简介

这是我个人用于复习的「Linear Algebra Done Right 3E/4E, by Sheldon Axler 」笔记,一本习题选答与课文补注。范围覆盖所有第三版和 第四版的课文和习题(除了第一章 A 节、极少数结合上下文太过显而易见的习题。没有任何日后反复推敲价值的当堂习题和方法套路过于 雷同的习题)。这份笔记尚处于缓慢的编撰进度中。

习题答案中,有我完全独立思考得出的,有抄 https://linearalgebras.com/的,有抄 https://math.stackexchange.com/的,有抄 LADR2eSolutions (By Axler).pdf ,有抄最新的 LADR4eSolutions 经典最全(By Axler?).pdf ,还有请教别人,乃至请教 AI 得出来的。

这些文档的许可证件,除 LADR4eSolutions 经典最全(By Axler?).pdf 找不到/没有指明外,都允许复制/引用。

课文补注中,除了我独立思考总结出的易错误区和技巧、难点之外,还(因为我想要兼容那些使用 LADR 第三版纸质书的读者,包括我在 内)把 LADR4e中对课文定理等等的修改也(作了简化和提炼)摘录上去。部分课文内容因为比较简单、比如 3E 节的积空间、所以我做 了概念前置,这相当于更改了原书的内容顺序。

题目标为正常数字 N 的,为第三版某章某节第 N 题(有个别题是第四版又删去的,这里,或直接摘录,或合并简化,仍然作保留;还有个 别题是第四版增添条件、设问的,也一并写在第 N 题下)。题目标为' \bullet '的,为第四版。因为要面向以第三版为主要教材的学习者,所以为 了避免混淆,故而将题号(部分题目的实心黑点后有标注具体第四版的数字标号)、甚至章节略去(一些变动过大的章节除外)。题目顺序 会有调换、在每章大标题处会交代清楚。除了原书第四版新加入的章节外、均使用原书第三版的索引。这也许对第四版的使用者很不友好、 我在此欢迎有心人士将我的作品修改后在同样的 CC BY NC SA 条款下作为衍生作品发布。

因为使用中文会给我编撰这份笔记带来额外的中英文输入法切换的工作成本、况且对于专业学习者、直接使用英文不会造成任何困扰。但 英文词句的冗长性拖慢我编撰/复习的效率,所以我对许多常用术语作了简写。

作者序

我目前还没有能力和资格评论原书好坏以及线性代数课程教材选用的问题。但作为原书的学习者,我可以说:

相较于(其他课程的)其他教材,以LADR作为自学读本的精学计划,往往在执行中出现一次又一次的时间误判/超时,比 如我最开始计划 40×8h 完成 LADR 的精学,差不多是一天(8h)完成一节,还有额外的复习时间。但在实际学习中,(刨去 笔记的功夫) 完成到一半时,发现已经耗费了约35×8h,于是我不得不重新估计LADR 精学所需的总时间为70×8h。这一 点对于有学时/学期限制/应试要求的线性代数初学者来说很不安全。更主观地讲,这是因为 LADR 更像是一本参考手册,而 不是一本细致入微的自学读本;如果把 LADR 作为初学线性代数第一教材和自学读本来学习,会面临不小的困难。

以上或许能劝退相当一部分打算入门的线性代数初学者。S.Axler 说这本书作为第二遍学习线性代数的教材更合适。我认为理 由就是,在校的科班生第二遍学习线性代数时,也已经学习过了离散数学、抽象代数、数论、数学分析等课程,这些知识储备 统统会化作一个叫 "mathematical maturity" 的东西, 让他们面对 LADR 的课文和习题不再少见多怪、茫然无措。据此, 我进 一步认为,对于完全的初学者,想要完成 LADR 的精学,要么有很好的天赋,要么有与之相匹配的 "mathematical maturity", 再要么,拿出足够的耐心和毅力。幸运的是,在坚持学习 LADR 的过程中,这三样会一同增益。就我个人来说:课文一次看 不懂,就多看几遍,一天看不懂,就分三天看;习题一个小时做不出来,就隔六个小时再尝试,一天做不出来,就隔天再尝 试。这确实让我收获了独特的学习体验和能力,我迄今也无法在别处得到,因此我很珍视 LADR,我愿意为此编撰一份电子 辅助书并免费公开于网络中。这本身并不花费什么,因为实际的时间开销包括了很多不相干的额外项目:初学 LATEX、调整代 码架构、了解许可证选用,诸如此类的各种波折,也不乏戏剧性。

