp \in \mathcal{P}(\mathbf{R})$ for all $p \in \mathcal{P}(\mathbf{R})$ and that $T : \mathcal{P}(\mathbf{R}) \to \mathcal{P}(\mathbf{R})$ is a linear map.

Solution:

For $x \neq 3, T(x^n) = \dfrac{x^n - 3^n}{x - 3} = \sum\limits_{i=1}^{n} 3^{i-1} x^{n-i}$.

For $x = 3, T(x^n) = 3^{n-1} \cdot n$. Note that if $x = 3$, then $\sum\limits_{i=1}^{n} 3^{i-1} x^{n-i} = \sum\limits_{i=1}^{n} 3^{n-1} = 3^{n-1} \cdot n$.

Hence for all $x \in \mathbf{R}$ and for all $n \in \mathbf{N}, T(x^n) = \sum\limits_{i=1}^{n} 3^{i-1} x^{n-i} \in \mathcal{P}(\mathbf{R})$.

Because T is linear, we conclude that $Tp \in \mathcal{P}(\mathbf{R})$ for all $p \in \mathcal{P}(\mathbf{R})$.

Now we show that T is linear:

$\forall p, q \in \mathcal{P}(\mathbf{R}), \lambda \in \mathbf{R}, T(p + \lambda q)(x) = \begin{cases} \dfrac{(p + \lambda q)(x) - (p + \lambda q)(3)}{x - 3} & \text{if } x \neq 3, \\ (p + \lambda q)'(3) & \text{if } x = 3 \end{cases}$ for all $x \in \mathbf{R}$.

Notice that $\begin{cases} (p + \lambda q)(x) - (p + \lambda q)(3) = \big(p(x) - p(3)\big) + \big(\lambda q(x) - \lambda q(3)\big). \\ (p + \lambda q)'(3) = p'(3) + \lambda q'(3). \end{cases}$

Thus $T(p + \lambda q)(x) = \big(T(p) + \lambda T(q)\big)(x)$ for all $x \in \mathbf{R}$. $\square$

---

9 *Suppose $p \in \mathcal{P}(\mathbf{C})$. Define $q : \mathbf{C} \to \mathbf{C}$ by $q(z) = p(z)\overline{p(\overline{z})}$. Prove that $q \in \mathcal{P}(\mathbf{R})$.*

Solution:

$p(z) = a_n z^n + \cdots + a_1 z + a_0 \Rightarrow p(\overline{z}) = a_n \overline{z}^n + \cdots + a_1 \overline{z} + a_0 \Rightarrow \overline{p(\overline{z})} = \overline{a_n} z^n + \cdots + \overline{a_1} z + \overline{a_0}$.

Note that $q(z) = p(z)\overline{p(\overline{z})} = \overline{p(\overline{z})} p(z) = \overline{p(\overline{z}) \overline{p(\overline{\overline{z}})}} = \overline{q(\overline{z})}$.

Hence letting $q(z) = c_m x^m + \cdots + c_1 x + c_0 \;\Rightarrow\; \overline{c_k} = c_k, c_k \in \mathbf{R}$ for each k. $\square$

---

10 *Suppose $m \in \mathbf{N}$ and $p \in \mathcal{P}_m(\mathbf{C})$ such that $p(x_k) \in \mathbf{R}$ for each x_k, where $x_0, x_1, \dots, x_m \in \mathbf{R}$ are distinct. Prove that $p \in \mathcal{P}(\mathbf{R})$.*

Solution:

Let $p(x_k) = y_k$ for each k. By Problem (5), $\exists !\, q \in \mathcal{P}_m(\mathbf{R})$ such that $q(x_k) = y_k$. Hence $p = q$. $\square$

Or. Using the Lagrange Interpolating Polynomial.

Define $q(x) = \sum\limits_{j=0}^{m} \dfrac{(x - x_0)(x - x_1) \cdots (x - x_{j-1})(x - x_{j+1}) \cdots (x - x_m)}{(x_j - x_0)(x_j - x_1) \cdots (x_j - x_{j-1})(x_j - x_{j+1}) \cdots (x_j - x_m)} p(x_j)$.

又 For each $j, x_j, p(x_j) \in \mathbf{R} \Rightarrow q \in \mathcal{P}_m(\mathbf{R}) \subseteq \mathcal{P}_m(\mathbf{C})$.

Notice that $q(x_k) = 1 \cdot p(x_k) \Rightarrow (q - p)(x_k) = 0$ for each $k \in \{0, 1, \dots, m\}$.

Then $(q - p)$ has $(m + 1)$ distinct zeros, while $(q - p) \in \mathcal{P}_m(\mathbf{C})$. Hence by [4.12], $q - p = 0 \Rightarrow p = q$ $\square$

---

11 *Suppose $p \in \mathcal{P}(\mathbf{F})$ with $p \neq 0$. Let $U = \{pq : q \in \mathcal{P}(\mathbf{F})\}$.*

(a) *Show that* $\dim \mathcal{P}(\mathbf{F})/U = \deg p$.

(b) *Find a basis of $\mathcal{P}(\mathbf{F})/U$.*

SOLUTION:

U is a subsp of $\mathcal{P}(\mathbf{F})$ because $\forall f,g \in \mathcal{P}(\mathbf{F}), \lambda \in \mathbf{F}, pf + \lambda pg = p(f+\lambda g) \in U$.

NOTE: Define $P :\to \mathcal{P}(\mathbf{F})$ by $(Pq)(x) = p\big(q(x)\big) = (p \circ q)(x)$ $(\neq p(x)q(x))$. P is not linear.

(a) By [4.8], $\forall f \in \mathcal{P}(\mathbf{F}), \exists!\, q, r \in \mathcal{P}(\mathbf{F}), f = (p)q + (r)$; $\deg r < \deg p$.
Hence $\forall f \in \mathcal{P}(\mathbf{F}), \exists!\, pq \in U, r \in \mathcal{P}_{\deg p-1}(\mathbf{F}), f = (pq) + (r); r \notin U$.
Thus $\mathcal{P}(\mathbf{F}) = U \oplus \mathcal{P}_{\deg p-1}(\mathbf{F})$. Therefore $\mathcal{P}(\mathbf{F})/U$ and $\mathcal{P}_{\deg p-1}(\mathbf{F})$ are iso.

OR. $\forall f \in \mathcal{P}(\mathbf{F}), \exists!\, q, r \in \mathcal{P}(\mathbf{F}), f = (p)q + (r)$; $\deg r < \deg p$.
Define $R : \mathcal{P}(\mathbf{F}) \to \mathcal{P}_{\deg p-1}(\mathbf{F})$ by $(Rf)(z) = r(z)$ for each $z \in \mathbf{F}$.
$\forall f,g \in \mathcal{P}(\mathbf{F}), \lambda \in \mathbf{F}, R(f+\lambda g)(z) = R(f) + \lambda R(g)$.
BECAUSE: $\forall f,g \in \mathcal{P}(\mathbf{F}), \lambda \in \mathbf{F}$,

$\exists!\, q_1, r_1 \in \mathcal{P}(\mathbf{F}), f = (p)q_1 + (r_1),\ \deg r_1 < \deg p$;
$\exists!\, q_2, r_2 \in \mathcal{P}(\mathbf{F}), g = (p)q_2 + (r_2),\ \deg r_2 < \deg p$;
$\exists!\, q_3, r_3 \in \mathcal{P}(\mathbf{F}), \lambda g = (p)q_3 + (r_3) = (p)(\lambda q_2) + (\lambda r_2),\ \deg r_3 < \deg p$ and $\deg \lambda r_2 < \deg p$.
$\Rightarrow q_3 = \lambda q_2, r_3 = \lambda r_2$.
$\exists!\, q_0, r_0 \in \mathcal{P}(\mathbf{F}), (f+\lambda g) = (p)q_0 + (r_0)$
$= (p)(q_1 + \lambda q_2) + (r_1 + \lambda r_2),\ \deg r_0 < \deg p$ and $\deg (r_1 + \lambda r_2) < \deg p$.
$\Rightarrow q_1 + \lambda q_2 = q_0;\ r_1 + \lambda r_2 = r_0$.

Hence R is linear.
$R(f) = 0 \iff f = pq, \exists!\, q \in \mathcal{P}(\mathbf{F})$. Thus $\operatorname{null} R = U$.
$\forall r \in \mathcal{P}_{\deg p-1}(\mathbf{F})$, let $f = p + r$, then $R(f) = r$. Thus $\operatorname{range} R = \mathcal{P}_{\deg p-1}(\mathbf{F})$.
Finally, by [3.91(d)], $\mathcal{P}(\mathbf{F})/\operatorname{null} R$, namely $\mathcal{P}(\mathbf{F})/U$, and $\operatorname{range} R$, namely $\mathcal{P}_{\deg p-1}(\mathbf{F})$, are iso.

(b) $(1+U, x+U, \ldots, x^{\deg p-1}+U)$ can be a basis of $\mathcal{P}(\mathbf{F})/U$. □

- *Suppose nonconst $p, q \in \mathcal{P}(\mathbf{C})$ have no zeros in common. Let $m = \deg p$, $n = \deg q$. Use* (a)–(c) *below to prove that $\exists!\, r \in \mathcal{P}_{n-1}(\mathbf{C}), s \in \mathcal{P}_{m-1}(\mathbf{C})$ such that $rp + sq = 1$.*
  (a) *Define $T : \mathcal{P}_{n-1}(\mathbf{C}) \times \mathcal{P}_{m-1}(\mathbf{C}) \to \mathcal{P}_{m+n-1}(\mathbf{C})$ by $T(r,s) = rp + sq$. Show that the linear map T is inje.*
  (b) *Show that the linear map T in* (a) *is surj.*
  (c) *Use* (b) *to conclude that $\exists!\, r \in \mathcal{P}_{n-1}(\mathbf{C}), s \in \mathcal{P}_{m-1}(\mathbf{C})$ such that $rp + sq = 1$.*

SOLUTION:

(a) T is linear because $\forall\, r_1, r_2 \in \mathcal{P}_{n-1}(\mathbf{C}), s_1, s_2 \in \mathcal{P}_{m-1}(\mathbf{C}), \lambda \in \mathbf{F}$,
$T\big((r_1,s_1) + \lambda(r_2,s_2)\big) = T(r_1 + \lambda r_2, s_1 + \lambda s_2) = (r_1 + \lambda r_2)p + (s_1 + \lambda s_2)q = T(r_1,s_1) + \lambda T(r_2,s_2)$.

Suppose $T(r,s) = rp + sq = 0$. Notice that p, q have no zeros in common.
Then $r = s = 0$, for if not, write $\dfrac{q(z)}{r(z)} = \dfrac{p(z)}{s(z)}$, while for any zero λ of q, $\dfrac{q(\lambda)r(z)}{=}0 \neq \dfrac{p(\lambda)s(z)}{.}$ □

(b) $\dim(\mathcal{P}_{n-1}(\mathbf{C}) \times \mathcal{P}_{m-1}(\mathbf{C})) = \dim \mathcal{P}_{n-1}(\mathbf{C}) + \dim \mathcal{P}_{m-1}(\mathbf{C}) = n + m = \dim \mathcal{P}_{m+n-1}(\mathbf{C})$.
又 T is inje. Hence $\dim \operatorname{range} T = \dim(\mathcal{P}_{n-1}(\mathbf{C}) \times \mathcal{P}_{m-1}(\mathbf{C})) - \dim \operatorname{null} T = \dim \mathcal{P}_{m+n-1}(\mathbf{C})$.
Thus $\operatorname{range} T = \mathcal{P}_{m+n-1}(\mathbf{C}) \Rightarrow T$ is surj, and therefore is an iso.

(c) Immediately. □

ENDED

• **NOTE FOR [5.6]:**

More generally, suppose we do not know whether V is finite-dim. We show that $(a) \Longleftrightarrow (b)$.
Suppose (a) λ is an eigval of T with an eigvec v. Then $(T - \lambda I)v = 0$.
Hence we get (b), $(T - \lambda I)$ is not inje. And then (d), $(T - \lambda I)$ is not inv.
But $(d) \Rightarrow (b)$ fails (because S is not inv $\Longleftrightarrow$ S is not inje *or* S is not surj).

---

31 *Suppose V is finite-dim and $v_1, \dots, v_m \in V$. Prove that $(v_1, \dots, v_m)$ is linely inde $\Longleftrightarrow \exists\, T \in \mathcal{L}(V)$, $v_1, \dots, v_m$ are eigvecs of T correspd to distinct eigvals.*

SOLUTION:

Suppose $(v_1, \dots, v_m)$ is linely inde, extend it to a basis of V as $(v_1, \dots, v_m, \dots, v_n)$.
Define $T \in \mathcal{L}(V)$ by $Tv_k = kv_k$ for each $k \in \{1, \dots, m, \dots, n\}$. Conversely by [5.10]. ☐

---

1 *Suppose $T \in \mathcal{L}(V)$ and U is a subsp of V.*
(a) *If $U \subseteq \operatorname{null} T$, then U is invar under T.* $\forall u \in U \subseteq \operatorname{null} T, Tu = 0 \in U$. ☐
(b) *If $\operatorname{range} T \subseteq U$, then U is invar under T.* $\forall u \in U, Tu \in \operatorname{range} T \subseteq U$. ☐

• *Suppose $S, T \in \mathcal{L}(V)$ are such that $ST = TS$.*
(a) *Prove that $\operatorname{null}(T - \lambda I)$ is invar under S for any $\lambda \in \mathbf{F}$.*
(b) *Prove that $\operatorname{range}(T - \lambda I)$ is invar under S for any $\lambda \in \mathbf{F}$.*

SOLUTION: Note that $ST = TS \Rightarrow (T - \lambda I)S = S(T - \lambda I)$.
(a) Suppose $v \in \operatorname{null}(T - \lambda I)$, then $(T - \lambda I)(Sv) = S(T - \lambda I)v = S(0) = 0$.
Hence $Sv \in \operatorname{null}(T - \lambda I)$ and therefore $\operatorname{null}(T - \lambda I)$ is invar under S.
(b) Suppose $v \in \operatorname{range}(T - \lambda I)$, therefore $\exists\, u \in V, (T - \lambda I)u = v$.
Then $Sv = S(T - \lambda I)u = (T - \lambda I)(Su) \in \operatorname{range}(T - \lambda I)$.
Hence $Sv \in \operatorname{range}(T - \lambda I)$ and therefore $\operatorname{range}(T - \lambda I)$ is invar under S. ☐

• *Suppose $S, T \in \mathcal{L}(V)$ are such that $ST = TS$.*
2 *Show that $W = \operatorname{null} T$ is invar under S.* $\forall u \in W, Tu = 0 \Rightarrow STu = 0 = TSu \Rightarrow Su \in W$. ☐
3 *Show that $U = \operatorname{range} T$ is invar under S.* $\forall w \in U, \exists\, v \in V, Tv = w, TSv = STv = Sw \in U$. ☐

---

15 *Suppose $T \in \mathcal{L}(V)$. Suppose $S \in \mathcal{L}(V)$ is inv.*
(a) *Prove that T and $S^{-1}TS$ have the same eigvals.*
(b) *What is the relationship between the eigvecs of T and the eigvecs of $S^{-1}TS$?*

SOLUTION:

Suppose λ is an eigval of T with an eigvec v.
Then $S^{-1}TS(S^{-1}v) = S^{-1}Tv = S^{-1}(\lambda v) = \lambda S^{-1}v$.
Thus λ is also an eigval of $S^{-1}TS$ with an eigvec $S^{-1}v$.

