1·B

- *Suppose V is a real vector space. The complexification of V, denoted by $V_{\mathbb{C}}$, equals $V \times V$. An element of $V_{\mathbb{C}}$ is an ordered pair (u, v), where $u, v \in V$, but we write this as $u + iv$.*
  - *Addition on $V_{\mathbb{C}}$ is defined by*
  $$(u_1 + iv_1) + (u_2 + iv_2) = (u_1 + u_2) + i(v_1 + v_2)$$
  for all $u_1, v_1, u_2, v_2 \in V$.
  - *Complex scalar multiplication on $V_{\mathbb{C}}$ is defined by*
  $$(a + bi)(u + iv) = (au - bv) + i(av + bu)$$
  for all $a, b \in \mathbf{R}$ and all $u, v \in V$.

  Prove that with the definitions above, $V_{\mathbb{C}}$ is a complex vector space.

  Think of V as a subset of $V_{\mathbb{C}}$ by identifying $u \in V$ with $u + i0$. The construction of $V_{\mathbb{C}}$ from V can then be thought of as generalizing the construction of $\mathbf{C}^n$ from $\mathbf{R}^n$.

SOLUTION:

- Commutativity: $(u_1 + \mathrm{i}v_1) + (u_2 + \mathrm{i}v_2) = (u_2 + \mathrm{i}v_2) + (u_1 + \mathrm{i}v_1)$.
- Associativity:

  (I) $[(u_1 + \mathrm{i}v_1) + (u_2 + \mathrm{i}v_2)] + (u_3 + \mathrm{i}v_3) = (u_1 + \mathrm{i}v_1) + [(u_2 + \mathrm{i}v_2) + (u_3 + \mathrm{i}v_3)]$.

  (II) $\begin{cases} [(a+b\mathrm{i})(c+d\mathrm{i})](u+\mathrm{i}v) = [(ac-bd)+(ad+bc)\mathrm{i}](u+\mathrm{i}v) = [(ac-bd)u-(ad+bc)v] + \mathrm{i}[(ac-bd)v+(ad+bc)u] \\ (a+b\mathrm{i})[(c+d\mathrm{i})(u+\mathrm{i}v)] = (a+b\mathrm{i})[(cu-dv)+\mathrm{i}(cv+du)] = [a(cu-dv)-b(cv+du)] + \mathrm{i}[a(cv+du)+b(cu-dv)] \end{cases}$
- Additive identity.
- Additive inverse: $(u_1 + \mathrm{i}v_1) + (-u_1 + \mathrm{i}(-v_1)) = 0$.
- Multiplication identity.
- Distributive properties:

  (I) $\begin{cases} (a+b\mathrm{i})[(u_1+\mathrm{i}v_1)+(u_2+\mathrm{i}v_2)] = (a+b\mathrm{i})[(u_1+u_2)+\mathrm{i}(v_1+v_2)] \\ \qquad = [a(u_1+u_2)-b(v_1+v_2)] + \mathrm{i}[a(v_1+v_2)+b(u_1+u_2)] \\ (a+b\mathrm{i})(u_1+\mathrm{i}v_1) + (a+b\mathrm{i})(u_2+\mathrm{i}v_2) = [(au_1-bv_1)+\mathrm{i}(av_1+bu_1)] + [(au_2-bv_2)+\mathrm{i}(av_2+bu_2)] \end{cases}$

  (II) $\begin{cases} [(a+b\mathrm{i})+(c+d\mathrm{i})](u+\mathrm{i}v) = [(a+c)+(b+d)\mathrm{i}](u+\mathrm{i}v) = [(a+c)u-(b+d)v] + \mathrm{i}[(a+c)v+(b+d)u] \\ (a+b\mathrm{i})(u+\mathrm{i}v) + (c+d\mathrm{i})(u+\mathrm{i}v) = [(au-bv)+\mathrm{i}(av+bu)] + [(cu-dv)+\mathrm{i}(cv+du)] \end{cases}$

$\square$

- *Suppose S is a nonempty set. Let V^S denote the set of functions from S to V. Define a natural addition and scalar multiplication on V^S, and show that V^S is a vector space with these definitions.*

SOLUTION:

- Addition on V^S is defined by $(f+g)(x) = f(x) + g(x)$ for any $x \in S$ and $f, g \in V^S$.
- Scalar Multiplication on V^S is defined by $(\lambda f)(x) = \lambda f(x)$ for any $x \in S, \lambda \in \mathbf{F}, f \in V^S$.

Commutativity. Associativity.

Additive identity: $0\,(x) = 0$.

Additive inverse: $f(x) + (-f)(x) = 0$.

Multiplication identity: $I(x) = x$.

Distributive properties: $(\lambda(f+g))(x) = \lambda(f(x)+g(x)) = (\lambda f)(x) + (\lambda g)(x)$;

$((\lambda+\mu)f)(x) = (\lambda+\mu)f(x) = \lambda f(x) + \mu f(x)$. $\square$

---

1 *Prove that $-(-v) = v$ for every $v \in V$.*

SOLUTION: $\left.\begin{array}{l} (-(-v)) + (-v) = 0 \\ v + (-v) = 0 \end{array}\right\} \Rightarrow$ By the uniqueness of additive inverse. $\square$

OR. $-(-v) = (-1)((-1)v) = ((-1)(-1))v = 1 \cdot v = v$ $\square$

---

2 *Suppose $a \in \mathbf{F}, v \in V$, and $av = 0$. Prove that $a = 0$ or $v = 0$.*

SOLUTION: If $a = 0$, then we are done.

Otherwise, $\exists\ a^{-1} \in \mathbf{F}, a^{-1}a = 1$, hence $v = 1 \cdot v = (a^{-1}a)v = a^{-1}(av) = a^{-1} \cdot 0 = 0$. $\square$

---

3 *Suppose $v, w \in V$. Explain why there exists a unique $x \in V$ such that $v + 3x = w$.*

SOLUTION:

[Existence] Let $x = \frac{1}{3}(w - v)$.

[Uniqueness] Suppose $v + 3x_1 = w$,(I) $v + 3x_2 = w$ (II).

Then (I) $-$ (II) : $3(x_1 - x_2) = 0 \Rightarrow$ By Problem (2), $x_1 - x_2 = 0 \Rightarrow x_1 = x_2$. $\square$

---

5 *Show that in the definition of a vector space, the additive inverse condition can be replaced with the condition that $0v = 0$ for all $v \in V$. Here the 0 on the left side is the number 0, and the 0 on the right side is the additive identity of V.*

The phrase a "condition can be replaced" in a definition means that the collection of objects satisfying the definition is unchanged if the original condition is replaced with the new condition.

SOLUTION: Using [1.31]. $0v = 0$ for all $v \in V \Leftrightarrow (1 + (-1))v = 1 \cdot v + (-1)v = v + (-v) = 0$. $\square$

---

6 *Let ∞ and $-\infty$ denote two distinct objects, neither of which is in $\mathbf{R}$. Define an addition and scalar multiplication on $\mathbf{R} \cup \{\infty, -\infty\}$ as you could guess from the notation. Specifically, the sum and product of two real numbers is as usual, and for $t \in \mathbf{R}$ define*

$$t\infty = \begin{cases} -\infty & \text{if } t < 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t > 0, \end{cases} \qquad t(-\infty) = \begin{cases} -\infty & \text{if } t > 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t < 0, \end{cases}$$

and (I) $t + \infty = \infty + t = \infty + \infty = \infty$,

(II) $t + (-\infty) = (-\infty) + t = (-\infty) + (-\infty) = -\infty$,

(III) $\infty + (-\infty) = (-\infty) + \infty = 0$.

With these operations of addition and scalar multiplication, is $\mathbf{R} \cup \{\infty, -\infty\}$ a vector space over $\mathbf{R}$? Explain.

SOLUTION: Not a vector space. By Associativity: $(a + \infty) + (-\infty) \neq a + (\infty + (-\infty))$.

OR By Distributive properties: $\infty = (2 + (-1))\infty \neq 2\infty + (-\infty) = \infty + (-\infty) = 0$. $\square$

ENDED

1·C

2 (1.35)

(b) *The set of continuous real-valued functions on the interval $[0, 1]$ is a subspace of $\mathbf{R}^{[0,1]}$*

Denote the set by U. $\forall x \in [0, 1]$ we have $\left.\begin{array}{l} (一)\ 0 \in U;\ f(x) = 0 \Leftrightarrow f = 0 \\ (二)\ \forall f, g \in U,\ (f + g)(x) = f(x) + g(x) \\ (三)\ \forall f \in U, \forall \lambda \in \mathbf{F} = \mathbf{R},\ (\lambda f)(x) = \lambda f(x) \end{array}\right\} \Rightarrow \square$

(c) *The set of differentiable real-valued functions on $\mathbf{R}$ is a subspace of $\mathbb{R}^{\mathbb{R}}$*

Denote the set by U. $\left.\begin{array}{l} (一)\ 0 \in U \\ (二)\ \forall f, g \in U,\ (f' + g') = f' + g' \\ (三)\ \forall f \in U, \forall \lambda \in \mathbf{F} = \mathbf{R}, (\lambda f)' = \lambda (f)' \end{array}\right\} \Rightarrow \square$

(d) *The set of differentiable real-valued functions f on the interval $(0, 3)$ such that $f'(2) = b$ is a subspace of $\mathbf{R}^{(0,3)}$ if and only if $b = 0$.*

Denote the set by U. Suppose $b = 0$. Then

$$\left.\begin{array}{l}(一)\ 0 \in U \\ (二)\ \forall f, g \in U,\ (f+g)'(2) = f'(2) + g'(2) = 0 \\ (三)\ \forall f \in U, \forall \lambda \in \mathbf{F} = \mathbf{R},\ (\lambda f)'(2) = \lambda f'(2)\end{array}\right\} \Rightarrow U \text{ is a subspace of } \mathbf{R}^{(0,3)}.$$

Suppose U is a subspace of $\mathbf{R}^{(0,3)}$. Suppose $f = 0 \Rightarrow f \in U$. Then $f'(2) = 0 = b$. $\square$

(e) *The set of all sequences with limit 0, of complex numbers, is a subspace of $\mathbf{C}^\infty$.*

Denote the set by A.

$$\left.\begin{array}{l}(一)\ (0,0,\dots) \in A \\ (二)\ \forall\ (a_1,a_2,\dots),\ (b_1,b_2,\dots) \in A \iff \lim\limits_{n\to\infty} a_n = 0,\ \lim\limits_{n\to\infty} b_n = 0. \\ \qquad \text{Thus } \lim\limits_{n\to\infty}(a_n+b_n) = \lim\limits_{n\to\infty} a_n + \lim\limits_{n\to\infty} b_n = 0 \Rightarrow (a_1+b_1, a_2+b_2, \dots) \in A \\ (三)\ \forall\ (a_1,a_2,\dots) \in A, \forall \lambda \in \mathbf{F} = \mathbf{C},\ \lim\limits_{n\to\infty}(\lambda a_n) = \lambda \lim\limits_{n\to\infty} a_n = 0 \Rightarrow \lambda(a_1,a_2,\dots) \in A\end{array}\right\} \Rightarrow \square$$

---

4 *Suppose $b \in \mathbf{R}$. Show that the set of continuous real-valued functions f on the interval $[0,1]$ such that $\int_0^1 f = b$ is a subspace of $\mathbf{R}^{[0,1]}$ if and only if $b = 0$*

SOLUTION: Denote the set by V_b.

(a) Suppose V_b is a subspace of $\mathbf{R}^{[0,1]}$, then $\forall f \in V_b$, we have $\int_0^1 f = b$.

Because $kf \in V_b$ for any $k \in \mathbf{R}$. Hence $\int_0^1 (kf) = k\int_0^1 f = kb = b \Leftrightarrow b = 0$.

OR. Because $g = 0 \in V_b \Rightarrow \int_0^1 g = 0 = b$.

(b) Suppose $b = 0$. $\forall f, g \in V_b = V_0, \lambda \in \mathbf{R}$, $\int_0^1 (f + \lambda g) = \int_0^1 f + \int_0^1 g = 0$. $\square$

---

5 *Is $\mathbf{R}^2$ a subspace of the complex vector space $\mathbf{C}^2$?*

ANSWER: No. Because $\mathbf{R}^2$ is not closed on scalar multiplication on $\mathbf{C}$.

---

6 (a) *Is $\{(a,b,c) \in \mathbf{R}^3 : a^3 = b^3\}$ a subspace of $\mathbf{R}^3$?*

ANSWER: True. As can be easily checked (note that $a^3 = b^3 \Leftrightarrow a = b$).

(b) *Is $\{(a,b,c) \in \mathbf{C}^3 : a^3 = b^3\}$ a subspace of $\mathbf{C}^3$?*

ANSWER: No. Note that $(\dfrac{-1 \pm \sqrt{3}\mathrm{i}}{2})^3 = 1$.

---

7 *Prove or give a counterexample: If U is a nonempty subset of $\mathbf{R}^2$ such that U is closed under addition and under taking additive inverses (meaning $-u \in U$ whenever $u \in U$), then U is a subspace of $\mathbf{R}^2$.*

SOLUTION: Let $U = \mathbf{Z}^2$, $(\mathbf{Z}^*)^2$, $(\mathbf{Q}^*)^2$, $\mathbf{Q}^2 \backslash \{0\}$, or $\mathbf{R}^2 \backslash \{0\}$.

---

8 *Give an example of a nonempty subset U of $\mathbf{R}^2$ such that U is closed under scalar multiplication, but U is not a subspace of $\mathbf{R}^2$.*

SOLUTION: $U = \{(x,y) \in \mathbf{R}^2 : x = 0 \vee y = 0\}$.

---

9 *A function $f : \mathbf{R} \to \mathbf{R}$ is called periodic if there exists a positive number p such that $f(x) = f(x+p)$ for all $x \in \mathbf{R}$. Is the set of periodic functions from $\mathbf{R}$ to $\mathbf{R}$ a subspace of $\mathbb{R}^{\mathbb{R}}$? Explain.*

SOLUTION: Denote the set by S.

Suppose $h(x) = \sin\sqrt{2}x + \cos x \in S$, since both $f(x) = \sin\sqrt{2}$, $g(x) = \cos x$ are periodic functions $\mathbf{R} \to \mathbf{R}$.

Assume $\exists\ p \in \mathbf{N}^+$ such that $h(x) = h(x+p), \forall x \in \mathbf{R}$. Let $x = 0 \Rightarrow h(0) = h(\pm p) = 1$.

Thus $1 = \cos p + \sin\sqrt{2}p = \cos p - \sin\sqrt{2}p$

$\Rightarrow \sin\sqrt{2}p = 0,\ \cos p = 1 \Rightarrow p = 2k\pi, k \in \mathbf{Z}$, while $p = \dfrac{m\pi}{\sqrt{2}}, m \in \mathbf{Z}$.

Hence $2k = \dfrac{m}{\sqrt{2}} \Rightarrow \sqrt{2} = \dfrac{m}{2k} \in \mathbf{Q}$. Contradiction! $\square$

---

11 *Prove that the intersection of every collection of subspaces of V is a subspace of V.*

SOLUTION:

Suppose $\{U_\alpha\}_{\alpha\in\Gamma}$ is a collection of subspaces of V; here Γ is an arbitrary index set.

We need to prove that $\bigcap_{\alpha\in\Gamma} U_\alpha$, which equals the set of vectors

that are in U_α for each $\alpha \in \Gamma$, is a subspace of V.

(一) $0 \in \bigcap_{\alpha\in\Gamma} U_\alpha$. Nonempty.

(二) $u, v \in \bigcap_{\alpha\in\Gamma} U_\alpha \Rightarrow u+v \in U_\alpha,\ \forall\alpha\in\Gamma \Rightarrow u+v \in \bigcap_{\alpha\in\Gamma} U_\alpha$. Closed under addition.

(三) $u \in \bigcap_{\alpha\in\Gamma} U_\alpha, \lambda \in \mathbf{F} \Rightarrow \lambda u \in U_\alpha,\ \forall\alpha\in\Gamma \Rightarrow \lambda u \in \bigcap_{\alpha\in\Gamma} U_\alpha$. Closed under scalar multiplication.

Thus $\bigcap_{\alpha\in\Gamma} U_\alpha$ is nonempty subset of V that is closed under addition and scalar multiplication.

Hence $\bigcap_{\alpha\in\Gamma} U_\alpha$ is a subspace of V. $\square$

---

12 *Prove that the union of two subspaces of V is a subspace of V if and only if one of the subspaces is contained in the other.*

SOLUTION: Suppose U and W are subspaces of V.

(a) Suppose $U \subseteq W$. Then $U \cup W = W$ is a subspace of V.

(b) Suppose $U \cup W$ is a subspace of V. Suppose $U \nsubseteq W$ and $U \nsupseteq W$ ($U \cup W \neq U$ and W).

Then $\forall a \in U$ but $a \notin W$; $\ b \in W$ but $b \notin U$. $a+b \in U \cup W$.

$$\left.\begin{array}{l}\text{(1) Consider } a+b \in U \Rightarrow b = (a+b)+(-a) \in U\text{, contradicts!}\\ \text{(2) Consider } a+b \in W \Rightarrow a = (a+b)+(-b) \in W\text{, contradicts!}\end{array}\right\} \Rightarrow U \cup W = U \text{ or } W\text{. Contradicts!}$$

Thus $U \subseteq W$ and $U \supseteq W$. $\square$

---

13 *Prove that the union of three subspaces of V is a subspace of V if and only if one of the subspaces contains the other two.*

This exercise is surprisingly harder than Exercise 12, possibly because this exercise is not true if we replace **F** *with a field containing only two elements.*

SOLUTION: Suppose A, B, C are subspaces of V.

(a) If any two of them are subsets of the third one, then $A \cup B \cup C = A, B$ or C, which is a subspace of V.

(b)* If $A \cup B \cup C$ is a subspace of V, suppose $\left\{\begin{array}{c} A \nsupseteq B \text{ and } C \\ B \nsupseteq A \text{ and } C \\ C \nsupseteq A \text{ and } B \end{array}\right\} \Longleftrightarrow A \cap B \cap C \neq A, B \text{ and } C$.

$\forall a \in A$ but $a \notin B, C$; $\forall b \in B$ but $b \notin A, C$; $\forall c \in C$ but $c \notin A, B$; by assumption, $a+b+c \in A \cup B \cup C$.

(I) $A \cup B$ is a subspace $\Rightarrow$ By Problem (12), $A \subseteq B$ or $A \supseteq B$.

(II) $A \cup C$ is a subspace $\Rightarrow$ By Problem (12), $A \subseteq C$ or $A \supseteq C$.

(III) $B \cup C$ is a subspace $\Rightarrow$ By Problem (12), $B \subseteq C$ or $B \supseteq C$.

Any two of (I), (II) and (III) must be true.

$$\text{(一). (I) and (II) are true. Then } \left.\begin{array}{r} C \subseteq B \subseteq A \\ \text{or } C \supseteq B \supseteq A \\ \text{or } B \supseteq A, C \\ \text{or } \underbrace{B \subseteq A, C}_{(1)} \end{array}\right\} \Rightarrow \left\{\begin{array}{r} A \supseteq B, C \\ \text{or } B \supseteq A, C \\ \text{or } C \supseteq A, B \end{array}\right.$$

$$\text{(二). (II) and (III) are true. Then } \left.\begin{array}{r} A \subseteq C \subseteq B \\ \text{or } A \supseteq C \supseteq B \\ \text{or } C \supseteq A, B \\ \text{or } \underbrace{C \subseteq A, B}_{(2)} \end{array}\right\} \Rightarrow \left\{\begin{array}{r} A \supseteq B, C \\ \text{or } B \supseteq A, C \\ \text{or } C \supseteq A, B \end{array}\right.$$

$$(\text{三}).\ \text{(I) and (III) are true. Then}\quad \left.\begin{array}{r} B\subseteq A\subseteq C\\ \text{or } B\supseteq A\supseteq C\\ \text{or } A\supseteq B,C\\ \text{or } \underbrace{A\subseteq B,C}_{(3)} \end{array}\right\} \Rightarrow \left\{\begin{array}{r} A\supseteq B,C\\ \text{or } B\supseteq A,C\\ \text{or } C\supseteq A,B \end{array}\right.$$

Among these, any two of (1), (2) and (3) must be true.

$$\left.\begin{array}{l} \left.\begin{array}{c}(1)\\(2)\end{array}\right\}\Rightarrow B\subseteq C\subseteq A\\ \left.\begin{array}{c}(2)\\(3)\end{array}\right\}\Rightarrow C\subseteq A\subseteq B\\ \left.\begin{array}{c}(1)\\(3)\end{array}\right\}\Rightarrow B\subseteq A\subseteq C \end{array}\right\}\Rightarrow\ \square$$

• *Suppose $U=\{(x,-x,2x)\in\mathbf{F}^3 : x\in\mathbf{F}\}$ and $W=\{(x,x,2x)\in\mathbf{F}^3 : x\in\mathbf{F}\}$. Describe $U+W$ using symbols, and also give a description of $U+W$ that uses no symbols.*

SOLUTION:

(a) $U+W=\{(x+y,x-y,2(x+y))\in\mathbf{F}^3 : x,y\in\mathbf{F}\}=\{(x',y',2x'))\in\mathbf{F}^3 : x',y'\in\mathbf{F}\}$.

(b) $U+W$ is a plane of which $(1,0,2),(0,1,0)$ is a basis. $\square$

---

15 *Suppose U is a subspace of V. What is $U+U$?*

SOLUTION:
$$\left.\begin{array}{r}\forall x,y\in U, x+y\in U\Rightarrow U+U\subseteq U\\ \forall x\in U, 0\in U, x+0\in U+U\Rightarrow U\subseteq U+U\end{array}\right\}\Rightarrow U+U=U.\ \square$$

---

16 *Suppose U and W are subspaces of V. Prove that $U+W=W+U$?*

SOLUTION: $\forall x\in U, y\in W,$
$$\left.\begin{array}{r}x+y=y+x\in W+U\Rightarrow U+W\subseteq W+U\\ y+x=x+y\in U+W\Rightarrow W+U\subseteq U+W\end{array}\right\}\Rightarrow U+W=W+U.\ \square$$

---

17 *Suppose V_1,V_2,V_3 are subspaces of V. Prove that $(V_1+V_2)+V_3=V_1+(V_2+V_3)$.*

SOLUTION:

Let $x\in V_1, y\in V_2, z\in V_3$. Denote $(V_1+V_2)+V_3$ by L, $V_1+(V_2+V_3)$ by R.
$$\left.\begin{array}{l}\forall u\in L,\ \exists\, x,y,z,\ u=(x+y)+z=x+(y+z)\in R\Rightarrow L\subseteq R\\ \forall u\in R,\ \exists\, x,y,z,\ u=x+(y+z)=(x+y)+z\in L\Rightarrow R\subseteq L\end{array}\right\}\Rightarrow (V_1+V_2)+V_3=V_1+(V_2+V_3).\ \square$$

---

18 *Does the operation of addition on the subspaces of V have an additive identity? Which subspaces have additive inverses?*

SOLUTION:

Suppose Ω is the additive identity.

For any subspace U of V. $\Omega\subseteq U+\Omega=U\Rightarrow\Omega\subseteq U$. Let $U=\{0\}$, then $\Omega=\{0\}$.

Now suppose W is an additive inverse of $U\Rightarrow U+W=\Omega$.

Note that $U+W\supseteq U,W\Rightarrow\Omega\supseteq U,W$. Thus $U=W=\Omega=\{0\}$. $\square$

---

19 *Prove or give a counterexample: If V_1,V_2,U are subspaces of V such that $V_1+U=V_2+U$, then $V_1=V_2$.*

SOLUTION: An counterexample:

$V=\mathbf{F}^3, U=\{(x,0,0)\in\mathbf{F}^3 : x\in\mathbf{F}\}$,

$V_1=\{(x,x,y))\in\mathbf{F}^3 : x,y\in\mathbf{F}\}$, $V_2=\{(x,y,z))\in\mathbf{F}^3 : x,y,z\in\mathbf{F}\}$.

EXAMPLE: *Suppose* $U = \{(x,x,y,y) \in \mathbf{F}^4 : x,y \in \mathbf{F}\}, W = \{(x,x,x,y) \in \mathbf{F}^4 : x,y \in \mathbf{F}\}$.
Prove that $U + W = \{(x,x,y,z) \in \mathbf{F}^4 : x,y,z \in \mathbf{F}\}$.

SOLUTION: Let T denote $\{(x,x,y,z) \in \mathbf{F}^4 : x,y,z \in \mathbf{F}\}$.

(a) By definition, $U+W = \{(x_1+x_2, x_1+x_2, y_1+x_2, y_1+y_2) \in \mathbf{F}^4 : (x_1,x_1,y_1,y_1) \in U, (x_2,x_2,x_2,y_2) \in W\}$.
$\Rightarrow \forall v \in U+W,\ \exists\, t \in T,\ \ v = t \Rightarrow U+W \subseteq T$.

(b) $\forall x,y,z \in \mathbf{F}$, let $u = (0,0,y-x,y-x) \in U,\ \ w = (x,x,x,-y+x+z) \in W$
$\Rightarrow (x,x,y,z) = u+w \in U+W$. Hence $\forall t \in T,\ \exists\, u \in U, w \in W,\ \ t = u+w \Rightarrow T \subseteq U+W$. $\square$

---

21 *Suppose* $U = \{(x,y,x+y,x-y,2x) \in \mathbf{F}^5 : x,y \in \mathbf{F}\}$.
Find a subspace W *of* $\mathbf{F}^5$ *such that* $\mathbf{F}^5 = U \oplus W$.

SOLUTION:

(a) Let $W = \{(0,0,z,w,u) \in \mathbf{F}^5 : z,w,u \in \mathbf{F}\}$. Then $W \cap U = \{0\}$.

(b) $\forall x,y,z,w,u \in \mathbf{F}$, let $u = (x,y,x+y,x-y,2x) \in U$,
$$w = (0,0,z-x-y,w-x-y,u-2x) \in W$$
$\Rightarrow (x,y,z,w,u) = u+w \Rightarrow \mathbf{F}^5 \subseteq U+W$. $\square$

---

22 *Suppose* $U = \{(x,y,x+y,x-y,2x) \in \mathbf{F}^5 : x,y \in \mathbf{F}\}$.
Find three subspaces W_1, W_2, W_3 *of* $\mathbf{F}^5$*, none of which equals* $\{0\}$*,*
such that $\mathbf{F}^5 = U \oplus W_1 \oplus W_2 \oplus W_3$.

SOLUTION:

(1) Let $W_1 = \{(0,0,z,0,0) \in \mathbf{F}^5 : z \in \mathbf{F}\}$. Then $W_1 \cap U = \{0\}$.
Let $U_1 = U \oplus W_1$. Then $U_1 = \{(x,y,z,x-y,2x) \in \mathbf{F}^5 : x,y,z \in \mathbf{F}\}$. (Check it!)

(2) Let $W_2 = \{(0,0,0,w,0) \in \mathbf{F}^5 : w \in \mathbf{F}\}$. Then $W_2 \cap U_1 = \{0\}$.
Let $U_2 = U_1 \oplus W_2$. Then $U_2 = \{(x,y,z,w,2x) \in \mathbf{F}^5 : x,y,z,w \in \mathbf{F}\}$.

(3) Let $W_3 = \{(0,0,0,0,u) \in \mathbf{F}^5 : u \in \mathbf{F}\}$. Then $W_3 \cap U_2 = \{0\}$.
Let $U_3 = U_2 \oplus W_3$. Then $U_3 = \{(x,y,z,w,u) \in \mathbf{F}^5 : x,y,z,w,u \in \mathbf{F}\}$.

Thus $\mathbf{F}^5 = ((U \oplus W_1) \oplus W_2) \oplus W_3$. $\square$

---

23 *Prove or give a counterexample: If* V_1, V_2, U *are subspaces of* V *such that*
$V = V_1 \oplus U$ *and* $V = V_2 \oplus U$*, then* $V_1 = V_2$.

HINT: *When trying to discover whether a conjecture in linear algebra is true or false, it is often useful to start by experimenting in* $\mathbf{F}^2$.

SOLUTION: An counterexample:
$V = \mathbf{F}^2, U = \{(x,x) \in \mathbf{F}^2 : x \in \mathbf{F}\}, V_1 = \{(x,0) \in \mathbf{F}^2 : x \in \mathbf{F}\}, V_2 = \{(0,x) \in \mathbf{F}^2 : x \in \mathbf{F}\}$.

---

24 *Let* V_e *denote the set of real-valued even functions on* $\mathbf{R}$
and let V_o *denote the set of real-valued odd functions on* $\mathbf{R}$*. Show that* $\mathbb{R}^{\mathbb{R}} = V_e \oplus V_o$.

SOLUTION:

(a) $V_e \cap V_o = \{f : f(x) = f(-x) = -f(-x)\} = \{0\}$.

(b)
$$\left.\begin{array}{l} f_e \in V_e \Leftrightarrow f_e(x) = f_e(-x) \Leftarrow \text{let } f_e(x) = \dfrac{g(x)+g(-x)}{2} \\ f_o \in V_o \Leftrightarrow f_o(x) = -f_o(-x) \Leftarrow \text{let } f_o(x) = \dfrac{g(x)-g(-x)}{2} \end{array}\right\} \Rightarrow \forall g \in \mathbb{R}^{\mathbb{R}}, g(x) = f_e(x) + f_o(x).\ \square$$

ENDED

2·A

2 (a) *Show that a list of length one in a vector space is linearly independent if and only if the vector in the list is not 0.*

(b) *Show that a list of length two in a vector space is linearly independent if and only if neither of the two vectors in the list is a scalar multiple of the other.*

SOLUTION:

(a) Suppose $v \neq 0$. Then let $av = 0, a \in \mathbf{F}$. Getting $a = 0$. Thus (v) is linearly independent.
Suppose (v) is linearly independent. $av = 0 \Rightarrow a = 0$. Then $v \neq 0$, for if not, $a \neq 0 \Rightarrow av = 0$. Contradicts.

(b) Denote the list by (v, w), where $v, w \in V$. If (v, w) is linearly independent, suppose $av + bw = 0 \Rightarrow a = b = 0$.
Without loss of generality, suppose $v \neq cw\ \forall c \in \mathbf{F}$. Then let $av + bw = 0$, getting $a = b = 0 \Rightarrow (v, w)$ is linearly independent.

---

1 *Prove that if (v_1, v_2, v_3, v_4) spans V, then the list $(v_1 - v_2, v_2 - v_3, v_3 - v_4, v_4)$ also spans V.*

SOLUTION: Assume that $\forall v \in V,\ \exists\ a_1, \ldots, a_4 \in \mathbf{F}$,

$$\begin{aligned} v &= a_1v_1 + a_2v_2 + a_3v_3 + a_4v_4 \\ &= b_1(v_1 - v_2) + b_2(v_2 - v_3) + b_3(v_3 - v_4) + b_4v_4 \\ &= b_1v_1 + (b_2 - b_1)v_2 + (b_3 - b_2)v_3 + (b_4 - b_3)v_4, \text{ letting } b_i = \sum_{r=1}^{i} a_r. \end{aligned}$$

Thus $\forall v \in V,\ \exists\ b_i \in \mathbf{F}$, $v = b_1(v_1 - v_2) + b_2(v_2 - v_3) + b_3(v_3 - v_4) + b_4v_4$.

