简介

这是我个人用于复习的「Linear Algebra Done Right 3E/4E, by Sheldon Axler」笔记,一本习题选答与课文补注。范围覆盖所有第三版和第四版的课文和习题(除了第一章 A 节、极少数结合上下文太过显而易见的习题。没有任何日后反复推敲价值的当堂习题和方法套路过于雷同的习题)。这份笔记尚处于缓慢的编撰进度中。

习题答案中,有我完全独立思考得出的,有抄 https://linearalgebras.com/的,有抄 https://math.stackexchange.com/的,有抄 LADR2eSolutions (By Axler).pdf , 有抄最新的 LADR4eSolutions 经典最全 (By Axler?).pdf , 还有请教别人,乃至请教 AI 得出来的。这些文档的许可证件,除 LADR4eSolutions 经典最全 (By Axler?).pdf 找不到/没有指明外,都允许复制/引用。

课文补注中,除了我独立思考总结出的易错误区和技巧、难点之外,还(因为我想要兼容那些使用 LADR 第三版纸质书的读者,包括我在内)把 LADR4e 中对课文定理等等的修改也(作了简化和提炼)摘录上去。

题目标为正常数字 N 的,为第三版某章某节第 N 题(有个别题是第四版又删去的,这里,或直接摘录,或合并简化,仍然作保留;还有个别题是第四版增添条件、设问的,也一并写在第 N 题下)。题目标为 ' \bullet '的,为第四版。因为要面向以第三版为主要教材的学习者,所以为了避免混淆,故而将题号(部分题目的实心黑点后有标注具体第四版的数字标号)、甚至章节略去(一些变动过大的章节除外)。题目顺序会有调换,在每章大标题处会交代清楚。除了原书第四版新加入的章节外,均使用原书第三版的索引。这也许对第四版的使用者很不友好,我在此欢迎有心人士将我的作品修改后在同样的 CC BY NC SA 条款下作为**衍生作品**发布。

因为使用中文会给我编撰这份笔记带来额外的中英文输入法切换的工作成本,况且对于专业学习者,直接使用英文不会造成任何困扰。但英文词句的冗长性拖慢我编撰/复习的效率,所以我对许多常用术语作了简写。

作者序

我目前还没有能力和资格评论原书好坏以及线性代数课程教材选用的问题。但作为原书的学习者,我可以说:

相较于(其他课程的)其他教材,以 LADR 作为**自学读本**的**精学**计划,往往在执行中出现一次又一次的时间误判/超时,比如我最开始计划 40×8h 完成 LADR 的精学,差不多是一天(8h)完成一节,还有额外的复习时间。但在实际学习中,(刨去笔记的功夫)完成到一半时,发现已经耗费了约 35×8h,于是我不得不重新估计 LADR 精学所需的总时间为 70×8h。这一点对于有学时/学期限制/应试要求的线性代数初学者来说很不安全。更主观地讲,这是因为 LADR 更像是一本参考手册,而不是一本细致人微的自学读本;如果把 LADR 作为初学线性代数第一教材和自学读本来学习,会面临不小的困难。

以上或许能劝退相当一部分打算入门的线性代数初学者。S.Axler 说这本书作为第二遍学习线性代数的教材更合适。我认为理由就是,在校的科班生第二遍学习线性代数时,也已经学习过了离散数学、抽象代数、数论、数学分析等课程,这些知识储备统统会化作一个叫"mathematical maturity"的东西,让他们面对 LADR 的课文和习题不再少见多怪、茫然无措。据此,我进一步认为,对于完全的初学者,想要完成 LADR 的精学,要么有很好的天赋,要么有与之相匹配的"mathematical maturity",再要么,拿出足够的耐心和毅力。幸运的是,在坚持学习 LADR 的过程中,这三样会一同增益。就我个人来说:课文一次看不懂,就多看几遍,一天看不懂,就分三天看;习题一个小时做不出来,就隔六个小时再尝试,一天做不出来,就隔天再尝试。这确实让我收获了独特的学习体验和能力,我迄今也无法在别处得到,因此我很珍视 LADR,我愿意为此编撰一份电子辅助书并免费公开于网络中。这本身并不花费什么,因为实际的时间开销包括了很多不相干的额外项目:初学 LATEX、调整代码架构、了解许可证选用,诸如此类的各种波折,也不乏戏剧性。

我在学习过程中碰到了很多重大误区: **第一章中**,我一开始误认为 $W = \mathbf{C}_V U \cup \{0\}$ 是唯一使得 $W \oplus U = V$ 的子空间,但 这压根就不是子空间,而且 C 节习题中也提示这样的子空间 W 不唯一。**第二章中**,我随意地将"线性无关的序列"等同于 有/无限维向量空间的基,没有任何理论依据,我也并不懂什么选择公理。**第三章 B 到 D 节中**,我总觉得子空间是超脱有限 维的存在;因为放不下第二章无限维向量空间的基的情结,我刻意寻找那些避开涉及基的解法,一些臆测的结论和容易就找 到反例。**第三章 E 节中**,我似乎对商空间有什么误解,觉得 v + U = v' + U 如同变戏法一样,把 v 中一切带有 U 的部分抹除 掉,让 v 变得纯粹独立于 U,为此我还单门发明了 P U U 并试着证明一些命题,甚至用它发现了 F 节 23 题无限维情况下不依赖基的解法。后来我猛然发现我最开始的想法多么荒诞,却仍然放不下 P U U 的情结。

1 Prove $\forall v \in V, -(-v) = v$.

Solus:
$$-(-v) = (-1)((-1)v) = ((-1)(-1))v = 1 \cdot v = v$$
.