Suppose λ is an eigval of $S^{-1}TS$ with an eigvec v.
Then $S(S^{-1}TS)v = TSv = \lambda Sv$.
Thus λ is also an eigval of T with an eigvec Sv. ☐

OR. Note that $S(S^{-1}TS)S^{-1} = T$. Hence every eigval of $S^{-1}TS$ is an eigval of $S(S^{-1}TS)S^{-1} = T$. And every eigvec v of $S^{-1}TS$ is $S^{-1}v$, every eigvec u of T is Su. □

---

21 *Suppose $T \in \mathcal{L}(V)$ is inv.*
(a) *Suppose $\lambda \in \mathbf{F}$ with $\lambda \neq 0$. Prove that λ is an eigval of $T \iff \frac{1}{\lambda}$ is an eigval of T^{-1}.*
(b) *Prove that T and T^{-1} have the same eigvecs.*

SOLUTION:

(a) Suppose λ is an eigval of T with an eigvec v.
Then $T^{-1}Tv = \lambda T^{-1}v = v \Rightarrow T^{-1}v = \frac{1}{\lambda}v$. Hence $\frac{1}{\lambda}$ is an eigval of T^{-1}.
(b) Suppose $\frac{1}{\lambda}$ is an eigval of T^{-1} with an eigvec v.
Then $TT^{-1}v = v = \frac{1}{\lambda}Tv \Rightarrow Tv = \lambda v$. Hence λ is an eigval of T.
OR. Note that $(T^{-1})^{-1} = T$ and $1/(\frac{1}{\lambda}) = \lambda$. □

---

23 *Suppose $S, T \in \mathcal{L}(V)$. Prove that ST and TS have the same eigvals.*

SOLUTION:

Suppose λ is an eigval of ST with an eigvec v. Then $T(STv) = \lambda Tv = TS(Tv)$.
If $Tv = 0$ (while $v \neq 0$), then T is not inje $\Rightarrow (TS - 0I)$ and $(ST - 0I)$ are not inje.
Thus $\lambda = 0$ is an eigval of ST and TS with the same eigvec v.
Otherwise, $Tv \neq 0$, then λ is an eigval of TS. Reversing the roles of T and S. □

• (2E Ch5.20)
Suppose $T \in \mathcal{L}(V)$ has $\dim V$ distinct eigvals and $S \in \mathcal{L}(V)$ has the same eigvecs (but might not with the same eigvals). Prove that $ST = TS$.

SOLUTION:

Let $n = \dim V$. For each $j \in \{1, \dots, n\}$, let v_j be an eigvec with eigval λ_j of T and α_j of S.
Then $(v_1, \dots, v_n)$ is a basis of V. Because $(ST)v_j = \alpha_j\lambda_j v_j = (TS)v_j$ for each j. Hence $ST = TS$. □

• *Suppose V is finite-dim and $T \in \mathcal{L}(V)$.*
Define $\mathcal{A} \in \mathcal{L}\big(\mathcal{L}(V)\big)$ by $\mathcal{A}(S) = TS$ for each $S \in \mathcal{L}(V)$.
Prove that the set of eigvals of T equals the set of eigvals of $\mathcal{A}$.

SOLUTION:

(a) Suppose $v_1, \dots, v_m$ are all linely inde eigvecs of T
with correspd eigvals $\lambda_1, \dots, \lambda_m$ respectively (possibly with repetitions).
Extend to a basis of V as $(v_1, \dots, v_m, \dots, v_n)$.
Then for each $k \in \{1, \dots, m\}$, $\operatorname{span}(v_k) \subseteq \operatorname{null}(T - \lambda_k I)$.
Define $S_k \in \mathcal{L}(V)$ by $S_k(v_j) = v_k$ for each $j \in \{1, \dots, n\}$,
so that range $S_k = \operatorname{span}(v_k)$ for each $k \in \{1, \dots, m\}$, then $\mathcal{A}(S_k) = TS_k = \lambda_k S_k$.
Thus the eigvals of T are eigvals of $\mathcal{A}$.
(b) Suppose $\lambda_1, \dots, \lambda_m$ are all eigvals of $\mathcal{A}$ with eigvecs $S_1, \dots, S_m$ respectively.
Then for each $k \in \{1, \dots, m\}$, $\exists\, v \in V, 0 \neq u = S_k(v) \in V \Rightarrow Tu = (TS_k)v = (\lambda_k S_k)v = \lambda_k u$.
Thus the eigvals of $\mathcal{A}$ are eigvals of T. □

OR.

(a) Suppose λ is an eigval of T with an eigvec v.
Let $v_1 = v$ and extend to a basis $(v_1, \dots, v_m)$ of V.

Define $S \in \mathcal{L}(V)$ by $Sv_1 = v_1,\ Sv_k = 0$ for $k \geqslant 2$.
Then $(T - \lambda I)Sv_1 = 0 = (T - \lambda I)Sv_k = 0$.
Hence $(T - \lambda I)S = 0 \Rightarrow TS = \lambda S$ while $S \neq 0$. Thus λ is also an eigval of $\mathcal{A}$.

(b) Suppose λ is an eigval of $\mathcal{A}$ with an eigvec S. Then $(T - \lambda I)S = 0$ while $S \neq 0$.
Hence $(T - \lambda I)$ is not inje. Thus λ is also an eigval of T. ☐

Comment: Define $\mathcal{B} \in \mathcal{L}BigPar\mathcal{L}(V)$ by $\mathcal{B}(S) = ST$, $\forall S \in \mathcal{L}(V)$. Then the eigvals of $\mathcal{B}$ are not the eigvals of T.

---

4 *Suppose $T \in \mathcal{L}(V)$ and $V_1, \dots, V_m$ are invar subsps of V under T.*
Prove that $V_1 + \cdots + V_m$ is invar under T.

Solution: For each $i = 1, \dots, m$, $\forall v_i \in V_i, Tv_i \in V_i$
Hence $\forall v = v_1 + \cdots + v_m \in V_1 + \cdots + V_m, Tv = Tv_1 + \cdots + Tv_m \in V_1 + \cdots + V_m$. ☐

---

6 *Prove or give a counterexample:*
If V is finite-dim and U is a subsp of V that is invar under every operator on V, then $U = \{0\}$ or $U = V$.

Solution:

Notice that V might be $\{0\}$. In this case we are done. Suppose $\dim V \geqslant 1$. We prove by contrapositive:
Suppose $U \neq \{0\}$ and $U \neq V$. Prove that $\exists\, T \in \mathcal{L}(V)$ such that U is not invar under T.
Let W be such that $V = U \oplus W$.
Let $(u_1, \dots, u_m)$ be a basis of U and $(w_1, \dots, w_n)$ be a basis of W.
Hence $(u_1, \dots, u_m, w_1, \dots, w_n)$ is a basis of V.
Define $T \in \mathcal{L}(V)$ by $T(a_1u_1 + \cdots + a_mu_m + b_1w_1 + \cdots + b_nw_n) = b_1w_1 + \cdots + b_nw_n$. ☐

• *Suppose $\mathbf{F} = \mathbf{R}$, $T \in \mathcal{L}(V)$.*
(a) (Or (9.11)) $\lambda \in \mathbf{R}$. *Prove that λ is an eigval of $T \iff \lambda$ is an eigval of T_{C}.*
(b) (Or Problem (16)) $\lambda \in \mathbf{C}$. *Prove that λ is an eigval of $T_{\mathrm{C}} \iff \overline{\lambda}$ is an eigval of T_{C}.*

Solution:

(a) Suppose $v \in V$ is an eigvec correspd to the eigval λ.
Then $Tv = \lambda v \Rightarrow T_{\mathrm{C}}(v + \mathrm{i}0) = Tv + \mathrm{i}T0 = \lambda v$.
Thus λ is an eigval of T.
Suppose $v + \mathrm{i}u \in V_{\mathrm{C}}$ is an eigvec correspd to the eigval λ.
Then $T_{\mathrm{C}}(v + \mathrm{i}u) = \lambda v + \mathrm{i}\lambda u \Rightarrow Tv = \lambda v, Tu = \lambda u$. (Note that v or u might be zero).
Thus λ is an eigval of T_{C}.

(b) Suppose λ is an eigval of T_{C} with an eigvec $v + \mathrm{i}u$.
Let $(v_1, \dots, v_n)$ be a basis of V. Write $v = \sum_{i=1}^{n} a_iv_i, u = \sum_{i=1}^{n} b_iv_i$, where $a_i, b_i \in \mathbf{R}$.
Then $T_{\mathrm{C}}(v + \mathrm{i}u) = Tv + \mathrm{i}Tu = \lambda v + \mathrm{i}\lambda u = \lambda \sum_{i=1}^{n} (a_i + \mathrm{i}b_i)v_i$. Conjugating two sides, we have:
$\overline{T_{\mathrm{C}}(v + \mathrm{i}u)} = \overline{Tv + \mathrm{i}Tu} = \overline{Tv} - \mathrm{i}\overline{Tu} = Tv - \mathrm{i}Tu = T_{\mathrm{C}}(\overline{v + \mathrm{i}u}) = \overline{\lambda \sum_{i=1}^{n} (a_i + \mathrm{i}b_i)v_i} = \overline{\lambda} \sum_{i=1}^{n} (a_i - \mathrm{i}b_i)v_i$.
Hence $\overline{\lambda}$ is an eigval of T_{C}. To prove the other direction, notice that $\overline{(\overline{\lambda})} = \lambda$. ☐

• *Suppose V is finite-dim, $T \in \mathcal{L}(V)$, and $\lambda \in \mathbf{F}$.*
Show that λ is an eigval of $T \iff \lambda$ is an eigval of the dual operator $T' \in \mathcal{L}(V')$.

Solution:

(a) Suppose λ is an eigval of T with an eigvec v.

Then $(T-\lambda I_V)$ is not inv. 又 V is finite-dim.

Thus by [3.108, 110], [3.101] and Problem (12) in (3.F), $(T-\lambda I_V)' = T' - \lambda I_{V'}$ is not inv.

Hence λ is an eigval of T'.

(b) Suppose λ is an eigval T' with an eigvec ψ. Then $T'(\psi) = \psi \circ T = \lambda\psi$.

又 $\psi \neq 0 \Rightarrow \exists\, v \in V$ such that $\psi(v) \neq 0$. Note that $\psi(Tv) = \lambda\psi(v)$.

Thus $\lambda = \dfrac{\psi(Tv)}{\psi(v)} \Rightarrow Tv = \dfrac{\psi(Tv)}{\psi(v)} v = \lambda v$. Hence λ is an eigval of T. $\square$

---

7 *Suppose $T \in \mathcal{L}(\mathbf{R}^2)$ is defined by $T(x,y) = (-3y, x)$. Find the eigvals of T.*

Solution:

Suppose $\lambda \in \mathbf{R}$ and $(x,y) \in \mathbf{R}^2 \backslash \{0\}$ such that $T(x,y) = (-3y,x) = \lambda(x,y)$. Then $-3y = \lambda x$ and $x = \lambda y$.

Thus $-3y = \lambda^2 y \Rightarrow \lambda^2 = -3$, ignoring the possibility of $y = 0$ (because if $y = 0$, then $x = 0$).

Hence the set of solution for this equation is $\emptyset$, and therefore T has no eigvals in $\mathbf{R}$. $\square$

---

8 *Define $T \in \mathcal{L}(\mathbf{F}^2)$ by $T(w,z) = (z,w)$. Find all eigvals and eigvecs of T.*

Solution:

Suppose $\lambda \in \mathbf{F}$ and $(w,z) \in \mathbf{F}^2$ such that $T(w,z) = (z,w) = \lambda(w,z)$. Then $z = \lambda w$ and $w = \lambda z$.

Thus $z = \lambda^2 z \Rightarrow \lambda^2 = 1$, ignoring the possibility of $z = 0$ ($z = 0 \Rightarrow w = 0$).

Hence $\lambda_1 = -1$ and $\lambda_2 = 1$ are all eigvals of T. For $\lambda_1 = -1, z = -w, w = -z$; For $\lambda_2 = 1, z = w$.

Thus the set of all eigvecs is $\{(z,-z),(z,z) : z \in \mathbf{F} \wedge z \neq 0\}$. $\square$

• *Suppose $P \in \mathcal{L}(V)$ is such that $P^2 = P$.*
Prove that if λ is an eigval of P, then $\lambda = 0$ or $\lambda = 1$.

Solution: (See also at (3.B), just below Problem (25), where (5.B.4) was answered.)

Suppose λ is an eigval with an eigvec v. Then $P(Pv) = Pv \Rightarrow \lambda^2 v = \lambda v$. Thus $\lambda = 1$ or 0. $\square$

---

22 *Suppose $T \in \mathcal{L}(V)$ and $\exists$ nonzero vecs u, w in V such that $Tu = 3w$ and $Tw = 3u$.*
Prove that 3 or -3 is an eigval of T.

Solution: **Comment:** $Tu = 3w, Tw = 3u \Rightarrow T(Tu) = 9u \Rightarrow T^2$ has an eigval 9.

$Tu = 3w, Tw = 3u \Rightarrow T(u+w) = 3(u+w), T(u-w) = 3(w-u) = -3(u-w)$. $\square$

---

9 *Define $T \in \mathcal{L}(\mathbf{F}^3)$ by $T(z_1,z_2,z_3) = (2z_2, 0, 5z_3)$.*
Find all eigvals and eigvecs of T.

Solution:

Suppose λ is an eigval of T with an eigvec $(z_1,z_2,z_3) \in \mathbf{F}^3$.

Then $T(z_1,z_2,z_3) = (2z_2,0,5z_3) = \lambda(z_1,z_2,z_3)$. Thus $2z_2 = \lambda z_1, \quad 0 = \lambda z_2, \quad 5z_3 = \lambda z_3$.

We discuss in two cases:

For $\lambda = 0,\ z_2 = z_3 = 0$ and z_1 can be arbitrary ($z_1 \neq 0$).

For $\lambda \neq 0,\ z_2 = 0 = z_1$, and z_3 can be arbitrary ($z_3 \neq 0$), then $\lambda = 5$.

The set of all eigvecs is $\{(0,0,z),(z,0,0) : z \in \mathbf{F} \wedge z \neq 0\}$. $\square$

---

10 *Define $T \in \mathcal{L}(\mathbf{F}^n)$ by $T(x_1,x_2,x_3,\dots,x_n) = (x_1,2x_2,3x_3,\dots,nx_n)$*

(a) *Find all eigvals and eigvecs of T.*

(b) *Find all invar subsps of V under T.*

SOLUTION:

(a) Suppose $v = (x_1, x_2, x_3, \dots, x_n)$ is an eigvec of T with an eigval λ.
Then $Tv = \lambda v = (x_1, 2x_2, 3x_3, \dots, nx_n) = (\lambda x_1, \lambda x_2, \lambda x_3, \dots, \lambda x_n)$.
Hence $1, \dots, n$ are eigvals of T.
And $\{(0, \dots, 0, x_\lambda, 0, \dots, 0) \in \mathbf{F}^n : \lambda = 1, \dots, n,\ x_\lambda \in \mathbf{F} \wedge x_\lambda \neq 0\}$ is the set of all eigvecs of T.