我在学习过程中碰到了很多重大误区: 第一章中,我一开始误认为 $W = C_V U \cup \{0\}$ 是唯一使得 $W \oplus U = V$ 的子空间,但这压根就不是子 空间,而且C节习题中也提示这样的子空间W不唯一。第二章中,我随意地将"线性无关的序列"等同于有/无限维向量空间的基,没有 任何理论依据,我也并不懂什么选择公理。**第三章 B 到 D 节中**,我总觉得子空间是超脱有限维的存在;因为放不下第二章无限维向量空间 的基的情结,我刻意寻找那些避开涉及基的解法,一些臆测的结论和容易就找到反例。第三章 E 节中,我似乎对商空间有什么误解,觉得 v+U=v'+U 如同变戏法一样, 把 v 中一切带有 U 的部分抹除掉, 让 v 变得纯粹独立于 U, 为此我还单门发明了 P U 中一切带有 U 的部分抹除掉 一些命题,甚至用它发现了F节23题无限维情况下不依赖基的解法。后来我猛然发现我最开始的想法多么荒诞,却仍然放不下Pure V/U 的情结。这些挫折让我思维变得更加缜密,于是在学习抽象的**第三章 F 节**时比想象中的要顺利。

1.B

1 Prove $\forall v \in V, -(-v) = v$.

Solus:
$$-(-v) = (-1)((-1)v) = ((-1)(-1))v = 1 \cdot v = v$$
.

2 Supp $a \in \mathbf{F}, v \in V$, and av = 0. Prove a = 0 or v = 0.

Solus: Supp
$$a \neq 0$$
, $\exists a^{-1} \in \mathbf{F}$, $a^{-1}a = 1$, hence $v = 1 \cdot v = (a^{-1}a)v = a^{-1}(av) = a^{-1} \cdot 0 = 0$.

3 Supp $v, w \in V$. Explain why $\exists ! x \in V, v + 3x = w$.

Solus:
$$v + 3x = w \Leftrightarrow 3x = w - v \Leftrightarrow x = \frac{1}{3}(w - v).$$

Or.
$$[Existns]$$
 Let $x = \frac{1}{3}(w - v)$.

[*Uniques*] If
$$v + 3x_1 = w$$
,(I) $v + 3x_2 = w$ (II). Then (I) $- (II) : 3(x_1 - x_2) = 0 \Rightarrow x_1 = x_2$.

5 *Show in the def of a vecsp, the add inv cond can be replaced by* [1.29].

Hint: Supp V satisfies all conds in the def, except we've replaced the add inv cond with [1.29]. Prove the add inv is true.

Solus: Using [1.31].
$$0v = 0 \iff (1 + (-1))v = 1 \cdot v + (-1)v = v + (-v) = 0.$$

6 Let ∞ and $-\infty$ denote two disti objects, neither of which is in R.

Define an add and scalar multi on $R \cup \{\infty, -\infty\}$ as you could guess.

The operations of real numbers is as usual. While for $t \in R$ define

$$t\infty = \begin{cases} -\infty & \text{if } t < 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t > 0, \end{cases} \qquad t(-\infty) = \begin{cases} -\infty & \text{if } t > 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t < 0, \end{cases}$$

(I)
$$t + \infty = \infty + t = \infty + \infty = \infty$$
,

(II)
$$t + (-\infty) = (-\infty) + t = (-\infty) + (-\infty) = -\infty$$
,

(III)
$$\infty + (-\infty) = (-\infty) + \infty = 0.$$

With these operations of add and scalar multi, is $R \cup \{\infty, -\infty\}$ a vecsp over R? Explain.

Solus: Not a vecpsp, since the add and scalar mult is not assoc and distr.

By Assoc:
$$(a + \infty) + (-\infty) \neq a + (\infty + (-\infty))$$
.

Or. By Distr:
$$\infty = (2 + (-1))\infty \neq 2\infty + (-\infty) = \infty + (-\infty) = 0$$
.