2 Supp $a \in \mathbf{F}, v \in V$, and av = 0. Prove a = 0 or v = 0.

Solus: Supp
$$a \neq 0$$
, $\exists a^{-1} \in \mathbb{F}$, $a^{-1}a = 1$, hence $v = 1 \cdot v = (a^{-1}a)v = a^{-1}(av) = a^{-1} \cdot 0 = 0$.

3 Supp $v, w \in V$. Explain why $\exists ! x \in V, v + 3x = w$.

Solus:
$$v + 3x = w \Leftrightarrow 3x = w - v \Leftrightarrow x = \frac{1}{3}(w - v).$$

Or. [Existns] Let $x = \frac{1}{3}(w - v)$.

[*Uniques*] If
$$v + 3x_1 = w$$
,(I) $v + 3x_2 = w$ (II). Then (I) $-$ (II) $: 3(x_1 - x_2) = 0 \Rightarrow x_1 = x_2$.

5 Show in the def of a vecsp, the add inv cond can be replaced by [1.29].

Hint: Supp V satisfies all conds in the def, except we've replaced the add inv cond with [1.29]. Prove the add inv is true.

Using [1.31].
$$0v = 0$$
 for all $v \in V \iff (1 + (-1))v = 1 \cdot v + (-1)v = v + (-v) = 0$.

6 Let ∞ and $-\infty$ denote two disti objects, neither of which is in R.

Define an add and scalar multi on $R \cup \{\infty, -\infty\}$ *as you could guess.*

The operations of real numbers is as usual. While for $t \in R$ define

$$t\infty = \begin{cases} -\infty & \text{if } t < 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t > 0, \end{cases} \qquad t(-\infty) = \begin{cases} -\infty & \text{if } t > 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t < 0, \end{cases}$$

(I)
$$t + \infty = \infty + t = \infty + \infty = \infty$$
,

(II)
$$t + (-\infty) = (-\infty) + t = (-\infty) + (-\infty) = -\infty$$
,

(III)
$$\infty + (-\infty) = (-\infty) + \infty = 0.$$

With these operations of add and scalar multi, is $R \cup \{\infty, -\infty\}$ a vecsp over R? Explain.

Solus: Not a vecpsp, since the add and scalar mult is not assoc and distr.

By Assoc:
$$(a + \infty) + (-\infty) \neq a + (\infty + (-\infty))$$
.
Or. By Distr: $\infty = (2 + (-1))\infty \neq 2\infty + (-\infty) = \infty + (-\infty) = 0$.

ullet Tips: About the Field F: Many choices. $\lceil Req Multi Inv Uniq \rceil$

Exa:
$$\mathbf{F} = \mathbf{Z}_m = \{K_0, K_1, ..., K_{m-1}\}, \forall m - 1 \in \mathbf{N}^+ \text{ suth } (m-1) \text{ is a prime.}$$

• NOTE FOR [1.45]: If $F = \{0, 1\}$. Prove if U + W is a direct sum, then $U \cap W = \{0\}$. Becs $\forall v \in U \cap W, \exists ! (u, w) \in U \times W, v = u + w$.

If $U \cap W \neq \{0\}$, then (u, w) can be (v, 0) or (0, v), ctradic the uniques.