(b) Let $V_\lambda = \{(0, \dots, 0, x_\lambda, 0, \dots, 0) \in \mathbf{F}^n : x_\lambda \in \mathbf{F} \wedge x_\lambda \neq 0\}$. Then $V_1, \dots, V_n$ are invar under T.
Hence by Problem (4), every sum of $V_1, \dots, V_n$ is a invar subsp of V under T. □

---

11 *Define $T : \mathcal{P}(\mathbf{R}) \to \mathcal{P}(\mathbf{R})$ by $Tp = p'$. Find all eigvals and eigvecs of T.*

SOLUTION:

Note that in general, $\deg p' < \deg p$ ($\deg 0 = -\infty$).
Suppose λ is an eigval of T with an eigvec p.
Suppose $\lambda \neq 0$. Then $\deg \lambda p > \deg p'$ while $\lambda p \neq p'$. Contradicts. Thus $\lambda = 0$.
Therefore $\deg \lambda p = -\infty = \deg p \Rightarrow p$ is a nonzero const poly.
Hence the set of all eigvecs is $\{C : C \in \mathbf{R} \wedge C \neq 0\} = \mathcal{P}_0(\mathbf{R}) \backslash \{0\}$. □

---

12 *Define $T \in \mathcal{L}(\mathcal{P}_4(\mathbf{R}))$ by $(Tp)(x) = xp'(x)$ for all $x \in \mathbf{R}$.*
Find all eigvals and eigvecs of T.

SOLUTION:

Suppose λ is an eigval of T with an eigvec p, then $(Tp)(x) = xp'(x) = \lambda p(x)$.
Let $p = a_0 + a_1 x + \cdots + a_n x^n$.
Then $xp'(x) = a_1 x + 2a_2 x^2 + \cdots + na_n x^n = \lambda a_0 + \lambda a_1 x + \lambda a_2 x^2 + \cdots + \lambda a_n x^n$.
Similar to Problem (10), $0, 1, \dots, n$ are eigvals of T.
The set of all eigvecs of T is $\{cx^\lambda : \lambda = 0, 1, \dots, n,\ c \in \mathbf{F} \wedge c \neq 0\}$. □

---

30 *Suppose $T \in \mathcal{L}(\mathbf{R}^3)$ and $-4, 5, \sqrt{7}$ are eigvals of T.*
Prove that $\exists\, x \in \mathbf{R}^3$ such that $Tx - 9x = (-4, 5, \sqrt{7})$.

SOLUTION: Because 9 is not an eigval. Hence $(T - 9I)$ is surj. □

---

14 *Suppose $V = U \oplus W$, where U and W are nonzero subsps of V.*
Define $P \in \mathcal{L}(V)$ by $P(u + w) = u$ for each $u \in U$ and each $w \in W$.
Find all eigvals and eigvecs of P.

SOLUTION:

Suppose λ is an eigval of P with an eigvec $(u + w)$.
Then $P(u + w) = u = \lambda u + \lambda w \Rightarrow (\lambda - 1)u + \lambda w = 0$. By [1.44] and $V = U \oplus W$, $(\lambda - 1)u = \lambda w = 0$.
Thus if $\lambda = 1$, then $w = 0$; if $\lambda = 0$, then $u = 0$.
Hence the eigvals of P are 0 and 1, the set of all eigvecs in P is $U \cup W$. □

---

13 *Suppose V is finite-dim, $T \in \mathcal{L}(V)$, and $\lambda \in \mathbf{F}$.*
Prove that $\exists\, \alpha \in \mathbf{F}, |\alpha - \lambda| < \frac{1}{1000}$ and $(T - \alpha I)$ is inv.

SOLUTION:

Let $\alpha_k \in \mathbf{F}$ be such that $|\alpha_k - \lambda| = \dfrac{1}{1000 + k}$ for each $k = 1, \dots, \dim V + 1$.
Note that each $T \in \mathcal{L}(V)$ has at most $\dim V$ distinct eigvals.

Hence $\exists\, k = 1, \dots, \dim V + 1$ such that α_k is not an eigval of T and therefore $(T - \alpha_k I)$ is inv. $\square$

- *Suppose V is finite-dim, $T \in \mathcal{L}(V)$, and $\lambda \in \mathbf{F}$.*
  Prove that $\exists\, \delta > 0$ such that $(T - \alpha I)$ is inv for all $\alpha \in \mathbf{F}$ such that $0 < |\alpha - \lambda| < \delta$.

SOLUTION:

If T has no eigvals, then $(T - \alpha I)$ is inje for all $\alpha \in \mathbf{F}$ and we are done.
Let $\delta > 0$ be such that, for each eigval λ_k, $\lambda_k \notin (\lambda - \delta, \lambda) \cup (\lambda, \lambda + \delta)$.
So that for all $\alpha \in \mathbf{F}$ such that $0 < |\alpha - \lambda| < \delta$, $(T - \alpha I)$ is not inje. $\square$

---

17 *Give an example of an operator on $\mathbf{R}^4$ that has no (real) eigvals.*

SOLUTION: Where (e_1, e_2, e_3, e_4) is the standard basis of $\mathbf{R}^4$.

Define $T \in \mathcal{L}(\mathbf{R}^4)$ by $\mathcal{M}(T, (e_1, e_2, e_3, e_4)) = \begin{pmatrix} 1 & 1 & 1 & 1 \\ -1 & 1 & -1 & -1 \\ 3 & 8 & 11 & 5 \\ 3 & -8 & -11 & 5 \end{pmatrix}$.

Suppose λ is an eigval of T with an eigvec (x, y, z, w).

Then $T(x, y, z, w) = \lambda(x, y, z, w) \Rightarrow \begin{cases} (1 - \lambda)x + y + z + w = 0 \\ -x + (1 - \lambda)y - z - w = 0 \\ 3x + 8y + (11 - \lambda)z + 5w = 0 \\ 3x - 8y - 11z + (5 - \lambda)w = 0 \end{cases}$

This linear equation has no solutions.
(You can type it on `https://zh.numberempire.com/equationsolver.php` to check.)

OR. Define $T \in \mathcal{L}(\mathbf{R}^4)$ by $T(x_1, x_2, x_3, x_4) = (-x_2, x_1, -x_4, x_3)$.
Suppose λ is an eigval of T with an eigvec (x, y, z, w).

Then $T(x, y, z, w) = (\lambda x, \lambda y, \lambda z, \lambda w) = (-y, x, -w, z) \Rightarrow \begin{cases} -y = \lambda x \\ x = \lambda y \\ -w = \lambda z \\ z = \lambda w \end{cases} \Rightarrow \begin{cases} -xy = \lambda^2 xy \\ -zw = \lambda^2 zw \end{cases}$

If $xy \neq 0$ or $zw \neq 0$, then $\lambda^2 = -1$, we fail.
Otherwise, $xy = 0 \Rightarrow x = y = 0$, for if $x \neq 0$, then $\lambda = 0 \Rightarrow x = 0$, contradicts.
Similarly, $y = z = w = 0$. Then we fail. Thus T has no eigvals. $\square$

- *Suppose $(v_1, \dots, v_n)$ is a basis of V and $T \in \mathcal{L}(V)$, $\mathcal{M}(T, (v_1, \dots, v_n)) = A$.*
  Prove that if λ is an eigval of T, then $|\lambda| \leqslant n \max\{|A_{j,k}| : 1 \leqslant j, k \leqslant n\}$.

SOLUTION:

First we show that $|\lambda| = n \max\{|A_{j,k}| : 1 \leqslant j, k \leqslant n\}$ for some cases.

Consider $A = \begin{pmatrix} k & \cdots & k \\ \vdots & \ddots & \vdots \\ k & \cdots & k \end{pmatrix}$. Then nk is an eigval of T with an eigvec $v_1 + \cdots + v_n$.

Now we show that if $|\lambda| \neq n \max\{|A_{j,k}| : 1 \leqslant j, k \leqslant n\}$, then $|\lambda| < n \max\{|A_{j,k}| : 1 \leqslant j, k \leqslant n\}$.

---

18 *Show that the forward shift operator $T \in \mathcal{L}(\mathbf{F}^\infty)$*
defined by $T(z_1, z_2, \dots) = (0, z_1, z_2, \dots)$ has no eigvals.

SOLUTION:

Suppose λ is an eigval of T with an eigvec $(z_1, z_2, \dots)$.
Then $T(z_1, z_2, \dots) = (\lambda z_1, \lambda z_2, \dots) = (0, z_1, z_2, \dots)$.

Thus $\lambda z_1 = 0, \lambda z_2 = z_1, \dots, \lambda z_k = z_{k-1}, \dots$.

Let $\lambda = 0$, then $\lambda z_2 = z_1 = 0 = \lambda z_k = z_{k-1}$, therefore $(z_1, z_2, \dots) = 0$ is not an eigvec.

Suppose $\lambda \neq 0$. Then $\lambda z_1 = 0 \Rightarrow z_1 = 0 \Rightarrow z_2 = 0 = z_k$ for all $k \in \mathbf{N}^+$.

And then $(z_1, z_2, \dots) = 0$ is not an eigvec. Hence T has no eigvals. $\square$

---

19 *Suppose $n \in \mathbf{N}^+$. Define $T \in \mathcal{L}(\mathbf{F}^n)$ by*

$$T(x_1, \dots, x_n) = (x_1 + \dots + x_n, \dots, x_1 + \dots + x_n).$$

In other words, the entries of $\mathcal{M}(T)$ with resp to the standard basis are all 1's.
Find all eigvals and eigvecs of T.

Solution:

Suppose λ is an eigval of T with an eigvec $(x_1, \dots, x_n)$.

Then $T(x_1, \dots, x_n) = (\lambda x_1, \dots, \lambda x_n) = (x_1 + \dots + x_n, \dots, x_1 + \dots + x_n)$.

Thus $\lambda x_1 = \dots = \lambda x_n = x_1 + \dots + x_n$.

For $\lambda = 0$, $x_1 + \dots + x_n = 0$.

For $\lambda \neq 0$, $x_1 = \dots = x_n$ and then $\lambda x_k = n x_k$ for each k.

Hence $0, n$ are eigvecs of T.

And the set of all eigvecs of T is $\{(x_1, \dots, x_n) \in \mathbf{F}^n : x_1 + \dots + x_n = 0 \vee x_1 = \dots = x_n\}$. $\square$

---

20 *Define the backward shift operator $S \in \mathcal{L}(\mathbf{F}^\infty)$ by $S(z_1, z_2, z_3, \dots) = (z_2, z_3, \dots)$.*

(a) *Show that every element of $\mathbf{F}$ is an eigval of S.*

(b) *Find all eigvecs of S.*

Solution:

Suppose λ is an eigval of S with an eigvec $(z_1, z_2, \dots)$.

Then $S(z_1, z_2, z_3 \dots) = (\lambda z_1, \lambda z_2, \dots) = (z_2, z_3, \dots)$.

Thus $\lambda z_1 = z_2, \lambda z_2 = z_3, \dots, \lambda z_k = z_{k+1}, \dots$.

For $\lambda = 0$, $\lambda z_1 = z_2 = 0 = \lambda z_2 = z_3 = \dots = z_k$ for all k.

While z_1 can be arbitrary, so that $(z_1, 0, \dots)$ is an eigvec with $z_1 \neq 0$.

For $\lambda \neq 0$, $\lambda^k z_1 = \lambda^{k-1} z_2 = \dots = \lambda z_k = z_{k+1}$ for all k.

Then $(z_1, \lambda z_1, \lambda^2 z_1, \dots, \lambda^k z_1, \dots)$ is an eigvec with $z_1 \neq 0$.

Hence (a) each element of $\lambda \in \mathbf{F}$ is an eigval of T.

And (b) the set of all eigvecs of T is $\{(z_1, \lambda z_1, \lambda^2 z_1, \dots, \lambda^k z_1, \dots) \in \mathbf{F}^\infty : \lambda \in \mathbf{F}, z_1 \neq 0\}$ $\square$

---

24 *Suppose $A \in \mathbf{F}^{n,n}$. Define $T \in \mathcal{L}(\mathbf{F}^n)$ by $Tx = Ax$,*
where elements of $\mathbf{F}^n$ are thought of as n-by-1 col vecs.

(a) *Suppose the sum of the entries in each row of A equals 1.*
Prove that 1 is an eigval of T.

(b) *Suppose the sum of the entries in each col of A equals 1.*
Prove that 1 is an eigval of T.

Solution:

(a) Suppose λ is an eigval of T with an eigvec $x = \begin{pmatrix} x_1 \\ \vdots \\ x_n \end{pmatrix}$.

Then $Tx = Ax = \begin{pmatrix} \sum\limits_{c=1}^{n} A_{1,c} x_c \\ \vdots \\ \sum\limits_{c=1}^{n} A_{n,c} x_c \end{pmatrix} = \lambda \begin{pmatrix} x_1 \\ \vdots \\ x_n \end{pmatrix}$. While $\sum\limits_{r=1}^{n} A_{R,c} = 1$ for each $R = 1, \dots, n$.

Thus if we let $x_1 = \cdots = x_n$, then $\lambda = 1$, and hence is an eigval of T.

(b) Suppose λ is an eigval of T with an eigvec $x = \begin{pmatrix} x_1 \\ \vdots \\ x_n \end{pmatrix}$.

Then $Tx = Ax = \begin{pmatrix} \sum_{r=1}^{n} A_{1,r}x_r \\ \vdots \\ \sum_{r=1}^{n} A_{n,r}x_r \end{pmatrix} = \lambda \begin{pmatrix} x_1 \\ \vdots \\ x_n \end{pmatrix}$. While $\sum_{r=1}^{n} A_{r,C} = 1$ for each $C = 1, \ldots, n$.

Thus $\sum_{r=1}^{n} (Ax)_{r,\cdot} = \sum_{r=1}^{n} (Ax)_{r,1}$

$$= \sum_{c=1}^{n} (A_{1,c} + \cdots + A_{n,c})x_c = \sum_{c=1}^{n} x_c = \lambda \begin{pmatrix} x_1 \\ + \\ \vdots \\ + \\ x_n \end{pmatrix}.$$

Hence $\lambda = 1$, for all x such that $\sum_{c=1}^{n} x_{c,1} \neq 0$. □

OR. Prove that $(T - I)$ is not inv, so that we can conclude $\lambda = 1$ is an eigval.

Because $(T - I)x = (A - \mathcal{M}(I))x = \begin{pmatrix} \sum_{r=1}^{n} A_{1,r}x_r - x_1 \\ \vdots \\ \sum_{r=1}^{n} A_{n,r}x_r - x_n \end{pmatrix} = \begin{pmatrix} y_1 \\ \vdots \\ y_n \end{pmatrix}$.

Then $y_1 + \cdots + y_n = \sum_{r=1}^{n} \sum_{c=1}^{n} (A_{r,c}x_c - x_r) = \sum_{c=1}^{n} x_c \sum_{r=1}^{n} A_{r,c} - \sum_{r=1}^{n} x_r = 0$.

Thus range $(T - I) \subseteq \left\{ \begin{pmatrix} y_1 \\ \vdots \\ y_n \end{pmatrix} \in \mathbf{F}^n : y_1 + \cdots + y_n = 0 \right\}$. Hence $(T - I)$ is not surj. □

• *Suppose $A \in \mathbf{F}^{n,n}$. Define $T \in \mathcal{L}(\mathbf{F}^n)$ by $Tx = xA$,*
where elements of $\mathbf{F}^n$ are thought of as 1-by-n row vecs.
(a) *Suppose the sum of the entries in each col of A equals 1.*
Prove that 1 is an eigval of T.
(b) *Suppose the sum of the entries in each row of A equals 1.*
Prove that 1 is an eigval of T.

SOLUTION:

(a) Suppose λ is an eigval of T with an eigvec $x = \begin{pmatrix} x_1 & \cdots & x_n \end{pmatrix}$.