• **Note For Fields:** *Many choices.* [*Req Multi Inv Uniq*]

Exa:
$$\mathbf{F} = \mathbf{Z}_m = \{K_0, K_1, \dots, K_{m-1}\}, \forall m - 1 \in \mathbf{N}^+ \ suth \ (m-1) \ is \ a \ prime.$$

7 Give a nonempty $U \subseteq \mathbb{R}^2$, U is closd taking add invs and add, but is not a subsp of \mathbb{R}^2 . Solus: $(0 \in U; v \in U \Rightarrow -v \in U$. And operations on U are the same as \mathbb{R}^2 . $)$ Let \mathbb{Z}^2 , \mathbb{Q}^2 .	
8 Give a nonempty $U \subseteq \mathbb{R}^2$, U is closd scalar multi, but is not a subsp of \mathbb{R}^2 . S OLUS: Let $U = \{(x,y) \in \mathbb{R}^2 : x = 0 \lor y = 0\}$.	
• Supp U, W, V_1, V_2, V_3 are subsps of V . 15 $U + U \ni u + w \in U$. 16 $U + W \ni u + w = w + u \in W + U$. 17 $(V_1 + V_2) + V_3 \ni (v_1 + v_2) + v_3 = v_1 + (v_2 + v_3) \in V_1 + (V_2 + V_3)$. • $(U + W)_C \ni (u_1 + w_1) + i(u_2 + w_2) = (u_1 + iu_2) + (w_1 + iw_2) \in U_C + W_C$.	
18 Does the add on the subsps of V have an add id ? Which subsps have add $invs$? Solus: Supp Ω is the uniq add id . (a) For any subsp U of V . $\Omega \subseteq U + \Omega = U \Rightarrow \Omega \subseteq U$. Let $U = \{0\}$, then $\Omega = \{0\}$. (b) Now supp W is an add inv of $U \Rightarrow U + W = \Omega$. Note that $U + W \supseteq U, W \Rightarrow \Omega \supseteq U, W$. Thus $U = W = \Omega = \{0\}$.	
11 Prove the intersec of every collec of subsps of V is a subsp of V . Solus: Supp $\{U_{\alpha}\}_{\alpha\in\Gamma}$ is a collec of subsps of V ; here Γ is an index set. We show $\bigcap_{\alpha\in\Gamma}U_{\alpha}$, which equals the set of vecs in each U_{α} , is a subsp of V . $(-)\ 0\in\bigcap_{\alpha\in\Gamma}U_{\alpha}$. Nonempty. $(\stackrel{-}{\Box})\ u,v\in\bigcap_{\alpha\in\Gamma}U_{\alpha}\Rightarrow u+v\in U_{\alpha},\ \forall\alpha\in\Gamma\Rightarrow u+v\in\bigcap_{\alpha\in\Gamma}U_{\alpha}$. Closd add. $(\stackrel{-}{\Xi})\ u\in\bigcap_{\alpha\in\Gamma}U_{\alpha},\lambda\in F\Rightarrow\lambda u\in U_{\alpha},\ \forall\alpha\in\Gamma\Rightarrow\lambda u\in\bigcap_{\alpha\in\Gamma}U_{\alpha}$. Closd scalar multi. Thus $\bigcap_{\alpha\in\Gamma}U_{\alpha}$ is nonempty subset of V that is closd add and scalar multi.	
• Note For [1.45]: If $\mathbf{F} = \{0,1\}$. Prove if $U + W$ is a direct sum, then $U \cap W = \{0\}$. Becs $\forall v \in U \cap W, \exists ! (u,w) \in U \times W, v = u + w$. If $U \cap W \neq \{0\}$, then (u,w) can be $(v,0)$ or $(0,v)$, ctradic the uniques.	
• Tips 1: Supp $U, W \subseteq V$. And U, W, V are vecsps $\Rightarrow U, W$ are subsps of V . Then $U + W$ is also a subsp of V . Becs $\forall u \in U, w \in U, u + w \in V$ since $u, w \in V$.	
• Supp $U = \{(x, x, y, y)\}, W = \{(x, x, x, y)\} \subseteq \mathbb{F}^4$. Prove $U + W = \{(x, x, y, z)\}$. Solus: Let T denote $\{(x, x, y, z)\}$. By def, $U + W \subseteq T$. And $T \ni (x, x, y, z) \Rightarrow (0, 0, y - x, y - x) + (x, x, x, -y + x + z) \in U + W$. Hence $T \subseteq U + W$.	
21 Supp $U = \{(x, y, x + y, x - y, 2x)\}$. Find a W suth $\mathbf{F}^5 = U \oplus W$. Solus: Let $W = \{(0, 0, z, w, u)\}$. Then $U \cap W = \{0\}$. And $\mathbf{F}^5 \ni (x, y, z, w, u) \Rightarrow (x, y, x + y, x - y, 2x) + (0, 0, z - x - y, w - x - y, u - 2x) \in U + (0, 0, z - x - y, w - x - y, u - 2x)$	W.