7 Give a nonempty $U \subseteq \mathbb{R}^2$, U is closd taking add invs and add, but is not a subsp of \mathbb{R}^2 . Solus: $(0 \in U; v \in U \Rightarrow -v \in U)$. And operations on U are the same as \mathbb{R}^2 . $(0 \in U; v \in U)$.	
8 Give a nonempty $U \subseteq \mathbb{R}^2$, U is closd scalar multi, but is not a subsp of \mathbb{R}^2 . Solus : Let $U = \{(x,y) \in \mathbb{R}^2 : x = 0 \lor y = 0\}$.	
9 A function $f: \mathbb{R} \to \mathbb{R}$ is called periodic if $\exists p \in \mathbb{N}^+$, $f(x) = f(x+p)$ for all $x \in \mathbb{R}$. Is the set of periodic functions $\mathbb{R} \to \mathbb{R}$ a subsp of $\mathbb{R}^\mathbb{R}$? Explain. Solus: Denote the set by S . Supp $h(x) = \cos x + \sin \sqrt{2}x \in S$, since $\cos x$, $\sin \sqrt{2}x \in S$. Asum $\exists p \in \mathbb{N}^+$ suth $h(x) = h(x+p)$, $\forall x \in \mathbb{R}$. Let $x = 0 \Rightarrow h(0) = h(\pm p) = 1$. Thus $1 = \cos p + \sin \sqrt{2}p = \cos p - \sin \sqrt{2}p$ $\Rightarrow \sin \sqrt{2}p = 0$, $\cos p = 1 \Rightarrow p = 2k\pi$, $k \in \mathbb{Z}$, while $p = \frac{m\pi}{\sqrt{2}}$, $m \in \mathbb{Z}$.	
Hence $2k = \frac{m}{\sqrt{2}} \Rightarrow \sqrt{2} = \frac{m}{2k} \in \mathbb{Q}$. Ctradic! OR. Becs $\cos x + \sin\sqrt{2}x = \cos(x+p) + \sin(\sqrt{2}x + \sqrt{2}p)$. By diff twice, $\cos x + 2\sin\sqrt{2}x = \cos(x+p) + 2\sin(\sqrt{2}x + \sqrt{2}p).$ $\sin\sqrt{2}x = \sin(\sqrt{2}x + \sqrt{2}p)$ $\cos x = \cos(x+p)$ $\Rightarrow \text{Let } x = 0, \ p = \frac{m\pi}{\sqrt{2}} = 2k\pi. \text{ Ctradic.}$

• Supp U, W, V_1, V_2, V_3 are subsps of V . 15 $U + U \ni u + w \in U$. 16 $U + W \ni u + w = w + u \in W + U$. 17 $(V_1 + V_2) + V_3 \ni (v_1 + v_2) + v_3 = v_1 + (v_2 + v_3) \in V_1 + (V_2 + V_3)$. • $(U + W)_C \ni (u_1 + w_1) + i(u_2 + w_2) = (u_1 + iu_2) + (w_1 + iw_2) \in U_C + W_C$.	
18 Does the add on the subsps of V have an add id ? Which subsps have add $invs$? Solus: Supp Ω is the uniq add id. (a) For any subsp U of V . $\Omega \subseteq U + \Omega = U \Rightarrow \Omega \subseteq U$. Let $U = \{0\}$, then $\Omega = \{0\}$. (b) Now supp W is an add inv of $U \Rightarrow U + W = \Omega$. Note that $U + W \supseteq U$, $W \Rightarrow \Omega \supseteq U$, W . Thus $U = W = \Omega = \{0\}$.	

• TIPS 1: Supp $U, W \subseteq V$. And U, W, V are vecsps $\Rightarrow U, W$ are subsps of V.

Then U + W is also a subsp of V. Becs $\forall u \in U, w \in U, u + w \in V$ since $u, w \in V$.