Hence the list $(v_1 - v_2, v_2 - v_3, v_3 - v_4, v_4)$ also spans V. $\square$

---

6 *Suppose (v_1, v_2, v_3, v_4) is linearly independent in V. Prove that the list $(v_1 - v_2, v_2 - v_3, v_3 - v_4, v_4)$ is also linearly independent.*

SOLUTION: $a_1(v_1 - v_2) + a_2(v_2 - v_3) + a_3(v_3 - v_4) + a_4v_4 = 0$

$\Rightarrow a_1v_1 + (a_2 - a_1)v_2 + (a_3 - a_2)v_3 + (a_4 - a_3)v_4 = 0$

$\Rightarrow a_1 = a_2 - a_1 = a_3 - a_2 = a_4 - a_3 = 0 \Rightarrow a_1 = \cdots = a_4 = 0 \Rightarrow\ \square$

---

7 *Prove that if $(v_1, v_2, \ldots, v_m)$ is a linearly independent list of vectors in V, then $(5v_1 - 4v_2, v_2, v_3, \ldots, v_m)$ is linearly independent.*

SOLUTION: $a_1(5v_1 - 4v_2) + a_2v_2 + a_3v_3 + a_4v_4 = 0$

$\Rightarrow 5a_1v_1 + (a_2 - 4a_1)v_2 + a_3v_3 + a_4v_4 = 0$

$\Rightarrow 5a_1 = a_2 - 4a_1 = a_3 = a_4 = 0 \Rightarrow a_1 = \cdots = a_4 = 0\ \square$

• *Suppose $(v_1, \ldots, v_m)$ is a list of vectors in V. For $k \in \{1, \ldots, m\}$, let $w_k = v_1 + \cdots + v_k$.*

(a) *Show that span$(v_1, \ldots, v_m)$ = span$(w_1, \ldots, w_m)$.*

(b) *Show that $(v_1, \ldots, v_m)$ is linearly independent if and only if $(w_1, \ldots, w_m)$ is linearly independent.*

SOLUTION:

(a) Let span$(v_1, \ldots, v_m) = U$. Assume that $\forall v \in U,\ \exists\ a_i \in \mathbf{F}$,

$$v = a_1v_1 + \cdots + a_mv_m = b_1w_1 + \cdots + b_mw_m = \sum_{j=1}^{m}(\sum_{i=j}^{m} b_i)v_j$$

$\Rightarrow b_1 = a_1,\ \ b_i = a_i - \sum_{r=1}^{i-1} b_r$. Thus $\exists\ b_i \in \mathbf{F}$ such that $v = b_1w_1 + \cdots + b_mw_m$.

又 Each $w_i \in U \Rightarrow$ span$(v_1, \ldots, v_m)$ = span$(w_1, \ldots, w_m)$.

(b) $a_1w_1 + \cdots + a_mw_m = 0$

$\Rightarrow (a_1 + \cdots + a_m)v_1 + \cdots + (a_i + \cdots + a_m)v_i + \cdots + a_mv_m = 0$

$\Rightarrow a_m = \cdots = (a_m + \cdots + a_i) = \cdots = (a_m + \cdots + a_1) = 0.\ \square$

---

10 *Suppose $(v_1, \dots, v_m)$ is linearly independent in V and $w \in V$.*

(a) *Prove that if $(v_1 + w, \dots, v_m + w)$ is linearly dependent, then $w \in span(v_1, \dots, v_m)$.*

(b) *Show that $(v_1, \dots, v_m, w)$ is linearly independent $\iff w \notin span(v_1, \dots, v_m)$.*

SOLUTION:

(a) Suppose $a_1(v_1 + w) + \cdots + a_m(v_m + w) = 0,\ \exists\, a_i \neq= 0 \Rightarrow a_1v_1 + \cdots + a_mv_m = 0 = -(a_1 + \cdots + a_m)w$.

Then $a_1 + \cdots + a_m \neq 0$, for if not, $a_1v_1 + \cdots + a_mv_m = 0$ while $a_i \neq 0$ for some i, contradicts.

Hence $w \in \text{span}(v_1, \dots, v_m)$.

(b) Suppose $w \in \text{span}(v_1, \dots, v_m)$. Then $(v_1, \dots, v_m, w)$ is linearly dependent.

Thus have we proven the "$\Rightarrow$" by its contrapositive.

Suppose $w \notin \text{span}(v_1, \dots, v_m)$. Then by [2.23], $(v_1, \dots, v_m, w)$ is linearly independent. □

---

14 *Prove that V is infinite-dim if and only if there is a sequence $(v_1, v_2, \dots)$ in V such that $(v_1, \dots, v_m)$ is linearly independent for every $m \in \mathbf{N}^+$.*

SOLUTION: Similar to [2.16].

Suppose there is a sequence $(v_1, v_2, \dots)$ in V such that $(v_1, \dots, v_m)$ is linearly independent for any $m \in \mathbf{N}^+$.

Choose an m. Suppose a linearly independent list $(v_1, \dots, v_m)$ spans V.

Then there exists $v_{m+1} \in V$ but $v_{m+1} \notin \text{span}(v_1, \dots, v_m)$. Hence no list spans V. Thus V is infinite-dim.

Conversely it is true as well. For if not, V must be finite-dim, contradicting the assumption. □

---

15 *Prove that $\mathbf{F}^\infty$ is infinite-dim.*

SOLUTION: Let $e_i = (0, \dots, 0, 1, 0, \dots) \in \mathbf{F}^\infty$ for every $m \in \mathbf{N}^+$, where '1' is on the ith entry of e_i.

Suppose $\mathbf{F}^\infty$ is finite-dim. Then let $\text{span}(e_1, \dots, e_m) = V$. But $e_{m+1} \notin \text{span}(e_1, \dots, e_m)$. Contradicts. □

---

16 *Prove that the real vector space of all continuous real-valued functions on the interval $[0, 1]$ is infinite-dimensional.*

SOLUTION: Denote the vec-sp by U. Note that for each $m \in \mathbf{N}^+$, $(1, x, \dots, x^m)$ is linearly independent.

$$\left.\begin{array}{l}\text{Because if } a_0, \dots, a_m \in \mathbf{R} \text{ are such that } a_0 + a_1x + \cdots + a_mx^m = 0,\ \forall x \in [0,1], \\ \text{then the polynomial has infinitely many roots and hence } a_0 = \cdots = a_m = 0.\end{array}\right\} \text{Similar to [2.16], } U \text{ is infinite-dim.}$$

OR. Note that for $a_n = \dfrac{1}{n}$, $\quad a_1 < a_2 < \cdots < a_m,\ \ \forall m \in \mathbf{N}^+$.

Suppose $f_n = \begin{cases} x - \dfrac{1}{n}, & x \in [\frac{1}{n}, 1) \\ 0 \quad , & x \in [0, \frac{1}{n}) \end{cases}$. Then for any m, $f_1(\frac{1}{m}) = \cdots = f_m(\frac{1}{m})$, while $f_{m+1}(\frac{1}{m}) \neq 0$.

Hence $f_{m+1} \notin \text{span}(f_1, \dots, f_m)$. Thus by Problem (14), U is infinite-dim.

---

17 *Suppose $p_0, p_1, \dots, p_m \in \mathcal{P}_m(\mathbf{F})$ such that $p_k(2) = 0$ for each $k \in \{0, \dots, m\}$. Prove that $(p_0, p_1, \dots, p_m)$ is not linearly independent in $\mathcal{P}_m(\mathbf{F})$.*

SOLUTION:

Suppose $(p_0, p_1, \dots, p_m)$ is linearly independent. Define $p \in \mathcal{P}_m(\mathbf{F})$ by $p(z) = z\ \forall z \in \mathbf{F}$.

But $\forall a_i \in \mathbf{F}$, $z \neq a_0p_0(z) + \cdots + a_mp_m(z)$, for if not, let $z = 2$, contradicts. Thus $z \notin \text{span}(p_0, p_1, \dots, p_m)$.

Then $\text{span}(p_0, p_1, \dots, p_m) \subsetneq \mathcal{P}_m(\mathbf{F})$ while the list $(p_0, p_1, \dots, p_m)$ has length $m + 1$.

Hence $(p_0, p_1, \dots, p_m)$ is linearly dependent in $\mathcal{P}_m(\mathbf{F})$.

For if not, notice that the list $(1, z, \dots, z^m)$ spans $\mathcal{P}_m(\mathbf{F})$,

thus by [2.23], $(p_0, p_1, \dots, p_m)$ spans $\mathcal{P}_m(\mathbf{F})$. Contradicts. □

ENDED

2·B

NOTE FOR *linearly independent sequence and [2.34].*

"$V = \operatorname{span}(v_1, \dots, v_n, \dots)$" is an invalid expression.

If we allow using "infinite list", then we must guarantee that $(v_1, \dots, v_n, \dots)$ is a spanning "list" such that for all $v \in V$, there exists a certain positive integer such that $v = a_1 v_{\alpha_1} + \cdots + a_n v_{\alpha_n}$, where $\Gamma = \{\alpha_1, \dots, \alpha_n\}$ is an finite index set. The key point is, how do we find such a "list"?

NOTE FOR "$\complement_V U \cap \{0\}$": "$\complement_V U \cap \{0\}$" is supposed to be "$W$", where $V = U \oplus W$.

But if we let $u \in U \backslash \{0\}$ and $w \in W \backslash \{0\}$, then $\left.\begin{array}{l} w \in \complement_V U \cap \{0\} \\ u \pm w \in \complement_V U \cap \{0\} \end{array}\right\} \Rightarrow u \in \complement_V U \cap \{0\}$. Contradicts.

NEW NOTATION: Denote the set $\{W_1, W_2 \dots\}$ by $\mathcal{S}_V U$, where for each $W_i, V = U \oplus W_i$. See also in (1.C.23).

---

1 *Find all vector spaces that have exactly one basis.* **SOLUTION:** $\mathbf{F} = \mathbf{C}, \mathbf{R}, \mathbf{Q}, \{0,1\}, \mathcal{P}_0(\mathbf{F})$.

---

6 *Suppose (v_1, v_2, v_3, v_4) is a basis of V. Prove that $(v_1 + v_2, v_2 + v_3, v_3 + v_4, v_4)$ is also a basis.*

SOLUTION: $\forall v \in V,\ \exists!\ a_1, \dots, a_4 \in \mathbf{F}, v = a_1 v_1 + a_2 v_2 + a_3 v_3 + a_4 v_4$.

Assune that $v = b_1(v_1 + v_2) + b_2(v_2 + v_3) + b_3(v_3 + v_4) + b_4 v_4$. Then $v = b_1 v_1 + (b_1 + b_2) v_2 + (b_2 + b_3) v_3 + (b_3 + b_4) v_4$.

$\Rightarrow \exists!\ b_1 = a_1,\ \ b_2 = a_2 - b_1,\ \ b_3 = a_3 - b_2,\ \ b_4 = a_4 - b_3 \in \mathbf{F}$. $\square$

---

7 *Prove or give a counterexample: If v_1, v_2, v_3, v_4 is a basis of V and U is a subspace of V such that $v_1, v_2 \in U$ and $v_3 \notin U$ and $v_4 \in U$, then v_1, v_2 is a basis of U.*

SOLUTION: Let $V = \mathbf{F}^4, v_1 = (1,0,0,0), v_2 = (0,1,0,0), v_3 = (0,0,1,1), v_4 = (0,0,0,1)$.

And $U = \{(x, y, z, 0) \in \mathbf{R}^4 : x, y, z \in \mathbf{F}\}$. We have an counterexample.

• *Suppose V is finite-dim and U, W are subspaces of V such that $V = U + W$. Prove that there exists a basis of V consisting of vectors in $U \cup W$.*

SOLUTION: Let $(u_1, \dots, u_m)$ and $(w_1, \dots, w_n)$ be bases of U and W respectively.

Then $V = \operatorname{span}(u_1, \dots, u_m) + \operatorname{span}(w_1, \dots, w_n) = \operatorname{span}(u_1, \dots, u_m, w_1, \dots, w_n)$.

Hence, by [2.31], we get a basis of V consisting of vectors in U or W. $\square$

---

8 *Suppose U and W are subspaces of V such that $V = U \oplus W$. Suppose also that $(u_1, \dots, u_m)$ is a basis of U and $(w_1, \dots, w_n)$ is a basis of W. Prove that $(u_1, \dots, u_m, w_1, \dots, w_n)$ is a basis of V.*

SOLUTION:

$\forall v \in V,\ \exists!\, a_i, b_i \in \mathbf{F}, v = (a_1 u_1 + \cdots + a_m u_m) + (b_1 w_1 + \cdots + b_n w_n)$

$\Rightarrow (a_1 u_1 + \cdots + a_m u_m) = -(b_1 w_1 + \cdots + b_n w_n) \in U \cap W = \{0\}$. Thus $a_1 = \cdots = a_m = b_1 = \cdots = b_n$. $\square$

• *Suppose V is a real vector space. Show that if $(v_1, \dots, v_n)$ is a basis of V (as a real vector space), then $(v_1, \dots, v_n)$ is also a basis of the complexification $V_{\mathbb{C}}$ (as a complex vector space).*

See Section 1B (4e) for the definition of the complexification $V_{\mathbb{C}}$.

SOLUTION:

$\forall u + \mathrm{i}v \in V_{\mathbb{C}},\ \exists!\ u, v \in V, a_i, b_i \in \mathbf{R},$

$u + \mathrm{i}v = (a_1 v_1 + \cdots + a_n v_n) + \mathrm{i}(b_1 v_1 + \cdots + b_n v_n) = (a_1 + b_1 \mathrm{i}) v_1 + \cdots + (a_n + b_n \mathrm{i}) v_n$

$\Rightarrow\ u + \mathrm{i}v = c_1 v_1 + \cdots + c_n v_n,\ \exists!\, c_i = a_i + b_i \mathrm{i} \in \mathbf{C}$

$\Rightarrow$ By the uniqueness of c_i and [2.29], $(v_1, \dots, v_n)$ is a basis of $V_{\mathbb{C}}$. $\square$

ENDED

2·C

1 *Suppose V is finite-dim and U is a subspace of V such that* $\dim V = \dim U$.

Let $(u_1, \ldots, u_m)$ be a basis of U. Then $n = \dim U = \dim V$. 又 $u_i \in V$.

Then by [2.39], $(u_1, \ldots, u_m)$ is a basis of V. Thus $V = U$.

---

2 *Show that the subspaces of* $\mathbf{R}^2$ *are precisely* $\{0\}$, *all lines in* $\mathbf{R}^2$ *containing the origin, and* $\mathbf{R}^2$.

SOLUTION:

Suppose U is a subspace of $\mathbf{R}^2$. Let $\dim U = n$.

If $n = 0$, then $U = \{0\}$.

If $n = 1$, then $U = \operatorname{span}(v)$, where v is a vector in $\mathbf{R}^2$. Thus U can be any line in $\mathbf{R}^2$ containing the origin.

If $n = 2$, then $U = \operatorname{span}(v, w)$, where v, w are vectors in $\mathbf{R}^2$ and (v, w) is linearly independent $\Rightarrow U = \mathbf{R}^2$. $\square$

---

3 *Show that the subspaces of* $\mathbf{R}^3$ *are precisely* $\{0\}$, *all lines in* $\mathbf{R}^3$ *containing the origin, all planes in* $\mathbf{R}^3$ *containing the origin, and* $\mathbf{R}^3$.

SOLUTION:

Suppose U is a subspace of $\mathbf{R}^3$. Let $\dim U = n$.

If $n = 0$, then $U = \{0\}$.

If $n = 1$, then $U = \operatorname{span}(v)$, where v is a vector in $\mathbf{R}^3$. Thus U can be any line in $\mathbf{R}^3$ containing the origin.

If $n = 2$, then $U = \operatorname{span}(v, w)$, where v, w are vectors in $\mathbf{R}^3$ and (v, w) is linearly independent.

Thus U can be any plane in $\mathbf{R}^3$ containing the origin.

If $n = 3$, then $U = \operatorname{span}(u, v, w)$, where u, v, w are vectors in $\mathbf{R}^3$ and (u, v, w) is linearly independent

$\Rightarrow U = \mathbf{R}^3$. $\square$

---

7 (a) *Let* $U = \{p \in \mathcal{P}_4(\mathbf{F}) : p(2) = p(5) = p(6)\}$. *Find a basis of* U.

(b) *Extend the basis in (a) to a basis of* $\mathcal{P}_4(\mathbf{F})$.

(c) *Find a subspace* W *of* $\mathcal{P}_4(\mathbf{F})$ *such that* $\mathcal{P}_4(\mathbf{F}) = U \oplus W$.

SOLUTION:

Suppose $p(z) = az^4 + bz^3 + cz^2 + dz + e$ and $p(2) = p(5) = p(6)$.

$$\text{Then}\begin{cases} p(2) = 16a + 8b + 4c + 2d + e \text{ (I)} \\ p(5) = 625a + 125b + 25c + 5d + e \text{ (II)} \\ p(6) = 1296a + 216b + 36c + 6d + e \text{ (III)} \end{cases}$$

You don't have to compute to know that the dimension of the set of soultions is 3.

(a) A basis: $1, (z-2)(z-5)(z-6), z(z-2)(z-5)(z-6)$.

(b) Extend to a basis of $\mathcal{P}_4(\mathbf{F})$ as $1, z, z^2, (z-2)(z-5)(z-6), z(z-2)(z-5)(z-6)$.

(c) Let $W = \operatorname{span}(z, z^2) = \{az + bz^2 : a, b \in \mathbf{F}\}$, so that $\mathcal{P}_4(\mathbf{F}) = U \oplus W$. $\square$

---

9 *Suppose $(v_1, \ldots, v_m)$ is linearly independent in V and $w \in V$.*

Prove that $\dim$ *span*$(v_1 + w, \ldots, v_m + w) \geq m - 1$.

SOLUTION:

Note that $v_i - v_1 = (v_i + w) - (v_1 + w) \in \operatorname{span}(v_1 + w, \ldots, v_n + w)$, for each $i = 1, \ldots, m$.

$(v_1, \ldots, v_m)$ is linearly independent $\Rightarrow (v_1, v_2 - v_1, \ldots, v_m - v_1)$ is linearly independent

$\Rightarrow (v_2 - v_1, \ldots, v_m - v_1)$ is linearly independent of length $m - 1$.

又 By the contrapositive of (2.A.10), $w \notin \operatorname{span}(v_1, \ldots, v_m) \Rightarrow (v_1 + w, \ldots, v_m + w)$ is linearly independent.

$\therefore\ m \geq \dim \operatorname{span}(v_1 + w, \ldots, v_m + w) \geq m - 1$. $\square$

---

10 *Suppose m is a positive integer and $p_0, p_1, \ldots, p_m \in \mathcal{P}(\mathbf{F})$ are such that each p_k has degree k. Prove that $(p_0, p_1, \ldots, p_m)$ is a basis of $\mathcal{P}_m(\mathbf{F})$.*

SOLUTION: Using mathematical induction on m.

(i) For p_0, $\deg p_0 = 0 \Rightarrow \text{span}\,(p_0) = \text{span}\,(1)$.

(ii) Suppose for $i \geq 1$, $\text{span}\,(p_0, p_1, \ldots, p_i) = \text{span}(1, x, \ldots, x^i)$.

Then $\text{span}(p_0, p_1, \ldots, p_i, p_{i+1}) \subseteq \text{span}\,(1, x, \ldots, x^i, x^{i+1})$.

又 $\deg p_{i+1} = i + 1$, $\quad p_{i+1}(x) = a_{i+1}x^{i+1} + r_{i+1}(x);\quad a_{i+1} \neq 0,\quad \deg r_{i+1} \leq i$.

$\Rightarrow x^{i+1} = \frac{1}{a_{i+1}}(p_{i+1}(x) - r_{i+1}(x)) \in \text{span}\,(1, x, \ldots, x^i, p_{i+1}) = \text{span}\,(p_0, p_1, \ldots, p_i, p_{i+1})$.

$\therefore\ x^{i+1} \in \text{span}\,(p_0, p_1, \ldots, p_i, p_{i+1})$. $\Rightarrow \text{span}\,(1, x, \ldots, x^i, x^{i+1}) \subseteq \text{span}\,(p_0, p_1, \ldots, p_i, p_{i+1})$.

Thus $\mathcal{P}_m(\mathbf{F}) = \text{span}\,(1, x, \ldots, x^m) = \text{span}(p_0, p_1, \ldots, p_m)$. $\square$

• *Suppose m is a positive integer. For $0 \leq k \leq m$, let $p_k(x) = x^k(1-x)^{m-k}$. Show that $(p_0, \ldots, p_m)$ is a basis of $\mathcal{P}(\mathbf{F})$.*

The basis in this exercise leads to what are called Bernstein polynomials. You can do a web search to learn how Bernstein polynomials are used to approximate continuous functions on $[0, 1]$.

SOLUTION: Using mathematical induction.

(i) $k = 0, 1, 2$, $p_m(x) = x^m$, $\ p_{m-1}(x) = x^{m-1} - x^m$, $\ p_{m-2}(x) = x^{m-2} + x^m - 2x^{m-1}$.

(ii) $k \geq 2$. Suppose for $p_{m-k}(x)$, $\ \exists\,!\ a_i \in \mathbf{F}$, $x^{m-k} = p_{m-k}(x) + a_m x^m + \cdots + a_{m-k+1}x^{m-k+1}$.

Then for $p_{m-k-1}(x)$, $\ \exists\,!\ c_i \in \mathbf{F}$,

$$x^{m-k-1} = p_{m-k-1}(x) + \mathcal{C}_{k+1}^{1}(-1)^2 x^{m-k} + \cdots + \mathcal{C}_{k+1}^{k}(-1)^{k+1}x^{m-1} + (-1)^{k-2}x^m$$

$$\Rightarrow c_{m-i} = \mathcal{C}_{k+1}^{k+1-i}(-1)^{k-i}.$$

Thus for each x^i, $\ \exists\,!\ b_i \in \mathbf{F}$, $x^i = b_m p_m(x) + \cdots + b_{m-i}p_{m-i}(x)$.

$\Rightarrow \text{span}(x^m, \ldots, x, 1) = \text{span}\underbrace{(p_m, \ldots, p_1, p_0)}_{\text{Basis}}$. $\square$

• *Suppose V is finite-dim and V_1, V_2, V_3 are subspaces of V with $\dim V_1 + \dim V_2 + \dim V_3 > 2\dim V$. Prove that $V_1 \cap V_2 \cap V_3 \neq \{0\}$.*

SOLUTION:
$$\left.\begin{array}{l} \dim V_1 + \dim V_2 > 2\dim V - \dim V_3 \geq \dim V \Rightarrow V_1 \cap V_2 \neq \{0\} \\ \dim V_2 + \dim V_3 > 2\dim V - \dim V_1 \geq \dim V \Rightarrow V_2 \cap V_3 \neq \{0\} \\ \dim V_1 + \dim V_3 > 2\dim V - \dim V_2 \geq \dim V \Rightarrow V_1 \cap V_3 \neq \{0\} \end{array}\right\} \Rightarrow V_1 \cap V_2 \cap V_3 \neq \{0\}.\ \square$$

• *Suppose V is finite-dim and U is a subspace of V with $U \neq V$. Let $n = \dim V$, $m = \dim U$. Prove that there exist $(n-m)$ subspaces of V, say $U_1, \ldots, U_{n-m}$, each of dimension $(n-1)$, such that $\bigcap_{i=1}^{n-m} U_i = U$.*

SOLUTION: Let $(v_1, \ldots, v_m)$ be a basis of U, extend to a basis of V as $(v_1, \ldots, v_m, \ldots, v_n)$.

Define $U_i = \text{span}\,(v_1, \ldots, v_m, v_{m+1}, \ldots, v_{m+i-1}, v_{m+i+1}, \ldots, v_n)$ for each i. Thus we are done.

EXAMPLE: Suppose $\dim V = 6$, $\dim U = 3$.

$$\underbrace{(\underbrace{v_1, v_2, v_3}_{\text{Basis of U}}, v_4, v_5, v_6)}_{\text{Basis of V}}, \text{ define } \left.\begin{array}{l} U_1 = \text{span}(v_1, v_2, v_3) \oplus \text{span}(v_5, v_6) \\ U_2 = \text{span}(v_1, v_2, v_3) \oplus \text{span}(v_4, v_6) \\ U_3 = \text{span}(v_1, v_2, v_3) \oplus \text{span}(v_4, v_5) \end{array}\right\} \Rightarrow \dim U_i = 6 - 1,\ i = \underbrace{1, 2, 3}_{6-3=3}.$$

$\square$

---

14 *Suppose that $V_1, \ldots, V_m$ are finite-dim subspaces of V.*
Prove that $V_1 + \cdots + V_m$ is finite-dim and $\dim(V_1 + \cdots + V_m) \leq \dim V_1 + \cdots + \dim V_m$.

SOLUTION:

Choose a basis $\mathcal{E}_i$ of $V_i \Rightarrow V_1 + \cdots + V_m = \operatorname{span}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m)$; $\dim U_i = \operatorname{card} \mathcal{E}_i$.

Then $\dim(V_1 + \cdots + V_m) = \dim \operatorname{span}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m)$.

又 $\dim \operatorname{span}(\mathcal{E}_1 \cup \cdots \cup E_m) \leq \operatorname{card}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m) \leq \operatorname{card} \mathcal{E}_1 + \cdots + \operatorname{card} \mathcal{E}_m$.

Thus $\dim(V_1 + \cdots + V_m) \leq \dim U_1 + \cdots + \dim U_m$.

•*The inequality above is an equality if and only if $V_1 + \cdots + V_m$ is a direct sum.*

For each i, $(V_1 + \cdots + V_i) \cap V_{i+1} = \{0\} \iff V_1 + \cdots + V_m$ is a direct sum $\iff \square$

---

17 *Suppose V_1, V_2, V_3 are subspaces of a finite-dim vector space, then*

$$\dim(V_1 + V_2 + V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \dim(V_1 \cap V_2) - \dim(V_1 \cap V_3) - \dim(V_2 \cap V_3) + \dim(V_1 \cap V_2 \cap V_3).$$

Explain why you might think and prove the formula above or give a counterexample.

SOLUTION:

Looks like: given three sets A, B and C.

Note that: $\operatorname{card}(X \cup Y) = \operatorname{card}(X) + \operatorname{card}(Y) - \operatorname{card}(X \cap Y)$; $(X \cup Y) \cap Z = (X \cap Z) \cup (Y \cap Z)$.

Then: $\operatorname{card}((A \cup B) \cup C) = \operatorname{card}(A \cup B) + \operatorname{card} C - \operatorname{card}((A \cup B) \cap C)$.

And: $\operatorname{card}((A \cup B) \cap C) = \operatorname{card}((A \cap C) \cup (B \cap C)) = \operatorname{card}(A \cap C) + \operatorname{card}(B \cap C) - \operatorname{card}(A \cap B \cap C)$.

Thus: $\operatorname{card}((A \cup B) \cup C) = \operatorname{card} A + \operatorname{card} B + \operatorname{card} C + \operatorname{card}(A \cap B \cap C) - \operatorname{card}(A \cap B) - \operatorname{card}(A \cap C) - \operatorname{card}(B \cap C)$.

Because $(V_1 + V_2) + V_3 = V_1 + (V_2 + V_3) = (V_1 + V_3) + V_2$.

$$\begin{aligned}
\dim(V_1 + V_2 + V_3) &= \dim(V_1 + V_2) + \dim(V_3) - \dim((V_1 + V_2) \cap V_3) \quad (1) \\
&= \dim(V_2 + V_3) + \dim(V_1) - \dim((V_2 + V_3) \cap V_1) \quad (2) \\
&= \dim(V_1 + V_3) + \dim(V_2) - \dim((V_1 + V_3) \cap V_2) \quad (3)
\end{aligned}$$

Notice that $(X + Y) \cap Z \neq X \cap Z + Y \cap Z$.

For example, $X = \{(x, 0) \in \mathbf{R}^2 : x \in \mathbf{R}\}, Y = \{(0, y) \in \mathbf{R}^2 : y \in \mathbf{R}\}, Z = \{(z, z) \in \mathbf{R}^2 : z \in \mathbf{R}\}$.

• **COROLLARY:** *If V_1, V_2 and V_3 are finite-dim vector spaces, then* $\dfrac{(1) + (2) + (3)}{3}$:

$$\dim(V_1 + V_2 + V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \frac{\dim(V_1 \cap V_2) + \dim(V_1 \cap V_3) + \dim(V_2 \cap V_3)}{3} - \frac{\dim((V_1 + V_2) \cap V_3) + \dim((V_1 + V_3) \cap V_2) + \dim((V_2 + V_3) \cap V_1)}{3}.$$

The formula above may seem strange because the right side does not look like an integer. $\square$

ENDED

3·A

2 *Suppose $b, c \in \mathbf{R}$. Define $T : \mathcal{P}(\mathbf{R}) \to \mathbf{R}^2$ by*

$$Tp = \left(3p(4) + 5p'(6) + bp(1)p(2), \int_{-1}^{2} x^3 p(x) dx + c \sin p(0)\right).$$

Show that T is linear if and only if $b = c = 0$.

SOLUTION:

(a) Suppose $b = c = 0$, then $\forall p, q \in \mathcal{P}(\mathbf{R}), T(p + q) = (3(p + q)(4) + 5(p + q)'(6), \int_{-1}^{2} x^3 (p + q)(x) \mathrm{d}x)$.

Because $(p + q)(x) = p(x) + q(x), (p + q)'(x) = p'(x) + q'(x)$,

$\int_{-1}^{2} x^3 (p + q)(x) \mathrm{d}x = \int_{-1}^{2} x^3 p(x) \mathrm{d}x + \int_{-1}^{2} x^3 q(x) \mathrm{d}x$.

$\Rightarrow T(p + q) = Tp + Tq$. Similarly, $\forall \lambda \in \mathbf{F}$, $\lambda Tp = T(\lambda p)$. Thus T is linear.

(b) Suppose T is linear, denote the linear map in (a) by $S \Rightarrow (T-S)$ is linear.

$\Rightarrow (T-S)(p) = (bp(1)p(2), c\sin p(0))$ is linear.

Consider $p(x) = q(x) = \frac{\pi}{2},\ \forall x \in \mathbf{R}$.

$\Rightarrow ((T-S)(p+q) = (T-S)(\pi) = (b\pi^2, 0) = (T-S)(\frac{\pi}{2}) + (T-S)(\frac{\pi}{2}) = (b\frac{\pi^2}{2}, 2c) \Rightarrow b = c = 0.$ $\square$

• **TIPS:** *$T : V \to W$ is linear* $\Longleftrightarrow \begin{cases} \forall v, u \in V, T(v+u) = Tv + Tu \\ \forall v, u \in V, \lambda \in \mathbf{F}, T(\lambda v) = \lambda(Tv) \end{cases} \Longleftrightarrow T(v + \lambda u) = Tv + \lambda Tu.$

---

3 *Suppose $T \in \mathcal{L}(\mathbf{F}^n, \mathbf{F}^m)$. Prove that $\exists\ A_{j,k} \in \mathbf{F}$ such that*

$$T(x_1, \ldots, x_n) = (A_{1,1}x_1 + \cdots + A_{1,n}x_n, \cdots, A_{m,1}x_1 + \cdots + A_{m,n}x_n)$$

for any $(x_1, \ldots, x_n) \in \mathbf{F}^n$.

SOLUTION:

Let $T(1,0,0,\ldots,0,0) = (A_{1,1}, \ldots, A_{m,1})$,

$T(0,1,0,\ldots,0,0) = (A_{1,2}, \ldots, A_{m,2})$,

$\vdots$

$T(0,0,0,\ldots,0,1) = (A_{1,n}, \ldots, A_{m,n})$.

Note that $(1,0,\ldots,0,0), \cdots, (0,0,\ldots,0,1)$ is a basis of $\mathbf{F}^n$.

Then by [3.5], we are done. $\square$

---

4 *Suppose $T \in \mathcal{L}(V, W)$ and $(v_1, \ldots, v_m)$ is a list of vectors in V such that $(Tv_1, \ldots, Tv_m)$ is linearly independent in W. Prove that $(v_1, \ldots, v_m)$ is linearly independent.*

SOLUTION:

Suppose $a_1v_1 + \cdots + a_mv_m = 0$. Then $a_1Tv_1 + \cdots + a_mTv_m = 0$. Thus $a_1 = \cdots = a_m = 0$.$\square$

---

5 *Prove that $\mathcal{L}(V, W)$ is a vector space,*

SOLUTION: Note that $\mathcal{L}(V, W)$ is a subspace of W^V. $\square$

---

7 *Show that every linear map from a one-dimensional vector space to itself is multiplication by some scalar. More precisely, prove that if* $\dim V = 1$ *and $T \in \mathcal{L}(V)$, then there exists $\lambda \in \mathbf{F}$ such that $Tv = \lambda v$ for all $v \in V$.*

SOLUTION:

Let u be a nonzero vector in $V \Rightarrow V = \text{span}(u)$.

Because $Tu \in V \Rightarrow Tu = \lambda u$ for some λ.