Then $Tx = xA = \begin{pmatrix} \sum_{r=1}^{n} x_r A_{r,1} & \cdots & \sum_{r=1}^{n} x_r A_{r,n} \end{pmatrix} = \lambda \begin{pmatrix} x_1 & \cdots & x_n \end{pmatrix}$. While $\sum_{r=1}^{n} A_{r,C} = 1$ for each $C = 1, \ldots, n$.

Thus if we let $x_1 = \cdots = x_n$, then $\lambda = 1$, hence is an eigval of T.

(b) Suppose λ is an eigval of T with an eigvec $x = \begin{pmatrix} x_1 & \cdots & x_n \end{pmatrix}$.

Then $Tx = xA = \begin{pmatrix} \sum_{c=1}^{n} x_c A_{c,1} & \cdots & \sum_{c=1}^{n} x_c A_{c,n} \end{pmatrix} = \lambda \begin{pmatrix} x_1 & \cdots & x_n \end{pmatrix}$. While $\sum_{c=1}^{n} A_{R,c} = 1$ for each $R = 1, \ldots, n$.

Thus $\sum_{c=1}^{n} (xA)_{\cdot,c} = \sum_{c=1}^{n} (xA)_{1,c} = \sum_{c=1}^{n} (A_{c,1} + \cdots + A_{c,n})x_c = \sum_{c=1}^{n} x_c = \lambda(x_1 \ + \ \cdots \ + \ x_n)$.

Hence $\lambda = 1$, for all x such that $\sum_{r=1}^{n} x_{1,r} \neq 0$. □

OR. Prove that $(T - I)$ is not inv, so that we can conclude $\lambda = 1$ is an eigval.

Because $(T - I)x = x(A - \mathcal{M}(I)) = \begin{pmatrix} \sum_{c=1}^{n} x_c A_{c,1} - x_1 & \cdots & \sum_{c=1}^{n} x_c A_{c,n} - x_n \end{pmatrix} = \begin{pmatrix} y_1 & \cdots & y_n \end{pmatrix}$.

Then $y_1 + \cdots + y_n = \sum_{c=1}^{n} \sum_{r=1}^{n} (x_r A_{r,c} - x_c) = \sum_{r=1}^{n} x_r \sum_{c=1}^{n} A_{r,c} - \sum_{c=1}^{n} x_c = 0$.

Thus range $(T-I) \subseteq \{(y_1 \ \cdots \ y_n) \in \mathbf{F}^n : y_1 + \cdots + y_n = 0\}$. Hence $(T-I)$ is not surj. $\square$

---

25 *Suppose $T \in \mathcal{L}(V)$ and u, w are eigvecs of T such that $u+w$ is also an eigvec of T. Prove that u and w are eigvecs of T correspd to the same eigval.*

Solution:

Suppose $\lambda_1, \lambda_2, \lambda_0$ are eigvals of T correspd to $u, w, u+w$ respectively.

Then $T(u+w) = \lambda_0(u+w) = Tu + Tw = \lambda_1 u + \lambda_2 w \Rightarrow (\lambda_0 - \lambda_1)u = (\lambda_2 - \lambda_0)w$.

Notice that $u, w, u+w$ are nonzero.

If (u, w) is linely depe, then let $w = cu$, therefore

$$\lambda_2 cu = Tw = cTu = \lambda_1 cu \qquad \Rightarrow \lambda_2 = \lambda_1.$$
$$\lambda_0(u+w) = T(u+w) = \lambda_1 u + \lambda_1 cu = \lambda_1(u+w) \qquad \Rightarrow \lambda_0 = \lambda_1.$$

Otherwise, $\lambda_0 - \lambda_1 = \lambda_2 - \lambda_0 = 0 \Rightarrow \lambda_1 = \lambda_2 = \lambda_0$. $\square$

---

26 *Suppose $T \in \mathcal{L}(V)$ is such that every nonzero vec in V is an eigvec of T. Prove that T is a scalar multi of the identity operator.*

Solution:

Because $\forall v \in V, \exists!\, \lambda_v \in \mathbf{F}, Tv = \lambda_v v$. For any two distinct nonzero vecs $v, w \in V$,

$T(v+w) = \lambda_{v+w}(v+w) = Tv + Tw = \lambda_v v + \lambda_w w \Rightarrow (\lambda_{v+w} - \lambda_v)v = (\lambda_w - \lambda_{v+w})w$.

If (v, w) is linely inde, then let $w = cv$, therefore

$$\lambda_v cv = cTv = Tw = \lambda_w w \qquad \Rightarrow \lambda_w = \lambda_v.$$
$$\lambda_{v+w}(v+w) = T(v+w) = Tv + Tw = \lambda_v(v+cv) \Rightarrow \lambda_{v+w} = \lambda_v.$$

Otherwise, $\lambda_v = \lambda_{v+w} = \lambda_w$. $\square$

27, 28 *Suppose V is finite-dim and $k \in \{1, \dots, \dim V - 1\}$. Suppose $T \in \mathcal{L}(V)$ is such that every subsp of V of dim k is invar under T. Prove that T is a scalar multi of the identity operator.*

Solution: We prove the contrapositive:

Suppose T is not a scalar multi of I. Prove that $\exists$ an invar subsp U of V under T such that $\dim U = k$.

By Problem (26), $\exists\, v \in V$ and $v \neq 0$ such that v is not an eigvec of T.

Thus (v, Tv) is linely inde. Extend to a basis of V as $(v, Tv, u_1, \dots, u_n)$.

Let $U = \operatorname{span}(v, u_1, \dots, u_{k-1}) \Rightarrow U$ is not an invar subsp of V under T.

Or. Suppose $0 \neq v = v_1 \in V$ and extend to a basis of V as $(v_1, \dots, v_n)$.

Suppose $Tv_1 = c_1 v_1 + \cdots + c_n v_n, \exists!\, c_i \in \mathbf{F}$.

Consider a k-dim subsp $U = \operatorname{span}(v_1, v_{\alpha_1}, \dots, v_{\alpha_{k-1}})$,

where $\alpha_j \in \{2, \dots, n\}$ for each j, and $\alpha_1, \dots, \alpha_{k-1}$ are distinct.

Because every subsp such U is invar.

Thus $Tv_1 = c_1 v_1 + \cdots + c_n v_n \in U \Rightarrow c_2 = \cdots = c_n = 0$,

for if not, for each $c_i \neq 0$, choose U_i such that $\alpha_j \in \{\overbrace{2, \dots, i-1, i+1, \dots, n}^{\text{length } (n-2)}\}$ for each j,

hence for $Tv_1 = c_1 v_1 + \cdots + c_{i-1} v_{i-1} + c_{i+1} v_{i+1} + \cdots + c_n v_n \in U_i$, we conclude that $c_i = 0$.

$\Rightarrow Tv_1 = c_1 v_1$, 又 $v_1 = v \in V$ is arbitrary $\Rightarrow T = \lambda I$ for some λ. $\square$

• *Suppose V is finite-dim and $T \in \mathcal{L}(V)$. Prove that T has an eigval $\iff \exists$ an invar subsp U of V under T such that* $\dim U = \dim V - 1$.

Solution:

(a) Suppose λ is an eigval of T with an eigvec v.

(If $\dim V = 1$, then $U = \{0\}$ and we are done.)

Extend $v_1 = v$ to a basis of V as $(v_1, v_2 \dots, v_n)$.

Step 1. If $\exists\, w_1 \in \operatorname{span}(v_2, \dots, v_n)$ such that $0 \neq Tw_1 \in \operatorname{span}(v_1)$,

then extend $w_1 = \alpha_{1,1}$ to a basis of $\operatorname{span}(v_2, \dots, v_n)$ as $(\alpha_{1,1}, \dots, \alpha_{1,n-1})$.

Otherwise, we stop at step 1.

$\vdots$

Step k. If $\exists\, w_k \in \operatorname{span}(\alpha_{k-1,2}, \dots, \alpha_{k-1,n-k+1})$ such that $0 \neq Tw_k \in \operatorname{span}(v_1, w_1, \dots, w_{k-1})$,

then extend $w_k = \alpha_{k,1}$ to a basis of $\operatorname{span}(\alpha_{k-1,2}, \dots, \alpha_{k-1,n-k+1})$ as $(\alpha_{k,1}, \dots, \alpha_{k,n-k})$.

Otherwise, we stop at step k.

$\vdots$

Finally, we stop at step m, thus we get $(v_1, w_1, \dots, w_{m-1})$ and $(\alpha_{m-1,2}, \dots, \alpha_{m-1,n-m+1})$,

range $T|_{\operatorname{span}(w_1,\dots,w_{m-1})} = \operatorname{span}(v_1, w_1, \dots, w_{m-2}) \Rightarrow \dim \operatorname{null} T|_{\operatorname{span}(w_1,\dots,w_{m-1})} = 0$,

$\underbrace{\operatorname{span}(v_1, w_1, \dots, w_{m-1})}_{\dim m}$ and $\underbrace{\operatorname{span}(\alpha_{m-1,2}, \dots, \alpha_{m-1,n-m+1})}_{\dim (n-m)}$ are invar under T.

Let $U = \operatorname{span}(\alpha_{m-1,2}, \dots, \alpha_{m-1,n-m+1}) \oplus \operatorname{span}(v_1, w_1, \dots, w_{m-2})$ and we are done. □

Comment: Both $\operatorname{span}(v_2, \dots, v_n)$ and $\operatorname{span}(\alpha_{m-1,2}, \dots, \alpha_{m-1,n-m+1}) \oplus \operatorname{span}(w_1, \dots, w_{m-1})$ are in $\mathcal{S}_V \operatorname{span}(v_1)$.

(b) Suppose U is an invar subpsace of V under T with $\dim U = m = \dim V - 1$.

(If $m = 0$, then $\dim V = 1$ and we are done.)

Let $(u_1, \dots, u_m)$ be a basis of U, extend to a basis of V as $(u_0, u_1, \dots, u_m)$.

We discuss in cases:

For $Tu_0 \in U$, then range $T = U$ so that T is not surj $\Longleftrightarrow$ null $T \neq \{0\} \Longleftrightarrow 0$ is an eigval of T.

For $Tu_0 \notin U$, then $Tu_0 = a_0 u_0 + a_1 u_1 + \cdots + a_m u_m$.

(1) If $Tu_0 \in \operatorname{span}(u_0)$, then we are done.

(2) Otherwise, if range $T|_U = U$, then $Tu_0 = a_0 u_0$ and we are done;

otherwise, $T|_U : U \to U$ is not surj ($\Rightarrow$ not inje), suppose range $T|_U \neq \{0\}$

(Suppose range $T|_U = \{0\}$. If $\dim U = 0$ then we are done.

Otherwise $\exists\, u \in U \backslash \{0\}, Tu = 0$ and we are done.)

then $\exists\, u \in U \backslash \{0\}, Tu = 0$, we are done. □

---

29 *Suppose $T \in \mathcal{L}(V)$ and range T is finite-dim.*
Prove that T has at most $1 + \dim \operatorname{range} T$ distinct eigvals.

Solution:

Let $\lambda_1, \dots, \lambda_m$ be the distinct eigvals of T and let $v_1, \dots, v_m$ be the correspd eigvecs.

(Because range T is finite-dim. Let $(v_1, \dots, v_n)$ be a list of all the linely inde eigvecs of T,

so that the correspd eigvals are finite.)

For every $\lambda_k \neq 0, T(\frac{1}{\lambda_k} v_k) = v_k$. And if $T = T - 0I$ is not inje, then $\exists!\, \lambda_A = 0$ and $Tv_A = \lambda_A v_A = 0$.

Thus for $\lambda_k \neq 0, \forall\, k, \mathcal{L}(Tv_1, \dots, Tv_m)$ is a linely inde list of length m in range T.

And for $\lambda_A = 0$, there is a linely inde list of length at most $(m-1)$ in range T.

Hence, by [2.23], $m \leqslant \dim \operatorname{range} T + 1$. □

---

32 *Suppose that $\lambda_1, \dots, \lambda_n$ are distinct real numbers.*
Prove that $(e^{\lambda_1} x, \dots, e^{\lambda_n} x)$ is linely inde in $\mathbf{R}^{\mathbf{R}}$.

HINT: *Let* $V = \operatorname{span}(e^{\lambda_1}x, \dots, e^{\lambda_n}x)$, *and define an operator* $D \in \mathcal{L}(V)$ *by* $Df = f'$. *Find eigvals and eigvecs of* D.

SOLUTION:

Define V and $D \in \mathcal{L}(V)$ as in HINT. Then because for each k, $D(e^{\lambda_k x}) = \lambda_k e^{\lambda_k x}$.
Thus $\lambda_1, \dots, \lambda_n$ are distinct eigvals of D. By [5.10], $(e^{\lambda_1}x, \dots, e^{\lambda_n}x)$ is linely inde in $\mathbf{R}^{\mathbf{R}}$. $\square$

• *Suppose* $\lambda_1, \dots, \lambda_n$ *are distinct positive numbers.*
Prove that $(\cos(\lambda_1 x), \dots, \cos(\lambda_n x))$ *is linely inde in* $\mathbf{R}^{\mathbf{R}}$.

SOLUTION:

Let $V = \operatorname{span}(\cos(\lambda_1 x), \dots, \cos(\lambda_n x))$. Define $D \in \mathcal{L}(V)$ by $Df = f'$.
Then because $D(\cos(\lambda_k x)) = -\lambda_k \sin(\lambda_k x)$. 又 $D(\sin(\lambda_k x)) = \lambda_k \cos(\lambda_k x)$.
Thus $D^2(\cos(\lambda_k x)) = -\lambda_k^2 \cos(\lambda_k x)$.
Notice that $\lambda_1, \dots, \lambda_n$ are distinct $\Rightarrow -\lambda_1^2, \dots, -\lambda_n^2$ are distinct.
Hence $-\lambda_1^2, \dots, -\lambda_n^2$ are distinct eigvals of D^2
with the correspd eigvecs $\cos(\lambda_1 x), \dots, \cos(\lambda_n x)$ respectively.
And then $(\cos(\lambda_1 x), \dots, \cos(\lambda_n x))$ is linely inde in $\mathbf{R}^{\mathbf{R}}$. $\square$

• *Suppose* V *is finite-dim,* $T \in \mathcal{L}(V)$, *and* U *is a subsp of* V *invar under* T.
The quotient operator $T/U \in \mathcal{L}(V/U)$ *is defined by*

$$(T/U)(v + U) = Tv + U \text{ for each } v \in V.$$

(a) *Show that the definition of* T/U *makes sense*
(*which requires using the condition that* U *is invar under* T)
and show that T/U *is an operator on* V/U.
(b) (OR Problem 35) *Show that each eigval of* T/U *is an eigval of* T.