Solus: Supp $\{U_{\alpha}\}_{{\alpha}\in\Gamma}$ is a collectof subsps of V; here Γ is an index set. We show $\bigcap_{\alpha \in \Gamma} U_{\alpha}$, which equals the set of vecs that are in U_{α} for each $\alpha \in \Gamma$, is a subsp of V. (-) $0 \in \bigcap_{\alpha \in \Gamma} U_{\alpha}$. Nonempty. $(\underline{\hspace{0.1cm}}) u, v \in \bigcap_{\alpha \in \Gamma} U_{\alpha} \Rightarrow u + v \in U_{\alpha}, \ \forall \alpha \in \Gamma \Rightarrow u + v \in \bigcap_{\alpha \in \Gamma} U_{\alpha}.$ Closd add. (Ξ) $u \in \bigcap_{\alpha \in \Gamma} U_{\alpha}$, $\lambda \in \mathbb{F} \Rightarrow \lambda u \in U_{\alpha}$, $\forall \alpha \in \Gamma \Rightarrow \lambda u \in \bigcap_{\alpha \in \Gamma} U_{\alpha}$. Closd scalar multi. Thus $\bigcap_{\alpha \in \Gamma} U_{\alpha}$ is nonempty subset of V that is closd add and scalar multi. **12** Supp U, W are subsps of V. Prove $U \cup W$ is a subsp of $V \iff U \subseteq W$ or $W \subseteq U$. **Solus**: (a) Supp $U \subseteq W$. Then $U \cup W = W$ is a subsp of V. (b) Supp $U \cup W$ is a subsp of V. Asum $U \subseteq W$, $U \supseteq W$ ($U \cup W \neq U$ and W). Then $\forall a \in U \land a \notin W, \forall b \in W \land b \notin U$, we have $a + b \in U \cup W$. $a + b \in U \Rightarrow b = (a + b) + (-a) \in U$, ctradic $\Rightarrow W \subseteq U$. | Ctradic asum. $a + b \in W \Rightarrow a = (a + b) + (-b) \in W$, ctradic $\Rightarrow U \subseteq W$. **13** *Prove the union of three subsps of V is a subsp of V* if and only if one of the subsps contains the other two. This exe is not true if we replace F with a field containing only two elems. **SOLUS:** Supp U_1 , U_2 , U_3 are subsps of V. Denote $U_1 \cup U_2 \cup U_3$ by \mathcal{U} . (a) Supp that one of the subsps contains the other two. Then $\mathcal{U} = U_1, U_2$ or U_3 is a subsp of V. (b) Supp that $U_1 \cup U_2 \cup U_3$ is a subsp of V. Distinctively notice that $A \cup B \cup C = (A \cup B) \cup (B \cup C) = (A \cup C) \cup (B \cup C) = (A \cup B) \cup (A \cup C)$. Also note that, if $U \cup W = V$ is a vecsp, then in general U and W are not subsps of V. Hence this literal trick is invalid. (I) If any U_i is contained in the union of the other two, say $U_1 \subseteq U_2 \cup U_3$, then $\mathcal{U} = U_2 \cup U_3$. By applying Exe (12) we conclude that one U_i contains the other two. Thus done. (II) Asum no U_i is contained in the union of the other two, and no U_i contains the union of the other two. Say $U_1 \nsubseteq U_2 \cup U_3$ and $U_1 \nsupseteq U_2 \cup U_3$. $\exists\, u\in U_1\wedge u\notin U_2\cup U_3;\ v\in U_2\cup U_3\wedge v\notin U_1.\,\mathrm{Let}\, W=\big\{v+\lambda u:\lambda\in \mathbf{F}\big\}\,\subseteq\mathcal{U}.$ Note that $W \cap U_1 = \emptyset$, for if any $v + \lambda u \in W \cap U_1$ then $v + \lambda u - \lambda u = v \in U_1$. Now $W \subseteq U_1 \cup U_2 \cup U_3 \Rightarrow W \subseteq U_2 \cup U_3$. $\forall v + \lambda u \in W, v + \lambda u \in U_i, i = 2, 3$. If $U_2 \subseteq U_3$ or $U_2 \supseteq U_3$, then $\mathcal{U} = U_1 \cup U_i$, i = 2, 3. By Exe (12) done. Othws, both $U_2, U_3 \neq \{0\}$. Becs $W \subseteq U_2 \cup U_3$ has at least three elems. There must be some U_i that contains at least two elems of W. \exists disti $\lambda_1, \lambda_2 \in \mathbf{F}, v + \lambda_1 u, v + \lambda_2 u \in U_i, i \in \{2,3\}.$ Then $u \in U_i$ while $u \notin U_2 \cup U_3$. Ctradic. **EXA:** Let $\mathbf{F} = \mathbf{Z}_2$. $U_1 = \{u, 0\}$, $U_2 = \{v, 0\}$, $U_3 = \{v + u, 0\}$. While $\mathcal{U} = \{0, u, v, v + u\}$ is a subsp.