Suppose $v \in V \Rightarrow v = au,\ \exists!\, a \in \mathbf{F}$. Then $Tv = T(au) = \lambda au = \lambda v$. $\square$

---

8 *Give an example of a function $\varphi : \mathbf{R}^2 \to \mathbf{R}$ such that $\varphi(av) = a\varphi(v)$ for all $a \in \mathbf{R}$ and all $v \in \mathbf{R}^2$ but φ is not linear.*

SOLUTION:

Define $T(x,y) = \begin{cases} x+y, \text{if } (x,y) \in \text{span}(3,1), \\ 0, \qquad \text{otherwise.} \end{cases}$

OR. Define $T(x,y) = \sqrt[3]{(x^3+y^3)}$. $\square$

---

9 *Give an example of a function $\varphi : \mathbf{C} \to \mathbf{C}$ such that $\varphi(w+z) = \varphi(w) + \varphi(z)$ for all $w, z \in \mathbf{C}$ but φ is not linear.*

*(Here **C** is thought of as a complex vector space.)*

SOLUTION:

Suppose $V_{\mathbb{C}}$ is the complexification of a vector space V. Suppose $\varphi : V_{\mathbb{C}} \to V_{\mathbb{C}}$.

Define $\varphi(u + \mathrm{i}v) = u = \Re(u + \mathrm{i}v)$

OR. Define $\varphi(u + \mathrm{i}v) = v = \Im(u + \mathrm{i}v)$. $\square$

• OR (3.D.16) *Suppose V is finite-dim and $T \in \mathcal{L}(V)$.*
Prove that T is a scalar multiple of the identity if and only if $ST = TS$ for every $S \in \mathcal{L}(V)$.

SOLUTION:

Assume that (v, Tv) is linearly dependent for every $v \in V$, then by (2.A.2.(b)), $Tv = \lambda_v v$ for some $\lambda_v \in \mathbf{F}$.

To prove that λ_v is independent of v

(in other words, for any two distinct nonzero vectors v and w in V, we have $\lambda_v \neq \lambda_w$), we discuss in two cases:

$$\left.\begin{array}{l} (-) \text{ If } (v,w) \text{ is linearly independent, } \lambda_{v+w}(v+w) = T(v+w) = Tv + Tw = a_v v + a_w w \\ \qquad\qquad\qquad\qquad \Rightarrow (\lambda_{v+w} - \lambda_v)v + (\lambda_{v+w} - \lambda_w)w = 0 \\ (=) \text{ Otherwise, suppose } w = cv,\ a_w w = Tw = cTv = ca_v v = a_v w \Rightarrow (a_w - a_v)w \end{array}\right\} \Rightarrow a_w = a_v.$$

Now we prove the assumption by contradiction. Suppose (v, Tv) is linearly independent for every nonzero vector $v \in V$.

Fix one v. Extend to $(v, Tv, u_1, \ldots, u_n)$ a basis of V.

Define $S \in \mathcal{L}(V)$ by $S(av + bTv + c_1 u_1 + \cdots + c_n u_n) = bv \Rightarrow S(Tv) = v = T(Sv) = 0$.

Hence a contradiction arises. □

---

10 *Suppose U is a subspace of V with $U \neq V$. Suppose $S \in \mathcal{L}(U, W)$ and $S \neq 0$*
(which means that $Su \neq 0$ for some $u \in U$).

Define $T : V \to W$ by $Tv = \begin{cases} Sv, & \text{if } v \in U, \\ 0, & \text{if } v \in V \backslash U. \end{cases}$ Prove that T is not a linear map on V.

SOLUTION:

Suppose T is a linear map. And $v \in V \backslash U,\ u \in U$ such that $Su \neq 0$.

Then $v + u \in V \backslash U$, (for if not, $v = (v+u) - u \in U$) while $T(v+u) = 0 = Tv + Tu = 0 + Su \Rightarrow Su = 0$.

Hence we get a contradiction. □

---

11 *Suppose V is finite-dim. Prove that every linear map on a subspace of V can be extended to a linear map on V. In other words, show that if U is a subspace of V and $S \in \mathcal{L}(U, W)$, then there exists $T \in \mathcal{L}(V, W)$ such that $Tu = Su$ for all $u \in U$.*

SOLUTION: Define $T \in \mathcal{L}(V, W)$ by $T(a_1 u_1 + \cdots + a_n u_n + a_{n+1} u_{n+1} + \cdots + a_m u_m) = a_1 S u_1 + \cdots + a_n S u_n$. Where:
Let $(u_1, \ldots, u_n)$ be a basis of U, extend to a basis of V as $(u_1, \ldots, u_n, \ldots, u_m)$.

---

12 *Suppose V is finite-dim with $\dim V > 0$, and W is infinite-dim.*
Prove that $\mathcal{L}(V, W)$ is infinite-dim.

SOLUTION:

Let $(v_1, \ldots, v_n)$ be a basis of V. Let $(w_1, \ldots, w_m)$ be linearly independent in W for any $m \in \mathbf{N}^+$.

Define $T_{x,y} \in \mathcal{L}(V, W)$ by $T_{x,y}(v_x) = w_y, \forall x \in \{1, \ldots, n\}, y \in \{1, \ldots, m\}$.

Suppose $a_1 T_{x,1} + \cdots + a_m T_{x,m} = 0$. Then $(a_1 T_{x,1} + \cdots + a_m T_{x,m})(v_x) = 0 = a_1 w_1 + \cdots + a_m w_m$.

$\Rightarrow a_1 = \cdots = a_m = 0$. 又 m is arbitrarily chosen.

Thus $(T_{x,1}, \ldots, T_{x,m})$ is a linearly independent list in $\mathcal{L}(V, W)$ for any x and length m. Hence by (2.A.14). □

---

13 *Suppose $(v_1, \ldots, v_m)$ is a linearly dependent list of vectors in V.*
Suppose also that $W \neq \{0\}$. Prove that there exist $(w_1, \ldots, w_m) \in W$ such that no $T \in \mathcal{L}(V, W)$ satisfies $Tv_k = w_k$ for each $k = 1, \ldots, m$.

SOLUTION: We show it by contradiction.

By linear independence lemma, $\exists\ j \in \{1, \ldots, m\}$ such that $v_j \in \operatorname{span}(v_1, \ldots, v_{j-1})$.

Fix j. Let $w_j \neq 0$, while $w_1 = \cdots = w_{j-1} = w_{j+1} = w_m = 0$.

Define T by $Tv_k = w_k$ for all k. Suppose $a_1 v_1 + \cdots + a_m v_m = 0$ (where $a_j \neq 0$).

Then $T(a_1 v_1 + \cdots + a_m v_m) = 0 = a_1 w_1 + \cdots + a_m w_m = a_j w_j$ while $a_j \neq 0$ and $w_j \neq 0$. Contradicts. □

• *Suppose V is finite-dim. Show that the only two-sided ideals of $\mathcal{L}(V)$ are $\{0\}$ and $\mathcal{L}(V)$.*

A subspace $\mathcal{E}$ of $\mathcal{L}(V)$ is called a two-sided ideal of $\mathcal{L}(V)$ if $TE \in \mathcal{E}, ET \in \mathcal{E},\ \forall E \in \mathcal{E}, T \in \mathcal{L}(V)$.

SOLUTION:

Let $(v_1, \dots, v_n)$ be a basis of V. If $\mathcal{E} = 0$, then we are done.

Suppose $\mathcal{E} \neq 0$ and $\mathcal{E}$ is a two-sided ideal of $\mathcal{L}(V)$. Let $S \in \mathcal{E}\backslash\{0\}$.

Suppose $Sv_i \neq 0$ and $Sv_i = a_1 v_1 + \cdots + a_n v_n$, where $a_k \neq 0$.

Define $R_{x,y} \in \mathcal{L}(V)$ by $R_{x,y}(v_x) = v_y, R_{x,y}(v_z) = 0\,(\,z \neq x\,)$. Then for any $x, y \in \mathbf{N}^+$,

$(R_{k,y}S)(v_i) = a_k v_y \Rightarrow ((R_{k,y}S) \circ R_{x,i})(v_x) = a_k v_y$, and $((R_{k,y}S) \circ R_{x,i})(v_z) = 0$ for $z \neq x$.

Thus $R_{k,y}SR_{x,i} = a_k R_{x,y}$. Denote by $T_{x,y}$.

Getting $(\frac{1}{a_k}T_{1,1} + \cdots + \frac{1}{a_k}T_{n,n})v_j = v_j \Rightarrow \sum\limits_{r=1}^{n} \frac{1}{a_k}T_{r,r} = I$.

又 By assumption, $T_{x,y} \in \mathcal{E} \Rightarrow I \in \mathcal{E}$.

Hence for any $T \in \mathcal{L}(V), I \circ T = T \circ I = T \in \mathcal{E} \Rightarrow \mathcal{E} = \mathcal{L}(V)$. $\square$

ENDED

3·B

2 *Suppose $S, T \in \mathcal{L}(V)$ are such that range $S \subseteq$ null T. Prove that $(ST)^2 = 0$.*

SOLUTION: $TS = 0 \Rightarrow STST = (ST)^2 = 0$. $\square$

---

3 *Suppose $(v_1, \dots, v_m)$ in V. Define $T \in \mathcal{L}(\mathbf{F}^m, V)$ by $T(z_1, \dots, z_m) = z_1 v_1 + \cdots + z_m v_m$.*

(a) *What property of T corresponds to $(v_1, \dots, v_m)$ spanning V?*

(b) *What property of T corresponds to $(v_1, \dots, v_m)$ being linearly independent?*

ANSWER: (a) Surjectivity; (b) Injectivity. $\square$

---

4 *Show that $U = \{T \in \mathcal{L}(\mathbf{R}^5, \mathbf{R}^4) : \dim \textit{null}\, T > 2\}$ is not a subspace of $\mathcal{L}(\mathbf{R}^5, \mathbf{R}^4)$.*

SOLUTION: Let $(v_1, v_2, v_3, v_4, v_5)$ be a basis of $\mathbf{R}^5$, (w_1, w_2, w_3, w_4) be a basis of $\mathbf{R}^4$.

Define $T_1, T_2 \in U$ as $T_1 v_1 = 0,\ T_1 v_2 = 0,\ T_1 v_3 = 0,\ T_1 v_4 = w_4,\ T_1 v_5 = w_1$;

$T_2 v_1 = 0,\ T_2 v_2 = 0,\ T_2 v_3 = w_3,\ T_2 v_4 = 0,\ T_2 v_5 = w_4$. Thus $T_1 + T_2 \notin U$.

For $U' = \{T \in \mathcal{L}(\mathbf{R}^5, \mathbf{R}^4) : \dim \textit{null}\, T > 0\}$,

define $T_1, T_2 \in U'$ as $T_1 v_1 = 0,\ T_1 v_2 = w_2,\ T_1 v_3 = w_3,\ T_1 v_4 = w_4,\ T_1 v_5 = w_1$;

$T_2 v_1 = w_1,\ T_2 v_2 = w_2,\ T_2 v_3 = 0,\ T_2 v_4 = w_3,\ T_2 v_5 = w_4$. Thus $T_1 + T_2 \notin U'$. $\square$

---

7 *Suppose V is finite-dim with $2 \leq \dim V \leq \dim W$, if W is finite-dim.*

Show that $U = \{\, T \in \mathcal{L}(V, W) : T$ is not injective $\}$ is not a subspace of $\mathcal{L}(V, W)$.

SOLUTION:

Let $(v_1, \dots, v_n)$ be a basis of V, $(w_1, \dots, w_m)$ be linearly independent in W.

(Let $\dim W = m$, if W is finite, otherwise, we choose $m \in \{n, n+1, \dots\}$ arbitrarily; $2 \leq n \leq m$).

Define $T_1 \in \mathcal{L}(V, W)$ as $T_1 : \quad v_1 \mapsto 0, \quad v_2 \mapsto w_2, \quad v_i \mapsto w_i$.

Define $T_2 \in \mathcal{L}(V, W)$ as $T_2 : \quad v_1 \mapsto w_1, \quad v_2 \mapsto 0, \quad v_i \mapsto w_i, \quad i = 3, \dots, n$.

Thus $T_1 + T_2 \notin U$. $\square$

COMMENT: If $\dim V = 0$, then $V = \{0\} =$ span $(\,)$. $\forall\, T \in \mathcal{L}(V, W), T$ is injective. Hence $U = \varnothing$.

If $\dim V = 1$, then $V =$ span (v_0). Thus $U =$ span (T_0), where $T_0 v_0 = 0$.

If V is infinite-dim, the result is true as well.

---

8 *Suppose W is finite-dim with $\dim V \geq \dim W \geq 2$, if V is finite-dim.*
Show that $U = \{\, T \in \mathcal{L}(V, W) : T$ is not surjective $\}$ is not a subspace of $\mathcal{L}(V, W)$.

SOLUTION:

Let $(v_1, \dots, v_n)$ be linearly independent in V, $(w_1, \dots, w_m)$ be a basis of W.
(Let $n = \dim V$, if V is finite, otherwise we choose $n \in \{m, m+1, \dots\}$; $2 \leq m \leq n$).
Define $T_1 \in \mathcal{L}(V, W)$ as $T_1 :\quad v_1 \mapsto 0, \qquad v_2 \mapsto w_2, \qquad v_j \mapsto w_j, \qquad v_{m+i} \mapsto 0.$
Define $T_2 \in \mathcal{L}(V, W)$ as $T_2 :\quad v_1 \mapsto w_1, \qquad v_2 \mapsto 0, \qquad v_j \mapsto w_j, \qquad v_{m+i} \mapsto 0.$
For each $j = 2, \dots, m;\ i = 1, \dots, n-m$, if V is finite, otherwise let $i \in \mathbf{N}^+$.
Thus $T_1 + T_2 \notin U$. $\square$

COMMENT: If $\dim W = 0$, then $W = \{0\} = \operatorname{span}()$. $\forall\, T \in \mathcal{L}(V, W), T$ is surjective. Hence $U = \varnothing$.
If $\dim W = 1$, then $W = \operatorname{span}(v_0)$. Thus $U = \operatorname{span}(T_0)$, where $T_0 v_0 = 0$.
If W is infinite-dim, the result is true as well.

---

9 *Suppose $T \in \mathcal{L}(V, W)$ is injective and $(v_1, \dots, v_n)$ is linearly independent in V.*
Prove that $(Tv_1, \dots, Tv_n)$ is linearly independent in W.

SOLUTION:

$$a_1 T v_1 + \cdots + a_n T v_n = 0 = T(\sum_{i=1}^{n} a_i v_i) \iff \sum_{i=1}^{n} a_i v_i = 0 \iff a_1 = \cdots = a_n = 0. \ \square$$

---

10 *Suppose $(v_1, \dots, v_n)$ spans V and $T \in \mathcal{L}(V, W)$. Show that $(Tv_1, \dots, Tv_n)$ spans range T.*

SOLUTION:

(a) $\operatorname{range} T = \{\, Tv : v \in V \,\} = \{\, Tv : v \in \operatorname{span}(v_1, \dots, v_n)\}$
$\Rightarrow Tv_1, \dots, Tv_n \in \operatorname{range} T \Rightarrow$ By [2.7] and [3.19], $\operatorname{span}(Tv_1, \dots, Tv_n) \subseteq \operatorname{range} T$.
(b) $\forall w \in \operatorname{range} T,\ \exists v \in V, Tv = w$. 又 $\forall v \in V,\ \exists\ a_i \in \mathbf{F}, v = a_1 v_1 + \cdots + a_n v_n$
$\Rightarrow w = Tv = a_1 T v_1 + \cdots + a_n T v_n \Rightarrow \operatorname{range} T \subseteq \operatorname{span}(Tv_1, \dots, Tv_n)$. $\square$

---

11 *Suppose $S_1, \dots, S_n$ are injective linear maps and $S_1 S_2 \dots S_n$ makes sence.*
Prove that $S_1 S_2 \dots S_n$ is injective.

SOLUTION: $S_1 S_2 \dots S_n(v) = 0 \iff S_2 S_3 \dots S_n(v) = 0 \iff \cdots \iff S_n(v) = 0 \iff v = 0.$ $\square$

---

12 *Suppose that V is finite-dim and that $T \in \mathcal{L}(V, W)$. Prove that*
there exists a subspace U of V such that $U \cap \operatorname{null} T = \{0\}$ and range $T = \{\, Tu : u \in U \,\}$.

SOLUTION:

By [2.34], there exists a subspace U of V such that $V = U \oplus \operatorname{null} T$.
$\forall v \in V,\ \exists !\ w \in \operatorname{null} T, u \in U, v = w + u$. Then $Tv = T(w+u) = Tu \in \{\, Tu : u \in U \,\} \Rightarrow \square$

COMMENT: V can be infinite-dim. See the above of [2.34].

---

16 *Suppose there exists a linear map on V*
whose null space and range are both finite-dim. Prove that V is finite-dim.

SOLUTION:

Denote the linear map by T. Let $(Tv_1, \dots, Tv_n)$ be a basis of range T, $(u_1, \dots, u_m)$ be a basis of null T.
Then for all $v \in V, T(\underbrace{v - a_1 v_1 - \cdots - a_n v_n}_{u \,\in\, \operatorname{null} T}) = 0$, where $Tv = a_1 T v_1 + \cdots + a_n T v_n$.
$\Rightarrow u = b_1 u_1 + \cdots + b_m u_m \Rightarrow v = a_1 v_1 + \cdots + a_n v_n + b_1 u_1 + \cdots + b_m u_m$.
Getting $V \subseteq \operatorname{span}(v_1, \dots, v_n, u_1, \dots, u_m)$. Thus V is finite-dim. $\square$

---

17 *Suppose V and W are both finite-dim. Prove that there exists an injective $T \in \mathcal{L}(V, W)$ if and only if* $\dim V \le \dim W$.

SOLUTION:

(a) Suppose there exists an injective T. Then $\dim V = \dim \operatorname{range} T + \dim \operatorname{null} T = \dim \operatorname{range} T \le \dim W$.

(b) Suppose $\dim V \le \dim W$, letting $(v_1, \dots, v_n)$ and $(w_1, \dots, w_m)$ be bases of V and W respectively.

Define $T \in \mathcal{L}(V, W)$ by $Tv_i = w_i, \;\; i = 1, \dots, n \,(= \dim V\,)$. $\square$

---

18 *Suppose V and W are both finite-dim. Prove that there exists a surjective $T \in \mathcal{L}(V, W)$ if and only if* $\dim V \ge \dim W$.

SOLUTION:

(a) Suppose there exists a surjective T. Then $\dim V = \dim \operatorname{range} T + \dim \operatorname{null} T = \dim W + \dim \operatorname{null} T$

$\Rightarrow \dim W = \dim V - \dim \operatorname{null} T \le \dim V$.

(b) Suppose $\dim V \ge \dim W$, letting $(v_1, \dots, v_n)$ and $(w_1, \dots, w_m)$ be bases of V and W respectively.

Define $T \in \mathcal{L}(V, W)$ by $T(a_1 v_1 + \cdots + a_m v_m + a_{m+1} v_{m+1} + \cdots + a_n v_n) = a_1 w_1 + \cdots + a_m w_m$. $\square$

---

19 *Suppose V and W are finite-dim and that U is a subspace of V.*
Prove that $\exists\; T \in \mathcal{L}(V, W)$, null $T = U$ $\iff \dim U \ge \dim V - \dim W$.

SOLUTION:

(a) Suppose $\exists\; T \in \mathcal{L}(V, W)$, $\operatorname{null} T = U$. Then $\dim \operatorname{null} T = \dim U \ge \dim V - \dim W$.

(b) Suppose $\underbrace{\dim U}_{m} \ge \underbrace{\dim V}_{m+n} - \underbrace{\dim W}_{p}$ $(\Rightarrow \dim W = p \ge n = \dim V - \dim U\,)$.

Let $(u_1, \dots, u_m)$ be a basis of U, extend to a basis of V as $(u_1, \dots, u_m, v_1, \dots, v_n)$.

Let $(w_1, \dots, w_p)$ be a basis of W.

Define $T \in \mathcal{L}(V, W)$ by $T(a_1 v_1 + \cdots + a_n v_n + b_1 u_1 + \cdots + b_m u_m) = a_1 w_1 + \cdots + a_n w_n$. $\square$

• **TIPS:** *Suppose $T \in \mathcal{L}(V, W)$ and $R = (Tv_1, \dots, Tv_n)$ is linearly independent in range T.*

(Let $\dim$ *range $T = n$, if range T is finite, otherwise choose n arbitrarily.).*

By (3.A.4), $L = (v_1, \dots, v_n)$ is linearly independent in V.

NEW NOTATION: *Denote $\mathcal{K}_R$ by span$L$, if range T is finite-dim,*
otherwise, denote it by an vector space in the set $\mathcal{S}_V$null T.

NEW THEOREM:

$$\mathcal{K}_R \oplus \operatorname{null} T = V \Leftarrow \begin{cases} \text{(a) } T(\sum_{i=1}^{n} a_i v_i) = 0 \Rightarrow \sum_{i=1}^{n} a_i T v_i = 0 \Rightarrow a_1 = \cdots = a_n = 0 \Rightarrow \mathcal{K}_R \cap \operatorname{null} T = \{0\}. \\ \text{(b) } \forall v \in V, Tv = \sum_{i=1}^{n} a_i T v_i \Rightarrow Tv - \sum_{i=1}^{n} a_i T v_i = T(v - \sum_{i=1}^{n} a_i v_i) = 0 \\ \quad \Rightarrow v - \sum_{i=1}^{n} a_i v_i \in \operatorname{null} T \Rightarrow v = (v - \sum_{i=1}^{n} a_i v_i) + (\sum_{i=1}^{n} a_i v_i) \Rightarrow \mathcal{K}_R + \operatorname{null} T = V. \end{cases}$$

COMMENT: $\operatorname{null} T \in \mathcal{S}_V \mathcal{K}_R$.

• *Suppose V is finite-dim, $T \in \mathcal{L}(V, W)$, and U is a subspace of W.*
Prove that $\mathcal{K}_U = \{\, v \in V : Tv \in U \,\}$ is a subspace of V
and $\dim \mathcal{K}_U = \dim$ *null* $T + \dim(U \cap$ *range* $T)$.

SOLUTION: For any $u, w \in \mathcal{K}_U$ and $\lambda \in \mathbf{F}$, $T(u + \lambda w) = Tu + \lambda Tw \in U \Rightarrow T$ is linear

Define $S \in \mathcal{L}(\mathcal{K}_U, U)$ as $Rv = Tv$ for all $v \in \mathcal{K}_U$. Hence range $R = U \cap \operatorname{range} T$.

Suppose $Tv = 0$ for some $v \in V$. 又 $0 \in U \Rightarrow Rv = 0$. Thus $\operatorname{null} T \subseteq \operatorname{null} R$. $\square$

---

20 *Suppose $T \in \mathcal{L}(V,W)$. Prove that T is injective $\iff \exists\ S \in \mathcal{L}(W,V),\ ST = I \in \mathcal{L}(V)$.*

SOLUTION:

(a) Suppose $\exists\ S \in \mathcal{L}(W,V),\ ST = I$. Then if $Tv = 0 \Rightarrow ST(v) = 0 = v$. Hence T is injective.

(b) Suppose T is injective. $\forall w \in \text{range}\, T,\ \exists!\, v \in V, Tv = w$. (if $w = 0$, then $v = 0$)

Define $S : W \to V$ by $Sw = v$ and $Su = 0,\ u \in U$. Where $W = U \oplus \text{range}\, T$.

$\Rightarrow S(Tv + \lambda Tu) = S(T(v + \lambda u)) = v + \lambda u$ and $S(x + \nu y) = 0,\ x, y \in U$.

Thus $S|_{\text{range}\, T + U} = S|_W \in \mathcal{L}(W,V)$ and $ST = I$. $\square$

OR. Let $R = (Tv_1, \dots, Tv_n)$ be linearly independent in $\text{range}\, T \subseteq W$, $(\dots)$ and then $\mathcal{K}_R \oplus \text{null}\, T = V$.

Supose $W = U \oplus \text{range}\, T$. Define $S \in \mathcal{L}(W,V)$ by $S(Tv_i) = v_i$ and $Su = 0,\ u \in U$. Thus $ST = I$. $\square$

---

21 *Suppose $T \in \mathcal{L}(V,W)$. Prove that T is surjective $\iff \exists\ S \in \mathcal{L}(W,V),\ TS = I \in \mathcal{L}(W)$.*

SOLUTION:

(a) Suppose $\exists\ S \in \mathcal{L}(W,V),\ TS = I$. Then for any $w \in W, TS(w) = w \in \text{range}\, T \Rightarrow \text{range}\, T = W$. $\square$

(b) Suppose T is surjective. $\forall w \in W,\ \exists v \in V, Tv = w$. Define $S : W \to V$ by $Sw = v$.

But $T(Sv + \lambda Su) = T(Sv) + \lambda T(Su) = v + \lambda u = T(S(v + \lambda u)) \not\Rightarrow Sv + \lambda Su = S(v + \lambda u)$.

So we let $R = (Tv_1, \dots, Tv_n)$ be linearly independent in $\text{range}\, T = W$, $(\dots)$ and then $\mathcal{K}_R \oplus \text{null}\, T = V$.

Define $S \in \mathcal{L}(W,V)$ by $S(Tv_i) = v_i$. Then $TS = I$. $\square$

---

22 *Suppose U and V are finite-dim vec-sps and $S \in \mathcal{L}(V,W)$ and $T \in \mathcal{L}(U,V)$.*
Prove that $\dim \textit{null}\, ST \le \dim \textit{null}\, S + \dim \textit{null}\, T$.

SOLUTION: Define $R \in \mathcal{L}(\text{null}\, ST, V)$ by $Ru = Tu$ for all $u \in \text{null}\, ST \subseteq U$.

$$\left.\begin{aligned} S(Tu) = 0 = S(Ru) &\Rightarrow \text{range}\, R \subseteq \text{null}\, S \Rightarrow \dim \text{range}\, R \le \dim \text{null}\, S \\ Tu = 0 = Ru &\Rightarrow \text{null}\, R \supseteq \text{null}\, T \Rightarrow \dim \text{null}\, R = \dim \text{null}\, T \end{aligned}\right\} \Rightarrow \square$$

• **COROLLARY:**

(1) If T is injective, then $\dim \text{null}\, T = 0 \Rightarrow \dim \text{null}\, ST \le \dim \text{null}\, S$.

(2) If T is surjective, then $\text{range}\, R = \text{null}\, S \Rightarrow \dim \text{null}\, ST = \dim \text{null}\, S + \dim \text{null}\, T$.

(3) If S is injective, then $\text{range}\, R = \{0\} \Rightarrow \dim \text{null}\, ST = \dim \text{null}\, R = \dim \text{null}\, T$.

---

23 *Suppose U and V are finite-dim vec-sps and $S \in \mathcal{L}(V,W)$ and $T \in \mathcal{L}(U,V)$.*
Prove that $\dim \textit{range}\, ST \le \min\{\dim \textit{range}\, S, \dim \textit{range}\, T\}$.

SOLUTION:

$\text{range}\, ST = \{Sv : v \in \text{range}\, T\} = \text{span}\,(Su_1, \dots, Su_{\dim \text{range}\, T})$, letting $\text{span}\,(u_1, \dots, u_{\dim \text{range}\, T}) = \text{range}\, T$.

$\dim \text{range}\, ST \le \dim \text{range}\, T$ 又 $\dim \text{range}\, ST \le \dim \text{range}\, S \Rightarrow \square$

• **COROLLARY:**

(1) If S is injective, then $\dim \text{range}\, ST = \dim \text{range}\, T$.

(2) If T is surjective, then $\text{range}\, ST = \text{range}\, S$.

• (a) *Suppose $\dim V = 5$ and $S, T \in \mathcal{L}(V)$ are such that $ST = 0$. Prove that $\dim \textit{range}\, TS \le 2$.*
(b) *Give an example of $S, T \in \mathcal{L}(\mathbf{F}^5)$ with $ST = 0$ and $\dim \textit{range}\, TS = 2$.*

SOLUTION:

By Problem (23), $\dim \text{range}\, TS \le \min\{\underbrace{\dim \text{range}\, S}_{5 - \dim \text{null}\, T}, \underbrace{\dim \text{range}\, T}_{5 - \dim \text{null}\, S}\}$.

Suppose $\dim \text{range}\, TS \ge 3$. Then $\min\{5 - \dim \text{null}\, T, 5 - \dim \text{null}\, S\} \ge 3$

$$\Rightarrow \max\{\dim \text{null}\, T, \dim \text{null}\, S\} \le 2.$$

又 $\dim \text{null}\, ST = 5 \le \dim \text{null}\, S + \dim \text{null}\, T \le 4$. Contradicts. Thus $\dim \text{range}\, TS \le 2$. $\square$

EXAMPLE: $V = \text{span}\,(v_1, \dots, v_5)$

$$\begin{array}{llll} T: & v_1 \mapsto 0, & v_2 \mapsto 0, & v_i \mapsto v_i \ ; \\ S: & v_1 \mapsto v_4, & v_2 \mapsto v_5, & v_i \mapsto 0 \ ; \qquad i = 3,4,5 \end{array}$$

• *Suppose* $\dim V = n$ *and* $S, T \in \mathcal{L}(V)$ *are such that* $ST = 0$.

Prove that $\dim TS \leq m = \begin{cases} \frac{n}{2}, & \textit{if}\ 2 \mid n. \\ \frac{n-1}{2}, & \textit{otherwise.} \end{cases}$

SOLUTION:

By Problem (23), $\dim \text{range}\, TS \leq \min\{\underbrace{\dim \text{range}\, S}_{n - \dim \text{null}\, T}, \underbrace{\dim \text{range}\, T}_{n - \dim \text{null}\, S}\}$. Suppose $\dim \text{range}\, TS \geq m + 1$.

Then $\min\{n - \dim \text{null}\, T, n - \dim \text{null}\, S\} \geq m + 1$

$\Rightarrow \max\{\dim \text{null}\, T, \dim \text{null}\, S\} \leq n - m - 1$.

又 $\dim \text{null}\, ST = n \leq \dim \text{null}\, S + \dim \text{null}\, T \leq n - m - 1$. Contradicts. Thus $\dim \text{range}\, TS \leq m$. ☐

---

24 *Suppose that* W *is finite-dim and* $S, T \in \mathcal{L}(V, W)$.
Prove that null $S \subseteq$ *null* $T \iff \exists\ E \in \mathcal{L}(W)$ *such that* $T = ES$.

SOLUTION:

Suppose null $S \subseteq$ null T. Let $R = (Sv_1, \dots, Sv_n)$ be a basis of range $S \Rightarrow (v_1, \dots, v_n)$ is linearly independent.

Let $\mathcal{K}_R = \text{span}\,(v_1, \dots, v_n) \Rightarrow V = \mathcal{K}_R \oplus \text{null}\, S$.

Define $E \in \mathcal{L}(W)$ by $E(Sv_i) = Tv_i$, $Eu = 0$; for each $i = 1 \dots, n$ and $u \in \text{null}\, S$.

Hence $\forall v \in V$, $(\exists!\, a_i \in \mathbf{F}, u \in \text{null}\, S)$, $Tv = a_1 Tv_1 + \cdots + a_n Tv_n = E(a_1 Sv_1 + \cdots + a_n Sv_n) \Rightarrow T = ES$.

Suppose $\exists\ E \in \mathcal{L}(W)$ such that $T = ES$. Then null T = null $ES \supseteq$ null S. ☐

---

25 *Suppose that* V *is finite-dim and* $S, T \in \mathcal{L}(V, W)$.
Prove that range $S \subseteq$ *range* $T \iff \exists\ E \in \mathcal{L}(V)$ *such that* $S = TE$.

SOLUTION:

Suppose range $S \subseteq$ range T. Let $(v_1, \dots, v_m)$ be a basis of V.

Because range $S \subseteq$ range $T \Rightarrow Sv_i \in$ range T for each i. Suppose $u_i \in V$ for each i such that $Tu_i = Tv_i$.

Thus defining $E \in \mathcal{L}(V)$ by $Ev_i = u_i$ for each $i \Rightarrow S = TE$.

Suppose $\exists\ E \in \mathcal{L}(V)$ such that $S = TE$. Then range S = range $TE \subseteq$ range T. ☐

• *Suppose* $P \in \mathcal{L}(V)$ *and* $P^2 = P$. *Prove that* $V =$ *null* $P \oplus$ *range* P.