22 Supp $U = \{(x, y, x + y, x - y, 2x) \in \mathbb{F}^5\}.$ Find non0 subsps W_1 , W_2 , W_3 of \mathbf{F}^5 suth $\mathbf{F}^5 = U \oplus W_1 \oplus W_2 \oplus W_3$. Solus: Let $W_1 = \{(0,0,z,0,0) \in \mathbb{F}^5\} \Rightarrow W_1 \cap U = \{0\}.$ Now $U \oplus W_1 = \{(x, y, z, x - y, 2x) \in \mathbb{F}^5\} = U_1$. Now $U_1 \oplus W_2 = \left\{ \left(x, y, z, w, 2x \right) \in \mathbb{F}^5 \right\} = U_2.$ Let $W_2 = \{(0,0,0,w,0) \in \mathbb{F}^5\} \Rightarrow W_2 \cap U_1 = \{0\}.$ Let $W_3 = \{(0,0,0,0,u) \in \mathbb{F}^5\} \Rightarrow W_3 \cap U_2 = \{0\}.$ Now $U_2 \oplus W_3 = \{(x, y, z, w, u) \in \mathbb{F}^5\} = U_3$. Thus $\mathbf{F}^5 = ((U \oplus W_1) \oplus W_2) \oplus W_3$. **23** Give an exa of vecsps V_1, V_2, U suth $V_1 \oplus U = V_2 \oplus U$, but $V_1 \neq V_2$. **Solus:** $V = \mathbb{F}^2$, $U = \{(x, x)\}$, $V_1 = \{(x, 0)\}$, $V_2 = \{(0, x)\}$. • Note For " $\mathbf{C}_V U \cup \{0\}$ ": " $\mathbf{C}_V U \cup \{0\}$ " is supposed to be a subsp W suth $V = U \oplus W$. But if we let $u \in U \setminus \{0\}$ and $w \in W \setminus \{0\}$, then $\begin{cases} w \in C_V U \cup \{0\} \\ u \pm w \in C_V U \cup \{0\} \end{cases} \Rightarrow u \in C_V U \cup \{0\}$. Ctradic. To fix this, denote the set $\{W_1, W_2, \dots\}$ by $\mathcal{S}_V U$, where each $W_i \oplus U = V$. See also in (1.C.23). • Tips 2: Supp $V_1 \subseteq V_2$ in Exe (23). Prove $V_1 = V_2$. **Solus**: Becs the subset V_1 of vecsp V_2 is closd add and scalar multi, V_1 is a subspace of V_2 . $\text{Supp }W\text{ is suth }V_2=V_1\oplus W.\text{ Now }V_2\oplus U=\left(V_1\oplus W\right)\oplus U=\left(V_1\oplus U\right)\oplus W=V_1\oplus U.$ If $W \neq \{0\}$, then $V_1 \oplus U \subsetneq (V_1 \oplus U) \oplus W$, ctradic. Hence $W = \{0\}$, $V_1 = V_2$. • Supp V_1, V_2, U_1, U_2 are vecsps, $V_1 \oplus U_1 = V_2 \oplus U_2, V_1 \subseteq V_2, U_2 \subseteq U_1$. U_2 Prove or give a countexa: $V_1 = V_2$, $U_1 = U_2$. **Solus**: Let $U_2 = \{0\}$. Give an exa that each of V_1, V_2, U_1 is non0. • Supp the intersec of any two of the vecsps U, W, X, Y is $\{0\}$. Give an exa that $(X \oplus U) \cap (Y \oplus W) \neq \{0\}$. **Solus:** Using notas in Chapter 2. Let $B_X = (e_1), B_U = (e_2 - e_1), B_Y = (), B_W = (e_2).$ • Tips 4: Let V = U + W, $I = U \cap W$, $U = I \oplus X$, $W = I \oplus Y$. Prove $V = I \oplus (X \oplus Y)$. **Solus**: We show $X \cap Y = U \cap Y = W \cap X = \{0\}$ by ctradic. $X \cap Y = \Delta \neq \{0\} \Rightarrow I = U \cap W \supseteq \Delta \Rightarrow I \cap X \neq \{0\}, I \cap Y \neq \{0\}.$ $U \cap Y = \Delta \neq \{0\} \Rightarrow I = U \cap W \supseteq \Delta \Rightarrow I \cap Y \neq \{0\}$. Siml for $W \cap X$. Thus $I + (X + Y) = (I \oplus X) \oplus Y = I \oplus (X \oplus Y)$. Now we show V = I + (X + Y). $\forall v \in V, v = u + w, \exists (u, w) \in U \times W$ $\Rightarrow \exists (i_u, x_u) \in I \times X, (i_w, y_w) \in I \times Y, v = (i_u + i_w) + x_u + y_w \in I + (X + Y).$ **12** Supp U, W are subsps of V. Prove $U \cup W$ is a subsp of $V \iff U \subseteq W$ or $W \subseteq U$. **Solus**: (a) Supp $U \subseteq W$. Then $U \cup W = W$ is a subsp of V.