11 Prove the intersec of every collectof subsps of V is a subsp of V.

• Supp $U = \{(x, x, y, y)\}, W = \{(x, x, x, y)\} \subseteq \mathbb{F}^4$. Prove $U + W = \{(x, x, y, z)\}$. **Solus**: Let T denote $\{(x, x, y, z)\}$. By def, $U + W \subseteq T$. And $T \ni (x, x, y, z) \Rightarrow (0, 0, y - x, y - x) + (x, x, x, -y + x + z) \in U + W$. Hence $T \subseteq U + W$. **21** Supp $U = \{(x, y, x + y, x - y, 2x)\}$. Find a W suth $\mathbf{F}^5 = U \oplus W$. **Solus:** Let $W = \{(0, 0, z, w, u)\}$. Then $U \cap W = \{0\}$. And $F^5 \ni (x, y, z, w, u) \Rightarrow (x, y, x + y, x - y, 2x) + (0, 0, z - x - y, w - x - y, u - 2x) \in U + W$. **23** Give an exa of vecsps V_1, V_2, U suth $V_1 \oplus U = V_2 \oplus U$, but $V_1 \neq V_2$. **Solus:** $V = \mathbb{F}^2$, $U = \{(x, x)\}$, $V_1 = \{(x, 0)\}$, $V_2 = \{(0, x)\}$. • Note For " $\mathbf{C}_V U \cup \{0\}$ ": " $\mathbf{C}_V U \cup \{0\}$ " is supposed to be a subsp W suth $V = U \oplus W$. But if we let $u \in U \setminus \{0\}$ and $w \in W \setminus \{0\}$, then $\begin{cases} w \in C_V U \cup \{0\} \\ u \pm w \in C_V U \cup \{0\} \end{cases} \Rightarrow u \in C_V U \cup \{0\}$. Ctradic. To fix this, denote the set $\{W_1, W_2, \dots\}$ by $S_V U$, where for each W_i , $V = U \oplus W_i$. See also in (1.C.23). • Tips 2: Supp $V_1 \subseteq V_2$ in Exe (23). Prove $V_1 = V_2$. Solus: Becs the subset V_1 of vecsp V_2 is closd add and scalar multi, V_1 is a subspace of V_2 . Supp W is suth $V_2 = V_1 \oplus W$. Now $V_2 \oplus U = (V_1 \oplus W) \oplus U = (V_1 \oplus U) \oplus W = V_1 \oplus U$. If $W \neq \{0\}$, then $V_1 \oplus U \subsetneq (V_1 \oplus U) \oplus W$, ctradic. Hence $W = \{0\}, V_1 = V_2$. • Supp V_1, V_2, U_1, U_2 are vecsps, $V_1 \oplus U_1 = V_2 \oplus U_2, V_1 \subseteq V_2, U_2 \subseteq U_1$. Prove or give a counterexa: $V_1 = V_2$, $U_1 = U_2$. **Solus**: Let $U_2 = \{0\}$. Give an exa that each of V_1, V_2, U_1 is nonzero. • Tips 3: Supp the intersec of any two of the vecsps U, W, X, Y is $\{0\}$. Give an exa that $(X \oplus U) \cap (Y \oplus W) \neq \{0\}$. **Solus:** Using notas in Chapter 2. Let $B_X = (e_1), B_U = (e_2 - e_1), B_Y = (), B_W = (e_2).$ • Tips 4: Let V = U + W, $I = U \cap W$, $U = I \oplus X$, $W = I \oplus Y$. Prove $V = I \oplus (X \oplus Y)$. **Solus:** We show $X \cap Y = U \cap Y = W \cap X = \{0\}$ by ctradic. $X\cap Y=\Delta\neq\left\{0\right\}\Rightarrow I=U\cap W\supseteq\Delta\Rightarrow I\cap X\neq\left\{0\right\},I\cap Y\neq\left\{0\right\}.$ $U \cap Y = \Delta \neq \{0\} \Rightarrow I = U \cap W \supseteq \Delta \Rightarrow I \cap Y \neq \{0\}$. Simler for $W \cap X$. Thus $I + (X + Y) = (I \oplus X) \oplus Y = I \oplus (X \oplus Y)$. Now we show V = I + (X + Y). $\forall v \in V, v = u + w, \exists (u, w) \in U \times W$ $\Rightarrow \exists (i_u, x_u) \in I \times X, (i_w, y_w) \in I \times Y, v = (i_u + i_w) + x_u + y_w \in I + (X + Y).$

4 Prove $\mathcal{L}(V_1 \times \cdots \times V_m, W)$ and $\mathcal{L}(V_1, W) \times \cdots \times \mathcal{L}(V_m, W)$ are iso.

Solus: Using nota in Exe (2): $R_i : u_i \mapsto (0, \dots, u_i, \dots, 0)$; $S_i : (u_1, \dots, u_m) \mapsto u_i$.

6 For $m \in \mathbb{N}^+$, define V^m by $\underbrace{V \times \cdots \times V}_{m \text{ times}}$. Prove V^m and $\mathcal{L}(\mathbf{F}^m, V)$ are iso. **Solus**:

Define $T:(v_1,\ldots,v_m)\to \varphi$, where $\varphi:(a_1,\ldots,a_m)\mapsto v$ is defined by $\varphi(a_1,\ldots,a_m)=a_1v_1+\cdots+a_mv_m$.

- (b) Supp $\psi \in \mathcal{L}(\mathbf{F}^m, V)$. Let (e_1, \dots, e_m) be std bss of \mathbf{F}^m . Then $\forall (b_1, \dots, b_n) \in \mathbf{F}^m$, $\left[T \left(\psi(e_1), \dots, \psi(e_m) \right) \right] (b_1, \dots, b_m) = b_1 \psi(e_1) + \dots + b_m \psi(e_m) = \psi \left(b_1 e_1 + \dots + b_m e_m \right) = \psi(b_1, \dots, b_m).$ Thus $T \left(\psi(e_1), \dots, \psi(e_m) \right) = \psi$. Hence T is surj. \Box

3 Give an exa of a vecsp V and its two subsps U_1 , U_2 suth $U_1 \times U_2$ and $U_1 + U_2$ are iso but $U_1 + U_2$ is not a direct sum.

[V must be infinide.]

Solus: Note that at least one of U_1 , U_2 must be infinide. Both can be infinide. [Req Other Courses.]

Let $V = \mathbf{F}^{\infty} = U_1$, $U_2 = \{(x, 0, \dots) \in \mathbf{F}^{\infty} : x \in \mathbf{F}\}$. Then $V = U_1 + U_2$ is not a direct sum.

Define $T \in \mathcal{L}(U_1 \times U_2, U_1 + U_2)$ by $T((x_1, x_2, \dots), (x, 0, \dots)) = (x, x_1, x_2, \dots)$ Define $S \in \mathcal{L}(U_1 + U_2, U_1 \times U_2)$ by $S(x, x_1, x_2, \dots) = ((x_1, x_2, \dots), (x, 0, \dots))$ $\Rightarrow S = T^{-1}$.