SOLUTION:

Let $P^2 v_1, \dots, P^2 v_n$ be a basis of range P^2. Then $(Pv_1, \dots, Pv_n)$ is linearly independent in V.

$$\left.\begin{array}{l} \text{Let } \mathcal{K} = \text{span}\,(Pv_1, \dots, Pv_n) \Rightarrow V = \mathcal{K} \oplus \text{null}\, P^2 \\ \text{又 } \mathcal{K} = \text{range}\, P = \text{range}\, P^2;\ \ \text{null}\, P = \text{null}\, P^2 \end{array}\right\} \Rightarrow \ \square$$

---

26 *Prove that the differentiation map* $D \in \mathcal{P}(\mathbf{R})$ *is surjective.*

SOLUTION: Note that $\deg Dx^n = n - 1$.

Because span $(Dx, Dx^2, \dots) \subseteq$ range D. 又 By (2.A.10), span $(Dx, Dx^2, \dots) =$ span $(1, x, \dots) = \mathcal{P}(\mathbf{R})$. ☐

---

27 *Suppose* $p \in \mathcal{P}(\mathbf{R})$. *Prove that there exists a polynomial* $q \in \mathcal{P}(\mathbf{R})$ *such that* $5q'' + 3q' = p$.

SOLUTION:

Define $B \in \mathcal{L}(\mathcal{P}(\mathbf{R}))$ by $B = 5D^2 + 3D \Rightarrow B(q) = 5q'' + 3q'$.

Note that $\deg Bx^n = n - 1$. Similar to Problem (26), we conclude that B is surjective.

Hence for any $p \in \mathcal{P}(\mathbf{R})$, there exists $q \in \mathcal{P}(\mathbf{R})$ such that $Bq = p$. ☐

---

28 *Suppose $T \in \mathcal{L}(V, W)$ and $(w_1, \ldots, w_m)$ is a basis of range T. Prove that $\exists\, \varphi_1, \ldots, \varphi_m \in \mathcal{L}(V, \mathbf{F})$ such that for all $v \in V, Tv = \varphi_1(v)w_1 + \cdots + \varphi_m(v)w_m$.*

SOLUTION:

Suppose $(v_1, \ldots, v_m)$ in V such that $Tv_i = w_i$ for each i.

Then $(v_1, \ldots, v_m)$ is linearly independent, extend it to a basis of V as $(v_1, \ldots, v_m, u_1, \ldots, u_n)$.

Note that $\forall v \in V, v = a_1 v_1 + \cdots + a_m v_m + b_1 u_1 + \cdots + b_n u_n,\ \exists!\, a_i, b_i \in \mathbf{F} \Rightarrow Tv = a_1 w_1 + \cdots + a_m w_m$.

Define $\varphi_i : V \to \mathbf{F}$ by $\varphi_i(v) = a_i v_i$ for each i. We now check the linearity.

$\forall v, u \in V\ (\exists!\, a_i, b_i, c_i, d_i \in \mathbf{F}), \lambda \in \mathbf{F}, \varphi_i(v + \lambda u) = a_i + \lambda c_i = \varphi(v) + \lambda\varphi(u)$. □

---

29 *Suppose $\varphi \in \mathcal{L}(V, \mathbf{F})$ and $\varphi \neq 0$. Suppose $u \in V$ is not in null φ. Prove that $V = \text{null}\,\varphi \oplus \{au : a \in \mathbf{F}\}$.*

SOLUTION:

(a) Suppose $v = cu \in \text{null}\,\varphi \cap \{au : a \in \mathbf{F}\}$, where $c \in \mathbf{F}$.

Then $\varphi(v) = 0 = c\varphi(u) \Rightarrow c = 0$. Hence $\text{null}\,\varphi \cap \{au : a \in \mathbf{F}\}$.

(b) Suppose $v \in V$. Then $v = (v - \dfrac{\varphi(v)}{\varphi(u)}u) + \dfrac{\varphi(v)}{\varphi(u)}u \Rightarrow \varphi(v) = 0$.

$$\left.\begin{array}{l} v - \frac{\varphi(v)}{\varphi(u)}u \in \text{null}\,\varphi \\ \frac{\varphi(v)}{\varphi(u)}u \in \{au : a \in \mathbf{F}\} \end{array}\right\} \Rightarrow V = \text{null}\,\varphi \oplus \{au : a \in \mathbf{F}\}. \quad \square$$

This may seems strange. Here we explain why.

$\varphi \neq 0 \Rightarrow \exists$ a linearly independent list $(v_1, \ldots, v_n \in V)$ such that $\varphi(v_i) = a_i \neq 0$.

Choose a v_k arbitrarily. Then $\varphi(v_k - \dfrac{\varphi(v_k)}{\varphi(v_j)}v_j) = 0$ for each $j = 1, \ldots, k-1, k+1, \ldots, n$.

Thus span $\{v_k - \dfrac{\varphi(v_k)}{\varphi(v_j)}v_j\}_{j \neq k} \subseteq \text{null}\,\varphi$. Hence there is only one nonzero vector in every vec-sp in $\mathcal{S}_V \text{null}\,\varphi$.

---

30 *Suppose $\varphi_1, \varphi_2 \in \mathcal{L}(V, \mathbf{F})$ and null φ_1 = null φ_2 = null φ. Prove that $\exists\, c \in \mathbf{F}, \varphi_1 = c\varphi_2$*

SOLUTION:

If $\text{null}\,\varphi = V$, then $\varphi_1 = \varphi_2 = 0$, we are done. Suppose $u \in V/\text{null}\,\varphi \Rightarrow \varphi_1(u), \varphi_2(u) \neq 0$.

By Problem (29), $V = \text{null}\,\varphi \oplus \text{span}\,(u)$.

Hence for any $v \in V, v = w + a_v u,\ \exists!\, w \in \text{null}\,\varphi, a_v \in \mathbf{F}$.

$$\varphi_1(v) = a_v\varphi_1(u),\ \ \varphi_2(v) = a_v\varphi_2(u) \Rightarrow a_v = \frac{\varphi_1(v)}{\varphi_1(u)} = \frac{\varphi_2(v)}{\varphi_2(u)} \Rightarrow \frac{\varphi_1(u)}{\varphi_2(u)} = \frac{\varphi_1(v)}{\varphi_2(v)} = c \in \mathbf{F}.$$

Thus $\varphi_1 = c\varphi_2$. □

---

31 *Give an example of $T_1, T_2 \in \mathcal{L}(\mathbf{R}^5, \mathbf{R}^2)$ such that null T_1 = null T_2 and that T_1 is not a scalar multiple of T_2.*

SOLUTION:

Let $(v_1, \ldots, v_5)$ be a basis of $\mathbf{R}^5$, (w_1, w_2) be a basis of $\mathbf{R}^2$. Define $T, S \in \mathcal{L}(V, W)$ by

$$\left.\begin{array}{lll} Tv_1 = w_1, & Tv_2 = w_2, & Tv_3 = Tv_4 = Tv_5 = 0 \\ Sv_1 = w_1, & Sv_2 = 2w_2, & Sv_3 = Sv_4 = Sv_5 = 0 \end{array}\right\} \Rightarrow \text{null}\,T = \text{null}\,S.$$

Suppose $T = \lambda S$. Then $w_1 = Tv_1 = \lambda Sv_1 = \lambda w_1 \Rightarrow \lambda = 1$.

While $w_2 = Tv_2 = \lambda Sv_2 = 2\lambda w_2 \Rightarrow \lambda = \frac{1}{2}$. Contradicts. □

• *Suppose V is finite-dim, X is a subspace of V, and Y is a finite-dim subspace of W. Prove that there exists $T \in \mathcal{L}(V, W)$ such that null $T = X$ and range $T = Y$ if and only if* $\dim X + \dim Y = \dim V$.

SOLUTION:

(a) Suppose $\dim X + \dim Y = \dim V$. Let $(u_1, \ldots, u_n)$ be a basis of X, $R = (w_1, \ldots, w_m)$ be a basis of Y.
Extend $(u_1, \ldots, u_n)$ to a basis of V as $(u_1, \ldots, u_n, v_1, \ldots, v_m)$.
Define $T \in \mathcal{L}(V, W)$ by $T(a_1 v_1 + \cdots + a_m v_m + b_1 v_1 + \cdots + b_n v_n) = a_1 w_1 + \cdots + a_m w_m$.
Now we show that null $T = X$ and range $T = Y$
Suppose $v \in V$. Then $\exists!\, a_i, b_j \in \mathbf{F}, v = a_1 v_1 + \cdots + a_m v_m + b_1 u_1 + \cdots + b_n u_n$.

$$\left.\begin{aligned} v \in \text{null}\, T &\Rightarrow Tv = 0 \\ &\Rightarrow a_1 = \cdots = a_m = 0 \\ &\Rightarrow v \in X \Rightarrow \text{null}\, T \subseteq X. \\ v \in X &\Rightarrow v \in \text{null}\, T \Rightarrow \text{null}\, T \supseteq X. \end{aligned}\right\} \Rightarrow \text{null}\, T = X.$$

$$\left.\begin{aligned} w \in \text{range}\, T &\Rightarrow \exists\, v \in V, Tv = w \Rightarrow \text{let } v = a_1 v_1 + \cdots + a_m v_m + b_1 u_1 + \cdots + b_n u_n \\ &\Rightarrow Tv = w = a_1 w_1 + \cdots + a_m w_m \Rightarrow w \in Y \Rightarrow \text{range}\, T \subseteq Y. \\ w \in Y &\Rightarrow w = a_1 T v_1 + \cdots + a_m T v_m = T(a_1 v_1 + \cdots + a_m v_m) \\ &\Rightarrow w \in \text{range}\, T \Rightarrow \text{range}\, T \supseteq Y. \end{aligned}\right\} \Rightarrow \text{range}\, T = Y.$$

(b) Conversely it is true as well.

□

• *Suppose V is finite-dim and $T \in \mathcal{L}(V, W)$. Let $(Tv_1, \ldots, Tv_n)$ be a basis of range T. Extend $(v_1, \ldots, v_n)$ to a basis of V as $(v_1, \ldots, v_n, u_1, \ldots, u_m)$. Prove or give a counterexample: $(u_1, \ldots, u_m)$ is a basis of null T.*

SOLUTION: An counterexample:

Suppose $\dim V = 3, Tv_1 = Tv_2 = Tv_3 = w_1$. Then span $(Tv_1, Tv_2, Tv_3) =$ span (w_1).
Extend (v_i) to (v_1, v_2, v_3) for each i. But none of $(v_1, v_2), (v_1, v_3), (v_2, v_3)$ is a basis of null T.

• *Suppose V is finite-dim and $T \in \mathcal{L}(V, W)$. Let $(u_1, \ldots, u_m)$ be a basis of null T. Extend $(u_1, \ldots, u_m)$ to a basis of V as $(u_1, \ldots, u_m, v_1, \ldots, v_n)$. Prove or give a counterexample: $(Tv_1, \ldots, Tv_n)$ spans range T.*

SOLUTION:

$\forall w \in \text{range}\, T,\ \exists\, v \in V,\ (\exists!\, a_i, b_i \in \mathbf{F}), Tv = T(a_1 v_1 + \cdots + a_n v_n) = w$
$\Rightarrow w \in \text{span}\,(Tv_1, \ldots, Tv_n) \Rightarrow \text{range}\, T \subseteq \text{span}\,(Tv_1, \ldots, Tv_n)$. □

COMMENT: If T is injective, then $(Tv_1, \ldots, Tv_n)$ is a basis of range T.

- *Suppose V is finite-dim with $\dim V > 1$. Show that if $\varphi : \mathcal{L}(V) \to \mathbf{F}$ is a linear map such that $\varphi(ST) = \varphi(S) \cdot \varphi(T)$ for all $S, T \in \mathcal{L}(V)$, then $\varphi = 0$.*

  HINT: *The description of the two-sided ideals of $\mathcal{L}(V)$ in Section 3A might be useful.*

SOLUTION: Using notations in (3.A.• the last).

Suppose $\varphi \neq 0 \Rightarrow \exists\, i, j \in \{1, \ldots, n\}$, $\varphi(R_{i,j}) \neq 0$.

Because $R_{i,j} = R_{x,j} \circ R_{i,x},\ \forall x = 1, \ldots, n$

$\Rightarrow \varphi(R_{i,j}) = \varphi(R_{x,j}) \cdot \varphi(R_{i,x}) \neq 0 \Rightarrow \varphi(R_{x,j}) \neq 0$ and $\varphi(R_{i,x}) \neq 0$.

Again, because $R_{i,x} = R_{y,x} \circ R_{i,y},\ \forall y = 1, \ldots, n$. Thus $\varphi(R_{y,x}) \neq 0$ for any $x, y = 1, \ldots, n$.

Let $l \neq i, k \neq j$ and then $\varphi(R_{l,k} \circ R_{i,j}) = \varphi(0) = 0 = \varphi(R_{l,k}) \cdot \varphi(R_{i,j})$

$\Rightarrow \varphi(R_{l,k}) = 0$ or $\varphi(R_{i,j}) = 0$. Contradicts. $\square$

- *Suppose that V and W are real vector spaces and $T \in \mathcal{L}(V, W)$. Define $T_{\mathbb{C}} : V_{\mathbb{C}} \to W_{\mathbb{C}}$ by $T_{\mathbb{C}}(u + iv) = Tu + iTv$ for all $u, v \in V$.*

  (a) *Show that $T_{\mathbb{C}}$ is a (complex) linear map from $V_{\mathbb{C}}$ to $W_{\mathbb{C}}$.*

  (b) *Show that $T_{\mathbb{C}}$ is injective $\iff$ T is injective.*

  (c) *Show that range $T_{\mathbb{C}} = W_{\mathbb{C}} \iff$ range $T = W$.*

  See Exercise 8 in Section 1B for the definition of the complexification $V_{\mathbb{C}}$.

  The linear map $T_{\mathbb{C}}$ is called the complexification of the linear map T.

SOLUTION:

(a) $\forall u_1 + \mathrm{i}v_1, u_2 + \mathrm{i}v_2 \in V_{\mathbb{C}}, \lambda \in \mathbf{F}$,

$T((u_1 + \mathrm{i}v_1) + \lambda(u_2 + \mathrm{i}v_2)) = T((u_1 + \lambda u_2) + \mathrm{i}(v_1 + \lambda v_2)) = T(u_1 + \lambda u_2) + \mathrm{i}T(v_1 + \lambda v_2)$

$= Tu_1 + \mathrm{i}Tv_1 + \lambda Tu_2 + \mathrm{i}\lambda Tv_2 = T(u_1 + \mathrm{i}v_1) + \lambda T(u_2 + \mathrm{i}v_2)$. $\square$

(b) $\left.\begin{array}{l}\text{Suppose } T_{\mathbb{C}} \text{ is injective. Let } T(u) = 0 \Rightarrow T_{\mathbb{C}}(u + \mathrm{i}0) = Tu = 0 \Rightarrow u = 0. \\ \text{Suppose } T \text{ is injective. Let } T_{\mathbb{C}}(u + \mathrm{i}v) = Tu + \mathrm{i}Tv = 0 \Rightarrow Tu = Tv = 0 \Rightarrow u + \mathrm{i}v = 0.\end{array}\right\} \Rightarrow \square$

(c) $\left.\begin{array}{l}\text{Suppose } T_{\mathbb{C}} \text{ is surjective. } \forall w, x \in W,\ \exists\, u, v \in V, T(u + \mathrm{i}v) = Tu + \mathrm{i}Tv = w + \mathrm{i}x \\ \qquad \Rightarrow Tu = w, Tv = x \Rightarrow \text{T is surjective.} \\ \text{Suppose } T \text{ is surjective. } \forall w, x \in W,\ \exists\, u, v \in V, Tu = w, Tv = x \\ \qquad \Rightarrow \forall w + \mathrm{i}x \in W_{\mathbb{C}},\ \exists\, u + \mathrm{i}v \in V, T(u + \mathrm{i}v) = w + \mathrm{i}x \Rightarrow T_{\mathbb{C}} \text{ is surjective.}\end{array}\right\} \Rightarrow \square$

$\therefore aC = a_{1,\cdot}C_{\cdot,\cdot} = \sum_{r=1}^{n} a_{1,r}C_{r,\cdot} = a_1C_{1,\cdot} + \cdots + a_nC_{n,\cdot}$ OR. By $(aC)_{1,\cdot} = a_{1,\cdot}C.$ Using (b) above.

- **Column-Row Factorization** (CR Factorization)

Suppose $A \in \mathbf{F}^{m,n}$, $A \neq 0$. Let $S_c = span\,(A_{\cdot,1}, \ldots, A_{\cdot,n}) \subseteq \mathbf{F}^{m,1}$, $\dim S_c = c$.

And $S_r = span\,(A_{1,\cdot}, \ldots, A_{n,\cdot}) \subseteq \mathbf{F}^{1,n}$, $\dim S_r = r$.

Prove that $A = CR$. $\exists\ C \in \mathbf{F}^{m,c}$, $R \in \mathbf{F}^{c,n}$.

Solution: Notice that $A \neq 0 \Rightarrow c, r \geq 1$.

Let $(C_{\cdot,1}, \ldots, C_{\cdot,c})$ be a basis of S_c, forming $C \in \mathbf{F}^{m,c}$.

Then for any $A_{\cdot,k}$, $\quad A_{\cdot,k} = R_{1,k}C_{\cdot,1} + \cdots + R_{c,k}C_{\cdot,c} = (CR)_{\cdot,k}$, $\quad \exists!\, R_{1,k}, \ldots, R_{c,k} \in \mathbf{F}$.

Hence, by letting $R = \begin{pmatrix} R_{1,1} & \cdots & R_{1,n} \\ \vdots & \ddots & \vdots \\ R_{c,1} & \cdots & R_{c,n} \end{pmatrix}$, we have $A = CR$.

Or. Let $(R_{1,\cdot}, \ldots, R_{c,\cdot})$ be a basis of S_r, forming $R \in \mathbf{F}^{c,n}$.

For any $A_{j,\cdot}$, $\quad A_{j,\cdot} = C_{j,1}R_{1,\cdot} + \cdots + C_{j,c}R_{c,\cdot} = (CR)_{j,\cdot}$, $\quad \exists!\, C_{j,1}, \ldots, C_{j,c} \in \mathbf{F}$. Similarly. $\square$

Example:

$$A = \begin{pmatrix} 10 & 7 & 4 & 1 \\ 26 & 19 & 12 & 5 \\ 46 & 33 & 20 & 7 \end{pmatrix} \overset{(1)}{=} \begin{pmatrix} 1 & 0 \\ 0 & 1 \\ 2 & 1 \end{pmatrix} \begin{pmatrix} 10 & 7 & 4 & 1 \\ 26 & 19 & 12 & 5 \end{pmatrix} \overset{(2)}{=} \begin{pmatrix} 7 & 4 \\ 19 & 12 \\ 33 & 20 \end{pmatrix} \begin{pmatrix} 2 & -1 \\ 1 & 0 \\ 0 & 1 \\ -1 & 2 \end{pmatrix}$$

(1) Because $\begin{pmatrix} 46 & 33 & 20 & 7 \end{pmatrix} = 2\begin{pmatrix} 10 & 7 & 4 & 1 \end{pmatrix} + \begin{pmatrix} 26 & 19 & 12 & 5 \end{pmatrix}$.

$\begin{pmatrix} 46 & 33 & 20 & 7 \end{pmatrix}$ can be uniquely written as a linear combination of $A_{1,\cdot}, A_{2,\cdot}$.

Hence $\dim S_r = 2$. We choose $(A_{1,\cdot}, A_{2,\cdot})$ as the basis.

(2) Because $\begin{pmatrix} 10 \\ 26 \\ 46 \end{pmatrix} = 2\begin{pmatrix} 7 \\ 19 \\ 33 \end{pmatrix} - \begin{pmatrix} 4 \\ 12 \\ 20 \end{pmatrix}$; $\begin{pmatrix} 1 \\ 5 \\ 7 \end{pmatrix} = 2\begin{pmatrix} 4 \\ 12 \\ 20 \end{pmatrix} - \begin{pmatrix} 7 \\ 19 \\ 33 \end{pmatrix}$.

Hence $\dim S_c = 2$. We choose $(A_{\cdot,2}, A_{\cdot,3})$ as the basis.

- **Column Rank Equals Row Rank** (Using the notation above)

For any $A_{j,\cdot} \in S_r$, $\quad A_{j,\cdot} = (CR)_{j,\cdot} = C_{j,1}R = C_{j,1}R_{1,\cdot} + \cdots + C_{j,c}R_{c,\cdot}$

$\Rightarrow \text{span}\,(A_{1,\cdot}, \ldots, A_{m,\cdot}) = S_r = \text{span}\,(R_{1,\cdot}, \ldots, R_{c,\cdot}) \Rightarrow \dim S_r = r \leq c = \dim S_c$.

Apply the result to $A^t \in \mathbf{F}^{n,m} \Rightarrow \dim S_r^t = \dim S_c = c \leq r = \dim S_r = \dim S_c^t$. $\square$

- *Suppose $T \in \mathcal{L}(V)$, and $u_1, \ldots, u_n$ and $v_1, \ldots, v_n$ are bases of V.*

Prove that the following are equivalent.

(a) *T is injective.*

(b) *The columns of $\mathcal{M}(T)$ are linearly independent in $\mathbf{F}^{n,1}$.*

(c) *The columns of $\mathcal{M}(T)$ span $\mathbf{F}^{n,1}$.*

(d) *The rows of $\mathcal{M}(T)$ span $\mathbf{F}^{1,n}$.*

(e) *The rows of $\mathcal{M}(T)$ are linearly independent in $\mathbf{F}^{1,n}$.*

Here $A = \mathcal{M}(T)$ means $\mathcal{M}(T, (u_1, \ldots, u_n), (v_1, \ldots, v_n))$.

Solution:

T is injective $\iff \dim V = \dim \text{range}\, T + \dim \text{null}\, T = \dim \text{range}\, T$

$\iff (Tu_1, \ldots, Tu_n)$ is linearly independent in V, and therefore is a basis of V

$\iff (\mathcal{M}(Tu_1), \ldots, \mathcal{M}(Tu_n))$ is linearly independent, as well as $(A_{\cdot,1}, \ldots, A_{\cdot,n})$

$\iff (A_{\cdot,1}, \ldots, A_{\cdot,n})$ is a basis of $\mathbf{F}^{n,1}$.

$\Big($ 又 $\dim \text{span}\,(A_{\cdot,1}, \ldots, A_{\cdot,n}) = \dim \text{span}\,(A_{1,\cdot}, \ldots, A_{n,\cdot}) = n$ $\Big)$

$\iff (A_{1,\cdot}, \ldots, A_{n,\cdot})$ is a basis of $\mathbf{F}^{1,n}$. $\square$

• *Suppose A is an m-by-n matrix with $A \neq 0$.*
Prove that the rank of A is 1 if and only if there exist $(c_1, \dots, c_m) \in \mathbf{F}^m$ and $(d_1, \dots, d_n) \in \mathbf{F}^n$ such that $A_{j,k} = c_j \cdot d_k$ for every $j = 1, \dots, m$ and every $k = 1, \dots, n$.

SOLUTION: Using the notation in CR Factorization.

(a) Suppose $A = \begin{pmatrix} c_1 \\ \vdots \\ c_m \end{pmatrix} \begin{pmatrix} d_1 & \cdots & d_n \end{pmatrix} = \begin{pmatrix} c_1 d_1 & \cdots & c_1 d_n \\ \vdots & \ddots & \vdots \\ c_m d_1 & \cdots & c_m d_n \end{pmatrix}$. $(\ \exists\, c_j, d_k \in \mathbf{F}, \forall j, k\ )$

Then $S_c = \operatorname{span}\left(\begin{pmatrix} c_1 d_1 \\ \vdots \\ c_m d_1 \end{pmatrix}, \begin{pmatrix} c_1 d_2 \\ \vdots \\ c_m d_2 \end{pmatrix}, \dots, \begin{pmatrix} c_1 d_n \\ \vdots \\ c_m d_n \end{pmatrix} \right) = \operatorname{span}\left(\begin{pmatrix} c_1 \\ \vdots \\ c_m \end{pmatrix} \right)$.

OR. $S_r = \operatorname{span} \begin{pmatrix} \begin{pmatrix} c_1 d_1 & \cdots & c_1 d_n \end{pmatrix}, \\ \begin{pmatrix} c_2 d_1 & \cdots & c_2 d_n \end{pmatrix}, \\ \vdots \\ \begin{pmatrix} c_m d_1 & \cdots & c_m d_n \end{pmatrix} \end{pmatrix} = \operatorname{span}\left(\begin{pmatrix} d_1 & \dots & d_n \end{pmatrix} \right)$. Hence the rank of A is 1.

(b) Suppose the rank of A is $\dim S_c = \dim S_r = 1$

Let $c_j = \dfrac{A_{j,1}}{A_{1,1}} = \dfrac{A_{j,2}}{A_{1,2}} = \cdots = \dfrac{A_{j,n}}{A_{1,n}}$, $\quad d'_k = \dfrac{A_{1,k}}{A_{1,1}} = \dfrac{A_{2,k}}{A_{2,1}} = \cdots = \dfrac{A_{m,k}}{A_{m,1}}$. $(\forall j, k\ )$

$\Rightarrow A_{j,k} = d'_k A_{j,1} = c_j A_{1,k} = c_j d'_k A_{1,1} = c_j d_k$. Letting $d_k = d'_k A_{1,1}$. □

---

1 *Suppose $T \in \mathcal{L}(V, W)$. Show that with respect to each choice of bases of V and W, the matrix of T has at least $\dim$ range T nonzero entries.*

SOLUTION: Let $(v_1, \dots, v_n)$ and $(w_1, \dots, w_m)$ be bases of V and W respectively. We prove by contradiction.

Suppose $A = \mathcal{M}(T, (v_1, \dots, v_n), (w_1, \dots, w_m))$ has at most $(\dim \operatorname{range} T - 1)$ nonzero entries.

Then by Pigeon Hole Principle, at least one of $A_{\cdot,k} = 0$.

Thus there are at most $(\dim \operatorname{range} T - 1)$ nonzero vectors in $Tv_1, \dots, Tv_n$.

While $\operatorname{range} T = \operatorname{span}(Tv_1, \dots, Tv_n) \Rightarrow \dim \operatorname{range} T \leq \dim \operatorname{range} T - 1$. Hence we get a contradiction. □

---

3 *Suppose V and W are finite-dim and $T \in \mathcal{L}(V, W)$.*
Prove that there exist a basis of V and a basis of W such that
[letting $A = \mathcal{M}(T)$ with respect to these bases],
$A_{k,k} = 1, A_{i,j} = 0$, *where* $1 \leq k \leq \dim$ *range* $T, i \neq j$.

SOLUTION:

Let $R = (Tv_1, \dots, Tv_n)$ be a basis of range T, extend it to the basis of W as $(Tv_1, \dots, Tv_n, w_1, \dots, w_p)$.

Let $\mathcal{K}_R = \operatorname{span}(v_1, \dots, v_n)$. Let $(u_1, \dots, u_m)$ be a basis of null T.

Then $(v_1, \dots, v_n, u_1, \dots, u_m)$ is the basis of V.

Thus $T(v_k) = Tv_k, T(u_j) = 0 \Rightarrow A_{k,k} = 1, A_{i,j}$ for each $k \in \{1, \dots, \dim \operatorname{range} T\}$ and $j \in \{1, \dots, m\}$. □

---

4 *Suppose $(v_1, \dots, v_m)$ is a basis of V and W is finite-dim. Suppose $T \in \mathcal{L}(V, W)$.*
Prove that there exists a basis $(w_1, \dots, w_n)$ of W such that all entries in the first column of $A = \mathcal{M}(T, (v_1, \dots, v_m), (w_1, \dots, w_n))$ are 0 except for possibly a 1 in the first row, first column.

SOLUTION: If $Tv_1 = 0$, then we are done. Otherwise, extend (Tv_1) to a basis of W, as desired. □

---

5 *Suppose $(w_1, \ldots, w_n)$ is a basis of W and V is finite-dim. Suppose $T \in \mathcal{L}(V, W)$. Prove that there exists a basis $(v_1, \ldots, v_m)$ of V such that all entries in the first row of $\mathcal{M}(T, (v_1, \ldots, v_m), (w_1, \ldots, w_n))$ are 0 except for possibly a 1 in the first row, first column.*

Solution:

Let $(u_1, \ldots, u_m)$ be a basis of V. If $A_{1,\cdot} = 0$, then let $v_i = u_i$ for each $i = 1, \ldots, n$, we are done.

Otherwise, $\begin{pmatrix} A_{1,1} & \cdots & A_{1,m} \end{pmatrix} \neq 0$, choose one $A_{1,k} \neq 0$.

Let $v_1 = \dfrac{u_k}{A_{1,k}}$; $\quad v_j = u_{j-1} - A_{1,j-1}v_1 \quad$ for $j = 2, \ldots, k$;

$\qquad v_i = u_i - A_{1,i}v_1 \quad$ for $i = k+1, \ldots, n$. $\quad \square$

---

6 *Suppose V and W are finite-dim and $T \in \mathcal{L}(V, W)$. Prove that $\dim$ range $T = 1$ if and only if there exist a basis of V and a basis of W such that with respect to these bases, all entries of $A = \mathcal{M}(T)$ equal 1.*

Solution:

Denote the bases of V and W by $B_V = (v_1, \ldots, v_n)$ and $B_W = (w_1, \ldots, w_m)$ respectively.

(a) Suppose B_V, B_W are the bases such that all entries of A equal 1.

Then $Tv_i = w_1 + \cdots + w_m$ for all $i = 1, \ldots, n$. Hence $\dim \operatorname{range} T = 1$.

(b) Suppose $\dim \operatorname{range} T = 1$. Then $\dim \operatorname{null} T = \dim V - 1$.

Let $(u_2, \ldots, u_n)$ be a basis of null T. Extend it to a basis of V as $(u_1, u_2, \ldots, u_n)$.

Let $w_1 = Tv_1 - w_2 - \cdots - w_m$. Extend it to B_W the basis of W.

Let $v_1 = u_1, v_i = u_1 + u_i$. Extend it to B_V the basis of V. $\square$

---

12 *Give an example of 2-by-2 matrices A and B such that $AB \neq BA$.*

Solution: $\begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix}\begin{pmatrix} 0 & 1 \\ 1 & 0 \end{pmatrix} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix}$; $\quad \begin{pmatrix} 0 & 1 \\ 1 & 0 \end{pmatrix}\begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix} = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix}$.

---

13 *Prove that the distributive property holds for matrix addition and matrix multiplication. In other words, suppose A, B, C, D, E and F are matrices whose sizes are such that $A(B+C)$ and $(D+E)F$ make sense. Explain why $AB + AC$ and $DF + EF$ both make sense and prove that.*

Solution: Using [3.36], [3.43].

(a) Left distributive: Suppose $A \in \mathbf{F}^{m,n}$ and $B, C \in \mathbf{F}^{n,p}$.

Because $[A(B+C)]_{j,k} = \sum\limits_{r=1}^{n} A_{j,r}(B+C)_{r,k} = \sum\limits_{r=1}^{n}(A_{j,r}B_{r,k} + A_{j,r}C_{r,k})$.

Hence we conclude that $A(B+C) = AB + AC$.

Or. Let $(e_1, \ldots, e_M)$ be the standard basis of $\mathbf{F}^M$, where $M = \max\{m, n, p\}$.

Suppose $T \in \mathcal{L}(\mathbf{F}^n, \mathbf{F}^m)$ such that $Te_k = \sum\limits_{j=1}^{m} A_{j,k}e_j$ for each $k = 1, \ldots, n$. Then $\mathcal{M}(T) = A$.

Similarly, define S, R such that $\mathcal{M}(S) = B, \mathcal{M}(R) = C$.

Thus $T(S+R) = TS + TR$
$$\Rightarrow \mathcal{M}(T(S+R)) = \mathcal{M}(TS + TR)$$
$$\Rightarrow \mathcal{M}(T)[\mathcal{M}(S) + \mathcal{M}(R)] = \mathcal{M}(T)\mathcal{M}(S) + \mathcal{M}(T)\mathcal{M}(R)$$
$$\Rightarrow A(B+C) = AB + AC.$$

(b) Right distributive: Similarly.

Suppose $\mathcal{M}(T) = D, \mathcal{M}(S) = E, \mathcal{M}(R) = F$.