(b) Supp $U \cup W$ is a subsp of V. Asum $U \subseteq W$, $U \supseteq W$ ($U \cup W \neq U$ and W). Then $\forall a \in U \land a \notin W, \forall b \in W \land b \notin U$, we have $a + b \in U \cup W$. $a + b \in U \Rightarrow b = (a + b) + (-a) \in U$, ctradic $\Rightarrow W \subseteq U$. Ctradic asum. $a + b \in W \Rightarrow a = (a + b) + (-b) \in W$, ctradic $\Rightarrow U \subseteq W$.

13 Prove the union of three subsps of V is a subsp of V if and only if one of the subsps contains the other two. This exe is not true if we replace F with a field containing only two elems.

Solus: Supp U_1, U_2, U_3 are subsps of V. Denote $U_1 \cup U_2 \cup U_3$ by \mathcal{U} .

- (a) Supp that one of the subsps contains the other two. Then $\mathcal{U} = U_1, U_2$ or U_3 is a subsp of V.
- (b) Supp that $U_1 \cup U_2 \cup U_3$ is a subsp of V.

Distinctively notice that $A \cup B \cup C = (A \cup B) \cup (B \cup C) = (A \cup C) \cup (B \cup C) = (A \cup B) \cup (A \cup C)$. Also note that, if $U \cup W = V$ is a vecsp, then in general U and W are not subsps of V. Hence this literal trick is invalid.

- (I) If any U_j is contained in the union of the other two, say $U_1 \subseteq U_2 \cup U_3$, then $\mathcal{U} = U_2 \cup U_3$. By applying Exe (12) we conclude that one U_j contains the other two. Thus done.
- (II) Asum no U_j is contained in the union of the other two, and no U_j contains the union of the other two. Say $U_1 \not\subseteq U_2 \cup U_3$ and $U_1 \not\supseteq U_2 \cup U_3$.

 $\exists u \in U_1 \land u \notin U_2 \cup U_3; \ v \in U_2 \cup U_3 \land v \notin U_1. \text{ Let } W = \{v + \lambda u : \lambda \in \mathbf{F}\} \subseteq \mathcal{U}.$

Note that $W \cap U_1 = \emptyset$, for if any $v + \lambda u \in W \cap U_1$ then $v + \lambda u - \lambda u = v \in U_1$.

Now $W \subseteq U_1 \cup U_2 \cup U_3 \Rightarrow W \subseteq U_2 \cup U_3$. $\forall v + \lambda u \in W, v + \lambda u \in U_i, i = 2, 3$.

If $U_2 \subseteq U_3$ or $U_2 \supseteq U_3$, then $\mathcal{U} = U_1 \cup U_i$, i = 2, 3. By Exe (12) done.

Othws, both $U_2, U_3 \neq \{0\}$. Becs $W \subseteq U_2 \cup U_3$ has at least three elems.

There must be some U_i that contains at least two elems of W.

 $\exists \text{ disti } \lambda_1, \lambda_2 \in \mathbf{F}, v + \lambda_1 u, v + \lambda_2 u \in U_i, i \in \{2, 3\}.$

Then $u \in U_i$ while $u \notin U_2 \cup U_3$. Ctradic.

EXA: Let $\mathbf{F} = \mathbf{Z}_2$. $U_1 = \{u, 0\}, U_2 = \{v, 0\}, U_3 = \{v + u, 0\}$. While $\mathcal{U} = \{0, u, v, v + u\}$ is a subsp.

• Note For [3.79], def of v + U: Given v + U, v is already uniqly determined, as a sort of precond. Even though v + U = v' + U, where v' is *purer* than v.

• Note For [3.85]:
$$v + U = w + U \iff v \in w + U, \ w \in v + U \iff v - w \in U \iff (v + U) \cap (w + U) \neq \emptyset$$
.

• Note For [3.79, 3.83]:

If *U* is merely a subset of *V*, then [3.85, 86] do not hold $\Rightarrow V/U$ not a vecsp.

If *V* is merely a subset of a vecsp of which *U* is a subsp, then [3,79, 86] do not hold $\Rightarrow V/U$ not a vecsp. If *U* is a vecsp but not a subsp of *V*, while *U*, *V* are subsps of some vecsp, then everything's alright.