- Note For [3.79], def of v + U: Given v + U, v is already uniqly determined, as a sort of precond. Even though v + U = v' + U, where v' is *purer* than v.
- Note For [3.85]: $v + U = w + U \iff v \in w + U, \ w \in v + U \iff v w \in U \iff (v + U) \cap (w + U) \neq \emptyset.$

• Note For [3.79, 3.83]:

If *U* is merely a subset of *V*, then [3.85, 86] do not hold $\Rightarrow V/U$ not a vecsp.

If *V* is merely a subset of a vecsp of which *U* is a subsp, then [3,79, 86] do not hold $\Rightarrow V/U$ not a vecsp.

If U is a vecsp but not a subsp of V, while U, V are subsps of some vecsp, then everything's alright. Hence if V/U is a vecsp, then V, U are subsps of some vecsp.

Comment: Supp U, V are subsps and U is not a subsp of V. Note that V/U = (V + U)/U.

Supp $v + U \in V/U$. Then $v \in V$, or possibly $v \in V + U$ as well. To avoid this ambiguity,

you have to specify the precond, what subsp that v belongs to.

Exa: Supp U + W = V. Then V/U = (U + W)/U = W/U. Let $W \cap U = I$, $U_I \oplus I = U$, $W_I \oplus I = W$.

Now $U_I \oplus W_I \oplus I = V$. Thus $W/U = (W_I \oplus I)/U = W_I/U$.

 $\forall w_1', w_2' \in W_I \text{ suth } w_1' + U = w_2' + U \in W_I/U, \ w_1' - w_2' \in U \cap W_I = \{0\} \Rightarrow w_1' = w_2'.$

• *Trivial Cases*: If $v \in U$, then $v + U = 0 + U = \{u : u \in U\} = U$. Now $U = 0 \in V/U$.

If $U = \{0\}$, then $v + U = v + \{0\} = \{v\}$, $V/U = V/\{0\} = \{\{v\} : v \in V\}$.

If $U = \emptyset$, then $v + U = v + \emptyset = \emptyset$, $V/U = V/\emptyset = \{\emptyset\}$.

- TIPS 1: V is a subsp of $U \iff \forall v \in V, v + U = 0 + U = U \iff V/U = \{0\} = \{U\}.$
- NOTE FOR [3.88]: If U, V are subsp of some vecsp \mathcal{V} . Define the quot map $\pi \in \mathcal{L}(V, V/U)$. Then π is surj by def, and null $\pi = V \cap U$. Thus if \mathcal{V} is finide, then dim $V = \dim V/U + \dim (V \cap U)$. Or. Let $I = V \cap U, V_I \oplus I = V$. Becs $V/U = V_I/U$, iso to V_I . Now dim $V = \dim V_I + \dim I$.
- (4E 8) Supp $T \in \mathcal{L}(V, W)$, $w \in \text{range } T$. Prove $\{v \in V : Tv = w\} = u + \text{null } T$.

Solus: Let $\mathcal{K}_w = \{v \in V : Tv = w\}$. [Not a vecsp.] Supp $u \in \mathcal{K}_w$. Then $u + \text{null } T \subseteq \mathcal{K}_w$. And $\forall u' \in \mathcal{K}_w$, $u' - u \in \text{null } T \Rightarrow u' \in u + \text{null } T$. Now $\mathcal{K}_w \subseteq u + \text{null } T$.

7 Supp $\alpha, \beta \in V$, and U, W are subsps of V. Prove $\alpha + U = \beta + W \Rightarrow U = W$.

Solus: (a) $\alpha \in \alpha + U = \beta + W \Rightarrow \exists w \in W, \alpha = \beta + w \Rightarrow \alpha - \beta \in W$.

(b) $\beta \in \beta + W = \alpha + U \Rightarrow \exists u \in U, \beta = \alpha + u \Rightarrow \beta - \alpha \in U.$

Now $\beta + U = \alpha + U = \beta + W = \alpha + W$. Thus $\{\alpha + u : u \in U\} = \{\alpha + w : w \in W\} \Rightarrow U = W$.

Or. $\pm(\alpha - \beta) \in U \cap W \Rightarrow \left\{ \begin{array}{l} U \ni u = (\beta - \alpha) + w \in W \Rightarrow U \subseteq W \\ W \ni w = (\alpha - \beta) + u \in U \Rightarrow W \subseteq U \end{array} \right\} \Rightarrow U = W.$

8 Supp A is a nonempty subset of V.

Prove A is a trislate of some subsp of $V \iff \lambda v + (1 - \lambda)w \in A$, $\forall v, w \in A, \lambda \in F$.

Solus: (a) Supp A = a + U. Then $\lambda(a + u_1) + (1 - \lambda)(a + u_2) = a + (\lambda(u_1 - u_2) + u_2) \in A$.