Then $(T+S)R = TR + SR$
$$\Rightarrow \mathcal{M}((T+S)R) = \mathcal{M}(TR) + \mathcal{M}(SR)$$
$$\Rightarrow [\mathcal{M}(T) + \mathcal{M}(S)]\mathcal{M}(R) = \mathcal{M}(T)\mathcal{M}(R) + \mathcal{M}(S)\mathcal{M}(R)$$
$$\Rightarrow (D+E)F = DF + EF. \ \square$$

---

14 *Prove that matrix multiplication is associative. In other words, suppose A, B and C are matrices whose sizes are such that $(AB)C$ makes sense. Explain why $A(BC)$ makes sense and prove that $(AB)C = A(BC)$.*

Try to find a clean proof that illustrates the following quote from Emil Artin:

"It is my experience that proofs involving matrices can be shortened by 50% if one throws the matrices out."

SOLUTION:

Because $[(AB)C]_{j,k} = (AB)_{j,\cdot}C_{\cdot,k} = \sum_{s=1}^{n}(A_{j,s}B_{s,\cdot})C_{\cdot,k} = \sum_{s=1}^{n} A_{j,s}(B_{s,\cdot}C_{\cdot,k}) = \sum_{s=1}^{n} A_{j,s}(BC)_{s,k} = A(BC)_{j,k}$

Hence we conclude that $(AB)C = A(BC)$.

OR. Suppose $A \in \mathbf{F}^{m,n}, B \in \mathbf{F}^{n,p}, C \in \mathbf{F}^{p,s}$.

Let $(e_1, \dots, e_M)$ be the standard basis of $\mathbf{F}^M$, where $M = \max\{m, n, p, s\}$.

Suppose $T \in \mathcal{L}(\mathbf{F}^n, \mathbf{F}^m)$ such that $Te_k = \sum_{j=1}^{m} A_{j,k}e_j$ for each $k = 1, \dots, n$. Then $\mathcal{M}(T) = A$.

Similarly, define S, R such that $\mathcal{M}(S) = B, \mathcal{M}(R) = C$.

$$
\begin{aligned}
\text{Hence } (TS)R = T(SR) &\Rightarrow \mathcal{M}((TS)R) = \mathcal{M}(T(SR)) \\
&\Rightarrow [\mathcal{M}(T)\mathcal{M}(S)]\mathcal{M}(R) = \mathcal{M}(T)[\mathcal{M}(S)\mathcal{M}(R)] \\
&\Rightarrow (AB)C = A(BC). \ \square
\end{aligned}
$$

---

15 *Suppose A is an n-by-n matrix and $1 \le j, k \le n$. Show that the entry in row j, column k, of A^3 (which is defined to mean AAA) is $\sum_{p=1}^{n}\sum_{r=1}^{n} A_{j,p}A_{p,r}A_{r,k}$.*

SOLUTION: $(AAA)_{j,k} = (AA)_{j,\cdot}A_{\cdot,k} = \sum_{p=1}^{n}(A_{j,p}A_{p,\cdot})A_{\cdot,k} = \sum_{p=1}^{n}\sum_{r=1}^{n} A_{j,p}A_{p,r}A_{r,k}$.

$$
\begin{aligned}
OR. \quad (AAA)_{j,k} &= \sum_{r=1}^{n}(AA)_{j,r}A_{r,k} = \sum_{r=1}^{n}\Big(\sum_{p=1}^{n} A_{j,p}A_{p,r}\Big)A_{r,k} \\
&= \sum_{r=1}^{n}(A_{j,1}A_{1,r}A_{r,k} + \cdots + A_{j,n}A_{n,r}A_{r,k}) \\
&= A_{j,1}\sum_{r=1}^{n} A_{1,r}A_{r,k} + \cdots + A_{j,n}\sum_{r=1}^{n} A_{n,r}A_{r,k} = \sum_{p=1}^{n}\sum_{r=1}^{n} A_{j,p}A_{p,r}A_{r,k}. \ \square
\end{aligned}
$$

3·D

• *Suppose $T \in \mathcal{L}(V, W)$ is invertible. Show that T^{-1} is invertible and $(T^{-1})^{-1} = T$.*

SOLUTION:

$$\left.\begin{array}{l} TT^{-1} = (T^{-1})^{-1}T^{-1} = I \in \mathcal{L}(V) \\ T^{-1}T = T^{-1}(T^{-1})^{-1} = I \in \mathcal{L}(W) \end{array}\right\} \Rightarrow T = (T^{-1})^{-1}, \text{ by the uniqueness of inverse.} \quad \square$$

---

1 *Suppose $T \in \mathcal{L}(U, V)$ and $S \in \mathcal{L}(V, W)$ are both invertible linear maps. Prove that $ST \in \mathcal{L}(U, W)$ is invertible and that $(ST)^{-1} = T^{-1}S^{-1}$.*

SOLUTION:

$$\left.\begin{array}{l} (ST)(T^{-1}S^{-1}) = STT^{-1}S^{-1} = I \in \mathcal{L}(W) \\ (T^{-1}S^{-1})(ST) = T^{-1}S^{-1}ST = I \in \mathcal{L}(V) \end{array}\right\} \Rightarrow (ST)^{-1} = T^{-1}S^{-1}, \text{ by the uniqueness of inverse.} \ \square$$

---

9 *Suppose V is finite-dim and $S, T \in \mathcal{L}(V)$. Prove that ST is invertible $\Longleftrightarrow$ S and T are invertible.*

SOLUTION:

Suppose S, T are invertible. Then $(ST)(T^{-1}S^{-1}) = (T^{-1}S^{-1})(ST) = I$. Hence ST is invertible.

Suppose ST is invertible. Let $R = (ST)^{-1} \Rightarrow R(ST) = (ST)R = I$.

$$\left.\begin{array}{l} Tv = 0 \Rightarrow v = R(ST)v = RS(Tv) = 0 \\ \forall v \in V, v = (ST)Rv = S(TRv) \in \operatorname{range} S \end{array}\right\} \Rightarrow T \text{ is injective, } S \text{ is surjective.}$$

Notice that V is finite-dim. Hence S, T are invertible. $\square$

---

10 *Suppose V is finite-dim and $S, T \in \mathcal{L}(V)$. Prove that $ST = I \Longleftrightarrow TS = I$.*

SOLUTION:

Suppose $ST = I$.

$$\left.\begin{array}{l} Tv = 0 \Rightarrow v = STv = 0 \\ v \in V \Rightarrow v = S(Tv) \in \operatorname{range} S \end{array}\right\} \Rightarrow T \text{ is injective, } S \text{ is surjective.}$$

Notice that V is finite-dim. Thus T, S are invertible.

OR. By Problem (9), V is finite-dim and $ST = I$ is invertible $\Rightarrow S, T$ are invertible.

$S((TS)v) = ST(Sv) = Sv \Rightarrow (TS)v = v$ (S is invertible).

OR. $ST = I \Rightarrow S = T^{-1} \Rightarrow S^{-1} = T$. 又 $S = S \Rightarrow TS = S^{-1}S = I$.

Reversing the roles of S and T, we conclude that $TS = I \Rightarrow ST = I$. $\square$

---

11 *Suppose V is finite-dim and $S, T, U \in \mathcal{L}(V)$ and $STU = I$. Show that T is invertible and that $T^{-1} = US$.*

SOLUTION: Using Problem (9) and (10).

$(ST)U = U(ST) = (US)T = T(US) = S(TU) = (TU)S = I$.

$\Rightarrow U^{-1} = ST, \quad T^{-1} = US, \quad S^{-1} = TU.$ $\square$

---

12 *Show that the result in Exercise 11 can fail without the hypothesis that V is finite-dim.*

SOLUTION:

Let $V = \mathbf{R}^\infty, S(a_1, a_2, \dots) = (a_2, \dots), T(a_1, \dots) = (0, a_1, \dots), U = I$.

Then $STU = I$ but T^{-1} is not invertible.

---

13 *Suppose V is finite-dim and $R, S, T \in \mathcal{L}(V)$ are such that RST is surjective. Prove that S is injective.*

SOLUTION:

By Problem (1) and (9), Notice that V is finite-dim. Then RST is invertible.

$(RST)^{-1} = ((RS)T)^{-1} = T^{-1}(RS)^{-1} = T^{-1}S^{-1}R^{-1}$. $\square$

OR. Let $X = (RST)^{-1}$, $\left| \begin{array}{l} Tv = 0 \Rightarrow v = X(RSTv) = 0 \Rightarrow T \text{ is injective, and therefore is invertible.} \\ \forall v \in V, v = (RST)Xv \in \text{range } R \Rightarrow R \text{ is surjective, and therefore is invertible.} \end{array} \right.$

Thus $S = R^{-1}(RST)T^{-1}$ is invertible.

---

15 *Prove that every linear map from $\mathbf{F}^{n,1}$ to $\mathbf{F}^{m,1}$ is given by a matrix multiplication. In other words, prove that if $T \in \mathcal{L}(\mathbf{F}^{n,1}, \mathbf{F}^{m,1})$, then $\exists\, A \in \mathbf{F}^{m,n}, Tx = Ax, \forall x \in \mathbf{F}^{n,1}$.*

SOLUTION:

Let $E_i \in \mathbf{F}^{n,1}$ for each $i = 1, \dots, n$ (where $M = \max\{m, n\}$) be such that $(E_i)_{j,1} = \begin{cases} 0, & i \neq j \\ 1, & i = j \end{cases}$

Then $(E_1, \dots, E_n)$ is linearly independent and thus is a basis of $\mathbf{F}^{n,1}$.

Similarly, let $(R_1, \dots, R_m)$ be a basis of $\mathbf{F}^{m,1}$.

Suppose $T(E_i) = A_{1,i}R_1 + \dots + A_{m,i}R_m$ for each $i = 1, \dots, n$. Hence by letting $A = \begin{pmatrix} A_{1,1} & \cdots & A_{1,n} \\ \vdots & \ddots & \vdots \\ A_{m,1} & \cdots & A_{m,n} \end{pmatrix}$. $\square$

COMMENT: $\mathcal{M}(T) = A$. Conversely it is true as well.

- OR (10.A.2) *Suppose $A, B \in \mathbf{F}^{n,n}$. Prove that $AB = I \iff BA = I$.*

SOLUTION: Using Problem (10) and (15).

Define $T, S \in \mathcal{L}(\mathbf{F}^{n,1}, \mathbf{F}^{n,1})$ by $Tx = Ax, Sx = Bx$ for all $x \in \mathbf{F}^{n,1}$. Then $\mathcal{M}(T) = A, \mathcal{M}(S) = B$.

Thus $AB = I \Leftrightarrow A(Bx) = x \iff T(Sx) = x \Leftrightarrow TS = I \iff ST = I \iff \mathcal{M}(S)\mathcal{M}(T) = BA = I$.$\square$

- **NOTE FOR [3.60]:** Suppose $(v_1, \dots, v_n)$ is a basis of V and $(w_1, \dots, w_m)$ is a basis of W.

Define $E_{i,j} \in \mathcal{L}(V, W)$ by $E_{i,j}(v_x) = \delta_{ix}w_j$; $\quad \delta_{ix} = \begin{cases} 0, & i \neq x \\ 1, & i = x \end{cases}$ $\qquad$ COROLLARY: $E_{l,k}E_{i,j} = \delta_{jl}E_{i,k}$.

Denote $\mathcal{M}(E_{i,j})$ by $\mathcal{E}^{(j,i)}$. $(\mathcal{E}^{(j,i)})_{l,k} = \begin{cases} 0, & i \neq k \text{ or } j \neq l \\ 1, & i = k \text{ and } j = l \end{cases}$

Because $\mathcal{L}(V, W)$ and $\mathbf{F}^{m,n}$ are isomorphic. And $T = \mathcal{M}^{-1}\mathcal{M}(T), E_{i,j} = \mathcal{M}^{-1}\mathcal{E}^{(j,i)}$.

Hence $\forall T \in \mathcal{L}(V, W)$, $\exists !\, A_{i,j} \in \mathbf{F}$ ($\forall i = \{1, \dots, m\}, j = \{1, \dots, n\}$), $\mathcal{M}(T) = A = \begin{pmatrix} A_{1,1} & \cdots & A_{1,n} \\ \vdots & \ddots & \vdots \\ A_{m,1} & \cdots & A_{m,n} \end{pmatrix}$.

$$\text{Thus } A = \begin{pmatrix} A_{1,1}\mathcal{E}^{(1,1)}+ & \cdots & +A_{1,n}\mathcal{E}^{(1,n)} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{m,1}\mathcal{E}^{(m,1)}+ & \cdots & +A_{m,n}\mathcal{E}^{(m,n)} \end{pmatrix} \iff T = \begin{pmatrix} A_{1,1}E_{1,1}+ & \cdots & +A_{1,n}E_{n,1} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{m,1}E_{1,m}+ & \cdots & +A_{m,n}E_{n,m} \end{pmatrix}.$$

$$\therefore \mathcal{L}(V, W) = \text{span} \underbrace{\begin{pmatrix} E_{1,1}, & \cdots & ,E_{n,1}, \\ \vdots & \ddots & \vdots \\ E_{1,m}, & \cdots & ,E_{n,m} \end{pmatrix}}_{B}; \quad \mathbf{F}^{m,n} = \text{span} \underbrace{\begin{pmatrix} \mathcal{E}^{(1,1)}, & \cdots & ,\mathcal{E}^{(1,n)}, \\ \vdots & \ddots & \vdots \\ \mathcal{E}^{(m,1)}, & \cdots & ,\mathcal{E}^{(m,n)} \end{pmatrix}}_{B_M}.$$

Hence by [2.42] and [3.61], we conclude that B is a basis of $\mathcal{L}(V, W)$ and that B_M is a basis of $\mathbf{F}^{m,n}$.

◦ *Suppose V is finite-dim and $S \in \mathcal{L}(V)$. Define $A \in \mathcal{L}(\mathcal{L}(V))$ by $A(T) = ST$ for $T \in \mathcal{L}(V)$.*
(a) *Show that* $\dim \textit{null}\, A = (\dim V)(\dim \textit{null}\, S)$.
(b) *Show that* $\dim \textit{range}\, A = (\dim V)(\dim \textit{range}\, S)$.

SOLUTION: Using NOTE FOR [3.60].

Let $(w_1, \dots, w_m)$ be a basis of range S, extend it to a basis of V as $(w_1, \dots, w_m, \dots, w_n)$.
Let $v_i \in V$ such that $Sv_i = w_i$ for $m = 1, \dots, m$. Extend $(v_1, \dots, v_m)$ to a basis of V as $(v_1, \dots, v_m, \dots, v_n)$.
Define $E_{i,j} \in \mathcal{L}(V)$ by $E_{i,j}(v_x) = \delta_{ix} w_i$.

Thus $S = E_{1,1} + \cdots + E_{m,m}$; $\quad \mathcal{M}(S, (v_1, \dots, v_n), (w_1, \dots, w_n)) = \begin{pmatrix} 1 & 0 & \cdots & 0 & 0 & \cdots & 0 \\ 0 & 1 & \cdots & 0 & 0 & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & 1 & 0 & \cdots & 0 \\ 0 & 0 & \cdots & 0 & 0 & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & 0 & 0 & \cdots & 0 \end{pmatrix}$.

Define $R_{i,j} \in \mathcal{L}(V)$ by $R_{i,j}(w_x) = \delta_{ix} v_i$.
Let $E_{j,k} R_{i,j} = Q_{i,k}, \quad R_{j,k} E_{i,j} = G_{i,k}$

Because $\forall T \in \mathcal{L}(V), \quad \exists!\, A_{i,j} \in \mathbf{F}\,(\forall i, j = 1, \dots, n), \quad T = \begin{pmatrix} A_{1,1}R_{1,1}+ & \cdots & +A_{1,m}R_{m,1}+ & \cdots & +A_{1,n}R_{n,1} \\ + & \cdots & + & \cdots & + \\ \vdots & \ddots & \vdots & \ddots & \vdots \\ + & \cdots & + & \cdots & + \\ A_{m,1}R_{1,m}+ & \cdots & +A_{m,m}R_{m,m}+ & \cdots & +A_{m,n}R_{n,m} \\ + & \cdots & + & \cdots & + \\ \vdots & \ddots & \vdots & \ddots & \vdots \\ + & \cdots & + & \cdots & + \\ A_{n,1}R_{1,n}+ & \cdots & +A_{n,m}R_{m,n}+ & \cdots & +A_{n,n}R_{n,n} \end{pmatrix}$.

$$\Rightarrow A(T) = ST = \Big(\sum_{r=1}^{m} E_{r,r}\Big)\Big(\sum_{i=1}^{n}\sum_{j=1}^{n} A_{i,j}R_{j,i}\Big) = \sum_{i=1}^{m}\sum_{j=1}^{n} A_{i,j}Q_{j,i} = \begin{pmatrix} A_{1,1}Q_{1,1}+ & \cdots & +A_{1,m}Q_{m,1}+ & \cdots & +A_{1,n}Q_{n,1} \\ + & \cdots & + & \cdots & + \\ \vdots & \ddots & \vdots & \ddots & \vdots \\ + & \cdots & + & \cdots & + \\ A_{m,1}Q_{1,m}+ & \cdots & +A_{m,m}Q_{m,m}+ & \cdots & +A_{m,n}Q_{n,m} \end{pmatrix}.$$

Thus null A = span $\begin{pmatrix} R_{1,m+1}, & \cdots & , R_{n,m+1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ R_{1,n}, & \cdots & , R_{n,n} \end{pmatrix}$, $\quad$ range A = span $\begin{pmatrix} Q_{1,1}, & \cdots & , Q_{n,1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ Q_{1,m}, & \cdots & , Q_{n,m} \end{pmatrix}$.

Hence (a) $\dim \text{null}\, A = n \times (n - m)$; $\quad$ (b) $\dim \text{range}\, A = n \times m$. $\quad \square$

• COMMENT: Define $B \in \mathcal{L}(\mathcal{L}(V))$ by $B(T) = TS$ for $T \in \mathcal{L}(V)$.

Similarly, $B(T) = TS = \Big(\sum_{i=1}^{n}\sum_{j=1}^{n} A_{i,j}R_{j,i}\Big)\Big(\sum_{r=1}^{m} E_{r,r}\Big) = \sum_{i=1}^{n}\sum_{j=1}^{m} A_{i,j}G_{j,i} = \begin{pmatrix} A_{1,1}G_{1,1}+ & \cdots & +A_{1,m}G_{m,1} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{m,1}G_{1,m}+ & \cdots & +A_{m,m}G_{m,m} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{n,1}G_{1,n}+ & \cdots & +A_{n,m}G_{m,n} \end{pmatrix}$.

Prove that $A = \mathcal{M}(T, (v_1, \dots, v_n)) = \mathcal{M}(I, (u_1, \dots, u_n), (v_1, \dots, v_n)) = B$.

SOLUTION:

$\forall\, k \in \{1, \dots, n\}, Iu_k = u_k = B_{1,k}v_1 + \cdots + B_{n,k}v_n = Tv_k = A_{1,k}v_1 + \cdots + A_{n,k}v_n \Rightarrow A = B.$ □

OR. Note that $\mathcal{M}(T, (v_1, \dots, v_n), (u_1, \dots, u_n))$ is the identity matrix.

$$A = \mathcal{M}(T, (v_1, \dots, v_n)) = \mathcal{M}(I, (u_1, \dots, u_n), (v_1, \dots, v_n))\,\underbrace{\mathcal{M}(T, (v_1, \dots, v_n), (u_1, \dots, u_n))}_{=I} = B. \quad \square$$

• COMMENT: Denote $\mathcal{M}(T, (u_1, \dots, u_n))$ by A'.

$u_k = Iu_k = B_{1,k}v_1 + \cdots + B_{n,k}v_n, \ \forall\, k \in \{1, \dots, n\}$.

又 $Tu_k = T(B_{1,k}v_1 + \cdots + B_{n,k}v_n) = B_{1,k}u_1 + \cdots + B_{n,k}u_n = A'_{1,k}u_1 + \cdots + A'_{n,k}u_n \Rightarrow A' = B$.

OR. $A' = \mathcal{M}(T, (u_1, \dots, u_n)) = \mathcal{M}(T, (v_1, \dots, v_n), (u_1, \dots, u_n))\mathcal{M}(I, (u_1, \dots, u_n), (v_1, \dots, v_n)) = B$.

---

16 *Suppose* V *is finite-dim and* $S \in \mathcal{L}(V)$.
Prove that $\exists\, \lambda \in \mathbf{F}, S = \lambda I \iff ST = TS$ *for every* $T \in \mathcal{L}(V)$.

SOLUTION: Using the notation and result in $(\circ)$.

Suppose $S = \lambda I$. Then $ST = TS = \lambda T$ for every $T \in \mathcal{L}(V)$. Conversely, if $S = 0$, then we are done.

Suppose $S \neq 0, ST = TS, \forall T \in \mathcal{L}(V)$. Let $S = E_{1,1} + \cdots + E_{m,m} \Rightarrow \mathcal{M}(S, (v_1, \dots, v_1)) = \mathcal{M}(I, (w_1, \dots, w_n), (v_1,$

Then $\forall k \in \{m+1, \dots, n\}, 0 \neq SR_{k,1} = R_{k,1}S$. Hence $n = \dim V = \dim \operatorname{range} S = m$.

Note that $R_{i,j}S = SR_{i,j} \iff Q_{i,j} = G_{i,j}$. Thus $Q_{i,j}(w_i) = w_j = a_{i,i}v_j = G_{i,j}(a_{1,i}v_1 + \cdots + a_{n,i}v_n)$. Where:

$a_{i,j} = \mathcal{M}(I, (w_1, \dots, w_n), (v_1, \dots, v_n))_{i,j} \iff w_i = Iw_i = a_{1,i}v_1 + \cdots + a_{n,i}v_n$;

For each j, for all i. Thus $a_{i,i} = a_{k,k} = \lambda, \forall\, k \neq i$.

Hence $w_i = \lambda v_i \Rightarrow \mathcal{M}(S) = \begin{pmatrix} \lambda & & 0 \\ & \ddots & \\ 0 & & \lambda \end{pmatrix} = \mathcal{M}(\lambda I, (v_1, \dots, v_n)) \Rightarrow S = \mathcal{M}^{-1}(\mathcal{M}(\lambda I)) = \lambda I$. □

• OR (10.A.3) *Suppose* V *is finite-dim and* $T \in \mathcal{L}(V)$.
Prove that T *has the same matrix with respect to every basis of* V
if and only if T *is a scalar multiple of the identity operator.*

SOLUTION: [Compare with the first solution of Problem (16) in (3.A)]

Suppose $T = \lambda I$ for some $\lambda \in \mathbf{F}$. Then T has the same matrix with respect to every basis of V.

Conversely, if $T = 0$, then we are done; Suppose $T \neq 0$. And v is a nonzero vector in V.

Assume that (v, Tv) is linearly independent.

Extend (v, Tv) to a basis of V as $(v, Tv, u_3, \dots, u_n)$. Let $B = \mathcal{M}(T, (v, Tv, u_3, \dots, u_n))$.

$\Rightarrow Tv = B_{1,1}v + B_{2,1}(Tv) + B_{3,1}u_3 + \cdots + B_{n,1}u_n \Rightarrow B_{2,1} = 1, B_{i,1} = 0, \forall i \neq 2$.

By assumption, $A = \mathcal{M}(T, (v, w_2, \dots, w_n) = B$ for any basis $(v, w_2, \dots, w_n)$.

Then $A_{2,1} = 1, A_{i,1} = 0\,(\,i \neq 2\,) \Rightarrow Tv = w_2$,

which is not true if we let $w_2 = u_3, w_3 = Tv, w_j = u_j\,(\,j = 4, \dots, n\,)$. Contradicts.

Hence (v, Tv) is linearly dependent $\Rightarrow \forall v \in V, \exists\, \lambda_v \in \mathbf{F}, Tv = \lambda_v v$.

Now we show that λ_v is independent of v, that is,

to show that for any two nonzero distinct vectors $v, w \in V, \lambda_v = \lambda_w$. Thus $T = \lambda I$ for some $\lambda \in \mathbf{F}$.

$$\left.\begin{aligned} &(v, w) \text{ is linearly independent} \Rightarrow T(v+w) = \lambda_{v+w}(v+w) \\ &\qquad = \lambda_{v+w}v + \lambda_{v+w}w \\ &\qquad = \lambda_v v + \lambda_w w = Tv + Tw \Rightarrow \lambda_{v+w} = \lambda_v = \lambda_w \\ &(v, w) \text{ is linearly dependent, } w = cv \Rightarrow Tw = \lambda_w w = \lambda_w cv = c\lambda_v v = T(cv) \Rightarrow \lambda_v = \lambda_w \end{aligned}\right\} \Rightarrow \square$$

---

17 *Suppose V is finite-dim. Show that the only two-sided ideals of $\mathcal{L}(V)$ are $\{0\}$ and $\mathcal{L}(V)$.*

A subspace $\mathcal{E}$ of $\mathcal{L}(V)$ is called a two-sided ideal of $\mathcal{L}(V)$ if $TE \in \mathcal{E}, ET \in \mathcal{E},\ \forall E \in \mathcal{E}, T \in \mathcal{L}(V)$.

SOLUTION: Using NOTE FOR [3.60]. Let $(v_1, \ldots, v_n)$ be a basis of V. If $\mathcal{E} = 0$, then we are done.

Suppose $\mathcal{E} \neq 0$ and $\mathcal{E}$ is a two-sided ideal of $\mathcal{L}(V)$.

Then for any $E_{i,j} \in \mathcal{E}$, $(\forall x, y = 1, \ldots, n)$, by assumption, $E_{j,x}E_{i,j} = E_{i,x} \in \mathcal{E}, E_{i,j}E_{y,i} = E_{y,j} \in \mathcal{E}$.

Again, $E_{y,x'}, E_{y',x} \in \mathcal{E}$ for all $x', y', x, y = 1, \ldots, n$. Thus $\mathcal{E} = \mathcal{L}(V)$. $\square$

---

18 *Show that V and $\mathcal{L}(\mathbf{F}, V)$ are isomorphic vector spaces.*

SOLUTION:

Define $\varphi \in \mathcal{L}(V, \mathcal{L}(\mathbf{F}, V))$ by $\varphi(v) = \varphi_v$; where $\varphi_v \in \mathcal{L}(\mathbf{F}, V)$ and $\varphi_v(\lambda) = \lambda v$.

$$\left.\begin{array}{l} \text{(a) } \varphi(v) = \varphi_v = 0 \Rightarrow \forall \lambda \in \mathbf{F}, \varphi_v(\lambda) = \lambda v = 0 \Rightarrow v = 0. \text{ Hence } \varphi \text{ is injective.} \\ \text{(b) } \forall \psi \in \mathcal{L}(\mathbf{F}, V), \text{ let } v = \psi(1) \Rightarrow \psi(\lambda) = \lambda v = \varphi_v(\lambda), \forall \lambda \in \mathbf{F} \\ \qquad \Rightarrow \psi = \varphi_{\psi(1)} = \varphi(\psi(1)). \text{ Hence } \varphi \text{ is surjective.} \end{array}\right\} \Rightarrow \varphi \text{ is an isomorphism.} \quad \square$$

• *Suppose $q \in \mathcal{P}(\mathbf{R})$. Prove that there exists a polynomial $p \in \mathcal{P}(\mathbf{R})$ such that $q(x) = (x^2 + x)p''(x) + 2xp'(x) + p(3)$ for all $x \in \mathbf{R}$.*

SOLUTION:

Note that $\deg[(x^2 + x)p''(x) + 2xp'(x) + p(3)] = \deg p$.

Define $T_n : \mathcal{P}_n(\mathbf{R}) \to \mathcal{P}_n(\mathbf{R})$ by $T_n(p) = (x^2 + x)p''(x) + 2xp'(x) + p(3)$.

As can be easily checked, T_n is an operator.

Now how can we prove that $T_n(p) = (x^2 + x)p''(x) + 2xp'(x) + p(3) = 0 \iff p = 0$?

Hence T_n is injective and therefore is surjective.

Thus $\forall q \in \mathcal{P}(\mathbf{R}), \deg q = m,\ \exists\, p \in \mathcal{P}_m(\mathbf{R}), q(x) = T_m(p) = (x^2 + x)p''(x) + 2xp'(x) + p(3)$ for all $x \in \mathbf{R}$.

---

19 *Suppose $T \in \mathcal{L}(\mathcal{P}(\mathbf{R}))$ is injective.* $\deg Tp \leq \deg p$ *for every nonzero $p \in \mathcal{P}(\mathbf{R})$.*

(a) *Prove that T is surjective.*

(b) *Prove that for every nonzero p,* $\deg Tp = \deg p$.

SOLUTION:

(a) T is injective $\iff T|_{\mathcal{P}_n(\mathbb{R})} : \mathcal{P}_n(\mathbf{R}) \to \mathcal{P}_n(\mathbf{R})$ is injective for any $n \in \mathbf{N}^+$

$\iff T|_{\mathcal{P}_n(\mathbb{R})}$ is surjective for any $n \in \mathbf{N}^+ \iff T$ is surjective.

(b) Using mathematical induction.

(i) $\deg p = 0 \Rightarrow p = C \Rightarrow \deg Tp = \deg p = 0$.

$\deg p = -\infty \Rightarrow p = 0 \Rightarrow \deg Tp = \deg p = -\infty$.

(ii) Suppose $\deg f = \deg Tf$ for all $f \in \mathcal{P}_n(\mathbf{R})$. Then suppose $\deg g = n + 1, g \in \mathcal{P}_{n+1}(\mathbf{R})$.

Assume that $\deg Tg < \deg g$ ($\Rightarrow \deg Tg \leq n, Tg \in \mathcal{P}_n(\mathbf{R})$).

Then by (a), $\exists\, f \in \mathcal{P}_n(\mathbf{R}), T(f) = (Tg)$. 又 T is injective $\Rightarrow f = g$.

While $\deg f = \deg Tf = \deg Tg < \deg g$. Contradicts the assumption.

Hence $\deg Tp = \deg p$ for all $p \in \mathcal{P}_{n+1}(\mathbf{R})$.

Thus $\deg Tp = \deg p$ for all $p \in \mathcal{P}(\mathbf{R})$. $\square$

• *Suppose $T \in \mathcal{L}(V)$ and $(v_1, \ldots, v_m)$ is a list in V such that $(Tv_1, \ldots, Tv_m)$ spans V. Prove that $(v_1, \ldots, v_m)$ spans V.*

SOLUTION:

$V = \operatorname{span}(Tv_1, \ldots, Tv_m) \Rightarrow T$ is surjective, 又 V is finite-dim $\Rightarrow T$ is invertible $\Rightarrow T^{-1}$ is invertible.

$\forall v \in V,\ \exists\, a_i \in \mathbf{F}, v = a_1Tv_1 + \cdots + a_nTv_n$

$$\Rightarrow T^{-1}v = a_1v_1 + \cdots + a_nv_n \Rightarrow \operatorname{range} T^{-1} \subseteq \operatorname{span}(v_1, \ldots, v_n) \text{ 又 } \operatorname{range} T^{-1} = V. \quad \square$$

OR. Reduce $(Tv_1, \ldots, Tv_n)$ to a basis of V as $(Tv_{\alpha_1}, \ldots, Tv_{\alpha_m})$, where $m = \dim V$ and $\alpha_i \in \{1, \ldots, m\}$. Then $(v_{\alpha_1}, \ldots, v_{\alpha_m})$ is linearly independet of length m, therefore is a basis of V, contained in the list $(v_1, \ldots, v_m)$. $\square$

• *Suppose V is finite-dim and $T \in \mathcal{L}(V)$.*

$$\left.\begin{array}{l} (Tv_1, \ldots, Tv_n) \text{ is a basis of } V \text{ for some basis } (v_1, \ldots, v_n) \text{ of } V \iff T \text{ is surjective} \\ (Tv_1, \ldots, Tv_n) \text{ is a basis of } V \text{ for every basis } (v_1, \ldots, v_n) \text{ of } V \iff T \text{ is injective} \end{array}\right\} \iff T \text{ is invertible.}$$

---

2 *Suppose V is finite-dim and $\dim V > 1$.*
Prove that the set of noninvertible operators on V is not a subspace of $\mathcal{L}(V)$.

SOLUTION:

Suppose $\dim V = n > 1$. Let $(v_1, \ldots, v_n)$ be a basis of V.