SOLUTION:

(a) Suppose $v + U = w + U$ ($\iff v - w \in U$).
Then because U is invar under T, $T(v - w) \in U \iff Tv + U = Tw + U$.
Hence the definition of T/U makes sense.
Now we show that T/U is linear.

$$\begin{aligned}\forall v + U, w + U \in V/U, \lambda \in \mathbf{F}, (T/U)\big((v + U) + \lambda(w + U)\big) \\ = T(v + \lambda w) + U = (Tv + U) + \lambda(Tw + U) \\ = (T/U)(v + U) + \lambda(T/U)(w).\end{aligned}$$

(b) Suppose λ is an eigval of T/U with an eigvec $v + U$.
Then $(T/U)(v + U) = \lambda(v + U) = Tv + U = \lambda v + U \Rightarrow (T - \lambda I)v \in U$.
If $(T - \lambda I)v = 0 \Rightarrow Tv = \lambda v$, then we are done.
Otherwise, then $(T|_U - \lambda I) : U \to U$ is inv,
hence $\exists!\, w \in U, (T|_U - \lambda I)(w) = (T - \lambda I)v \Rightarrow T(v - w) = \lambda(v - w)$.
Note that $v - w \neq 0$ (for if not, $v \in U \Rightarrow v + U = 0 + U$ is not an eigvec). $\square$

---

36 *Prove or give a counterexample:*
The result of (b) *in Exercise 35 is still true if* V *is infinite-dim.*

SOLUTION: A counterexample:
Consider $V = \operatorname{span}(1, e^x, e^{2x}, \dots)$ in $\mathbf{R}^{\mathbf{R}}$, and a subsp $U = \operatorname{span}(e^x, e^{2x}, \dots)$ of V.

Define $T \in \mathcal{L}(V)$ by $Tf = e^x f$. Then range $T = U$ is invar under T.
Consider $(T/U)(1+U) = e^x + U = 0$
$\Rightarrow 0$ is an eigval of T/U but is not an eigval of T.
(null $T = \{0\}$, for if not, $\exists f \in V \backslash \{0\}, (Tf)(x) = e^x f(x) = 0, \forall x \in \mathbf{R} \Rightarrow f = 0$, contradicts.) □

---

33 *Suppose $T \in \mathcal{L}(V)$. Prove that $T/(\operatorname{range} T) = 0$.*

Solution:

$\forall v + \operatorname{range} T \in V/\operatorname{range} T, v + \operatorname{range} T \in \operatorname{null}(T/(\operatorname{range} T))$
$\Rightarrow \operatorname{null}(T/(\operatorname{range} T)) = V/\operatorname{range} T \Rightarrow T/(\operatorname{range} T)$ is a zero map. □

---

34 *Suppose $T \in \mathcal{L}(V)$. Prove that $T/(\operatorname{null} T)$ is inje $\Longleftrightarrow (\operatorname{null} T) \cap (\operatorname{range} T) = \{0\}$.*

Solution:

(a) Suppose $T/(\operatorname{null} T)$ is inje.
Then $(T/(\operatorname{null} T))(u + \operatorname{null} T) = Tu + \operatorname{null} T = 0$
$\Longleftrightarrow Tu \in \operatorname{null} T$ 又 $Tu \in \operatorname{range} T \Longleftrightarrow u + \operatorname{null} T = 0 \Longleftrightarrow u \in \operatorname{null} T \Longleftrightarrow Tu = 0$.
Thus $(\operatorname{null} T) \cap (\operatorname{range} T) = \{0\}$.

(b) Suppose $(\operatorname{null} T) \cap (\operatorname{range} T) = \{0\}$.
Then $(T/(\operatorname{null} T))(u + \operatorname{null} T) = Tu + \operatorname{null} T = 0$
$\Longleftrightarrow Tu \in \operatorname{null} T$ 又 $Tu \in \operatorname{range} T \Longleftrightarrow Tu = 0 \Longleftrightarrow u \in \operatorname{null} T \Longleftrightarrow u + \operatorname{null} T = 0$.
Thus $T/(\operatorname{null} T)$ is inje. □

• *Suppose $T \in \mathcal{L}(V)$ and m is a positive integer.*
(a) *Prove that T is inje $\Longleftrightarrow T^m$ is inje.*

(b) *Prove that T is surj $\iff T^m$ is surj.*

SOLUTION:

(a) Suppose T^m is inje. Then $Tv = 0 \Rightarrow T^{m-1}Tv = T^m v = 0 \Rightarrow v = 0$.

Suppose T is inje. Then $T^m v = T^{m-1} v = \cdots = T^2 v = Tv = v = 0$.

(b) Suppose T^m is surj. $\forall u \in V, \exists v \in V, T^m v = u = Tw$, let $w = T^{m-1}v$. $\square$

Suppose T is surj. Then $\forall u \in V, \exists v_1, \dots, v_m \in V, T(v_1) = T^2 v_2 = \cdots = T^m v_m = u$. $\square$

- **NOTE FOR [5.17]:**

Suppose $T \in \mathcal{L}(V), p \in \mathcal{P}(\mathbf{F})$. Prove that $\operatorname{null} p(T)$ *and* $\operatorname{range} p(T)$ *are invar under T.*

SOLUTION: Using the commutativity in [5.10].

(a) Suppose $u \in \operatorname{null} p(T)$. Then $p(T)u = 0$.

Thus $p(T)(Tu) = \big(p(T)T\big)u(Tp(T))u = T\big(p(T)u\big) = 0$. Hence $Tu \in \operatorname{null} p(T)$. $\square$

(b) Suppose $u \in \operatorname{range} p(T)$. Then $\exists v \in V$ such that $u = p(T)v$.

Thus $Tu = T\big(p(T)v\big) = p(T)(Tv) \in \operatorname{range} p(T)$. $\square$

- **NOTE FOR [5.21]:** *Every operator on a finite-dim nonzero complex vecsp has an eigval.*

Suppose V is a finite-dim complex vecsp of dim $n > 0$ and $T \in \mathcal{L}(V)$.

Choose a nonzero $v \in V$. $(v, Tv, T^2 v, \dots, T^n v)$ of length $n+1$ is linely depe.

Suppose $a_0 I + a_1 T + \cdots + a_n T^n = 0$. Then $\exists\, a_j \neq 0$.

Thus $\exists$ nonconst p of smallest degree ($\deg p > 0$) such that $p(T)v = 0$.

Because $\exists \lambda \in \mathbf{C}$ such that $p(\lambda) = 0 \Rightarrow \exists q \in \mathcal{P}(\mathbf{C}), p(z) = (z - \lambda)q(z), \forall z \in \mathbf{C}$.

Thus $0 = p(T)v = (T - \lambda I)\big(q(T)v\big)$. By the minimality of $\deg p$ and $\deg q < \deg p$, $q(T)v \neq 0$.

Then $(T - \lambda I)$ is not inje. Thus λ is an eigval of T with eigvec $q(T)v$.

- **EXAMPLE:** *an operator on a complex vecsp with no eigvals*

Define $T \in \mathcal{L}\big(\mathcal{P}(\mathbf{C})\big)$ by $(Tp)(z) = zp(z)$.

Suppose $p \in \mathcal{P}(\mathbf{C})$ is a nonzero poly. Then $\deg Tp = \deg p + 1$, and thus $Tp \neq \lambda p$, $\forall \lambda \in \mathbf{C}$.

Hence T has no eigvals.

---

13 *Suppose V is a complex vecsp and $T \in \mathcal{L}(V)$ has no eigvals.*
Prove that every subsp of V invar under T is either $\{0\}$ or infinite-dim.

SOLUTION: Suppose U is a finite-dim nonzero invar subsp on $\mathbf{C}$. Then by [5.21], $T|_U$ has an eigval. $\square$

- **TIPS:** For $T_1, \dots, T_m \in \mathcal{L}(V)$:

(a) Suppose $T_1, \dots, T_m$ are all inje. Then $(T_1 \circ \cdots \circ T_m)$ is inje.

(b) Suppose $(T_1 \circ \cdots \circ T_m)$ is not inje. Then at least one of $T_1, \dots, T_m$ is not inje.

(c) At least one of $T_1, \dots, T_m$ is not inje $\not\Rightarrow$ $(T_1 \circ \cdots \circ T_m)$ is not inje.

EXAMPLE: On infinite-dim only. Let $V = \mathbf{F}^\infty$.

$$\left.\begin{array}{l}\text{Let } S \text{ be the backward shift (surj but not inje)}\\ \text{Let } T \text{ be the forward shift (inje but not surj)}\end{array}\right\} \Rightarrow \text{Then } ST = I.$$ $\square$

---

16 *Suppose $0 \neq v \in V$. Define $S \in \mathcal{L}\big(\mathcal{P}_{\dim V}(\mathbf{C}), V\big)$ by $S(p) = p(T)v$. Prove [5.21].*

SOLUTION:

Because $\dim \mathcal{P}_{\dim V}(\mathbf{C}) = \dim V + 1$. Then S is not inje. Hence $\exists\, 0 \neq p \in \mathcal{P}_{\dim V}(\mathbf{C}), p(T)v = 0$.

Using [4.14], write $p(z) = c(z - \lambda_1) \cdots (z - \lambda_m)$. Apply T to both sides: $p(T) = c(T - \lambda_1 I) \cdots (T - \lambda_m I)$.

Thus at least one of $(T - \lambda_j I)$ is not inje (because $p(T)$ is not inje). $\square$

17 *Suppose* $0 \neq v \in V$. *Define* $S \in \mathcal{L}\big(\mathcal{P}_{(\dim V)^2}(\mathbf{C}), \mathcal{L}(V)\big)$ *by* $S(p) = p(T)$. *Prove* [5.21].

SOLUTION:

Because $\dim \mathcal{P}_{(\dim V)^2}(\mathbf{C}) = (\dim V)^2 + 1$. Then S is not inje. Hence $\exists\, 0 \neq p \in \mathcal{P}_{(\dim V)^2}(\mathbf{C}), p(T) = 0$.

Using [4.14], write $p(z) = c(z - \lambda_1) \cdots (z - \lambda_m)$. Applying T, we have $0 = p(T) = c(T - \lambda_1 I) \cdots (T - \lambda_m I)$.

Thus $(T - \lambda_1 I) \cdots (T - \lambda_m I) = 0 \Rightarrow \exists j, (T - \lambda_j)$ is not inje. □

COMMENT: $\exists$ monic $q \in \operatorname{null} S \neq \{0\}$ of smallest degree, $S(q) = q(T) = 0$, then q is the *mini poly*.

- **NOTE FOR [8.40]:** *def for mini poly*

Suppose V is finite-dim and $T \in \mathcal{L}(V)$.
Suppose $M_T^0 = \{p_j\}_{j \in \Gamma}$ is the set of all monic poly that give 0 whenever T is applied.
Prove that $\exists\,!\, p_k \in M_T^0, \deg p_k = \min\{\deg p_j\}_{j \in \Gamma} \leqslant \dim V$.

SOLUTION: OR. Another Proof :

[*Existns Part*] We use induction on $\dim V$.

(i) If $\dim V = 0$, then $I = 0 \in \mathcal{L}(V)$ and let $p = 1$, we are done.

(ii) Suppose $\dim V \geqslant 1$.

Assume that $\dim V > 0$ *and that the desired result is true for all operators on all vecsps of smaller dim.*

Let $u \in V, u \neq 0$. The list $(u, Tu, \dots, T^{\dim V} u)$ of length $(1 + \dim V)$ is linely depe.

Then $\exists\,!\, T^m$ of smallest degree such that $T^m u \in \operatorname{span}(u, Tu, \dots, T^{m-1} u)$.

Thus $\exists\, c_j \in \mathbf{F}, c_0 u + c_1 Tu + \cdots + c_{m-1} T^{m-1} u + T^m u = 0$.

Define q by $q(z) = c_0 + c_1 z + \cdots + c_{m-1} z^{m-1} + z^m$.

Then $0 = T^k\big(q(T)u\big) = q(T)(T^k u), \forall k \in \{1, \dots, m-1\} \subseteq \mathbf{N}$.

Because $(u, Tu, \dots, T^{m-1} u)$ is linely inde.

Thus $\dim \operatorname{null} q(T) \geq m \Rightarrow \dim \operatorname{range} q(T) = \dim V - \dim \operatorname{null} q(T) \leqslant \dim V - m$.

Let $W = \operatorname{range} q(T)$.

By *assumption*, $\exists\, s \in M_T^0$ of smallest degree (and $\deg s \leqslant \dim W$,) so that $s(T|_W) = 0$.

Hence $\forall v \in V, \big((sq)(T)\big)(v) = s(T)\big(q(T)v\big) = 0$.

Thus $sq \in M_T^0$ and $\deg sq \leqslant \dim V$.

[*Uniqnes Part*]

Suppose $p, q \in M_T^0$ are of the smallest degree. Then $(p-q)(T) = 0$. 又 $\deg(p-q) = m < \min\{\deg p_j\}_{j \in \Gamma}$.

Hence $p - q = 0$, for if not, $\exists\,!\, c \in \mathbf{F}, c(p-q) \in M_T^0$. Contradicts. □

- (4E 5.31, 4E 5.B.25 and 26) *mini poly of restriction operator and mini poly of quotient operator*

Suppose V is finite-dim, $T \in \mathcal{L}(V)$, and U is an invar subsp of V under T.
Let p be the mini poly of T.

(a) *Prove that p is a poly multi of the mini poly of $T|_U$.*

(b) *Prove that p is a poly multi of the mini poly of T/U.*

(c) *Prove that (mini poly of $T|_U$) $\times$ (mini poly of T/U) is a poly multi of p.*

(d) *Prove that the set of eigvals of T equals the union of the set of eigvals of $T|_U$ and the set of eigvals of T/U.*

SOLUTION:

(a) $p(T) = 0 \Rightarrow \forall u \in U, p(T)u = 0 \Rightarrow p(T|_U) = 0 \Rightarrow$ By [8.46].

$\square$

(b) $p(T) = 0 \Rightarrow \forall v \in V, p(T)v = 0 \Rightarrow p(T/U)(v+U) = p(T)v + U = 0.$ $\square$

(c) Suppose r is the mini poly of $T|_U$, s is the mini poly of T/U.

Because $\forall v \in V, s(T/U)(v+U) = s(T)v + U = 0$. So that $\forall v \in V$ but $v \notin U, s(T)v \in U$.

又 $\forall u \in U, r(T|_U)u = r(T)u = 0$.

Thus $\forall v \in V$ but $v \notin U, (rs)(T)v = r\big(s(T)v\big) = 0$.

And $\forall u \in U, (rs)(T)u = r\big(s(T)u\big) = 0$ (because $s(T)u = s(T|_U)u \in U$).

Hence $\forall v \in V, (rs)(T)v = 0 \Rightarrow (rs)(T) = 0$. $\square$

(d) By [8.49], immediately. $\square$

•(4E 5.B.27) *Suppose $\mathbf{F} = \mathbf{R}$, V is finite-dim, and $T \in \mathcal{L}(V)$.*
Prove that the mini poly p of T_C equals the mini poly q of T.

Solution:

(a) $\forall u + i0 \in V_C, p(T_C)(u) = p(T)u = 0 \Rightarrow \forall u \in V, p(T)u = 0 \Rightarrow p$ is a poly multi of q.

(b) $q(T) = 0 \Rightarrow \forall u + iv \in V_C, q(T_C)(u+iv) = q(T)u + iq(T)v = 0 \Rightarrow q$ is a poly multi of p. $\square$

•(4E 5.B.28) *Suppose V is finite-dim and $T \in \mathcal{L}(V)$.*
Prove that the mini poly p of $T' \in \mathcal{L}(V')$ equals the mini poly q of T.

Solution:

(a) $\forall \varphi \in V', p(T')\varphi = \varphi \circ \big(p(T)\big) = 0 \Rightarrow \forall \varphi \in V', p(T) \in \operatorname{null}\varphi \Rightarrow p(T) = 0, p$ is a poly multi of q.

(b) $q(T) = 0 \Rightarrow \forall \varphi \in V', \varphi \circ \big(q(T)\big) = q(T')\varphi = 0 \Rightarrow q(T) = 0, q$ is a poly multi of p. $\square$

•(4E 5.32) *Suppose $T \in \mathcal{L}(V)$ and p is the mini poly.*
Prove that T is not inje $\Longleftrightarrow$ the const term of p is 0.