(b) Supp $\lambda v + (1 - \lambda)w \in A$, $\forall v, w \in A, \lambda \in \mathbb{F}$. Supp $\underline{a \in A}$ and let $A' = \{x - a : x \in A\}$. Then $0 \in A'$ and $\forall (v - a), (w - a) \in A', \lambda \in \mathbb{F}$,

- (I) $\lambda(v-a) = [\lambda v + (1-\lambda)a] a \in A'$.
- (II) Becs $\lambda(v-a) + (1-\lambda)(w-a) = [\lambda v + (1-\lambda)w] a \in A'$. Let $\lambda = \frac{1}{2}$ here and use (I) above by $\lambda = 2$, we have $(v-a) + (w-a) \in A'$.

Or. Note that $v, a \in A \Rightarrow \lambda v + (1 - \lambda)a = 2v - a \in A$. Simly $2w - a \in A$.

Now $(v - \frac{1}{2}a) + (w - \frac{1}{2}a) = v + w - a \in A \Rightarrow v + w - 2a = (v - a) + (w - a) \in A'$.

Thus A' = -a + A is a subsp of V. Hence $a + A' = a + \{x - a : x \in A\} = A$ is a trslate.

• **Note For [4.11]:** each zero of a poly corres to a deg-one factor;

First supp $p(\lambda) = 0$. Write $p(z) = a_0 + a_1 z + \dots + a_m z^m$, $\exists ! a_0, a_1, \dots, a_m \in \mathbb{F}$ for all $z \in \mathbb{F}$.

Then
$$p(z) = p(z) - p(\lambda) = a_1(z - \lambda) + \dots + a_m(z^m - \lambda^m)$$

Hence
$$\forall k \in \{1, ..., m\}, z^k - \lambda^k = (z - \lambda)(z^{k-1}\lambda^0 + z^{k-2}\lambda^1 + ... + z^{k-(j+1)}\lambda^j + ... + z\lambda^{k-2} + z^0\lambda^{k-1}).$$

Thus
$$p(z) = \sum_{j=1}^{m} a_j(z-\lambda) \sum_{i=1}^{k} \lambda^{i-1} z^{k-i} = (z-\lambda) \sum_{j=1}^{m} a_j \sum_{i=1}^{k} \lambda^{i-1} z^{k-i} = (z-\lambda) q(z).$$

By De Moivre' theorem,
$$w^k = [r(\cos\theta + i\sin\theta)]^k = r^k(\cos k\theta + i\sin k\theta)$$
.

Hence
$$\left(r^{1/k}\left(\cos\frac{\theta}{k} + i\sin\frac{\theta}{k}\right)\right)^k = w$$

Note that if $x = 3$, then $\sum_{i=1}^n 3^{i-1} x^{n-i} = \sum_{i=1}^n 3^{n-1} = n3^{n-1}$.

 $p'(x) = (p(x) - p(3))' = ((x - 3)q(x))' = q(x) + (x - 3)q'(x).$

Becs $Rs = 0 \iff s = pq, \exists ! q \in \mathcal{P}(\mathbf{F}) \iff s \in U$. And $\forall r \in \mathcal{P}_{\deg p-1}(\mathbf{F}), Rr = r$.

Now null R = U, range $R = \mathcal{P}_{\deg p-1}(\mathbf{F})$.

Hence $\tilde{R}: \mathcal{P}(\mathbf{F})/U \to \mathcal{P}_{\deg p-1}(\mathbf{F})$ is defined by $\tilde{R}(s+U) = Rs$. By [3.91(d)], \tilde{R} is iso.

We use induc to show for all $\alpha \in \{1, ..., A\}, p^{(\alpha-1)}(\lambda) = 0$.

(i)

• Note For [5.6]:

More generally, supp we do not know whether V is finide. We show $(a) \iff (b)$.

Supp (a) λ is an eigval of T with an eigvec v. Then $(T - \lambda I)v = 0$.

Hence we get (b), $(T - \lambda I)$ is not inje. And then (d), $(T - \lambda I)$ is not inv.

But $(d) \Rightarrow (b)$ fails, becs S is not inv $\iff S$ is not inje OR S is not surj.

- Tips: For $T_1, \ldots, T_m \in \mathcal{L}(V)$:
 - (a) Supp $T_1, ..., T_m$ are all inje. Then $(T_1 \circ \cdots \circ T_m)$ is inje.
 - (b) Supp $(T_1 \circ \cdots \circ T_m)$ is not inje. Then at least one of T_1, \dots, T_m is not inje.
 - (c) At least one of T_1, \dots, T_m is not inje $\Rightarrow (T_1 \circ \dots \circ T_m)$ is not inje.

Exa: In infinide only. Let $V = \mathbf{F}^{\infty}$.

Let S be the backward shift (surj but not inje) Let T be the forward shift (inje but not surj) \Rightarrow Then ST = I.