Define $S, T \in \mathcal{L}(V)$ by $S(a_1v_1 + \cdots + a_nv_n) = a_1v_1$ and $T(a_1v_1 + \cdots + a_nv_n) = a_2v_1 + \cdots + a_nv_n$.

Hence $S + T = I$ is invertible.

Thus the set of noninvertible linear maps in $\mathcal{L}(V)$ is not closed under addition and therefore is not a subspace. $\square$

COMMENT: If $\dim V = 1$, then the set of noninvertible operators on V equals $\{0\}$, which is a subspace of $\mathcal{L}(V)$.

---

3 *Suppose V is finite-dim, U is a subspace of V, and $S \in \mathcal{L}(U, V)$.*
Prove that there exists an invertible $T \in \mathcal{L}(V, V)$ such that
$Tu = Su$ for every $u \in U$ if and only if S is injective.

SOLUTION: [*Compare this with (3.A.11).*]

(a) $Tu = Su$ for every $u \in U \Rightarrow u = T^{-1}Su \Rightarrow S$ is injective.

(b) Suppose $(u_1, \ldots, u_m)$ be a basis of U and S is injective $\Rightarrow (Su_1, \ldots, Su_m)$ is linearly independent in V.

Extend these to bases of V as $(u_1, \ldots, u_m, v_1, \ldots, v_n)$ and $(Su_1, \ldots, Su_m, w_1, \ldots, w_n)$.

Define $T \in \mathcal{L}(V)$ by $T(u_i) = Su_i;\ \ Tv_j = w_j$, for each $i \in \{1, \ldots, m\}, j \in \{1, \ldots, n\}$.

---

4 *Suppose that W is finite-dim and $S, T \in \mathcal{L}(V, W)$.*
Prove that null S = null T $(= U) \iff S = ET,\ \exists$ invertible $E \in \mathcal{L}(W)$.

SOLUTION:

Define $E \in \mathcal{L}(W)$ by $E(Tv_i) = Sv_i,\ \ E(w_j) = x_j$, for each $i \in \{1, \ldots, m\}, j \in \{1, \ldots, n\}$. Where:

Let $(Tv_1, \ldots, Tv_m)$ be a basis of range T, extend it to a basis of W as $(Tv_1, \ldots, Tv_m, w_1, \ldots, w_n)$. Let $(u_1, \ldots, u_n)$ be a basis of U. Then by (3.B.TIPS), $(v_1, \ldots, v_m, u_1, \ldots, u_n)$ is a basis of V. 又 null S = null $T \Rightarrow V = \operatorname{span}(v_1, \ldots, v_m) \oplus \operatorname{null} S \Rightarrow \operatorname{span}(Sv_1, \ldots, Sv_m) = \operatorname{range} S$. And dim range T = dim range S = dim V − null $U = m$. Hence $(Sv_1, \ldots, Sv_m)$ is a basis of range S. Thus we let $(Sv_1, \ldots, Sv_m, x_1, \ldots, x_n)$ be a basis of W.	Hence E is invertible and $S = ET$.

Conversely, $S = ET \Rightarrow$ null S = null ET.

Then $v \in \operatorname{null} ET \iff ET(v) = 0 \iff Tv = 0 \iff v \in \operatorname{null} T$. Hence null ET = null T = null S. $\square$

---

5 *Suppose that W is finite-dim and $S, T \in \mathcal{L}(V, W)$.*
Prove that range $S =$ range T $(= R)$ $\Longleftrightarrow S = TE$, $\exists$ invertible $E \in \mathcal{L}(V)$.

SOLUTION:

Define $E \in \mathcal{L}(V)$ as $E: \ v_i \mapsto r_i$; $\ u_j \mapsto s_j$; for each $i \in \{1, \ldots, m\}, j \in \{1, \ldots, n\}$. Where:

Let $(Tv_1, \ldots, Tv_m)$ and $(Sr_1, \ldots, Sr_m)$ be bases of R such that $\forall\, i, Tv_i = Sr_i$.
Let $(u_1, \ldots, u_n)$ and $(s_1, \ldots, s_n)$ be bases of null T and null S respectively.
Thus $(v_1, \ldots, v_m, u_1, \ldots, u_n)$ and $(r_1, \ldots, r_m, s_1, \ldots, s_n)$ are bases of V.

Hence E is invertible and $S = TE$.

Conversely, $S = TE \Rightarrow$ range $S =$ range TE.
Then $w \in$ range $S \Longleftrightarrow \exists\, v \in V, Sv = TE(v) = T(E(v)) = w \in$ range T. Hence range $S =$ range T. $\square$

---

6 *Suppose V and W are finite-dim and $S, T \in \mathcal{L}(V, W)$.* [dim null $S =$ dim null $T = n$]
Prove that $S = E_2 T E_1$, $\exists$ invertible $E_1 \in \mathcal{L}(V), E_2 \in \mathcal{L}(W) \Longleftrightarrow$ dim *null* $S =$ dim *null* T.

SOLUTION:

Define $E_1: \ v_i \mapsto r_i$; $\ u_j \mapsto s_j$; for each $i \in \{1, \ldots, m\}, j \in \{1, \ldots, n\}$.
Define $E_2: Tv_i \mapsto Sr_i$; $x_j \mapsto y_j$; for each $i \in \{1, \ldots, m\}, j \in \{1, \ldots, n\}$. Where:

Let $(Tv_1, \ldots, Tv_m)$ and $(Sr_1, \ldots, Sr_m)$ be bases of range T and range S.
Let $(u_1, \ldots, u_n)$ and $(s_1, \ldots, s_n)$ be bases of null T and null S respectively.
Thus $(v_1, \ldots, v_m, u_1, \ldots, u_n)$ and $(r_1, \ldots, r_m, s_1, \ldots, s_n)$ are bases of V.
Extend $(Tv_1, \ldots, Tv_m)$ and $(Sr_1, \ldots, Sr_m)$ to bases of W as
$(Tv_1, \ldots, Tv_m, x_1, \ldots, x_p)$ and $(Sr_1, \ldots, Sr_m, y_1, \ldots, y_p)$.

Thus E_1, E_2 are invertible and $S = E_2 T E_1$.

Conversely, $S = E_2 T E_1 \Rightarrow$ dim null $S =$ dim null $E_2 T E_1$.
$v \in$ null $E_2 T E_1 \Longleftrightarrow E_2 T E_1(v) = 0 \Longleftrightarrow T E_1(v) = 0$. Hence null $E_2 T E_1 =$ null $T E_1 =$ null S.
又 By (3.B.22.COROLLARY), E is invertible $\Rightarrow$ dim null $T E_1 =$ dim null $T =$ dim null S. $\square$

---

8 *Suppose V is finite-dim and $T: V \to W$ is a surjective linear map of V onto W.*
Prove that there is a subspace U of V such that $T|_U$ is an isomorphism of U onto W.

$T|_U$ is the function whose domain is U, with $T|_U$ defined by $T|_U(u) = Tu$ for every $u \in U$.

SOLUTION:

T is surjective $\Rightarrow$ range $T = W \Rightarrow$ dim range $T =$ dim $W =$ dim $V -$ dim null T.
Let $(w_1, \ldots, w_m)$ be a basis of range $T = W \Rightarrow \forall w_i, \exists!\, v_i \in V, Tv_i = w_i$.
$\Rightarrow (v_1, \ldots, v_m)$ is a basis of $\mathcal{K}$. Thus dim $\mathcal{K} =$ dim W.
Thus $T|_{\mathcal{K}}$ maps a basis of $\mathcal{K}$ to a basis of range $T = W$. Denote $\mathcal{K}$ by U. $\square$

• *Suppose V and W are finite-dim and U is a subspace of V.*
Let $\mathcal{E} = \{\, T \in \mathcal{L}(V, W) : U \subseteq$ null $T \,\}$.
(a) *Show that $\mathcal{E}$ is a subspace of $\mathcal{L}(V, W)$.*
(b) *Find a formula for* dim $\mathcal{E}$ *in terms of* dim V, dim W *and* dim U.

Hint: Define $\Phi : \mathcal{L}(V, W) \to L(U, W)$ by $\Phi(T) = T|_U$. What is null Φ? What is range Φ?

SOLUTION:

(a) $\forall S, T \in \mathcal{E}, \lambda \in \mathbf{F}, Su = Tu = \lambda Tu = (S + \lambda T)u = 0 \Rightarrow (S + \lambda T) \in \mathcal{E}$.
(b) Define Φ as in the hint.

$T \in$ null $\Phi \Longleftrightarrow \Phi(T) = 0 \Longleftrightarrow \forall u \in U, Tu = 0 \Longleftrightarrow T \in \mathcal{E}$. Hence null $\Phi = \mathcal{E}$.
$S \in \mathcal{L}(U, W) \Rightarrow \exists T \in \mathcal{L}(V, W), \Phi(T) = S$, by (3.B.11) $\Rightarrow S \in$ range T. Hence range $\Phi = \mathcal{L}(U, W)$.
Thus dim null $\Phi =$ dim $\mathcal{E} =$ dim $\mathcal{L}(V, W) -$ dim range $\Phi = ($dim $V -$ dim $U)$ dim W. $\square$

OR. Extend $(u_1,\dots,u_m)$ a basis of U to $(u_1,\dots,u_m,v_1,\dots,v_n)$ a basis of V. Let $p=\dim W$.
(See NOTE FOR [3.60])

$$\forall T\in\mathcal{E}, k\in\{1,\dots,m\}, TE_{k,k}=0 \Rightarrow \underbrace{\operatorname{span}\left\{\begin{matrix} E_{1,1}, & \cdots & ,E_{m,1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ E_{1,p}, & \cdots & ,E_{m,p} \end{matrix}\right\}}_{\text{Denote it by R}} \cap\mathcal{E}=\{0\}.$$

$$\text{又 } W=\operatorname{span}\left\{\begin{matrix} E_{m+1,1}, & \cdots & ,E_{n,1}, \\ , & & , \\ \vdots & \ddots & \vdots \\ , & & , \\ E_{m+1,p}, & \cdots & ,E_{n,p} \end{matrix}\right\}\subseteq\mathcal{E}. \text{ Where } \mathcal{L}(V,W)=R\oplus W\Rightarrow\mathcal{L}(V,W)=R+\mathcal{E}.$$

Then $\dim\mathcal{E}=\dim\mathcal{L}(V,W)-\dim R-\dim(R\cap\mathcal{E})=(\dim V-\dim U)\dim W.$ $\square$

ENDED

3·E

2 *Suppose $V_1,\dots,V_m$ are vec-sps such that $V_1\times\cdots\times V_m$ is finite-dim.*
Prove that every V_j is finite-dim.

SOLUTION: Denote $V_1\times\cdots\times V_m$ by U. Denote $\{0\}\times\cdots\{0\}\times V_i\times\{0\}\cdots\times\{0\}$ by U_i.
Let $(v_1,\dots,v_M)$ be a basis of U. Note that $\forall u_i\in V_i,\in U_i\subseteq U$, for each i.

$$\left.\begin{aligned} &\text{Define } R_i\in\mathcal{L}(V_i,U) \text{ by } R_i(u_i)=(0,\dots,0,u_i,0,\dots,0). \\ &\text{Define } S_i\in\mathcal{L}(U,V_i) \text{ by } S_i(u_1,\dots,u_i,\dots,u_m)=u_i \end{aligned}\right\}\Rightarrow S_i|_{U_i}=R_i^{-1}|_{U_i}.$$

Thus U_i and V_i are isomorphic. 又 U_i is a subspace of a finite-dim vec-sp U. $\square$

---

3 *Give an example of a vec-sp V and its two subspaces U_1,U_2 such that $U_1\times U_2$ and U_1+U_2 are isomorphic but U_1+U_2 is not a direct sum.*

SOLUTION:

NOTE *that at least one of U_1,U_2 must be infinite-dim.*
For if not, $U_1\times U_2$ is finite-dim and $\dim(U_1\times U_2)=\dim(U_1+U_2)=\dim U_1+\dim U_2$.
And V must be infinite-dim. For if not, both U_1 and U_2 are finite-dim subspaces.

Let $V=\mathbf{F}^\infty=U_1, U_2=\{(x,0,\cdots)\in\mathbf{F}^\infty : x\in\mathbf{F}\}$.

$$\left.\begin{aligned} &\text{Define } T\in\mathcal{L}(U_1\times U_2,U_1+U_2) \text{ by } T((x_1,x_2,\cdots),(x,0,\cdots))=(x,x_1,x_2,\cdots) \\ &\text{Define } S\in\mathcal{L}(U_1+U_2,U_1\times U_2) \text{ by } S(x,x_1,x_2,\cdots)=((x_1,x_2,\cdots),(x,0,\cdots)) \end{aligned}\right\}\Rightarrow S=T^{-1}.\ \square$$

---

4 *Suppose $V_1,\dots,V_m$ are vec-sps.*
Prove that $\mathcal{L}(V_1\times\cdots\times V_m,W)$ and $\mathcal{L}(V_1,W)\times\cdots\times\mathcal{L}(V_m,W)$ are isomorphic.

SOLUTION: Using the notations in Problem (2). Note that $T(u_1,\dots,u_m)=T(u_1,0,\dots,0)+\cdots+T(0,\dots,u_m)$.

$$\left.\begin{aligned} &\text{Define } \varphi: T\mapsto(T_1,\dots,T_m) \text{ by } \varphi(T)=(TR_1,\dots,TR_m). \\ &\text{Define } \psi:(T_1,\dots,T_m)\mapsto T \text{ by } \psi(T_1,\dots,T_m)=T_1S_1+\cdots+T_mS_m. \end{aligned}\right\}\Rightarrow\psi=\varphi^{-1}.\square$$

---

5 *Suppose $W_1,\dots,W_m$ are vec-sps.*
Prove that $\mathcal{L}(V,W_1\times\cdots\times W_m)$ and $\mathcal{L}(V,W_1)\times\cdots\times\mathcal{L}(V,W_m)$ are isomorphic.

SOLUTION: Using the notations in Problem (2).

Note that $Tv=(w_1,\dots,w_m)$. Define $T_i\in\mathcal{L}(V,W_i)$ by $T_i(v)=w_i$.

$$\left.\begin{aligned} &\text{Define } \varphi: T\mapsto(T_1,\dots,T_m) \text{ by } \varphi(T)=(S_1T,\dots,S_mT). \\ &\text{Define } \psi:(T_1,\dots,T_m)\mapsto T \text{ by } \psi(T_1,\dots,T_m)=T_1S_1+\cdots+T_mS_m. \end{aligned}\right\}\Rightarrow\psi=\varphi^{-1}.\square$$

---

6 *For $m \in \mathbf{N}^+$, define V^m by $\underbrace{V \times \cdots \times V}_{m\ times}$. Prove that V^m and $\mathcal{L}(\mathbf{F}^m, V)$ are isomorphic.*

SOLUTION:

Define $T : (v_1, \ldots, v_m) \to \varphi$, where $\varphi : (a_1, \ldots, a_m) \mapsto v$ is defined by $\varphi(a_1, \ldots, a_m) = a_1 v_1 + \cdots + a_m v_m$.

Suppose $T(v_1, \ldots, v_m) = 0$. Then $\forall\, (a_1, \ldots, a_n) \in \mathbf{F}^m$, $\varphi(a_1, \ldots, a_m) = a_1 v_1 + \cdots + a_m v_m = 0$

$\Rightarrow (v_1, \ldots, v_m) = 0 \Rightarrow T$ is injective.

Suppose $\psi \in \mathcal{L}(\mathbf{F}^m, V)$. Let $(e_1, \ldots, e_m)$ be the standard basis of $\mathbf{F}^m$. Then $\forall\, (b_1, \ldots, b_n) \in \mathbf{F}^m$,

$(\, T(\psi(e_1), \ldots, \psi(e_m))\,)(b_1, \ldots, b_m) = b_1\psi(e_1) + \cdots + b_m\psi(e_m) = \psi(b_1 e_1 + \cdots + b_m e_m) = \psi(b_1, \ldots, b_m)$.

Thus $T(\psi(e_1), \ldots, \psi(e_m)) = \psi$. Hence T is surjective. $\Box$

---

7 *Suppose $v, x \in V$ (chosen arbitrarily) of which U and W are subspaces.
Suppose $v + U = x + W$. Prove that $U = W$.*

SOLUTION:

(a) $\forall u \in U,\ \exists\, w \in W, v + u = x + w$, let $u = 0$, getting $v = x + w \Rightarrow v - x \in W$.

(b) $\forall w \in W,\ \exists\, u \in U, v + u = x + w$, let $w = 0$, getting $x = v + u \Rightarrow x - v \in U$.

Thus $\pm(v - x) \in U \cap W \Rightarrow \left\{ \begin{array}{c} u = (x - v) + w \in W \Rightarrow U \subseteq W \\ w = (v - x) + u \in U \Rightarrow W \subseteq U \end{array} \right\} \Rightarrow U = W.$ $\Box$

• *Let $U = \{(x, y, z) \in \mathbf{R}^3 : 2x + 3y + 5z = 0\}$. Suppose $A \subseteq \mathbf{R}^3$.
Prove that A is a translate of $U \iff \exists\, c \in \mathbf{R},\ A = \{(x, y, z) \in \mathbf{R}^3 : 2x + 3y + 5z = c\}$.
[Do it in your mind.]*

• *Suppose $T \in \mathcal{L}(V, W)$ and $c \in W$. Prove that $U = \{x \in V : Tx = c\}$ is either $\varnothing$ or is a translate of null T.*

SOLUTION:

If $c \in W$ but $c \notin$ range T, then $U = \varnothing$ and we are done.

Suppose $c \in$ range T, then $\exists\ u \in V, Tu = c \Rightarrow u \in U$.

Suppose $y \in$ null $T \Rightarrow y + u \in U \iff T(y + u) = Ty + c = c$. Thus $u+$ null $T \subseteq U$. Hence $u+$ null $T = U$, for if not, suppose $z \notin u+$ null$T$ but $Tz = c (\Leftrightarrow z \in U)$, then $\forall w \in$ null $T, z \neq u + w \Leftrightarrow z - u \notin$ null$T$.

又 $\tilde{T}(z+$ null $T) = \tilde{T}(u+$ null $T) \Rightarrow z+$ null $T = u+$ null $T \Rightarrow z - u \in$ null T, contradicts. $\Box$

• **COROLLARY:** *The set of solutions to a system of linear equations such as [3.28] is either $\varnothing$ or a translate of the null subspace.*

---

8 *Prove that a nonempty subset A of V is a translate of some subspace of V if and only if $\lambda v + (1 - \lambda)w \in A$ for all $v, w \in A$ and all $\lambda \in \mathbf{F}$.*

SOLUTION:

Suppose $A = a + U$, where U is a subspace of V. $\forall a + u_1, a + u_2 \in A, \lambda \in \mathbf{F}$,

$\lambda(a + u_1) + (1 - \lambda)(a + u_2) = a + [\lambda(u_1 - u_2) + u_2] \in A$.

Suppose $\lambda v + (1 - \lambda)w \in A, \forall v, w \in A, \lambda \in \mathbf{F}$. Suppose $a \in A$ and let $A' = \{x - a : x \in A\}$.

Then $\forall x - a, y - a \in A', \lambda \in \mathbf{F}$,

(I) $\lambda(x - a) = [\lambda x + (1 - \lambda)a] - a \in A'$. Then let $\lambda = 2$.

(II) $\lambda(x - a) + (1 - \lambda)(y - a) = \frac{1}{2}(x - a) + \frac{1}{2}(y - a) = \frac{1}{2}x + (1 - \frac{1}{2})(y) - a \in A'$.

By (I), $2 \times [\frac{1}{2}(x - a) + \frac{1}{2}(y - a)] = (x - a) + (y - a) \in A'$.

Thus A' is a subspace of V. Hence $a + A' = \{(x - a) + a : x \in A\} = A$ is a translate. $\Box$

---

9 *Suppose $A_1 = v + U_1$ and $A_2 = w + U_2$ for some $v, w \in V$ and some subspaces U_1, U_2 of V.
Prove that the intersection $A_1 \cap A_2$ is either a translate of some subspace of V or is $\varnothing$.*

SOLUTION: Suppose $v+u_1, w+u_2 \in A_1 \cap A_2 \neq \varnothing$. By Problem (8),
$\forall \lambda \in \mathbf{F}$, $\lambda(v+u_1)+(1-\lambda)(w+u_2) \in A_1$ and A_2. Thus $A_1 \cap A_2$ is a translate of some subspace of V. $\square$

---

10 *Prove that the intersection of any collection of translates of subspaces of V is either a translate of some subspace or $\varnothing$.*

SOLUTION: Suppose $\{A_\alpha\}_{\alpha\in\Gamma}$ is a collection of translates of subspaces of V, where Γ is an arbitrary index set.
Suppose $x, y \in \bigcap_{\alpha\in\Gamma} A_\alpha \neq \varnothing$, then by Problem (18), $\forall \lambda \in \mathbf{F}$, $\lambda x+(1-\lambda)y \in A_\alpha$ for every $\alpha \in \Gamma$.
Thus $\bigcap_{\alpha\in\Gamma} A_\alpha$ is a translate of some subspace of V. $\square$

---

11 *Suppose $A = \{\lambda_1 v_1 + \cdots + \lambda_m v_m : \sum\limits_{i=1}^{m} \lambda_i = 1\}$, where each $v_i \in V, \lambda_i \in \mathbf{F}$.*

(a) *Prove that A is a translate of some subspace of V: By Problem (8),*
$\forall \sum\limits_{i=1}^{m} a_i v_i, \sum\limits_{i=1}^{m} b_i v_i \in A, \lambda \in \mathbf{F}, \quad \lambda \sum\limits_{i=1}^{m} a_i v_i + (1-\lambda)\sum\limits_{i=1}^{m} b_i v_i = (\lambda \sum\limits_{i=1}^{m} a_i + (1-\lambda)\sum\limits_{i=1}^{m} b_i)v_i \in A.$ $\square$

(b) *Prove that if B is a translate of some subspace of V and $\{v_1, \dots, v_m\} \subseteq B$, then $A \subseteq B$.*

(c) *Prove that A is a translate of some subspace of V and $\dim V < m$.*

SOLUTION:

(b) Let $v = \lambda_1 v_+ \cdots + \lambda_m v_m \in A$. To show that $v \in B$, use induction on m by k.

(i) $k=1, v=\lambda_1 v_1 \Rightarrow \lambda_1 = 1$. 又 $v_1 \in B$. Hence $v \in B$.
$k=2, v=\lambda_1 v_1+\lambda_2 v_2 \Rightarrow \lambda_2 = 1-\lambda_1$. 又 $v_1, v_2 \in B$. By problem (8), $v \in B$.

(ii) $2 \leq k \leq m$, we assume that $v = \lambda_1 v_1 + \cdots + \lambda_k v_k \in A \subseteq B$. $(\forall \lambda_i$ such that $\sum\limits_{i=1}^{k} \lambda_i = 1)$
For $u = \mu_1 v_1 + \cdots + \mu_k v_k + \mu_{k+1} v_{k+1} \in A$. $\forall i = 1, \dots, k$, $\exists\, \mu_i \neq 1$, fix one such i by ι.
Then $\sum\limits_{i=1}^{k+1} \mu_i - \mu_\iota = 1-\mu_\iota \Rightarrow (\sum\limits_{i=1}^{k+1} \dfrac{\mu_i}{1-\mu_\iota}) - \dfrac{\mu_\iota}{1-\mu_\iota} = 1.$

$$\text{Let } w = \underbrace{\frac{\mu_1}{1-\mu_\iota}v_1 + \cdots + \frac{\mu_{\iota-1}}{1-\mu_\iota}v_{\iota-1} + \frac{\mu_{\iota+1}}{1-\mu_\iota}v_{\iota+1} + \cdots + \frac{\mu_{k+1}}{1-\mu_\iota}v_{k+1}}_{k\,terms}.$$

Let $\lambda_i = \dfrac{\mu_i}{1-\mu_\iota}$ for $i = 1, \dots, \iota-1$; $\lambda_j = \dfrac{\mu_{j+1}}{1-\mu_\iota}$ for $j = \iota, \dots, k$. Then,

$$\left.\begin{array}{l} \sum\limits_{i=1}^{k} \lambda_i = 1 \Rightarrow w \in B \\ v_\iota \in B \Rightarrow u' = \lambda w + (1-\lambda)v_\iota \in B \end{array}\right\} \Rightarrow \text{Let } \lambda = 1-\mu_\iota. \text{ Thus } u' = u \in B \Rightarrow A \subseteq B. \ \square$$

(c) $\forall k = 1, \dots, m, \ \forall \lambda_1, \dots, \lambda_{k-1}, \lambda_{k+1}, \dots, \lambda_m$, let $\lambda_k = 1-\lambda_1-\cdots-\lambda_{k-1}-\lambda_{k+1}-\cdots-\lambda_m$

$$\begin{aligned} &\Rightarrow \lambda_1 v_1 + \cdots + \lambda_m v_m \\ &= \lambda_1 v_1 + \cdots + \lambda_{k-1}v_{k-1} + (1-\lambda_1-\cdots-\lambda_{k-1}-\lambda_{k+1}-\cdots-\lambda_m)v_k + \lambda_{k+1}v_{k+1} + \cdots + \lambda_m v_m \\ &= v_k + \lambda_1(v_1-v_k) + \cdots + \lambda_{k-1}(v_{k-1}-v_k) + \lambda_{k+1}(v_{k+1}-v_k) + \cdots + \lambda_m(v_m-v_k). \end{aligned}$$

Thus $A = v_k +$ span$(v_1-v_k, \dots, v_{k-1}-v_k, v_{k+1}-v_k, \dots, v_m-v_k)$. $\square$

---

12 *Suppose U is a subspace of V such that V/U is finite-dim. Prove that is V is isomorphic to $U \times (V/U)$.*

SOLUTION: Let $(v_1+U, \dots, v_n+U)$ be a basis of V/U. Note that
$\forall v \in V, \ \exists\,!\ a_1, \dots, a_n \in \mathbf{F}, v+U = \sum\limits_{i=1}^{n} a_i(v_i+U) = (\sum\limits_{i=1}^{n} a_i v_i) + U$
$\Rightarrow (v - a_1 v_1 - \cdots - a_n v_n) = u \in U$ for some u; $v = \sum\limits_{i=1}^{n} a_i v_i + u$.
Thus define $\varphi \in \mathcal{L}(V, U \times (V/U))$ by $\varphi(v) = (u, \sum\limits_{i=1}^{n} a_i v_i + U)$
and $\psi \in \mathcal{L}(U \times (V/U), V)$ by $\psi(u, w+U) = u + w; w = \sum\limits_{i=1}^{n} b_i v_i + U$.
So that $\psi = \varphi^{-1}$. $\square$

• *Suppose $V = U \oplus W$, $(w_1, \dots, w_m)$ is a basis of W.*
Prove that $(w_1 + U, \dots, w_m + U)$ is a basis of V/U.

SOLUTION: Note that for any $v \in V$,

$\exists ! \ u \in U, w \in W, v = u + w$ 又 $\exists ! \ c_i \in \mathbf{F}$ such that $w = \sum_{i=1}^{m} c_i w_i \Rightarrow v = u + \sum_{i=1}^{m} c_i w_i$.

Thus $v + U = \sum_{i=1}^{m} c_i w_i + U \Rightarrow v + U \in \operatorname{span}(w_1 + U, \dots, w_m + U) \Rightarrow V/U \subseteq \operatorname{span}(w_1 + U, \dots, w_m + U)$.

Now suppose $a_1(w_1 + U) + \dots + a_m(w_m + U) = 0 + U \Rightarrow \sum_{i=1}^{m} a_i w_i \in U$ while $U \cap W = \{0\}$.

Then $\sum_{i=1}^{m} a_i w_i = 0 \Rightarrow a_1 = \dots = a_m = 0$. $\square$

---

13 *Suppose $(v_1 + U, \dots, v_m + U)$ is a basis of V/U and $(u_1, \dots, u_n)$ is a basis of U.*
Prove that $(v_1, \dots, v_m, u_1, \dots, u_n)$ is a basis of V.

SOLUTION: By Problem (12), U and V/U are finite-dim$\Rightarrow U \times (V/U)$ is finite-dim, so is V.

$\dim V = \dim(U \times (V/U)) = \dim U + \dim V/U = m + n$.

OR. Note that for any $v \in V, v + U = \sum_{i=1}^{m} a_i v_i + U, \ \exists ! \ a_i \in \mathbf{F} \Rightarrow v = \sum_{i=1}^{m} a_i v_i = \sum_{i=1}^{m} b_i v_i, \ \exists ! \ b_i \in \mathbf{F}$.

$\Rightarrow v \in \operatorname{span}(v_1, \dots, v_m, u_1, \dots, u_n) \supseteq V$.

又 Notice that $(\sum_{i=1}^{m} a_i v_i) + U = 0 + U (\Rightarrow \sum_{i=1}^{m} a_i v_i \in U) \iff a_1 = \dots = a_m = 0$.

Hence $\operatorname{span}(v_1, \dots, v_m) \cap U = \{0\} \Rightarrow \operatorname{span}(v_1, \dots, v_m) \oplus U = V$

Thus $(v_1, \dots, v_m, u_1, \dots, u_n)$ is linearly independent, so is a basis of V. $\square$

---

14 *Suppose $U = \{(x_1, x_2, \dots) \in \mathbf{F}^\infty : x_k \neq 0$ for only finitely many $k\}$.*

(a) *Show that U is a subspace of $\mathbf{F}^\infty$. [Do it in your mind]*

(b) *Prove that $\mathbf{F}^\infty/U$ is infinite-dim.*

SOLUTION:

For $u = (x_1, \dots, x_p, \dots) \in \mathbf{F}^\infty$, denote x_p by $u[p]$. For each $r \in \mathbf{N}^+$.

Define $e_r[p] = \begin{cases} 1, (p-1) \equiv 0 \,(\operatorname{mod} r) \\ 0, \text{otherwise} \end{cases}$, simply $e_r = (1, \underbrace{0, \dots, 0}_{(p-1) \text{ times}}, 1, \underbrace{0, \dots, 0}_{(p-1) \text{ times}}, 1, \dots) \in \mathbf{F}^\infty$.

Choose $m \in \mathbf{N}^+$ arbitrarily.

Suppose $a_1(e_1 + U) + \dots + a_m(e_m + U) = (a_1 e_1 + \dots + a_m e_m) + U = 0 + U = 0$.

$\Rightarrow a_1 e_1 + \dots + a_m e_m = u$ for some $u \in U$.

Then suppose $u = (x_1, \dots, x_t, 0, \dots) \Rightarrow u[t + i] = 0, \forall i \in \mathbf{N}^+$,

then let $j = s \cdot m! + 1 \geq t$ ($\exists \ s \in \mathbf{N}^+$) so that $e_1[j] = \dots = e_m[j] = 1, \ u[j + i] = 0$.

Now we have: $u[j + i] = (\Sigma_{r=1}^{m} a_r e_r)[j + i] = \Sigma_{r=1}^{m} a_r e_r[s \cdot m! + 1 + i] = a_{i_1} + \dots + a_{i_{\tau(i)}} = 0$,

$\Rightarrow (\Sigma_{r=1}^{m} a_r e_r)[j + i] = a_{i_1} + \dots + a_{i_{\tau(i)}} = 0$. (Δ)

where $i_1, \dots, i_{\tau(i)}$ are distinct ordered factors of i ($1 = i_1 \leq \dots \leq i_{\tau(i)} = i$).

$\Big($ Note that by definition, $e_r[s \cdot m! + 1 + i] = 1 \iff s \cdot m! + i \equiv i \equiv 0 \,(\operatorname{mod} r) \iff r \mid i$. $\Big)$

Let $i' = i_{\tau(i)-1}$. Notice that $i'_l = i_l, \forall l \in \{1, \dots, \tau(i')\}$; and $\tau(i') = \tau(i) - 1$.

Again by (Δ), $(\Sigma_{r=1}^{m} a_r e_r)[j + i'] = a_{i'_1} + \dots + a_{i'_{\tau(i')}} = a_{i_1} + \dots + a_{i_{\tau(i)-1}} = 0$.

Thus $a_{i_{\tau(i)}} = a_i = 0$ for any $i \in \{1, \dots, m\}$.

Hence $(e_1, \dots, e_m)$ is linearly independent in $\mathbf{F}^\infty$, so is $(e_1, \dots, e_m, \dots)$, since $m \in \mathbf{N}^+$.