Solution:

T is not inje $\Longleftrightarrow$ 0 is an eigval of $T \Longleftrightarrow$ 0 is a zero of $p \Longleftrightarrow$ the const term of p is 0. $\square$

Or. Because $p(0) = (z-0)(z-\lambda_1)\cdots(z-\lambda_m) = 0 \Rightarrow T(T-\lambda_1 I)\cdots(T-\lambda_m I) = 0$

又 p is the mini poly $\Rightarrow q$ define by $q(z) = (z-\lambda_1)\cdots(z-\lambda_m)$ is such that $q(T) \neq 0$.

Hence $0 = p(T) = Tq(T) \Rightarrow T$ is not inje.

Conversely, suppose $(T - 0I)$ is not inje, then 0 is a zero of p, so that the const term is 0. $\square$

•(4E 5.B.22)
Suppose V is finite-dim, $T \in \mathcal{L}(V)$. Prove that T is inv $\Longleftrightarrow I \in \operatorname{span}(T, T^2, \dots, T^{\dim V})$.

Solution: Denote the mini poly by p, where for all $z \in \mathbf{F}, p(z) = a_0 + a_1 z + \cdots + z^m$.

Notice that V is finite-dim. T is inv $\Longleftrightarrow T$ is inje $\Longleftrightarrow p(0) \neq 0$.

Hence $p(T) = 0 = a_0 I + a_1 T + \cdots + T^m$, where $a_0 \neq 0$ and $m \leqslant \dim V$. $\square$

---

6 *Suppose $T \in \mathcal{L}(V)$ and U is a subsp of V invar under T.*
Prove that U is invar under $p(T)$ for every poly $p \in \mathcal{P}(\mathbf{F})$.

Solution:

$\forall u \in U, Tu \in U \Rightarrow \forall u \in U, Iu, Tu, T(Tu), \dots, T^m u \in U \Rightarrow \forall u \in U, (a_0 I + a_1 T + \cdots + a_m T^m)u \in U$. $\square$

•(4E 5.B.10, 5.B.23) *Suppose V is finite-dim, $T \in \mathcal{L}(V)$ and p is the mini poly with degree m.*
Suppose $v \in V$.

(a) *Prove that* $\operatorname{span}(v, Tv, \dots, T^{m-1}v) = \operatorname{span}(v, Tv, \dots, T^{j-1}v)$ *for some* $j \leqslant m$.
(b) *Prove that* $\operatorname{span}(v, Tv, \dots, T^{m-1}v) = \operatorname{span}(v, Tv, \dots, T^{m-1}v, \dots, T^{n}v)$.

SOLUTION:

COMMENT: By NOTE FOR[8.40], j has an upper bound $m-1$, m has an upper bound $\dim V$.

Write $p(z) = a_0 + a_1 z + \cdots + z^m$ ($m \leqslant \dim V$). If $v = 0$, then we are done. Suppose $v \neq 0$.

(a) Suppose $j \in \mathbf{N}^+$ is the smallest such that $T^j v \in \operatorname{span}(v, Tv, \dots, T^{j-1}v) = U_0$. Then $j \leqslant m$.
Write $T^j v = c_0 v + c_1 Tv + \cdots + c_{j-1} T^{j-1} v$. And because $T(T^k v) = T^{k+1} \in U_0$. U_0 is invar under T.
By Problem (6), $\forall k \in \mathbf{N},\ T^{j+k} v = T^k (T^j v) \in U_0$.
Thus $U_0 = \operatorname{span}(v, Tv, \dots, T^{j-1}v, \dots, T^n v)$ for all $n \geqslant j-1$. Let $n = m-1$ and we are done.

(b) Let $U = \operatorname{span}(v, Tv, \dots, T^{m-1}v)$.
By (a), $U = U_0 = \operatorname{span}(v, Tv, \dots, T^{j-1}, \dots, T^{m-1}, \dots, T^n)$ for all $n \geqslant m-1$. ☐

•(4E 5.B.21) *Suppose* V *is finite-dim and* $T \in \mathcal{L}(V)$.
Prove that the mini poly p *has degree at most* $1 + \dim \operatorname{range} T$.
If $\dim \operatorname{range} T < \dim V - 1$, *then this result gives a better upper bound for the degree of mini poly.*

SOLUTION:

If T is inje, then $\operatorname{range} T = V$ and we are done. Now choose $0 \neq v \in \operatorname{null} T$, then $Tv + 0 \cdot v = 0$.
1 is the smallest positive integer such that $T^1 v \in \operatorname{span}(v, \dots, T^0 v)$. Define q by $q(z) = z \Rightarrow q(T)v = 0$.
Let $W = \operatorname{range} q(T) = \operatorname{range} T$. $\exists$ monic $s \in \mathcal{P}(\mathbf{F})$ of smallest degree ($\deg s \leqslant \dim W$), $s(T|_W) = 0$.
Hence sq is the mini poly (see NOTE FOR[8.40]) and $\deg(sq) = \deg s + \deg q \leqslant \dim \operatorname{range} T + 1$. ☐

---

19 *Suppose* V *is finite-dim and* $T \in \mathcal{L}(V)$. *Let* $\mathcal{E} = \{q(T) : q \in \mathcal{P}(\mathbf{F})\}$.
Prove that $\dim \mathcal{E}$ *equals the degree of the mini poly of* T.

SOLUTION:

Because the list $(I, T, \dots, T^{(\dim V)^2})$ of length $\dim \mathcal{L}(V) + 1$ is linely depe in $\dim \mathcal{L}(V)$.
Suppose $m \in \mathbf{N}^+$ is the smallest such that $T^m = a_0 I + \cdots + a_{m-1} T^{m-1}$.
Then q defined by $q(z) = z^m - a_{m-1} z^{m-1} - \cdots - a_0$ is the mini poly (see [8.40]).
For any $k \in \mathbf{N}^+,\ T^{m+k} = T^k (T^m) \in \operatorname{span}(I, T, \dots, T^{m-1}) = U$.
Hence $\operatorname{span}(I, T, \dots, T^{(\dim V)^2}) = \operatorname{span}(I, T, \dots, T^{(\dim V)^2 - 1}) = U$.
Note that by the minimality of m, $(I, T, \dots, T^{m-1})$ is linely inde.
Thus $\dim U = m = \dim \operatorname{span}(I, T, \dots, T^{(\dim V)^2 - 1}) = \dim \operatorname{span}(I, T, \dots, T^n)$ for all $m < n \in \mathbf{N}^+$.

Define $\varphi \in \mathcal{L}(\mathcal{P}_{m-1}(\mathbf{F}), \mathcal{E})$ by $\varphi(p) = p(T)$.
(a) Suppose $p(T) = 0$. 又 $\deg p \leqslant m-1 \Rightarrow p = 0$. Then φ is inje.
(b) $\forall S = a_0 I + a_1 T + \cdots + a_{m-1} T^{m-1} \in \mathcal{E}$, define $p \in \mathcal{P}_{m-1}(\mathbf{F})$ by
$p(z) = a_0 + a_1 z + \cdots + a_{m-1} z^{m-1} \Rightarrow \varphi(p) = S$. Then φ is surj.
Hence $\mathcal{E}$ and $\mathcal{P}_{m-1}(\mathbf{F})$ are iso. 又 $\dim \mathcal{P}_{m-1}(\mathbf{F}) = m = \dim U$. ☐

•(4E 5.B.13) *Suppose* $T \in \mathcal{L}(V)$ *and* $q \in \mathcal{P}(\mathbf{F})$ *is defined by*
$$q(z) = a_0 + a_1 z + \cdots + a_n z^n, \text{ where } a_n \neq 0, \text{ for all } z \in \mathbf{F}.$$
Denote the mini poly of T *by* p *defined by*
$$p(z) = c_0 + c_1 z + \cdots + c_{m-1} z^{m-1} + z^m \text{ for all } z \in \mathbf{F}.$$
Prove that $\exists!\, r \in \mathcal{P}(\mathbf{F})$ *such that* $q(T) = r(T), \deg r < \deg p$.

SOLUTION:

If $\deg q < \deg p$, then we are done.

If $\deg q = \deg p$, notice that $p(T) = 0 = c_0 I + c_1 T + \cdots + c_{m-1}T^{m-1} + T^m$

$$\Rightarrow T^m = -c_0 I - c_1 T - \cdots - c_{m-1}T^{m-1},$$

define r by $r(z) = q(z) + \left[-a_m z^m + a_m\left(-c_0 - c_1 z - \cdots - c_{m-1}z^{m-1} \right) \right]$

$$= (a_0 - a_m c_0) + (a_1 - a_m c_1)z + \cdots + (a_{m-1} - a_m c_{m-1})z^{m-1},$$

hence $r(T) = 0, \deg r < m$ and we are done.

Now suppose $\deg q \geqslant \deg p$. We use induction on $\deg q$.

(i) $\deg q = \deg p$, then the desired result is true, as shown above.

(ii) $\deg q > \deg p$, assume that the desired result is true for $\deg q = n$.

Suppose $f \in \mathcal{P}(\mathbf{F})$ such that $f(z) = b_0 + b_1 z + \cdots + b_n z^n + b_{n+1}z^{n+1}$.

Apply the assumption to g defined by $g(z) = b_0 + b_1 z + \cdots + b_n z^n$,

getting s defined by $s(z) = d_0 + d_1 z + \cdots + d_{m-1}z^{m-1}$.

Thus $g(T) = s(T) \Rightarrow f(T) = g(T) + b_{n+1}T^{n+1} = s(T) + b_{n+1}T^{n+1}$.

Apply the assumption to t defined by $t(z) = z^n$,

getting δ defined by $\delta(z) = {c_0}' + {c_1}'z + \cdots + {c_{m-1}}'z^{m-1}$.

Thus $t(T) = T^n = {c_0}' + {c_1}'z + \cdots + {c_{m-1}}'z^{m-1} = \delta(T)$.

又 $\operatorname{span}(v, Tv, \dots, T^{m-1}v)$ is invar under T.

Hence $\exists\,!\, k_j \in \mathbf{F}, T^{n+1} = T(T^n) = k_0 + k_1 z + \cdots + k_{m-1}z^{m-1}$.

And $f(T) = s(T) + b_{n+1}(k_0 + k_1 T + \cdots + k_{m-1}T^{m-1})$

$\Rightarrow f(T) = (d_0 + k_0) + (d_1 + k_1)z + \cdots + (d_{m-1} + k_{m-1})z^{m-1} = h(T)$, thus defining h. □

•(4E 5.B.14) *Suppose V is finite-dim, $T \in \mathcal{L}(V)$ has mini poly p*

defined by $p(z) = a_0 + a_1 z + \cdots + a_{m-1}z^{m-1} + z^m, a_0 \neq 0$.

Find the mini poly of T^{-1}.

SOLUTION:

Notice that V is finite-dim. Then $p(0) = a_0 \neq 0 \Rightarrow 0$ is not a zero of $p \Rightarrow T - 0I = T$ is inv.

Then $p(T) = a_0 I + a_1 T + \cdots + T^m = 0$. Apply T^{-m} to both sides,

$a_0 (T^{-1})^m + a_1 (T^{-1})^{m-1} + \cdots + a_{m-1}T^{-1} + I = 0$.

Define q by $q(z) = z^m + \dfrac{a_1}{a_0}z^{m-1} + \cdots + \dfrac{a_{m-1}}{a_0}z + \dfrac{1}{a_0}$ for all $z \in \mathbf{F}$.

We now show that $(T^{-1})^k \notin \operatorname{span}(I, T^{-1}, \dots, (T^{-1})^{k-1})$

for every $k \in \{1, \dots, m-1\}$ by contradiction, so that q is exactly the mini poly of T^{-1}.

Suppose $(T^{-1})^k \in \operatorname{span}(I, T^{-1}, \dots, (T^{-1})^{k-1})$.

Then let $(T^{-1})^k = b_0 I + b_1 T^{-1} + \cdots + b_{k-1}T^{k-1}$. Apply T^k to both sides,

getting $I = b_0 T^k + b_1 T^{k-1} + \cdots + b_{k-1}T$, hence $T^k \in \operatorname{span}(I, T, \dots, T^{k-1})$.

Thus f defined by $f(z) = z^k + \dfrac{b_1}{b_0}z^{k-1} + \cdots + \dfrac{b_{k-1}}{b_0}z - \dfrac{1}{b_0}$ is a poly multi of p.

While $\deg f < \deg p$. Contradicts. □

• **NOTE FOR [8.49]:**

Suppose V is a finite-dim complex vecsp and $T \in \mathcal{L}(V)$.

By [4.14], the mini poly has the form $(z - \lambda_1)\cdots(z - \lambda_m)$,

*where $\lambda_1, \dots, \lambda_m$ is a list of all eigvals of T, **possibly with repetitions**.*

• **COMMENT:**

A nonzero poly has at most as many distinct zeros as its degree (see [4.12]).

Thus by the upper bound for the deg of mini poly given in NOTE FOR[8.40], *and by* [8.49,] *we can* ***give an alternative proof of*** **[5.13]**

.

• NOTICE (See also 4E 5.B.20,24)

Suppose $\alpha_1, \dots, \alpha_n$ are all the distinct eigvals of T,

and therefore are all the distinct zeros of the mini poly.

Also, the mini poly of T is a poly multi of, but not equal to, $(z-\alpha_1)\cdots(z-\alpha_n)$.

If we define q by $q(z) = (z-\alpha_1)^{\dim V-(n-1)} \cdots (z-\alpha_n)^{\dim V-(n-1)}$,

then q is a poly multi of the char poly (see [8.34] and [8.26])

(Because $\dim V > n$ and $n-1>0$, $n\left[\dim V-(n-1)\right] > \dim V$.)

The char poly has the form $(z-\alpha_1)^{\gamma_1}\cdots(z-\alpha_n)^{\gamma_n}$, where $\gamma_1+\cdots+\gamma_n = \dim V$.

The mini poly has the form $(z-\alpha_1)^{\delta_1}\cdots(z-\alpha_n)^{\delta_n}$, where $0 \leqslant \delta_1+\cdots+\delta_n \leqslant \dim V$.

---

10 *Suppose $T \in \mathcal{L}(V), \lambda$ is an eigval of T with an eigvec v.*
Prove that for any $p \in \mathcal{P}(\mathbf{F}), p(T)v = p(\lambda)v$.

SOLUTION:

Suppose p is defined by $p(z) = a_0 + a_1 z + \cdots + a_m z^m$ for all $z \in \mathbf{F}$. Because for any $n \in \mathbf{N}^+, T^n v = \lambda^n v$.

Thus $p(T)v = a_0 v + a_1 Tv + \cdots + a_m T^m v = a_0 v + a_1 \lambda v + \cdots + a_m \lambda^m v = p(\lambda)v$. □

COMMENT: For any $p \in \mathcal{P}(\mathbf{F})$ such that $p(z) = (z-\lambda_1)^{\alpha_1}\cdots(z-\lambda_m)^{\alpha_m}$, the result is true as well.

Now we prove that $(T-\lambda_1 I)^{\alpha_1}\cdots(T-\lambda_m I)^{\alpha_m} v = (\lambda-\lambda_1)^{\alpha_1}\cdots(\lambda-\lambda_m)^{\alpha_m} v$.

Define q_i by $q_i(z) = (z-\lambda_i)^{\alpha_i}$ for all $z \in \mathbf{F}$.

Because $(a+b)^n = a^n + C_n^1 a^{n-1} b + \cdots + C_n^k a^{n-k} b^k + \cdots + C_n^n b^n$.