Hence if V/U is a vecsp, then V, U are subsps of some vecsp.

COMMENT: Supp U, V are subsps and U is not a subsp of V. Note that V/U = (V + U)/U.

Supp $v + U \in V/U$. Then $v \in V$, or possibly $v \in V + U$ as well. To avoid this ambiguity,

you have to specify the precond, what subsp that v belongs to.

Exa: Supp U + W = V. Then V/U = (U + W)/U = W/U. Let $W \cap U = I$, $U_I \oplus I = U$, $W_I \oplus I = W$.

Now $U_I \oplus W_I \oplus I = V$. Thus $W/U = (W_I \oplus I)/U = W_I/U$.

 $\forall w_1', w_2' \in W_I \text{ suth } w_1' + U = w_2' + U \in W_I/U, \ w_1' - w_2' \in U \cap W_I = \{0\} \Rightarrow w_1' = w_2'.$

• *Trivial Cases*: If $v \in U$, then $v + U = 0 + U = \{u : u \in U\} = U$. Now $U = 0 \in V/U$.

If $U = \{0\}$, then $v + U = v + \{0\} = \{v\}$, $V/U = V/\{0\} = \{\{v\} : v \in V\}$.

If $U = \emptyset$, then $v + U = v + \emptyset = \emptyset$, $V/U = V/\emptyset = \{\emptyset\}$.

- TIPS 1: V is a subsp of $U \iff \forall v \in V, v + U = 0 + U = U \iff V/U = \{0\} = \{U\}.$
- Note For [3.88]: If U, V are subspof some vecsp \mathcal{V} . Define the quot map $\pi \in \mathcal{L}(V, V/U)$. Then π is surj by def, and null $\pi = V \cap U$. Thus if \mathcal{V} is finide, then dim $V = \dim V/U + \dim (V \cap U)$. Or. Let $I = V \cap U$, $V_I \oplus I = V$. Becs $V/U = V_I/U$, iso to V_I . Now dim $V = \dim V_I + \dim I$.

(b) $\beta \in \beta + W = \alpha + U \Rightarrow \exists u \in U, \beta = \alpha + u \Rightarrow \beta - \alpha \in U.$

Now $\beta + U = \alpha + U = \beta + W = \alpha + W$. Thus $\{\alpha + u : u \in U\} = \{\alpha + w : w \in W\} \Rightarrow U = W$.

 - (I) $\lambda(v-a) = [\lambda v + (1-\lambda)a] a \in A'$.
 - (II) Becs $\lambda(v-a) + (1-\lambda)(w-a) = [\lambda v + (1-\lambda)w] a \in A'$. Let $\lambda = \frac{1}{2}$ here and use (I) above by $\lambda = 2$, we have $(v-a) + (w-a) \in A'$.

Or. Note that $v, a \in A \Rightarrow \lambda v + (1 - \lambda)a = 2v - a \in A$. Simly $2w - a \in A$.

Now $(v - \frac{1}{2}a) + (w - \frac{1}{2}a) = v + w - a \in A \Rightarrow v + w - 2a = (v - a) + (w - a) \in A'$.

Thus A' = -a + A is a subsp of V. Hence $a + A' = a + \{x - a : x \in A\} = A$ is a trslate.