又 $e_i \notin U \Rightarrow (e_1 + U, e_2 + U, \dots)$ is linearly independent in $\mathbf{F}^\infty/U$. By [2.B.14]. $\square$

---

15 *Suppose* $\varphi \in \mathcal{L}(V, \mathbf{F}) \setminus \{0\}$. *Prove that* $\dim V/(null\ \varphi) = 1$.

SOLUTION: By [3.91] (d), $\dim \operatorname{range} \varphi = 1 = \dim V/(\operatorname{null} \varphi)$. $\square$

NOTE FOR [3.88, 3.90, 3.91]

For any $W \in \mathcal{S}_V U$, because $V = U \oplus W$. $\forall v \in V$, $\exists!\, u_v \in U, w_v \in W, v = u_v + w_v$.

Define $T \in \mathcal{L}(V, W)$ by $T(v) = w_v$. Hence $\operatorname{null} T = U$, $\operatorname{range} T = W$.

Then $\tilde{T} \in \mathcal{L}(V/\operatorname{null} T, W)$ is defined as $\tilde{T}(v + U) = Tv = w_v$.

Thus $\tilde{T}$ is injective (by [3.91(b)]) and surjective ($\operatorname{range} \tilde{T} = \operatorname{range} T = W$),

and therefore is an isomorphism. We conclude that V/U and W, namely any vec-sp in $\mathcal{S}_V$, are isomorphic.

---

16 *Suppose* $\dim V/U = 1$. *Prove that* $\exists\ \varphi \in \mathcal{L}(V, \mathbf{F})$ *such that null* $\varphi = U$.

SOLUTION:

Suppose V_0 is a subspace of V such that $V = U \oplus V_0$. Then V_0 and V/U are isomorphic. $\dim V_0 = 1$.

Define a linear map $\varphi : v \mapsto \lambda$ by $\varphi(v_0) = 1, \varphi(u) = 0$, where $v_0 \in V_0, u \in U$. $\square$

---

17 *Suppose* V/U *is finite-dim.* W *is a subspace of* V.

(a) *Show that if* $V = U + W$, *then* $\dim W \geq \dim V/U$.

(b) *Suppose* $\dim W = \dim V/U$ *and* $V = U \oplus W$. *Find such* W.

SOLUTION:

Let $(w_1, \ldots, w_n)$ be a basis of W

(a) $\forall v \in V,\ \exists\ u \in U, w \in W$ such that $v = u + w \Rightarrow v + U = w + U$

Then $V/U \subseteq \operatorname{span}(w_1 + U, \ldots, w_n + U) \Rightarrow V/U = \operatorname{span}(w_1 + U, \ldots, w_n + U)$.

Hence $\dim V/U = \dim \operatorname{span}(w_1 + U, \ldots, w_n + U) \leq \dim W$.

(b) Let $W \in \mathcal{S}_V U$. In other words,

reduce $(w_1{+}U, \ldots, w_n{+}U)$ to a basis of V/U as $(w_{\alpha_1}{+}U, \ldots, w_{\alpha_m}{+}U)$ and let $W = \operatorname{span}(w_{\alpha_1}, \ldots, w_{\alpha_m})$. $\square$

---

18 *Suppose* $T \in \mathcal{L}(V, W)$ *and* U *is a subspace of* V. *Let* π *denote the quotient map.*

Prove that $\exists\ S \in \mathcal{L}(V/U, W)$ *such that* $T = S \circ \pi$ *if and only if* $U \subseteq$ *null* T.

SOLUTION:

(a) Define $S \in \mathcal{L}(V/U, W)$ by $S(v + U) = Tv$. We have to check it is *well-defined*.

Suppose $v_1 + U = v_2 + U$, while $v_1 \neq v_2$.

Then $(v_1 - v_2) \in U \Rightarrow S((v_1 - v_2) + U) = T(v_1 - v_2) = 0 \Rightarrow Tv_1 = Tv_2$. Checked. $\square$

(b) Suppose $\exists\ S \in \mathcal{L}(V/U, W),\ T = S \circ \pi$. Then $\forall u \in U, Tu = S \circ \pi(u) = S(0 + U) = 0 \Rightarrow U \subseteq \operatorname{null} T$.$\square$

---

20 *Define* $\Gamma : \mathcal{L}(V/U, W) \to \mathcal{L}(V, W)$ *by* $\Gamma(S) = S \circ \pi (= \pi'(S))$.

(a) *Prove that* Γ *is linear:* By [3.9] distributive properties and [3.6]. $\square$

(b) *Prove that* Γ *is injective:*

$$\begin{aligned} &\Gamma(S) = 0 \\ \iff &\forall v \in V, S(\pi(v)) = 0 \\ \iff &\forall v + U \in V/U, S(v + U) = 0 \\ \iff &S = 0. \ \square \end{aligned}$$

(c) *Prove that range* Γ $(=$ *range* π' $) = \{T \in \mathcal{L}(V, W) : U \subseteq$ *null* $T\}$*:*

By Problem (18). $\square$

ENDED

3·F

- By (18) in (3.D) *we know that* $\varphi : V \to \mathcal{L}(\mathbf{F}, V)$ *is an isomorphism. Now we prove that* $(v_1, \ldots, v_m)$ *is linearly independent* $\iff$ $(\varphi(v_1), \ldots, \varphi(v_m))$ *is linearly independent.*

SOLUTION:

(a) Suppose $(v_1, \ldots, v_m)$ is linearly independent and $\vartheta \in \text{span}(\varphi(v_1), \ldots, \varphi(v_m))$.

Let $\vartheta = 0 = a_1\varphi(v_1) + \cdots + a_m\varphi(v_m)$. Then $\vartheta(1) = 0 = a_1 v_1 + \cdots + a_m v_m \Rightarrow a_1 = \cdots = a_m = 0$.

OR Because φ is injective. Suppose $a_1\varphi(v_1) + \cdots + a_m\varphi(v_m) = 0 = \varphi(a_1 v_1 + \cdots + a_m v_m)$.

Then $a_1 v_1 + \cdots + a_m v_m = 0 \Rightarrow a_1 = \cdots = a_m = 0$.

Thus $(\varphi(v_1), \ldots, \varphi(v_m))$ is linearly independent.

(b) Suppose $(\varphi(v_1), \ldots, \varphi(v_m))$ is linearly independent and $v \in \text{span}(v_1, \ldots, v_m)$.

Let $v = 0 = a_1 v_1 + \cdots + a_m v_m$. Then $\varphi(v) = a_1\varphi(v_1) + \cdots + a_m\varphi(v_m) = 0 \Rightarrow a_1 = \cdots = a_m = 0$.

Thus $v_1, \ldots, v_m$ is linearly independent. $\square$

---

1 *Explain why each linear functional is surjective or is the zero map.*

SOLUTION:
$$\left.\begin{array}{r} \text{For any } \varphi \in V' \text{ and } \varphi \neq 0,\ \exists\, v \in V, \text{ such that } \varphi(v) \neq 0. \text{ (a)} \\ \dim \text{range}\ \varphi = \dim \mathbf{F} = 1. \text{ (b)} \end{array}\right\} \Rightarrow \square$$

---

4 *Suppose* V *is finite-dimensional and* U *is a subspace of* V *such that* $U \neq V$. *Prove that* $\exists\, \varphi \in V'$ *and* $\varphi \neq 0$ *such that* $\varphi(u) = 0$ *for every* $u \in U$.

SOLUTION:

Let $(u_1, \ldots, u_m)$ be a basis of U, extend to $(u_1, \ldots, u_m, u_{m+1}, \ldots, u_{m+n})$ a basis of V.

Choose $k \in \{1, \ldots, n\}$ arbitrarily. Define $\varphi \in V'$ by $\varphi(u_i) = \begin{cases} 1, & \text{if } i = m+k. \\ 0, & \text{otherwise.} \end{cases}$

OR: Equivalent to proving that $U^0 \neq \{0\}$. By [3.106], $\dim U^0 = \dim V - \dim U > 0$. $\square$

- *Suppose* $T \in \mathcal{L}(V, W)$ *and* $w_1, \ldots, w_m$ *is a basis of range*T. *Hence* $\forall v \in V$, $Tv = \varphi_1(v)w_1 + \cdots + \varphi_m(v)w_m$, $\exists!\, \varphi_1(v), \ldots, \varphi_m(v)$, *thus defining functions* $\varphi_1, \ldots, \varphi_m$ *from* V *to* $\mathbf{F}$. *Show that each* $\varphi_i \in V'$.

SOLUTION:

For each w_i, $\exists\, v_i \in V$, $Tv_i = w_i$, getting a linearly independent list $(v_1, \ldots, v_m)$.

Now we have $Tv = a_1 Tv_1 + \cdots + a_m Tv_m$, $\forall v \in V, \exists!\, a_i \in \mathbf{F}$.

Let $\psi_1, \ldots, \psi_m$ be the dual basis of range$T$. Then $(T'(\psi_i))(v) = \psi_i \circ T(v) = a_i$.

Thus letting $\varphi_i = \psi_i \circ T$. $\square$

- *Suppose* $\varphi,\ \beta \in V'$. *Prove that null*$\varphi \subseteq$ *null*β *if and only if* $\beta = c\varphi$. $\exists\, c \in \mathbf{F}$.

SOLUTION: Using (3.B.29, 30)

(a) Suppose null$\varphi \subseteq$ nullβ. Choose a $u \notin$ nullβ. $V = \text{null}\beta \oplus \{au : a \in \mathbf{F}\}$.

If nullφ = nullβ, then let $c = \frac{\beta(u)}{\varphi(u)}$, we are done.

Otherwise, suppose $u' \in$ nullβ, but $u' \notin$ nullφ, then $V = \text{null}\varphi \oplus \{bu' : b \in \mathbf{F}\}$.

$\forall v \in V, v = w + au = w' + bu'$, $\exists!\, w, w' \in \text{null}\varphi$, $a, b \in \mathbf{F}$.

Thus $\beta(v) = a\beta(u)$, $\varphi(v) = b\varphi(u')$. Let $c = \frac{a\beta(u)}{b\varphi(u')}$. We are done

(b) Suppose $\beta = c\varphi$ for some $c \in \mathbf{F}$.

If $c = 0$, then null$\beta = V \supseteq$ nullφ, we are done.

$$\text{Otherwise,}\quad \left.\begin{array}{l} \forall v \in \text{null}\varphi, \varphi(v) = 0 = \beta(v) \Rightarrow \text{null}\varphi \subseteq \text{null}\beta. \\ \forall v \in \text{null}\beta, \beta(v) = 0 = \varphi(v) \Rightarrow \text{null}\beta \subseteq \text{null}\varphi. \end{array}\right\} \Rightarrow \text{null}\varphi = \text{null}\beta$$

$\Rightarrow$ null$\varphi \subseteq$ nullβ. $\square$

---

5 *Prove that $(V_1 \times \cdots \times V_m)'$ and $V_1' \times \cdots \times V_m'$ are isomorphic.*

SOLUTION: Using notations in (3.E.2).

$$\left.\begin{array}{l} \text{Define } \varphi: (V_1 \times \cdots \times V_m)' \to V_1' \times \cdots \times V_m' \\ \quad \text{by } \varphi(T) = (T \circ R_1, \ldots, T \circ R_m) = (R_1'(T), \ldots, R_m'(T)). \\ \text{Define } \psi: V_1' \times \cdots \times V_m' \to (V_1 \times \cdots \times V_m)' \\ \quad \text{by } \psi(T_1, \ldots, T_m) = T_1 S_1 + \cdots + T_m S_m = S_1'(T_1) + \cdots + S_m'(T_m). \end{array}\right\} \Rightarrow \psi = \varphi^{-1}. \quad \square$$

• *Suppose $v_1, \ldots, v_n$ is a basis of V and $\varphi_1, \ldots, \varphi_n$ is the dual basis of V'.*

$$\left.\begin{array}{l} \textit{Define } \Gamma: V \to \mathbf{F}^n \textit{ by } \Gamma(v) = (\varphi_1(v), \ldots, \varphi_n(v)). \\ \textit{Define } \Lambda: \mathbf{F}^n \to V \textit{ by } \Lambda(a_1, \ldots, a_n) = a_1 v_1 + \cdots + a_n v_n. \end{array}\right\} \Rightarrow \Lambda = \Gamma^{-1}.$$

---

35 *Prove that $(\mathcal{P}(\mathbf{R}))'$ and $\mathbf{R}^\infty$ are isomorphic.*

SOLUTION:

Define $\theta \in \mathcal{L}((\mathcal{P}(\mathbf{R}))', \mathbf{R}^\infty)$ by $\theta(\varphi) = (\varphi(1), \varphi(x), \ldots, \varphi(x^n), \ldots)$.

Injectivity: $\theta(\varphi) = 0 \Rightarrow \forall x^k$ in the basis $(1, x, \ldots, x^n, \ldots)$ of $\mathcal{P}_n(\mathbf{R})$ for any n, $\varphi(x^k) = 0 \Rightarrow \varphi = 0$.

Surjectivity: $\forall\, (a_0, a_1, \ldots, a_n, \ldots) \in \mathbf{F}^\infty$, let ψ be such that $\psi(x^k) = a_k$ and thus $\theta(\psi) = (a_0, a_1, \ldots, a_n, \ldots)$.

Hence θ is an isomorphism from $(\mathcal{P}(\mathbf{R}))'$ onto $\mathbf{R}^\infty$. $\square$

---

7 *Suppose m is a positive integer. Show that the dual basis of the basis $(1, x, \ldots, x_m)$ of $\mathcal{P}_m(\mathbf{R})$ is $\varphi_0, \varphi_1, \ldots, \varphi_m$, where $\varphi_k = \dfrac{p^{(k)}(0)}{k!}$. Here $p^{(k)}$ denotes the k^{th} derivative of p, with the understanding that the 0^{th} derivative of p is p.*

SOLUTION:

For each j and k, $(x^j)^{(k)} = \begin{cases} j(j-1)\ldots(j-k+1) \cdot x^{(j-k)}, & j \geq k. \\ j(j-1)\ldots(j-j+1) = j!\,, & j = k. \\ 0\,, & j \leq k. \end{cases}$ Then $(x^j)^{(k)}(0) = \begin{cases} 0\,, & j \neq k. \\ k!\,, & j = k. \end{cases}$

Thus $\varphi_k = \psi_k$, where $\psi_1, \ldots, \psi_m$ is the dual basis of $(1, x, \ldots, x_m)$ of $\mathcal{P}_m(\mathbf{R})$. $\square$

---

8 *Suppose m is a positive integer.*

(a) By [2.C.10], $B = (1, x-5, \ldots, (x{-}5)^m)$ is a basis of $\mathcal{P}_m(\mathbf{R})$.

(b) Let $\varphi_k = \frac{p^{(k)}(5)}{k!}$ for each $k = 0, 1, \ldots, m$. Then $(\varphi_0, \varphi_1, \ldots, \varphi_m)$ is the dual basis of B.

---

9 *Suppose $v_1, \ldots, v_n$ is a basis of V and $\varphi_1, \cdots, \varphi_n$ is the corresponding dual basis of V'. Suppose $\psi \in V'$. Prove that $\psi = \psi(v_1)\varphi_1 + \cdots + \psi(v_n)\varphi_n$.*

SOLUTION: $\psi(v) = \psi(\sum\limits_{i=1}^{n} a_i v_i) = \sum\limits_{i=1}^{n} a_i \psi(v_i) = \sum\limits_{i=1}^{n} \psi(v_i)\varphi_i(v) = [\psi(v_1)\varphi_1 + \cdots + \psi(v_n)\varphi_n](v) \Rightarrow \square$

COMMENT: For any other basis $(u_1, \ldots, u_n)$ of V and the corresponding dual basis of $(\rho_1, \ldots, \rho_n)$,

$\psi = \rho(u_1)\rho_1 + \cdots + \rho(u_n)\rho_n$.

• *Show that the dual map of the identity operator on V is the identity operator on V'.*

SOLUTION: $I'(\varphi) = \varphi \circ I, \ \forall \varphi \in V'$. $\square$

• *Suppose W is finite-dim and $T \in \mathcal{L}(V, W)$. Prove that $T' = 0 \iff T = 0$.*

SOLUTION: $T = 0 \Leftrightarrow T'(\varphi) = \varphi \circ T = 0$ for all $\varphi \in V' \Leftrightarrow T' = 0$. $\square$

---

13 *Define $T: \mathbf{R}^3 \to \mathbf{R}^2$ by $T(x, y, z) = (4x + 5y + 6z, 7x + 8y + 9z)$. Let $(\varphi_1, \varphi_2), (\psi_1, \psi_2, \psi_3)$ denote the dual basis of the standard basis of $\mathbf{R}^2$ and $\mathbf{R}^3$.*

(a) *Describe the linear functionals $T'(\varphi_1), T'(\varphi_2) \in \mathcal{L}(\mathbf{R}^3, \mathbf{R})$*

For any $(x, y, z) \in \mathbf{R}^3$, $(T'(\varphi_1))(x, y, z) = 4x + 5y + 6z$, $(T'(\varphi_2))(x, y, z) = 7x + 8y + 9z$.

(b) *Write $T'(\varphi_1)$ and $T'(\varphi_2)$ as linear combinations of ψ_1, ψ_2, ψ_3.*

$T'(\varphi_1) = 4\psi_1 + 5\psi_2 + 6\psi_3, \ T'(\varphi_2) = 7\psi_1 + 8\psi_2 + 9\psi_3$. $\square$

14 *Define $T : \mathcal{P}(\mathbf{R}) \to \mathcal{P}(\mathbf{R})$ by $(Tp)(x) = x^2p(x) + p''(x)$ for each $x \in \mathbf{R}$.*

(a) *Suppose $\varphi \in \mathcal{P}(\mathbf{R})'$ is defined by $\varphi(p) = p'(4)$. Describe $T'(\varphi) \in \mathcal{P}(\mathbf{R})'$.*

$(T'(\varphi))(p) = [x^2p(x) + p''(x)]'(4) = [2xp(x) + x^2p'(x) + p'''(x)](4) = 8p(4) + 16p'(4) + p'''(4)$.

(b) *Suppose $\varphi \in \mathcal{P}(\mathbf{R})'$ is defined by $\varphi(p) = \int_0^1 p(x)dx$. Evaluate $(T'(\varphi))(x^3)$.*

$(T'(\varphi))(x^3) = \int_0^1 (x^5 + 6x)\mathrm{d}x = \int_0^1 (\frac{1}{6}x^6 + 3x^2)'\mathrm{d}x = \frac{6}{19}$. □

• *Suppose V and W are finite-dim and $T \in \mathcal{L}(V, W)$.*
Prove that T is invertible if and only if $T' \in \mathcal{L}(W', V')$ is invertible.

SOLUTION: By [3.108] and [3.110]. □

---

16 *Suppose V and W are finite-dim. Define Γ by $\Gamma(T) = T'$ for any $T \in \mathcal{L}(L, W)$.*
Prove that Γ is an isomorphism of $\mathcal{L}(V, W)$ onto $\mathcal{L}(W', V')$.

SOLUTION:

V, W are finite-dim $\Rightarrow$ dim $\mathcal{L}(V, W) =$ dim $\mathcal{L}(W', V')$. And by [3.101], Γ is linear.

又 Suppose $\Gamma(T) = T' = 0$. By Problem (15), $T = 0$. Thus T is injective $\Rightarrow$ T is invertible. □

---

17 *Suppose $U \subseteq V$. Explain why $U^0 = \{\varphi \in V' : U \subseteq null\varphi\}$.*

SOLUTION: Because for $\varphi \in V'$, $U \subseteq$ null$\varphi \iff \forall u \in U, \varphi(u) = 0$. By definition in [3.102]. □

---

18 *$U \subseteq V$. We have $U = \{0\} \iff \forall\varphi \in V', U \subseteq null\varphi \iff U^0 = V'$.*

19 *U is a subspace of V. Prove that $U = V \iff U^0_V = \{0\} = V^0_V$.*

SOLUTION:

Suppose $U^0_V = \{0\}$. Then $U = V$.

Conversely, suppose $U = V$, then $U^0_V = \{\varphi \in V' : V \subseteq \text{null}\,\varphi\}$, therefore $U^0_V = \{0\}$.

20, 21 *Suppose U and W are subsets of V. Prove that $U \subseteq W \iff W^0 \subseteq U^0$.*

SOLUTION:

(a) $U \subseteq W \Rightarrow \forall w \in W, u \in U \cap W = U,\ \ \forall \varphi \in W^0, \varphi(w) = 0 = \varphi(u) \Rightarrow \varphi \in U^0$. Thus $W^0 \subseteq U^0$.

(b) $W^0 \subseteq U^0 \Rightarrow \forall w \in W, u \in U, \varphi(w) = 0 \Rightarrow \varphi(u) = 0$. Then null$\varphi \supseteq W \Rightarrow$ null$\varphi \supseteq U$. Thus $W \supseteq U$. □.

• **COROLLARY:** $W^0 = U^0 \iff U = W$.

---

22 *Prove that $(U + W)^0 = U^0 \cap W^0$.*

SOLUTION:

(a) $\left.\begin{array}{c} U \subseteq U + W \\ W \subseteq U + W \end{array}\right\} \Rightarrow \left.\begin{array}{c} (U + W)^0 \subseteq U^0 \\ (U + W)^0 \subseteq W^0 \end{array}\right\} \Rightarrow (U + W)^0 \subseteq U^0 \cap W^0.$

(b) $\forall \varphi \in U^0 \cap W^0, \varphi(u + w) = 0$, where $u \in U, w \in W \Rightarrow \varphi \in (U + W)^0$. Thus $(U + W)^0 \supseteq U^0 \cap W^0$. □

---

23 *Prove that $(U \cap W)^0 = U^0 + W^0$.*

SOLUTION:

(a) $\left.\begin{array}{c} U \cap W \subseteq U \\ U \cap W \subseteq W \end{array}\right\} \Rightarrow \left.\begin{array}{c} (U \cap W)^0 \supseteq U^0 \\ (U \cap W)^0 \supseteq W^0 \end{array}\right\} \Rightarrow (U \cap W)^0 \supseteq U^0 + W^0 \supseteq U^0 \cap W^0.$

(b) $\forall \varphi \in U^0, \psi \in W^0$ and $\forall v \in U \cap W$, $(\varphi + \psi)(v) = \varphi(v) + \psi(v) = 0$. Thus $U^0 + W^0 \subseteq (U \cap W)^0$. □

• **COROLLARY:**

Suppose $\{V_{\alpha_i}\}_{\alpha_i \in \Gamma}$ is a collection of subspaces of V.
Then $(\sum_{\alpha_i \in \Gamma} V_{\alpha_i})^0 = \bigcap_{\alpha_i \in \Gamma}(V^0_{\alpha_i})$;
And $(\bigcap_{\alpha_i \in \Gamma} V_{\alpha_i})^0 = \sum_{\alpha_i \in \Gamma}(V^0_{\alpha_i})$.

---

24 *Suppose V is finite-dim and U is a subspace of V.*
Prove, using the pattern of [3.104], that dim$U+$ dim$U^0=$ dim$V$.

SOLUTION:

Let $(u_1,\ldots,u_m)$ be a basis of U, extend to a basis of V as $(u_1,\ldots,u_m,\ldots,u_n)$, and let $(\varphi_1,\ldots,\varphi_m,\ldots,\varphi_n)$ be the dual basis.

(a) Suppose $\varphi\in\operatorname{span}(\varphi_{m+1},\ldots,\varphi_n)$, then $\exists\, a_i\in\mathbf{F}$, $\varphi=a_{m+1}\varphi_{m+1}+\cdots+a_n\varphi_n$.
For all $u\in U$, $\varphi(u)=0$. Thus $\varphi\in U^0$, getting $\operatorname{span}(\varphi_{m+1},\ldots,\varphi_n)\subseteq U^0$.

(b) Suppose $\varphi\in U^0$, then $\exists\, a_i\in\mathbf{F}$, $\varphi=a_1\varphi_1+\cdots+a_m\varphi_m+\cdots+a_n\varphi_n$.
For all $u_i\in U$, $0=\varphi(u_i)=\sum\limits_{i=1}^{n}\varphi(u_i)=a_i$. Then $\varphi=a_{m+1}\varphi_{m+1}+\cdots+a_n\varphi_n$.
Thus $\varphi\in\operatorname{span}(\varphi_{m+1},\ldots,\varphi_n)$, getting $\operatorname{span}(\varphi_{m+1},\ldots,\varphi_n)\supseteq U^0$.

Hence $\operatorname{span}(\varphi_{m+1},\ldots,\varphi_n)=U^0$, $\dim U^0=n-m=\dim V-\dim U$. $\square$

---

25 *Suppose U is a subspace of V. Explain why $U=\{v\in V:\varphi(v)=0$ for every $\varphi\in U^0\}$.*

SOLUTION: Note that $U=\{v\in V:v\in U\}$ is a subspace of V and $\varphi(v)=0$ for every $\varphi\in U^0\iff v\in U$. $\square$

---

26 *Suppose V is finite-dim and Ω is a subspace of V'.*
Prove that $\Omega=\{v\in V:\forall\varphi\in\Omega,\varphi(v)=0\}^0$.

SOLUTION: Using the corollary in Problem (20, 21).

Suppose $U=\{v\in V:\forall\varphi\in\Omega,\varphi(v)=0\}$.
Getting $U^0=\{v\in V:\forall\varphi\in\Omega,\varphi(v)=0\}^0$. We need to show that $\Omega=U^0$.

$$\left.\begin{array}{l}\text{(a) }\forall\varphi\in\Omega, v\in U,\varphi(v)=0\Rightarrow\varphi\in U^0\Rightarrow\Omega\subseteq U^0.\\ \text{(b) } v\in U\Leftrightarrow\left\{\begin{array}{l}\forall\varphi\in\Omega,\varphi(v)=0\\ \forall\psi\in U^0,\psi(v)=0\end{array}\right.\quad\text{Thus }\Omega\supseteq U^0.\end{array}\right\}\Rightarrow\square$$

---

27 *Suppose $T\in\mathcal{L}(\mathcal{P}_5(\mathbf{R}))$ and null$T'=$ span(φ), where φ is the linear functional on $\mathcal{P}_5(\mathbf{R})$ defined by $\varphi(p)=p(8)$. Prove that range$T=\{p\in\mathcal{P}_5(\mathbf{R}):p(8)=0\}$.*

SOLUTION: By Problem (26), $\operatorname{span}(\varphi)=\{p\in\mathcal{P}_5(\mathbf{R}):\psi(p)=0,\forall\psi\in\operatorname{span}(\varphi)\}^0$,
Hence $\operatorname{span}(\varphi)=\{p\in\mathcal{P}_5(\mathbf{R}):\varphi(p)=p(8)=0\}^0$, 又 $\operatorname{span}(\varphi)=\operatorname{null}T'=(\operatorname{range}T)^0$.

By the corollary in Problem (20, 21), range$T=\{p\in\mathcal{P}_5(\mathbf{R}):p(8)=0\}$. $\square$

28, 29 *Suppose V,W are finite-dim, $T\in\mathcal{L}(V,W)$.*
(a) *Suppose $\exists\,\varphi\in W'$ such that null$T'=$ span(φ). Prove that range$T=$ nullφ.*
(b) *Suppose $\exists\,\varphi\in V'$ such that range$T'=$ span(φ). Prove that null$T=$ nullφ.*

SOLUTION: Using Problem (26), [3.107] and [3.109].

Because $\operatorname{span}(\varphi)=\{v\in V:\forall\psi\in\operatorname{span}(\varphi),\psi(v)=0\}^0=\{v\in V:\varphi(v)=0\}^0=(\operatorname{null}\varphi)^0$.

$$\left.\begin{array}{l}\text{(a) }(\operatorname{range}T)^0=\operatorname{null}T'=\operatorname{span}(\varphi)=(\operatorname{null}\varphi)^0\iff\operatorname{range}T=\operatorname{null}\varphi.\\ \text{(b) }(\operatorname{null}T)^0=\operatorname{range}T'=\operatorname{span}(\varphi)=(\operatorname{null}\varphi)^0\iff\operatorname{null}T=\operatorname{null}\varphi.\end{array}\right\}\Rightarrow\square$$

---

31 *Suppose V is finite-dim and $(\varphi_1,\ldots,\varphi_n)$ is a basis of V'.*
Show that there exists a basis of V whose dual basis is $(\varphi_1,\ldots,\varphi_n)$.

SOLUTION: Using (3.B.29,30).

For each φ_i, $\operatorname{null}\varphi_i\oplus\{au_i:a\in\mathbf{F}\}=V$.
Because $\varphi_1,\ldots,\varphi_m$ is linearly independent. $\operatorname{null}\varphi_i\neq\operatorname{null}\varphi_j$ for all $i,j\in\mathbf{N}^+$ such that $i\neq j$.
Thus $(u_1,\ldots,u_m)$ is linearly independent, for if not, then $\exists\, i,j$ such that $\operatorname{null}\varphi_i=\operatorname{null}\varphi_j$, contradicts.
又 $\dim V'=m=\dim V$. Then $(u_1,\ldots,u_m)$ is a basis of V whose dual basis is $\varphi_1,\ldots,\varphi_n$. $\square$.

• *Suppose dim and $\varphi_1, \ldots, \varphi_m \in V'$. Prove that the following three sets are equal to each other.*

(a) *span*$(\varphi_1, \ldots, \varphi_m)$

(b) $((null\varphi_1) \cap \cdots \cap (null\varphi_m))^0$

(c) $\{\varphi \in V' : (\ null\varphi_1) \cap \cdots \cap (null\varphi_m) \subseteq null\varphi\}$

SOLUTION: By Problem (17), (b) and (c) are equivalent. By Problem (26) and the corollary in Problem (23),

$$\left.\begin{array}{r} ((\text{null}\varphi_1) \cap \cdots \cap (\text{null}\varphi_m))^0 = (\text{null}\varphi_1)^0 + \cdots + (\text{null}\varphi_m)^0. \\ \text{又 span}(\varphi_i) = \{v \in V : \forall \psi \in \text{span}(\varphi_i), \psi(v) = 0\}^0 = (\text{null}\varphi_i)^0. \end{array}\right\} \Rightarrow (a) = (b). \quad \square$$

30 OR COROLLARY:

Suppose V is finite-dim and $\varphi_1, \ldots, \varphi_m$ is a linearly independent list in V'.
Then dim$((null\varphi_1) \cap \cdots \cap (null\varphi_m)) = (dimV) - m$.

---

6 *Define $\Gamma : V' \to \mathbf{F}^m$ by $\Gamma(\varphi) = (\varphi(v_1), \ldots, \varphi(v_m))$, where $v_1, \ldots, v_m \in V$.*

(a) *Show that span$(v_1, \ldots, v_m) = V \iff \Gamma$ is injective.*

(b) *Show that $v_1, \ldots, v_m$ is linearly independent $\iff \Gamma$ is surjective.*

SOLUTION:

(a) Suppose Γ is injective. Then let $\Gamma(\varphi) = 0$, getting $\varphi = 0 \Leftrightarrow \text{null}\varphi = V = \text{span}(v_1, \ldots, v_m)$.
Suppose $\text{span}(v_1, \ldots, v_m) = V$. Then let $\Gamma(\varphi) = 0$, getting $\varphi(v_i) = 0$ for each i,
$\text{null}\varphi = \text{span}(v_1, \ldots, v_m) = V$, thus $\varphi = 0$, Γ is injective.