Let $a = z, b = \lambda_i, n = \alpha_i$, so we can write $q_i(z)$ in the form $a_0 + a_1 z + \cdots + a_m z^m$.

Hence $q_i(T)v = q_i(\lambda)v \Rightarrow (T-\lambda_i I)^{\alpha_i} v = (\lambda-\lambda_i)^{\alpha_i} v$.

Then for each $k \in \{2, \dots, m\}$, $(T-\lambda_{k-1}I)^{\alpha_{k-1}}(T-\lambda_k I)^{\alpha_k} v$

$$\begin{aligned} &= q_{k-1}(T)(q_k(T)v) \\ &= q_{k-1}(T)(q_k(\lambda)v) \\ &= q_{k-1}(\lambda)(q_k(\lambda)v) \\ &= (\lambda-\lambda_{k-1})^{\alpha_{k-1}}(\lambda-\lambda_k)^{\alpha_k} v. \end{aligned}$$

So that $(T-\lambda_1 I)^{\alpha_1}\cdots(T-\lambda_m I)^{\alpha_m} v$

$$\begin{aligned} &= q_1(T)\Big(q_2(T)\Big(\dots(q_m(T)v)\dots\Big)\Big) \\ &= q_1(\lambda)(q_2(\lambda)(\dots(q_m(\lambda)v)\dots)) \\ &= (\lambda-\lambda_1)^{\alpha_1}\cdots(\lambda-\lambda_m)^{\alpha_m} v. \end{aligned}$$ □

---

1 *Suppose $T \in \mathcal{L}(V)$ and $\exists\, n \in \mathbf{N}^+$ such that $T^n = 0$.*
Prove that $(I-T)$ is inv and $(I-T)^{-1} = I + T + \cdots + T^{n-1}$.

SOLUTION:

Note that $1 - x^n = (1-x)(1+x+\cdots+x^{n-1})$.

$$\left.\begin{aligned} (I-T)(1+T+\cdots+T^{n-1}) = I - T^n = I \\ (1+T+\cdots+T^{n-1})(I-T) = I - T^n = I \end{aligned}\right\} \Rightarrow (I-T)^{-1} = 1+T+\cdots+T^{n-1}.$$ □

---

2 *Suppose $T \in \mathcal{L}(V)$ and $(T-2I)(T-3I)(T-4I) = 0$.*
Suppose λ is an eigval of T. Prove that $\lambda = 2$ or $\lambda = 3$ or $\lambda = 4$.

SOLUTION:

Suppose v is an eigvec correspd to λ. Then for any $p \in \mathcal{P}(\mathbf{F}), p(T)v = p(\lambda)v$.

Hence $0 = (T-2I)(T-3I)(T-4I)v = (\lambda-2)(\lambda-3)(\lambda-4)v$ while $v \neq 0 \Rightarrow \lambda = 2$ or $\lambda = 3$ or $\lambda = 4$. $\square$

OR. Because $(T-2I)(T-3I)(T-4I) = 0$ is not inje. By TIPS. $\square$

---

7 (See 5.A.22) *Suppose $T \in \mathcal{L}(V)$. Prove that 9 is an eigval of $T^2 \iff 3$ or -3 is an eigval of T.*

SOLUTION:

(a) Suppose 9 is an eigval of T^2. Then $(T^2-9I)v = (T-3I)(T+3I)v = 0$ for some v. By TIPS.

OR. Suppose λ is an eigval with an eigvec v. Then $(T-3I)(T+3I)v = (\lambda-3)(\lambda+3)v = 0 \Rightarrow \lambda = \pm 3$.

(b) Suppose 3 or -3 is an eigval of T with an eigvec v. Then $Tv = \pm 3v \Rightarrow T^2v = T(Tv) = 9v$ $\square$

---

3 *Suppose $T \in \mathcal{L}(V), T^2 = I$ and -1 is not an eigval of T. Prove that $T = I$.*

SOLUTION:

$T^2 - I = (T+I)(T-I)$ is not inje, 又 -1 is not an eigval of $T \Rightarrow$ By TIPS. $\square$

OR. Note that $v = [\frac{1}{2}(I-T)v] + [\frac{1}{2}(I+T)v]$ for all $v \in V$.

And $(I-T^2)v = (I-T)(I+T)v = 0$ for all $v \in V$,

$$\left.\begin{aligned}(I+T)(\tfrac{1}{2}(I-T)v) &= \tfrac{1}{2}(I-T^2)v = 0 \Rightarrow \tfrac{1}{2}(I-T)v \in \operatorname{null}(I+T)\\ (I-T)(\tfrac{1}{2}(I+T)v) &= \tfrac{1}{2}(I-T^2)v = 0 \Rightarrow \tfrac{1}{2}(I+T)v \in \operatorname{null}(I-T)\end{aligned}\right\} \Rightarrow V = \operatorname{null}(I+T) + \operatorname{null}(I-T).$$

又 -1 is not an eigval of $T \Rightarrow (I+T)$ is inje $\Rightarrow \operatorname{null}(I+T) = \{0\}$.

Hence $V = \operatorname{null}(I-T) \Rightarrow \operatorname{range}(I-T) = \{0\}$. Thus $I - T = 0 \in \mathcal{L}(V) \Rightarrow T = I$. $\square$

•(4E 5.A.32) *Suppose $T \in \mathcal{L}(V)$ has no eigvals and $T^4 = I$. Prove that $T^2 = -I$.*

SOLUTION:

Because $T^4 - I = (T^2-I)(T^2+I) = 0$ is not inje $\Rightarrow (T^2-I)$ or (T^2+I) is not inje.

又 T has no eigvals $\Rightarrow (T^2-I) = (T-I)(T+I)$ is inje.

Hence $T^2 + I = 0 \in \mathcal{L}(V)$, for if not,

$\exists\, v \in V, (T^2+I)v \neq 0$ while $(T^2-I)\big((T^2+I)v\big) = 0$ but (T^2-I) is inje. Contradicts. $\square$

OR. Note that $v = \left[\frac{1}{2}(I-T^2)v\right] + \left[\frac{1}{2}(I+T^2)v\right]$ for all $v \in V$.

And $(I-T^4)v = (I-T^2)(I+T^2)v = 0$ for all $v \in V$,

$$\left.\begin{aligned}(I+T^2)(\tfrac{1}{2}(I-T^2)v) &= 0 \Rightarrow \tfrac{1}{2}(I-T^2)v \in \operatorname{null}(I+T^2)\\ (I-T^2)(\tfrac{1}{2}(I+T^2)v) &= 0 \Rightarrow \tfrac{1}{2}(I+T^2)v \in \operatorname{null}(I-T^2)\end{aligned}\right\} \Rightarrow V = \operatorname{null}(I+T^2) + \operatorname{null}(I-T^2).$$

又 T has no eigvals $\Rightarrow (I-T^2)$ is inje $\Rightarrow \operatorname{null}(I-T^2) = \{0\}$.

Hence $V = \operatorname{null}(I+T^2) \Rightarrow \operatorname{range}(I+T^2) = \{0\}$. Thus $I + T^2 = 0 \in \mathcal{L}(V) \Rightarrow T^2 = -I$. $\square$

---

8 (OR 4E 5.A.31) *Give an example of $T \in \mathcal{L}(\mathbf{R}^2)$ such that $T^4 = -I$.*

SOLUTION:

$T^4 + 1 = (T^2 + \mathrm{i}I)(T^2 - \mathrm{i}I) = (T + \mathrm{i}^{1/2}I)(T - \mathrm{i}^{1/2}I)(T - (-\mathrm{i})^{1/2}I)(T + (-\mathrm{i})^{1/2}I)$.

Note that $\mathrm{i}^{1/2} = \dfrac{\sqrt{2}}{2} + \mathrm{i}\dfrac{\sqrt{2}}{2}$, $(-\mathrm{i})^{1/2} = \dfrac{\sqrt{2}}{2} - \mathrm{i}\dfrac{\sqrt{2}}{2}$. Hence $T = \pm(\pm\mathrm{i})^{1/2}I$.

Define T by $T(x,y) = (\dfrac{\sqrt{2}}{2}x - \dfrac{\sqrt{2}}{2}y, \dfrac{\sqrt{2}}{2}x + \dfrac{\sqrt{2}}{2}y)$.

$\mathcal{M}(T) = \begin{pmatrix} \cos(-\pi/4) & \sin(-\pi/4) \\ -\sin(-\pi/4) & \cos(-\pi/4) \end{pmatrix} \Rightarrow \mathcal{M}(T)^4 = \mathcal{M}(T^4) = \begin{pmatrix} \cos(-\pi) & \sin(-\pi) \\ -\sin(-\pi) & \cos(-\pi) \end{pmatrix} = \begin{pmatrix} -1 & 0 \\ 0 & -1 \end{pmatrix} = -\mathcal{M}(I)$. □

(Using $\begin{pmatrix} \cos\alpha & \sin\alpha \\ -\sin\alpha & \cos\alpha \end{pmatrix}^n = \begin{pmatrix} \cos n\alpha & \sin n\alpha \\ -\sin n\alpha & \cos n\alpha \end{pmatrix}$.)

•(4E 5.B.12 See also at 5.A.9)

Define $T \in \mathcal{L}(\mathbf{F}^n)$ by $T(x_1, x_2, x_3, \dots, x_n) = (x_1, 2x_2, 3x_3, \dots, nx_n)$. Find the mini poly.

SOLUTION:

$T(x_1, \dots, 0) =$ By (5.A.9) and [8.49], $1, 2, \dots, n$ are zeros of the mini poly of T.

(又 Each eigvals of T corresponds to exact one-dim subsp of $\mathbf{F}^n$.)

Define a poly q by $q(z) = (z-1)(z-2)\cdots(z-n)$, for all $z \in \mathbf{F}$. (Then q is the char poly of T.)

Because $q(T)e_j = \big[(T-I)\cdots(T-(j-1)I)(T-(j+1)I)\cdots(T-nI)\big](T-jI)e_j = 0$ for each j, where $(e_1, \dots, e_n)$ is the standard basis. Thus $\forall v \in \mathbf{F}^n, q(T)v = 0$. Hence q is the mini poly of T. □

• *Suppose $n \in \mathbf{N}^+$. Define $T \in \mathcal{L}(\mathbf{F}^n)$ by $T(x_1, \dots, x_n) = (x_1 + \cdots + x_n, \dots, x_1 + \cdots + x_n)$.* [*See also at* (5.A.19)] *Find the mini poly of T.*

SOLUTION:

Because n and 0 are all eigvals of T, 又 For all $e_k, Te_k = e_1 + \cdots + e_n;\quad T^2 e_k = n(e_1 + \cdots + e_n)$.

Hence $T^2 e_k = n(Te_k) \Rightarrow T^2 = nT \Rightarrow T^2 - nT = T(T-n)$. Thus $z(z-n)$ is the mini poly of T. □

•(4E 5.B.8)

Suppose $T \in \mathcal{L}(\mathbf{R}^2)$ is the operator of counterclockwise rotation by the angel θ, where $\theta \in \mathbf{R}^+$. Find the mini poly of T.

SOLUTION:

If $\theta = \pi + 2k\pi$, then $T(w, z) = (-w, -z), T^2 = I$ and the mini poly is $z + 1$.

If $\theta = 2k\pi$, then $T = I$ and the mini poly is $z - 1$.

Now suppose (v, Tv) is linely inde. Then $\operatorname{span}(v, Tv) = \mathbf{R}^2$.

Suppose the mini poly p is defined by $p(z) = z^2 + bz + c$ for all $z \in \mathbf{R}$.

Because 
$Tv = \dfrac{|\vec{v}|}{2L}(T^2 v + v) \Rightarrow T = \dfrac{|\vec{v}|}{2L}(T^2 + I)$

$L = |\vec{v}|\cos\theta \Rightarrow \dfrac{|\vec{v}|}{2L} = \dfrac{1}{2\cos\theta}$

Hence $p(T) = T^2 - 2\cos\theta\, T + I = 0$ and $z^2 - 2\cos\theta\, z + 1$ is the mini poly of T. □

OR. By (4E 5.B.11), $\mathcal{M}(T, (e_1, e_2)) = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix}$.

Hence the mini poly is $z \pm 1$ or $z^2 - 2\cos\theta\, z + 1$. □

•(4E 5.B.11) *Suppose V is a two-dim vecsp, $T \in \mathcal{L}(V)$, and the matrix of T with resp to some basis of V is $\begin{pmatrix} a & c \\ b & d \end{pmatrix}$.*

(a) *Show that $T^2 - (a+d)T + (ad - bc)I = 0$.*

(b) *Show that the mini poly of T equals*

$$\begin{cases} z-a & \text{if } b=c=0 \text{ and } a=d, \\ z^2-(a+d)z+(ad-bc) & \text{otherwise.} \end{cases}$$

SOLUTION:

(a) Suppose the basis is (v,w). Because $\begin{cases} Tv = av+bw \Rightarrow (T-aI)v = bw, \text{ then apply } (T-dI) \text{ to both sides} \\ Tw = cv+dw \Rightarrow (T-dI)w = cv, \text{ then apply } (T-aI) \text{ to both sides} \end{cases}$

Hence $(T-aI)(T-dI) = bcI \Rightarrow T^2-(a+d)T+(ad-bc)I = 0$.

(b) If $b=c=0$ and $a=d$. Then $\mathcal{M}(T) = \begin{pmatrix} a & 0 \\ 0 & a \end{pmatrix} = a\mathcal{M}(I)$. Thus $T = aI$. Hence the mini poly is $z-a$.

Otherwise, by (a), $z^2-(a+d)z+(ad-bc)$ is a poly multi of the mini poly.

Now we prove that $T \notin \operatorname{span}(I)$, so that then the mini poly of T has exactly degree 2.

(At least one of the assumption of (I),(II) below is true.)

(I) Suppose $a=d$, then $Tv = av+bw \notin \operatorname{span}(v), Tw = cv+aw \notin \operatorname{span}(w)$.

(II) Suppose at most one of b,c is not 0. If $b=0$, then $Tw \notin \operatorname{span}(w)$; If $c=0$, then $Tv \notin \operatorname{span}(v)$. □

---

5 *Suppose $S,T \in \mathcal{L}(V)$, S is inv, and $p \in \mathcal{P}(\mathbf{F})$. Prove that $p(TS) = S^{-1}p(ST)S$.*

SOLUTION:

We prove $(TS)^m = S^{-1}(ST)^m S$ for each $m \in \mathbf{N}$ by induction.

(i) $m = 0,1$. $TS^0 = I = S^{-1}(ST)^0 S$; $TS = S^{-1}(ST)S$.

(ii) $m > 1$. Assume that $(TS)^m = S^{-1}(ST)^m S$.

Then $(TS)^{m+1} = (TS)^m(TS) = S^{-1}(ST)^m STS = S^{-1}(ST)^{m+1}S$.

Hence $\forall p \in \mathcal{P}(\mathbf{F})$, $p(TS) = a_0(TS)^0 + a_1(TS) + \cdots + a_m(TS)^m$

$$= a_0[S^{-1}(ST)^0S] + a_1[S^{-1}(ST)S] + \cdots + a_m[S^{-1}(ST)^mS]$$
$$= S^{-1}[a_0(ST)^0 + a_1(ST) + \cdots + a_m(ST)^m]S$$
$$= S^{-1}p(ST)S.$$

□

•(4E 5.B.7)

(a) *Give an example of $S,T \in \mathcal{L}(\mathbf{F}^2)$ such that the mini poly of ST does not equal the mini poly of TS.*

(b) *Suppose V is finite-dim and $S,T \in \mathcal{L}(V)$. Prove that if S or T is inv, then the mini poly of ST equals the mini poly of TS.*

SOLUTION:

(a) Define S by $S(x,y) = (x,x)$. Define T by $T(x,y) = (0,y)$.