   (b) \lceil Only \text{ in Finide; Req } U, W \text{ Subsps } \rceil By Exe (22), \dim(U^0 + W^0) = \dim U^0 + \dim W^0 - \dim(U^0 \cap W^0)
         = 2 \dim V - \dim U - \dim W - (\dim V - \dim(U + W)) = \dim V - \dim(U \cap W).
        Or. \lceil Req U, W Subsps \rceil Let I = U \cap W. We show (U \cap W)^0 \subseteq U^0 + W^0.
        Define \chi \in \mathcal{L}(V/I, V/U \times V/W) by \chi : v + I \mapsto (v + U, v + W).
        Well-defined: v_1 + I = v_2 + I \in V/I \iff v_1 - v_2 \in I
                             \iff v_1 - v_2 \in U \text{ and } v_1 - v_2 \in W \Rightarrow (v_1 + U, v_1 + W) = (v_2 + U, v_2 + W).
         Inje: (v + U, v + W) = 0 \iff v \in U \cap W = I \iff v + I = 0.
        Surj: \forall v \in V \text{ suth } (v + U, v + W) \in V/U \times V/W, \text{ becs } \emptyset \neq (v + U) \cap (v + W) = v + I \in V/I.
        Hence \chi' \in \mathcal{L}((V/U \times V/W)', (V/I)') is iso. Now we try finding an iso of U^0 \times W^0 onto (U \cap W)^0.
        By (3.E.4), supp \xi: (V/U)' \times (V/W)' \rightarrow (V/U \times V/W)' is iso.
        By (c) in Exe (37), supp \Lambda_1: U^0 \times W^0 \to (V/U)' \times (V/W)' and \Lambda_2: (V/I)' \to (U \cap W)^0 are isos.
        Hence (\Lambda_2 \circ \chi' \circ \xi \circ \Lambda_1) : U^0 \times W^0 \to (U \cap W)^0 is iso. Now we see how it works:
        \forall (\varphi_U, \varphi_W) \in U^0 \times W^0, \text{null } \pi_U \subseteq \text{null } \varphi_U \Rightarrow \exists \psi_U \in (V/U)', \ \psi_U \circ \pi_U = \varphi_U, \text{ simlr for } \varphi_W,
        thus \Lambda_1: (\varphi_U, \varphi_W) \mapsto (\psi_U, \psi_W). Then \xi: (\psi_U, \psi_W) \mapsto (\psi_U S_U + \psi_W S_W), [See notas in (3.E.2). ]
        Now (\psi_U S_U + \psi_W S_W) \stackrel{\chi'}{\longrightarrow} (\psi_U S_U + \psi_W S_W) \circ \chi \stackrel{\Lambda_2}{\longmapsto} (\psi_U S_U + \psi_W S_W) \circ \chi \circ \pi_I,
        which sends v to \psi_U(v+U) + \psi_W(v+W) = (\varphi_U + \varphi_W)(v), which is \varphi_U + \varphi_W.
        Thus (\Lambda_2 \circ \chi' \circ \xi \circ \Lambda_1) is the surj \Lambda : U^0 \times W^0 \to U^0 + W^0 defined in [3.77].
                                                                                                                                                 COMMENT: Not true if U or W is merely a subset. Promote U \cap W as I, U as X, and W as Y.