(b) Suppose Γ is surjective. Then let $\Gamma(\varphi_i) = e_i$ for each i, where $e_1, \ldots, e_m$ is the standard basis of $\mathbf{F}^m$.
Then $\varphi_1, \ldots, \varphi_m$ is linearly independent, suppose $a_1v_1 + \cdots + a_mv_m = 0$,
then for each i, we have $\varphi_i(a_1v_1 + \cdots + a_mv_m) = a_i = 0$. Thus $v_1, \ldots, v_n$ is linearly independent.
Suppose $v_1, \ldots, v_m$ is linearly independent. Let $(\varphi_1, \ldots, \varphi_m)$ be the dual basis of $\text{span}(v_1, \ldots, v_m)$.
Thus for each $(a_1, \ldots, a_m) \in \mathbf{F}^m$, we have $\varphi = a_1\varphi_1 + \cdots + a_m\varphi_m$ so that $\Gamma(\varphi) = (a_1, \ldots, a_m)$. $\square$

• *Define $\Gamma : V \to \mathbf{F}^m$ by $\Gamma(v) = (\varphi_1(v), \ldots, \varphi_m(v))$, where $\varphi_1, \ldots, \varphi_m \in V'$.*

(c) *Show that span$(\varphi_1, \ldots, \varphi_m) = V' \iff \Gamma$ is injective.*

(d) *Show that $\varphi_1, \ldots, \varphi_m$ is linearly independent $\iff \Gamma$ is surjective.*

SOLUTION:

(c) Suppose Γ is injective. Then $\Gamma(v) = 0 \Leftrightarrow \forall i, \varphi_i(v) = 0 \Leftrightarrow v \in (\text{null}\varphi_1) \cap \cdots \cap (\text{null}\varphi_m) \Leftrightarrow v = 0$.
Getting $(\text{null}\varphi_1) \cap \cdots \cap (\text{null}\varphi_m) = \{0\}$. By Problem (•) above, $\text{span}(\varphi_1, \ldots, \varphi_m) = V'$
Suppose $\text{span}(\varphi_1, \ldots, \varphi_m) = V'$. Again by Problem (•), $(\text{null}\varphi_1) \cap \cdots \cap (\text{null}\varphi_m) = \{0\}$.
Thus $\Gamma(v) = 0 \Rightarrow \forall i, \varphi_i(v) = 0 \Rightarrow v = 0$.

(d) Suppose $\varphi_1, \ldots, \varphi_m$ is linearly independent. Then by Problem (31), $(v_1, \ldots, v_m)$ is linearly independent.
Thus for any $(a_1, \ldots, a_m) \in \mathbf{F}$, by letting $v = \sum_{i=1}^m a_iv_i$, then $\varphi_i(v) = a_i \Rightarrow \Gamma(v) = (a_1, \ldots, a_m)$.
Suppose Γ is surjective. Let $e_1, \ldots, e_m$ be a basis of $\mathbf{F}^m$.
For every e_i, $\exists\, v_i \in V$ such that $\Gamma(v_i) = (\varphi_1(v_i), \ldots, \varphi_m(v)) = e_i$,
fix v_i ($\Rightarrow v_1, \ldots, v_m$ is linearly independent). Thus $\varphi_i(v_i) = 1, \varphi_i(v_j) = 0$.
Hence $(\varphi_1, \ldots, \varphi_m)$ is the dual basis of the basis $v_1, \ldots, \varphi_m$ of $\text{span}(v_1, \ldots, v_m)$. $\square$

---

33 *Suppose $A \in \mathbf{F}^{m,n}$. Define $T : A \to A^t$. Prove that T is an isomorphism of $\mathbf{F}^{m,n}$ onto $\mathbf{F}^{n,m}$*

SOLUTION: By [3.111], T is linear. Note that $(A^t)^t = A$.

(a) For any $B \in \mathbf{F}^{n,m}$, let $A = B^t$ so that $T(A) = B$. Thus T is surjective.
(b) If $T(A) = 0$ for some $A \in \mathbf{F}^{n,m}$, then $A = 0$. Thus T is injective.
for if not, $\exists\ j, k \in \mathbf{N}^+$ such that $A_{j,k} \neq 0$, then $T(A)_{k,j} \neq 0$, contradicts.
$\Rightarrow \square$

---

32 *Suppose $T \in \mathcal{L}(V)$, and $(u_1, \dots, u_m)$ and $(v_1, \dots, v_m)$ are bases of V. Prove that*
T is invertible $\iff$ The rows of $\mathcal{M}(T, (u_1, \dots, u_m), (v_1, \dots, v_m))$ form a basis of $\mathbf{F}^{1,n}$.

Solution: Note that T is inveritlbe $\Rightarrow T'$ is invertible. And $\mathcal{M}(T') = \mathcal{M}(T)^t = A^t$, denote it by B.

Let $(\varphi_1, \dots, \varphi_m)$ be the dual basis of $(v_1, \dots, v_m)$, $(\psi_1, \dots, \psi_m)$ be the dual basis of $(u_1, \dots, u_m)$.

(a) Suppose T is invertible, so is T'. Because $T'(\varphi_1), \dots, T'(\varphi_m)$ is linearly independent.

Noticing that $T'(\varphi_i) = B_{1,i}\psi_1 + \cdots + B_{m,i}\psi_m$.

Thus the columns of B, namely the rows of A, are linearly independent (check it by contradiction).

(b) Suppose the rows of A are linearly independent, so are the columns of B.

Then $(T'(\varphi_1), \dots, T'(\varphi_m))$ is a basis of range T', namely V'. Thus T' is surjective.

Hence T' is invertible, so is T. $\square$

---

34 *The double dual space of V, denoted by V'', is defined to be the dual space of V'.*
In other words, $V'' = \mathcal{L}(V', \mathbf{F})$. Define $\Lambda : V \to V''$ by $(\Lambda v)(\varphi) = \varphi(v)$.

(a) *Show that Λ is a linear map from V to V''.*

(b) *Show that if $T \in \mathcal{L}(V)$, then $T'' \circ \Lambda = \Lambda \circ T$, where $T'' = (T')'$.*

(c) *Show that if V is finite-dim, then Λ is an isomorphism from V onto V''.*

Suppose V is finite-dim. Then V and V' are isomorphic, but finding an isomorphism from V onto V' generally requires choosing a basis of V. In contrast, the isomorphism Λ from V onto V'' does not require a choice of basis and thus is considered more natural.

Solution:

(a) $\forall \varphi \in V'$, $\forall v, w \in V, a \in \mathbf{F}$, $(\Lambda(v + aw))(\varphi) = \varphi(v + aw) = \varphi(v) + a\varphi(w) = (\Lambda v)(\varphi) + a(\Lambda w)(\varphi)$.

Thus $\Lambda(v + aw) = \Lambda v + a\Lambda w$. Hence Λ is linear.

(b) $(T''(\Lambda v))(\varphi) = ((\Lambda v) \circ (T'))(\varphi) = (\Lambda v)(T'(\varphi)) = (T'(\varphi))(v) = (\varphi \circ T)(v) = \varphi(Tv) = (\Lambda(Tv))(\varphi)$.

Hence $T''(\Lambda v) = (\Lambda(Tv))$, getting $T'' \circ \Lambda = \Lambda \circ T$.

(c) Suppose $\Lambda v = 0$. Then $\forall \varphi \in V', (\Lambda v)(\varphi) = \varphi(v) = 0 \Rightarrow v = 0$. Thus Λ is injective.

又 Because V is finite-dim. dim$V$=dimV'=dimV''. Hence Λ is an isomorphism. $\square$

---

36 *Suppose U is a subspace of V. Define $i : U \to V$ by $i(u) = u$. Thus $i' \in \mathcal{L}(V', U')$.*

(a) *Show that null $i' = U^0$: null $i' = (\text{range } i)^0 = U^0 \Leftarrow \text{range } i = U$.* $\square$

(b) *Prove that if V is finite-dim, then range $i' = U'$: range $i' = (\text{null } i)^0_U = (\{0\})^0_U = U'$.* $\square$

(c) *Prove that if V is finite-dim, then $\tilde{i'}$ is an isomorphism from V'/U^0 onto U':*

Note that $\tilde{i'} : V'/\text{null } i' \to \text{range } i' \quad \Rightarrow \quad \tilde{i'} : V'/U^0 \to U'$. By (a), (b) and [3.91(d)]. $\square$

The isomorphism in (c) is natural in that it does not depend on a choice of basis in either vector space.

---

37 *Suppose U is a subspace of V and π is the quotient map. Thus $\pi' \in \mathcal{L}((V/U)', V')$.*

(a) *Show that π' is injective: Because π is surjective. Use [3.108].* $\square$

(b) *Show that range $\pi' = U^0$.*

(c) *Conclude that π' is an isomorphism from $(V/U)'$ onto U^0.*

The isomorphism in (c) is natural in that it does not depend on a choice of basis in either vector space.

In fact, there is no assumption here that any of these vector spaces are finite-dimensional.

Solution: [3.109] is not available. Using (3.E.18), also see (3.E.20).

(b) $\psi \in \text{range } \pi' \iff \exists \varphi \in (V/U)', \psi = \varphi \circ \pi \iff \text{null } \psi \supseteq U \iff \psi \in U^0$. Hence range $\pi' = U^0$.

(c) $\psi \in U^0 \iff \text{null } \psi \supseteq U \iff \exists \varphi \in (V/U)', \psi = \varphi \circ \pi = \pi(\varphi)$. Thus π' is surjective. And by (a). $\square$

Ended

- **NOTE FOR [4.8]:** *division algorithm for polynomials*

  Suppose $p, s \in \mathcal{P}(\mathbf{F})$, with $s \neq 0$. Then $\exists!\, q, r \in \mathcal{P}(\mathbf{F})$ such that $p = sq + r$ and $\deg r < \deg s$. *Another Proof:*

  Suppose $\deg p \geq \deg s$. Then $(\underbrace{1, z, \dots, z^{\deg s - 1}}_{\text{of length } \deg s}, \underbrace{s, zs, \cdots, z^{\deg p - \deg s} s}_{\text{of length } (\deg p - \deg s + 1)})$ is a basis of $\mathcal{P}_{\deg p}(\mathbf{F})$.

  Because $q \in \mathcal{P}(\mathbf{F})$, $\exists!\, a_i, b_j \in \mathbf{F}$,

  $$\begin{aligned} q &= a_0 + a_1 z + \cdots + a_{\deg s - 1} z^{\deg s - 1} + b_0 s + b_1 zs + \cdots + b_{\deg p - \deg s} z^{\deg p - \deg s} s \\ &= \underbrace{a_0 + a_1 z + \cdots + a_{\deg s - 1} z^{\deg s - 1}}_{r} + s \underbrace{\left(b_0 + b_1 z + \cdots + b_{\deg p - \deg s} z^{\deg p - \deg s}\right)}_{q}. \end{aligned}$$

  With r, q as defined uniquely above, we are done. $\square$

- **NOTE FOR [4.11]:** *each zero of a polynomial corresponds to a degree-one factor;* *Another Proof:*

  First suppose $p(\lambda) = 0$. Write $p(z) = a_0 + a_1 z + \cdots + a_m z^m$, $\exists!\, a_0, a_1, \dots, a_m \in \mathbf{F}$ for all $z \in \mathbf{F}$.

  Then $p(z) = p(z) - p(\lambda) = a_1(z - \lambda) + \cdots + a_m(z^m - \lambda^m)$ for all $z \in \mathbf{F}$.

  Hence for each $k \in \{1, \dots, m\}$, $z^k - \lambda^k = (z - \lambda)(z^{k-1}\lambda^0 + z^{k-2}\lambda^1 + \cdots + \cdots + z\lambda^{k-2} + z^0\lambda^{k-1})$.

  Thus $p(z) = \sum\limits_{j=1}^{m} a_j (z - \lambda) \sum\limits_{i=1}^{k} \lambda^{i-1} z^{k-i} = (z - \lambda) \sum\limits_{j=1}^{m} a_j \sum\limits_{i=1}^{k} \lambda^{i-1} z^{k-i} = (z - \lambda) q(z)$.

- **NOTE FOR [4.13]:** *fundamental theorem of algebra, first version*

  Every nonconstant polynomial with complex coefficients has a zero in $\mathbf{C}$. *Another Proof:*

  De Moivre's theorem (which you can prove using induction on k and the addition formulas for cosine and sine), states that if $k \in \mathbf{N}^+, \theta \in \mathbf{R}$, then $(\cos\theta + \mathrm{i}\sin\theta)^k = \cos k\theta + \mathrm{i}\sin k\theta$.

  Suppose $w \in \mathbf{C}, k \in \mathbf{N}^+$ and using polar coordinates. $\exists\, r \geq 0, \theta \in \mathbf{R}$ such that $r(\cos\theta + \mathrm{i}\sin\theta) = w$.

  Hence $(r^{1/k}(\cos\frac{\theta}{k} + \mathrm{i}\sin\frac{\theta}{k}))^k = w$. Thus every complex number has a k^{th} *root*, a fact that we will soon use.

  Suppose a nonconstant $p \in \mathcal{P}(\mathbf{C})$ with highest-order nonzero term $c_m z_m$.

  Then $|p(z)| \to \infty$ as $|z| \to \infty$ (because $\dfrac{|p(z)|}{|z_m|} \to |c_m|$ as $|z| \to \infty$).

  Thus the continuous function $z \to |p(z)|$ has a global minimum at some point $\zeta \in \mathbf{C}$.

  To show that $p(\zeta) = 0$, suppose that $p(\zeta) \neq 0$.

  Define $q \in \mathcal{P}(\mathbf{C})$ by $q(z) = \dfrac{p(z + \zeta)}{p(\zeta)}$.

  The function $z \to |q(z)|$ has a global minimum value of 1 at $z = 0$.

  Write $q(z) = 1 + a_k z^k + \cdots + a_m z^m$, where k is the smallest positive integer such that $a_k \neq 0$.

  Let $\beta \in \mathbf{C}$ be such that $\beta^k = -\dfrac{1}{a_k}$.

  There is a constant $c > 1$ such that if $t \in (0, 1)$,

  then $|q(t\beta)| \leq |1 + a_k t^k \beta^k| + t^{k+1} c = 1 - t^k(1 - tc)$.

  Thus taking t to be $1/(2c)$ in the inequality above, we have $|q(t\beta)| < 1$,

  which contradicts the assumption that the global minimum of $z \to |q(z)|$ is 1.

  Hence $p(\zeta) = 0$, as desired. $\square$

• *Prove that if $w, z \in \mathbf{C}$, then $||w| - |z|| \leq |w - z|$.* *The inequality here is called the* **reverse triangle inequality**.

SOLUTION:

$$\begin{aligned}|w-z|^2 &= (w-z)(\overline{w}-\overline{z}) \\ &= |w|^2+|z|^2-(w\overline{z}+\overline{w}z) \\ &= |w|^2+|z|^2-(\overline{\overline{w}z}+\overline{w}z) \\ &= |w|^2+|z|^2-2Re(\overline{w}z) \\ &\geq |w|^2+|z|^2-2|\overline{w}z| \\ &= |w|^2+|z|^2-2|w||z| = ||w|-|z||^2. \qquad \square\end{aligned}$$

Geometric interpretation: The length of each side of a triangle is greater than or equal to the difference of the lengths of the two other sides.

• *Suppose V is a complex vector space and $\varphi \in V'$.*
Define $: V \to \mathbf{R}$ by $\sigma(v) = \Re\varphi(v)$ for each $v \in V$.
Show that $\varphi(v) = \sigma(v) - i\sigma(iv)$ for all $v \in V$.

SOLUTION:

Notice that $\varphi(v) = \Re\varphi(v) + \mathrm{i}\Im\varphi(v) = \sigma(v) + \mathrm{i}\Im\varphi(v)$. 又 $\Re\varphi(\mathrm{i}v) = \Re[\mathrm{i}\varphi(v)] = -\Im\varphi(v) = \sigma(\mathrm{i}v)$.

Hence $\varphi(v) = \sigma(v) - \mathrm{i}\sigma(\mathrm{i}v)$. $\square$

---

2 *Suppose m is a positive integer. Is the set $U = \{0\} \cup \{p \in \mathcal{P}(\mathbf{F}) : \deg p = m\}$ a subspace of $\mathcal{P}(\mathbf{F})$?*

SOLUTION:

$x^m, x^m + x^{m-1} \in U$ but $\deg[(x^m + x^{m-1}) - (x^m)] \neq m \Rightarrow (x^m + x^{m-1}) - (x^m) \notin U$.

Hence U is not closed under addition, and therefore is not a subspace. $\square$

---

3 *Suppose m is a positive integer. Is the set $U = \{0\} \cup \{p \in \mathcal{P}(\mathbf{F}) : \deg p$ is even $\}$ a subspace of $\mathcal{P}(\mathbf{F})$?*

SOLUTION:

$x^2, x^2 + x \in U$ but $\deg[(x^2 + x) - (x^2)]$ is odd and hence $(x^2 + x) - (x^2) \notin U$.

Thus U is not closed under addition, and therefore is not a subspace. $\square$

---

4 *Suppose that m and n are positive integers with $m \leq n$, and suppose $\lambda_1, \ldots, \lambda_m \in \mathbf{F}$. Prove that $\exists\, p \in \mathcal{P}(\mathbf{F})$ such that $\deg p = n$, the zeros of p are $\lambda_1, \ldots, \lambda_m$.*

SOLUTION: Let $p(z) = (z - \lambda_1)^{n-(m-1)}(z - \lambda_2)\cdots(z - \lambda_m)$. $\square$

---

5 *Suppose that $m \in \mathbf{N}$, $z_1, \ldots, z_{m+1}$ are distinct elements of $\mathbf{F}$, and $w_1, \ldots, w_{m+1} \in \mathbf{F}$. Prove that $\exists\,!\, p \in \mathcal{P}_m(\mathbf{F})$ such that $p(z_k) = w_k$ for each $k = 1, \ldots, m+1$.*

This result can be proved without using linear algebra. However, try to find the clearer, shorter proof that uses some linear algebra.

SOLUTION:

Define $T : \mathcal{P}_m(\mathbf{F}) \to \mathbf{F}^{m+1}$ by $Tq = (q(z_1), \ldots, q(z_m), q(z_{m+1}))$. As can be easily checked, T is linear.

We need to show that T is surjective, so that such p exists; and that T is injective, so that such p is unique.

$Tq = 0 \iff q(z_1) = \cdots = q(z_m) = q(z_{m+1}) = 0$

$\iff q \in \mathcal{P}_m(\mathbf{F})$ is the zero polynomial, for if not,

q has at least $m+1$ distinct roots, while $\deg q = m$. Contradicts (by [4.12]). Hence T is injective.

$\dim \operatorname{range} T = \dim \mathcal{P}_m(\mathbf{F}) - \dim \operatorname{null} T = m + 1 = \dim \mathbf{F}^{m+1}$. 又 $\operatorname{range} T \subseteq \mathbf{F}^{m+1}$. Hence T is surjective. $\square$

---

6 *Suppose $p \in \mathcal{P}_m(\mathbf{C})$ has degree m. Prove that*
p has m distinct zeros $\iff$ p and its derivative p' have no zeros in common.

SOLUTION:

(a) Suppose p has m distinct zeros. By [4.14] and $\deg p = m$, let $p(z) = c(z-\lambda_1)\cdots(z-\lambda_m)$, $\exists!\, c, \lambda_i \in \mathbf{C}$.

For each $j \in \{1,\dots,m\}$, let $\dfrac{p(z)}{(z-\lambda_j)} = q_j \in \mathcal{P}_{m-1}(\mathbf{C})$, then $p(z) = (z-\lambda_j)q_j(z)$ and $q_j(\lambda_j) \neq 0$.

$p'(z) = (z-\lambda_j)q_j'(z) + q_j(z) \Rightarrow p'(\lambda_j) = q_j(\lambda_j) \neq 0$, as desired.

(b) To prove the implication on the other direction, we prove the contrapositive:
Suppose p has less than m distinct roots.
We must show that p and its derivative p' have at least one zero in common.
Let λ be a zero of p, then write $p(z) = (z-\lambda)^n q(z)$, $\exists!\, n \in \mathbf{N}^+, q \in \mathcal{P}_{m-n}(\mathbf{C})$.
$p'(z) = (z-\lambda)^n q'(z) + n(z-\lambda)^{n-1}q(z) \Rightarrow p'(\lambda) = 0$, λ is a common root of p' and p. $\square$

---

7 *Prove that every polynomial of odd degree with real coefficients has a real zero.*

SOLUTION:

Using the notation proof of [4.17]. $\deg p = 2M + m$ is odd $\Rightarrow$ m is odd. Hence λ_1 exists. $\square$

OR. Using calculus but not using [4.17].
Suppose $p \in \mathcal{P}_m(\mathbf{F})$, $\deg p = m$, m is odd.

Let $p(x) = a_0 + a_1 x + \cdots + a_m x^m$. Then $a_m \neq 0$. Denote $|a_m|^{-1}a_m$ by δ

Write $p(x) = x^m\left(\dfrac{a_0}{x^m} + \dfrac{a_1}{x^{m-1}} + \cdots + \dfrac{a_{m-1}}{x} + a_m\right)$.

Thus $p(x)$ is continuous, and $\lim\limits_{x\to-\infty} p(x) = -\delta\infty$; $\lim\limits_{x\to\infty} p(x) = \delta\infty$.

Hence we conclude that p has at least one real zero. $\square$

---

8 *For $p \in \mathcal{P}(\mathbf{R})$, define $Tp : \mathbf{R} \to \mathbf{R}$ by* $(Tp)(x) = \begin{cases} \dfrac{p(x)-p(3)}{x-3} & \text{if } x \neq 3, \\ p'(3) & \text{if } x = 3 \end{cases}$ *for all $x \in \mathbf{R}$.*

Show that $Tp \in \mathcal{P}(\mathbf{R})$ for all $p \in \mathcal{P}(\mathbf{R})$ and that $T : \mathcal{P}(\mathbf{R}) \to \mathcal{P}(\mathbf{R})$ is a linear map.

SOLUTION:

For $x \neq 3$, $T(x^n) = \dfrac{x^n - 3^n}{x-3} = \sum\limits_{i=1}^{n} 3^{i-1}x^{n-i}$.

For $x = 3$, $T(x^n) = 3^{n-1}\cdot n$. Note that if $x = 3$, then $\sum\limits_{i=1}^{n} 3^{i-1}x^{n-i} = \sum\limits_{i=1}^{n} 3^{n-1} = 3^{n-1}\cdot n$.

Hence for all $x \in \mathbf{R}$ and for all $n \in \mathbf{N}$, $T(x^n) = \sum\limits_{i=1}^{n} 3^{i-1}x^{n-i} \in \mathcal{P}(\mathbf{R})$.

Because T is linear, we conclude that $Tp \in \mathcal{P}(\mathbf{R})$ for all $p \in \mathcal{P}(\mathbf{R})$.

Now we show that T is linear:

$\forall p, q \in \mathcal{P}(\mathbf{R}), \lambda \in \mathbf{R}, T(p+\lambda q)(x) = \begin{cases} \dfrac{(p+\lambda q)(x) - (p+\lambda q)(3)}{x-3} & \text{if } x \neq 3, \\ (p+\lambda q)'(3) & \text{if } x = 3 \end{cases}$ for all $x \in \mathbf{R}$.

Notice that $(p+\lambda q)(x) - (p+\lambda q)(3) = (p(x)-p(3)) + (\lambda q(x) - \lambda q(3))$;
$(p+\lambda q)'(3) = p'(3) + \lambda q'(3)$.

Thus $T(p+\lambda q)(x) = (T(p) + \lambda T(q))(x)$ for all $x \in \mathbf{R}$. $\square$

---

9 *Suppose $p \in \mathcal{P}(\mathbf{C})$. Define $q : \mathbf{C} \to \mathbf{C}$ by $q(z) = p(z)\overline{p(\overline{z})}$.*
Prove that q is a polynomial with real coefficients.

SOLUTION:

$p(z) = a_n z^n + \cdots + a_1 z + a_0 \Rightarrow p(\overline{z}) = \underline{a_n \overline{z}^n + \cdots} + a_1 \overline{z} + a_0 \Rightarrow \overline{p(\overline{z})} = \overline{a_n} z^n + \cdots + \overline{a_1} z + \overline{a_0}$.

Note that $q(z) = p(z)\overline{p(\overline{z})} = \overline{p(\overline{z})}p(z) = \overline{p(\overline{z})\overline{p(\overline{\overline{z}})}} = \overline{q(\overline{z})}$.

Hence letting $q(z) = c_m x^m + \cdots + c_1 x + c_0 \Rightarrow \overline{c_k} = c_k$, $c_k \in \mathbf{R}$ for each k. $\square$

---

10 *Suppose $m \in \mathbf{N}$ and $p \in \mathcal{P}_m(\mathbf{C})$ is such that there are $(m+1)$ distinct real numbers $x_0, x_1, \ldots, x_m$ with $p(x_k) \in \mathbf{R}$ for each x_k. Prove that all coefficients of p are real.*

SOLUTION: Let $p(x_k) = y_k$ for each k. By Problem (5), $\exists!\, q \in \mathcal{P}_m(\mathbf{R})$ such that $q(x_k) = y_k$. Hence $p = q$. $\square$

OR. Using the Lagrange Interpolating Polynomial.

Define $q(x) = \displaystyle\sum_{j=0}^{m} \frac{(x-x_0)(x-x_1)\cdots(x-x_{j-1})(x-x_{j+1})\cdots(x-x_m)}{(x_j-x_0)(x_j-x_1)\cdots(x_j-x_{j-1})(x_j-x_{j+1})\cdots(x_j-x_m)} p(x_j)$.

又 For each j, $x_j, p(x_j) \in \mathbf{R} \Rightarrow q \in \mathcal{P}_m(\mathbf{R}) \subseteq \mathcal{P}_m(\mathbf{C})$.

Notice that $q(x_k) = 1 \cdot p(x_k) \Rightarrow (q-p)(x_k) = 0$ for each $k \in \{0, 1, \ldots, m\}$.

Then $(q-p)$ has $(m+1)$ distinct zeros, while $(q-p) \in \mathcal{P}_m(\mathbf{C})$. Hence by [4.12], $q - p = 0 \Rightarrow p = q$. $\square$

---

11 *Suppose $p \in \mathcal{P}(\mathbf{F})$ with $p \neq 0$. Let $U = \{pq : q \in \mathcal{P}(\mathbf{F})\}$.*
(a) *Show that* $\dim \mathcal{P}(\mathbf{F})/U = \deg p$.
(b) *Find a basis of $\mathcal{P}(\mathbf{F})/U$.*

SOLUTION:

U is a subspace of $\mathcal{P}(\mathbf{F})$ because $\forall f, g \in \mathcal{P}(\mathbf{F}), \lambda \in \mathbf{F}, pf + \lambda pg = p(f + \lambda g) \in U$.

NOTE: Define $P :\to \mathcal{P}(\mathbf{F})$ by $(Pq)(x) = p(q(x)) = (p \circ q)(x)$ ($\neq p(x)q(x)$). P is not linear.

(a) By [4.8], $\forall f \in \mathcal{P}(\mathbf{F})$, $\exists!\, q, r \in \mathcal{P}(\mathbf{F}), f = (p)q + (r)$; $\deg r < \deg p$.

Hence $\forall f \in \mathcal{P}(\mathbf{F})$, $\exists!\, pq \in U, r \in \mathcal{P}_{\deg p - 1}(\mathbf{F}), f = (pq) + (r); r \notin U$.

Thus $\mathcal{P}(\mathbf{F}) = U \oplus \mathcal{P}_{\deg p - 1}(\mathbf{F})$. Therefore $\mathcal{P}(\mathbf{F})/U$ and $\mathcal{P}_{\deg p-1}(\mathbf{F})$ are isomorphic.

OR. $\forall f \in \mathcal{P}(\mathbf{F})$, $\exists!\, q, r \in \mathcal{P}(\mathbf{F}), f = (p)q + (r)$; $\deg r < \deg p$.

Define $R : \mathcal{P}(\mathbf{F}) \to \mathcal{P}_{\deg p-1}(\mathbf{F})$ by $(Rf)(z) = r(z)$ for each $z \in \mathbf{F}$.

$\forall f, g \in \mathcal{P}(\mathbf{F}), \lambda \in \mathbf{F}, R(f + \lambda g)(z) = R(f) + \lambda R(g)$.

BECAUSE:$\forall f, g \in \mathcal{P}(\mathbf{F}), \lambda \in \mathbf{F}$,

$\exists!\, q_1, r_1 \in \mathcal{P}(\mathbf{F}), f = (p)q_1 + (r_1)$, $\deg r_1 < \deg p$;

$\exists!\, q_2, r_2 \in \mathcal{P}(\mathbf{F}), g = (p)q_2 + (r_2)$, $\deg r_2 < \deg p$;

$\exists!\, q_3, r_3 \in \mathcal{P}(\mathbf{F}), \lambda g = (p)q_3 + (r_3) = (p)(\lambda q_2) + (\lambda r_2)$, $\deg r_3 < \deg p$ and $\deg \lambda r_2 < \deg p$.

$\Rightarrow q_3 = \lambda q_2, r_3 = \lambda r_2$.

$\exists!\, q_0, r_0 \in \mathcal{P}(\mathbf{F}), (f + \lambda g) = (p)q_0 + (r_0)$

$= (p)(q_1 + \lambda q_2) + (r_1 + \lambda r_2)$, $\deg r_0 < \deg p$ and $\deg(r_1 + \lambda r_2) < \deg p$.

$\Rightarrow q_1 + \lambda q_2 = q_0$; $r_1 + \lambda r_2 = r_0$.

Hence R is linear.

$R(f) = 0 \Longleftrightarrow f = pq$, $\exists!\, q \in \mathcal{P}(\mathbf{F})$. Thus null $R = U$.

$\forall r \in \mathcal{P}_{\deg p-1}(\mathbf{F})$, let $f = p + r$, then $R(f) = r$. Thus range $R = \mathcal{P}_{\deg p-1}(\mathbf{F})$.

Finally, by [3.91(d)], $\mathcal{P}(\mathbf{F})/\text{null}\, R$, namely $\mathcal{P}(\mathbf{F})/U$, and range R, namely $\mathcal{P}_{\deg p-1}(\mathbf{F})$, are isomorphic.

(b) $(1 + U, x + U, \ldots, x^{\deg p - 1}) + U)$ can be a basis of $\mathcal{P}(\mathbf{F})/U$. $\square$

- *Suppose nonconstant $p, q \in \mathcal{P}(\mathbf{C})$ have no zeros in common. Let $m = \deg p$, $n = \deg q$. Use* (a)—(c) *below to prove that $\exists !\, r \in \mathcal{P}_{n-1}(\mathbf{C}), s \in \mathcal{P}_{m-1}(\mathbf{C})$ such that $rp + sq = 1$.*
  (a) *Define $T : \mathcal{P}_{n-1}(\mathbf{C}) \times \mathcal{P}_{m-1}(\mathbf{C}) \to \mathcal{P}_{m+n-1}(\mathbf{C})$ by $T(r, s) = rp + sq$. Show that the linear map T is injective.*
  (b) *Show that the linear map T in* (a) *is surjective.*
  (c) *Use* (b) *to conclude that $\exists !\, r \in \mathcal{P}_{n-1}(\mathbf{C}), s \in \mathcal{P}_{m-1}(\mathbf{C})$ such that $rp + sq = 1$.*

SOLUTION:

(a) T is linear because $\forall\, r_1, r_2 \in \mathcal{P}_{n-1}(\mathbf{C}), s_1, s_2 \in \mathcal{P}_{m-1}(\mathbf{C}), \lambda \in \mathbf{F}$,
$T((r_1, s_1) + \lambda(r_2, s_2)) = T(r_1 + \lambda r_2, s_1 + \lambda s_2) = (r_1 + \lambda r_2)p + (s_1 + \lambda s_2)q = T(r_1, s_1) + \lambda T(r_2, s_2)$.

Suppose $T(r, s) = rp + sq = 0$. Notice that p, q have no zeros in common.
Then $r = s = 0$, for if not, write $\dfrac{q(z)}{r(z)} = \dfrac{p(z)}{s(z)}$, while for any zero λ of q, $\dfrac{q(\lambda)}{r(z)} = 0 \neq \dfrac{p(\lambda)}{s(z)}$. Hence $\square$

(b) $\dim(\mathcal{P}_{n-1}(\mathbf{C}) \times \mathcal{P}_{m-1}(\mathbf{C})) = \dim \mathcal{P}_{n-1}(\mathbf{C}) + \dim \mathcal{P}_{m-1}(\mathbf{C}) = n + m = \dim \mathcal{P}_{m+n-1}(\mathbf{C})$.
又 T is injective. Hence $\dim \operatorname{range} T = \dim(\mathcal{P}_{n-1}(\mathbf{C}) \times \mathcal{P}_{m-1}(\mathbf{C})) - \dim \operatorname{null} T = \dim \mathcal{P}_{m+n-1}(\mathbf{C})$.
Thus $\operatorname{range} T = \mathcal{P}_{m+n-1}(\mathbf{C}) \Rightarrow T$ is surjective, and therefore is an isomorphism. $\square$

(c) Immediately. $\square$