Then $ST(x,y) = 0$, $TS(x,y) = (0,x)$ for all $(x,y) \in \mathbf{F}^2$.

Thus $ST = 0 \neq TS$ and $(TS)^2 = 0$.

Hence the mini poly of ST does not equal to the mini poly of TS.

(b) Denote the mini poly of ST by p, and the mini poly TS by q.

Suppose S is inv.

$$\left.\begin{array}{l} p(ST) = 0 = Sp(TS)S^{-1} \Rightarrow p(TS) = 0, p \text{ is a poly multi of } q. \\ q(TS) = 0 = S^{-1}q(ST)S \Rightarrow q(ST) = 0, q \text{ is a poly multi of } p. \end{array}\right\} \Rightarrow p = q.$$

Reversing the roles of S and T, we conclude that if T is inv, then $p = q$ as well. □

---

11 *Suppose $\mathbf{F} = \mathbf{C}$, $T \in \mathcal{L}(V)$, $p \in \mathcal{P}(\mathbf{C})$, and $\alpha \in \mathbf{C}$. Prove that α is an eigval of $p(T) \iff \alpha = p(\lambda)$ for some eigval λ of T.*

SOLUTION:

(a) Suppose α is an eigval of $p(T) \Leftrightarrow \big(p(T) - \alpha I\big)$ is not inje.

Write $p(z) - \alpha = c(z - \lambda_1) \cdots (z - \lambda_m) \Rightarrow p(T) - \alpha I = c(T - \lambda_1 I) \cdots (T - \lambda_m I)$.

By Tips, $\exists\, (T - \lambda_j I)$ not inje. Thus $p(\lambda_j) - \alpha = 0$.

(b) Suppose $\alpha = p(\lambda)$ and λ is an eigval of T with an eigvec v. Then $p(T)v = p(\lambda)v = \alpha v$. ☐

Or. Define q by $q(z) = p(z) - \alpha$. λ is a zero of q.

Because $q(T)v = \big(p(T) - \alpha I\big)v = q(\lambda)v = \big(p(\lambda) - \alpha\big)v = 0$.

Hence $q(T)$ is not inje $\Rightarrow \big(p(T) - \alpha I\big)$ is not inje. ☐

---

12 (Or 4E.5.B.6) *Give an example of an operator on* $\mathbf{R}^2$ *that shows the result above does not hold if* $\mathbf{C}$ *is replaced with* $\mathbf{R}$*.*

Solution:

Define $T \in \mathcal{L}(\mathbf{R}^2)$ by $T(w,z) = (-z, w)$.

By Problem (4E 5.B.11), $\mathcal{M}\big(T, ((1,0),(0,1))\big) = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} \Rightarrow$ the mini poly of T is $z^2 + 1$.

Define p by $p(z) = z^2$. Then $p(T) = T^2 = -I$. Thus $p(T)$ has eigval -1.

While $\nexists\, \lambda \in \mathbf{R}$ such that $-1 = p(\lambda) = \lambda^2$. ☐

•(4E 5.B.17) *Suppose V is finite-dim, $T \in \mathcal{L}(V)$, $\lambda \in \mathbf{F}$, and p is the mini poly of T. Show that the mini poly of $(T - \lambda I)$ is the poly q defined by $q(z) = p(z + \lambda)$.*

Solution:

$q(T - \lambda I) = 0 \Rightarrow q$ is poly multi of the mini poly of $(T - \lambda I)$.

Suppose the degree of the mini poly of $(T - \lambda I)$ is n, and the degree of the mini poly of T is m.

By definition of mini poly,

n is the smallest such that $(T - \lambda I)^n \in \operatorname{span}\big(I, (T - \lambda I), \dots, (T - \lambda I)^{n-1}\big)$;

m is the smallest such that $T^m \in \operatorname{span}(I, T, \dots, T^{m-1})$.

又 $T^k \in \operatorname{span}(I, T, \dots, T^{k-1}) \iff (T - \lambda)^k \in \operatorname{span}\big(I, (T - \lambda I), \dots, (T - \lambda I)^{k-1}\big)$.

Thus $n = m$. 又 q is monic. By the uniqnes of mini poly. ☐

•(4E 5.B.18) *Suppose V is finite-dim, $T \in \mathcal{L}(V)$, $\lambda \in \mathbf{F} \setminus \{0\}$, and p is the mini poly of T. Show that the mini poly of λT is the poly q defined by $q(z) = \lambda^{\deg p} p(\frac{z}{\lambda})$.*

Solution:

$q(\lambda T) = \lambda^{\deg p} p(T) = 0 \Rightarrow q$ is a poly multi of the mini poly of λT.

Suppose the degree of the mini poly of λT is n, and the degree of the mini poly of T is m.

By definition of mini poly,

n is the smallest such that $(\lambda T)^n \in \operatorname{span}\big(\lambda I, \lambda T, \dots, (\lambda T)^{n-1}\big)$;

m is the smallest such that $T^m \in \operatorname{span}(I, T, \dots, T^{m-1})$.

又 $(\lambda T)^k \in \operatorname{span}\big(\lambda I, \lambda T, \dots, (\lambda T)^{k-1}\big) \iff T^k \in \operatorname{span}(I, T \dots, T^{k-1})$.

Thus $n = m$. 又 q is monic. By the uniqnes of mini poly. ☐

---

18 (Or 4E 5.B.15) *Suppose V is a finite-dim complex vecsp with $\dim V > 0$ and $T \in \mathcal{L}(V)$. Define $f : \mathbf{C} \to \mathbf{R}$ by $f(\lambda) = \dim \operatorname{range}(T - \lambda I)$. Prove that f is not a continuous function.*

Solution: Note that V is finite-dim.

Let λ_0 be an eigval of T. Then $(T - \lambda_0 I)$ is not surj. Hence $\dim \operatorname{range}(T - \lambda_0 I) < \dim V$.

Because T has finitely many eigvals. There exist a sequence of number $\{\lambda_n\}$ such that $\lim\limits_{n\to\infty}\lambda_n = \lambda_0$.
And λ_n is not an eigval of T for each $n \Rightarrow \dim\operatorname{range}(T-\lambda_n I) = \dim V \neq \dim\operatorname{range}(T-\lambda_0 I)$.
Thus $f(\lambda_0) \neq \lim\limits_{n\to\infty} f(\lambda_n)$. $\square$

•(4E 5.B.9) *Suppose $T \in \mathcal{L}(V)$ is such that with resp to some basis of V, all entries of the matrix of T are rational numbers. Explain why all coefficients of the mini poly of T are rational numbers.*

Solution:

Let $(v_1,\dots,v_n)$ denote the basis such that $\mathcal{M}(T,(v_1,\dots,v_n))_{j,k} = A_{j,k} \in \mathbf{Q}$ for all $j,k = 1,\dots,n$.
Denote $\mathcal{M}(v_j,(v_1,\dots,v_n))$ by x_j for each v_j.
Suppose p is the mini poly of T and $p(z) = z^m + \cdots + c_1 z + c_0$. Now we show that each $c_j \in \mathbf{Q}$.
Note that $\forall s \in \mathbf{N}^+, \mathcal{M}(T^s) = \mathcal{M}(T)^s = A^s \in \mathbf{Q}^{n,n}$ and $T^s v_k = A^s_{1,k}v_1 + \cdots + A^s_{n,k}v_n$ for all $k \in \{1,\dots,n\}$.

$$\text{Thus}\begin{cases} \mathcal{M}(p(T)v_1) = (A^m + \cdots + c_1A + c_0I)x_1 = \sum\limits_{j=1}^{n}(A^m+\cdots+c_1A+c_0I)_{j,1}x_j = 0; \\ \qquad\vdots \\ \mathcal{M}(p(T)v_n) = (A^m + \cdots + c_1A + c_0I)x_n = \sum\limits_{j=1}^{n}(A^m+\cdots+c_1A+c_0I)_{j,n}x_j = 0; \end{cases}$$

$$\text{More clearly,}\begin{cases} (A^m+\cdots+c_1A+c_0I)_{1,1} = \cdots = (A^m+\cdots+c_1A+c_0I)_{n,1} = 0; \\ \qquad\qquad \vdots \quad \ddots \quad \vdots \\ (A^m+\cdots+c_1A+c_0I)_{1,n} = \cdots = (A^m+\cdots+c_1A+c_0I)_{n,n} = 0; \end{cases}$$

Hence we get a system of n^2 linear equations in m unknowns $c_0, c_1, \dots, c_{m-1}$.
We conclude that $c_0, c_1, \dots, c_{m-1} \in \mathbf{Q}$. $\square$

•Or (4E 5.B.16), Or (8.C.18) *Suppose $a_0,\dots,a_{n-1} \in \mathbf{F}$. Let T be the operator on $\mathbf{F}^n$ such that*

$$\mathcal{M}(T) = \begin{pmatrix} 0 & & & & -a_0 \\ 1 & 0 & & & -a_1 \\ & 1 & \ddots & & \vdots \\ & & \ddots & 0 & -a_{n-2} \\ 0 & & & 1 & -a_{n-1} \end{pmatrix}, \textit{with resp to the standard basis } (e_1,\dots,e_n).$$

Show that the mini poly of T is p defined by $p(z) = a_0 + a_1 z + \cdots + a_{n-1}z^{n-1} + z^n$.

*$\mathcal{M}(T)$ is called the **companion matrix** of the poly above. This exercise shows that every monic poly is the mini poly of some operator. Hence a formula or an algorithm that could produce exact eigvals for each operator on each $\mathbf{F}^n$ could then produce exact zeros for each poly [by 8.36(b)]. Thus there is no such formula or algorithm. However, efficient numeric methods exist for obtaining very good approximations for the eigvals of an operator.*

Solution: Note that $(e_1, Te_1, \dots, T^{n-1}e_1)$ is linely inde. 又 The deg of mini poly is at most n.
$T^n e_1 = \cdots = T^{n-k}e_{1+k} = \cdots = Te_n = -a_0e_1 - a_1e_2 - a_2e_3 - \cdots - a_{n-1}e_n$
$= (-a_0I - a_1T - a_2T^2 - \cdots - a_{n-1}T^{n-1})e_1$. Thus $p(T)e_1 = 0 = p(T)e_j$ for each $e_j = T^{j-1}e_1$. $\square$

• Eigenvalues On Odd-Dimensional Real Vector Spaces

• Even-Dimensional Null Space

Suppose $\mathbf{F} = \mathbf{R}$, V is finite-dim, $T \in \mathcal{L}(V)$ and $b, c \in \mathbf{R}$ with $b^2 < 4c$. Prove that $\dim\operatorname{null}(T^2 + bT + cI)$ is an even number.

Solution:

Denote $\operatorname{null}(T^2+bT+cI)$ by R. Then $T|_R + bT|_R + cI_R = (T+bT+cI)|_R = 0 \in \mathcal{L}(R)$.

Suppose λ is an eigval of T_R with an eigvec $v \in R$.

Then $0 = (T|_R^2 + bT|_R + cI_R)(v) = (\lambda^2 + \lambda b + c)v = \big((\lambda + b)^2 + c - \frac{b^2}{4}\big)v$.

Because $c - \frac{b^2}{4} > 0$ and we have $v = 0$. Thus T_R has no eigvals.

Let U be an invar subsp of R that has the largest, even dim among all invar subsps.

Assume that $U \neq R$. Then $\exists\, w \in R$ but $w \notin U$. Let W be such that $(w, T|_R w)$ is a basis of W.

Because $T|_R^2 w = -bT|_R w - cw \in W$. Hence W is an invar subsp of dim 2.

Thus $\dim\,(U + W) = \dim U + 2 - \dim(U \cap W)$, where $U \cap W = \{0\}$,

for if not, because $w \notin U, T|_R w \in U$,

$U \cap W$ is invar under $T|_R$ of one dim (impossible because $T|_R$ has no eigvecs).

Hence $U + W$ is even-dim invar subsp under $T|_R$, contradicting the maximality of $\dim U$.

Thus the assumption was incorrect. Hence $R = \operatorname{null}\,(T^2 + bT + cI) = U$ has even dim. □

• Operators On Odd-Dimensional Vector Spaces Have Eigenvalues

(a) *Suppose* $\mathbf{F} = \mathbf{C}$. Then by [5.21], we are done.

(b) *Suppose* $\mathbf{F} = \mathbf{R}$, *V is finite-dim, and* $\dim V = n$ *is an odd number.*
Let $T \in \mathcal{L}(V)$ and the mini poly is p. Prove that T has an eigval.

Solution:

(i) If $n = 1$, then we are done.

(ii) Suppose $n \geqslant 3$. Assume that every operator, on odd-dim vecsps of dim less than n, has an eigval.

If p is a poly multi of $(x - \lambda)$ for some $\lambda \in \mathbf{R}$, then by [8.49] λ is an eigval of T and we are done.

Now suppose $b, c \in \mathbf{R}$ such that $b^2 < 4c$ and p is a poly multi of $x^2 + bx + c$ (see [4.17]).

Then $\exists\, q \in \mathcal{P}(\mathbf{R})$ such that $p(x) = q(x)(x^2 + bx + c)$ for all $x \in \mathbf{R}$.

Now $0 = p(T) = \big(q(T)\big)(T^2 + bT + cI)$, which means that $q(T)|_{\operatorname{range}\,(T^2+bT+cI)} = 0$.

Because $\deg q < \deg p$ and p is the mini poly of T, hence $\operatorname{range}\,(T^2 + bT + cI) \neq V$.

又 $\dim V$ is odd and $\dim \operatorname{null}\,(T^2 + bT + cI)$ is even (by our previous result).

Thus $\dim V - \dim \operatorname{null}\,(T^2 + bT + cI) = \dim \operatorname{range}\,(T^2 + bT + cI)$ is odd.

By [5.18], $\operatorname{range}\,(T^2 + bT + cI)$ is an invar subsp of V under T that has odd dim less than n.

Our induction hypothesis now implies that $T|_{\operatorname{range}\,(T^2+bT+cI)}$ has an eigval.

By mathematical induction. □

•(2E Ch5.24) *Suppose* $\mathbf{F} = \mathbf{R}, T \in \mathcal{L}(V)$ *has no eigvals.*
Prove that every invar subsp of V under T is even-dim.

Solution:

Suppose U is such a subsp. Then $T|_U \in \mathcal{L}(U)$. We prove by contradiction.

If $\dim U$ is odd, then $T|_U$ has an eigval and so is T, so that $\exists$ invar subsp of 1 dim, contradicts. □

•(4E 5.B.29) *Show that every operator on a finite-dim vecsp of dim* ≥ 2 *has a 2-dim invar subsp.*

Solution:

Using induction on $\dim V$.

(i) $\dim V = 2$, we are done.

(ii) $\dim V > 2$. Assume that the desired result is true for vecsp of smaller dim.

Suppose p is the mini poly of degree m and $p(z) = (z - \lambda_1) \cdots (z - \lambda_m)$.

If $T = \lambda I$ ($\Leftrightarrow m = 1 \vee m = -\infty$), then we are done. ($m \neq 0$ because $\dim V \neq 0$.)

Now define a q by $q(z) = (z - \lambda_1)(z - \lambda_2)$.
By assumption, $T|_{\operatorname{null} q(T)}$ has an invar subsp of dim 2. □