          Simply becs W'_V have no info about the given U. Here is an informal explanation:
          Each liney map T \in \mathcal{L}(V, W) that vanishes on a given nontrivial U has its P'
          (though not uniq) suth U \oplus P = V' with T : P \mapsto \operatorname{range} T being surj.
          Hence \forall W \in \mathcal{S}_V U, U^0 = W'_V. But given nontrivial 'P', the corres 'U' is not uniq.
          Fix one W'_V, then U^0 is not uniq, with each U_k not equal to each other while each U_k^0 = W'_V.
EXA: Let B_V = (e_1, e_2). Let B_U = (e_1), B_X = (e_2 - e_1), B_Y = (e_2).
        Then \iota_X : ae_1 + b(e_2 - e_1) \mapsto b(e_2 - e_1), \ \iota_Y : ae_1 + be_2 \mapsto be_2. Now X_V' = Y_V' = U^0.
        (1) For V = U \oplus X, let B_{U_V'} = (\varphi) with \varphi : e_1 \mapsto 1, e_2 - e_1 \mapsto 0 \Rightarrow e_2 \mapsto 1.
        (2) For V = U \oplus Y, let B_{U_V'} = (\psi) with \psi : e_1 \mapsto 1, e_2 \mapsto 0.
        Thus X^0 = U_V' while Y^0 = U_V' \Rightarrow X^0 = Y^0 \Rightarrow X = Y, ctradic.
        To fix this, we must have a bss of V' as precond, which we'll see in the NOTE FOR Exa (31).
Note: Supp U is a subsp of V. Then finding the corres subsp in V' firstly reg another 'half' W \in S_V U,
          while finding the corres subsp of V for a subsp of V' must have the another 'half' asumed as precond.
31 Supp V is finide and B_{V'} = (\varphi_1, \dots, \varphi_n). Show \exists ! B_V whose dual bss is the B_{V'}.
Solus: For each k \in \{1, \dots, n\}, let \Gamma_k = \{1, \dots, n\} \setminus \{k\}. Let each U_k = \bigcap_{j \in \Gamma} \operatorname{null} \varphi_j.
            By Exe (4E 23), V' = \operatorname{span}(\varphi_1, \dots, \varphi_n) = (\operatorname{null} \varphi_1 \cap \dots \cap \operatorname{null} \varphi_n)^0 \Rightarrow U_k \cap \varphi_k = \{0\}.
            Thus \forall x_k \in U_k \setminus \{0\}, x_k \notin \text{null } \varphi_k \text{ while } x_k \in \text{null } \varphi_j \text{ for all } j \in \Gamma.
            Fix one x_k and let v_k = [\varphi_k(x_k)]^{-1}x_k \Rightarrow \varphi_k(v_k) = 1, \varphi_i(v_k) = 0 for all i \neq k.
            Simply for each v_k, \varphi_i(v_k) = \delta_{i,k} for all j \iff for each \varphi_i, \varphi_i(v_k) = \delta_{i,k} for all k.
            \not \subset a_1v_1 + \dots + a_nv_n = 0 \Rightarrow \operatorname{each} \varphi_k(0) = a_k.
            Now we prove the uniques part. Supp the dual bss of B'_V = (u_1, \dots, u_n) is the B_{V_V}.
            For each k, we have \varphi_i(v_k) = \varphi_i(u_k) for all k \Rightarrow v_k - u_k \in \bigcap \text{null } \varphi_i = \{0\}.
```

Supp λ is an eigval of T_R with an eigvec $v \in R$. Then $0 = (T|_R^2 + bT|_R + cI_R)(v) = (\lambda^2 + \lambda b + c)v = ((\lambda + b)^2 + c - \frac{b^2}{4})v$. Becs $c - \frac{b^2}{4} > 0$ and we have v = 0. Thus T_R has no eigvals. Let *U* be invarsp of *R* that has the largest, even dim among all invarsps. Asum $U \neq R$. Then $\exists w \in R$ but $w \notin U$. Let W be suth $(w, T|_R w)$ is a bss of W. Becs $T|_R^2 w = -bT|_R w - cw \in W$. Hence W is invarsp of dim 2. Thus dim $(U + W) = \dim U + 2 - \dim(U \cap W)$, where $U \cap W = \{0\}$, for if not, becs $w \notin U$, $T|_R w \in U$, $U \cap W$ is invard $T|_R$ of one dim (impossible becs $T|_R$ has no eigvecs). Hence U + W is even-dim invarsp under $T|_R$, ctradic the max of dim U. Thus the asum was incorrect. Hence $R = \text{null}(T^2 + bT + cI) = U$ has even dim. • Operators On Odd-Dimensional Vector Spaces Have Eigenvalues (a) $Supp \mathbf{F} = \mathbf{C}$. Then by [5.21], done. (b) Supp F = R, V is finide, and dim V = n is an odd number. Let $T \in \mathcal{L}(V)$ and the min poly is p. Prove T has an eigval. **SOLUS:** (i) If n = 1, then done. (ii) Supp $n \ge 3$. Asum every optor, on odd-dim vecsps of dim less than n, has an eigval. If p is a poly multi of $(x - \lambda)$ for some $\lambda \in \mathbb{R}$, then by [8.49] λ is an eigval of T and done. Now supp $b, c \in \mathbb{R}$ suth $b^2 < 4c$ and p is a poly multi of $x^2 + bx + c$ (see [4.17]). Then $\exists q \in \mathcal{P}(\mathbf{R})$ suth $p(x) = q(x)(x^2 + bx + c)$ for all $x \in \mathbf{R}$. Now $0 = p(T) = (q(T))(T^2 + bT + cI)$, which means that $q(T)|_{\text{range}(T^2 + bT + cI)}$ Becs deg $q < \deg p$ and p is the min poly of T, hence range $(T^2 + bT + cI) \neq V$. \mathbb{Z} dim V is odd and dim null $(T^2 + bT + cI)$ is even (by our previous result). Thus dim V – dim null($T^2 + bT + cI$) = dim range($T^2 + bT + cI$) is odd. By [5.18], range($T^2 + bT + cI$) is invarsp of V under T that has odd dim less than n. Our induc hypo now implies that $T|_{\text{range}(T^2+bT+cI)}$ has an eigval. By induc. • (2E 24) Supp $\mathbf{F} = \mathbf{R}, T \in \mathcal{L}(V)$ has no eigvals. Prove every invarsp U is even-dim. **Solus**: Asum dim *U* is odd. Then \exists eigval of $T|_{U}$, so of $T \Rightarrow \exists$ 1-dim invarsp, ctradic. • (4E 29) Supp V is finide, dim $V = n \ge 2$, $T \in \mathcal{L}(V)$. Show T has a 2-dim invarsp. **Solus**: (i) n = 2, done. (ii) n > 2. Asum the desired result is true for V of smaller dim. Supp *p* is the min of deg *m* and $p(z) = (z - \lambda_1) \cdots (z - \lambda_m)$.