• Note For [5.2]: Supp $T \in \mathcal{L}(V)$. Then U is invarsp of V under $T \iff \operatorname{range} T|_U \subseteq U$.

• Supp V is finide, $T \in \mathcal{L}(V)$, and U is invarsp of V under T. Prove there exis invarsp W of dimension $\dim V - \dim U$.

SOLUS:

Using the Note For [3.88,90,91]. Define the eraser S. Now $V = \operatorname{range} S \oplus U$.

Define E_1 by $E_1(u+w)=u$. Define E_2 by $E_2(u+w)=w$. ($E_2=S\circ\pi$.)

Note that $T - TE_1 = T(I - E_1) = TE_2$. And null $TE_2 = \text{null } T \oplus U$, range $T = \text{range } TE_2 \oplus U$.

Becs dim null $TE_2 \ge \dim U \iff \dim \operatorname{range} TE_2 \le \dim V - \dim U$.

Let
$$B_U = (u_1, ..., u_n)$$
, $B_{\text{range } TE_2} = (v_1, ..., v_m) \Rightarrow B_V = (v_1, ..., v_m, u_1, ..., u_n, ..., u_p)$.

Let
$$X = \operatorname{span}(v_1, \dots, v_m, u_{\alpha_1}, \dots, u_{\alpha_{p-\dim U}})$$
. Where $\alpha_1, \dots, \alpha_{p-\dim U} \in \{1, \dots, p\}$ are disti.

Then dim $X = \dim V - \dim U$. [range $TE_2 \subseteq X$] X is invard TE_2 , by Exe (1)(b).

We have
$$x \in X \Rightarrow TE_2(x) \in X \Rightarrow Tx - TE_1(x) \in X \Rightarrow Tx \in X$$
. Hence X is invard T.

(Note that $E_1(x) \in \text{span}(u_{\beta_1}, \dots, u_{\beta_t})$, where $\beta_1, \dots, \beta_t \in \{\alpha_1, \dots, \alpha_{p-\dim U}\}$ and each $u_{\beta_i} \in U$.)

COMMENT: Convly, by rev the roles of *U* and *W*, we conclude that it is true as well.

Solus:

Supp each $v_k \in U$. Then becs U is a subsp, $v_1 + \cdots + v_m \in U$.

Define the stmt P(k): if $v_1 + \cdots + v_k \in U$, then each $v_i \in U$. We use induc on m.

- (i) For $k = 1, v_1 \in U$.
- (ii) For $2 \le k \le m$. Asum P(k-1) holds. Supp $v = v_1 + \dots + v_k \in U$.

Then $Tv = \lambda_1 v_1 + \dots + \lambda_k v_k \in U \Longrightarrow Tv - \lambda_k v = (\lambda_1 - \lambda_k)v_1 + \dots + (\lambda_{k-1} - \lambda_k)v_{k-1} \in U$.

For each $j \in \{1, ..., k-1\}$, $\lambda_j - \lambda_k \neq 0 \Rightarrow (\lambda_j - \lambda_k)v_j = v_j'$ is an eigvec of T corres λ_j .

By asum, each $v_i' \in U$. Thus $v_1, \dots, v_{k-1} \in U$. So that $v_k = v - v_1 - \dots - v_{k-1} \in U$.

• Tips 2: If dim V = m. Prove $U = (U \cap E_1) \oplus \cdots \oplus (U \cap E_m)$, where $E_k = \operatorname{span}(v_k)$.

SOLUS:

Becs $V=E_1\oplus\cdots\oplus E_m.\ \forall u\in U,\exists\,!\,e_j\in E_j,u=e_1+\cdots+e_m.$

If $e_i \neq 0$, then e_i is an eigvec corres λ_i . Othws $e_i = 0 \in U$. By TIPS (1), each nonzero $e_i \in U$.

Thus $u \in (U \cap E_1) + \cdots + (U \cap E_m) = U$. Becs each $(U \cap E_j) \subseteq E_j$.

For each $k \in \{2, ..., n\}$, $((U \cap E_1) + ... + (U \cap E_{k-1})) \cap (U \cap E_k) \subseteq (E_1 + ... + E_{k-1}) \cap E_k = \{0\}$.

• Tips 3: Supp W is a nonzero invarsp of V under T. If dim $V = m \ge 1$. Prove $W = \text{span}(v_{\alpha_1}, \dots, v_{\alpha_A})$ for some disti $\alpha_1, \dots, \alpha_A \in \{1, \dots, m\}$.

SOLUS:

Each span($v_{\alpha_1}, \dots, v_{\alpha_A}$) is invard T.

By Tips (2), $U = (U \cap E_1) \oplus \cdots \oplus (U \cap E_m)$. Becs each dim $E_k = 1$, $U \cap E_k = \{0\}$ or E_k .

There must be at least one k suth $E_k = U \cap E_k$, for if not, $U = \{0\}$ since $V = E_1 \oplus \cdots \oplus E_m$.

Let $\alpha_1, \dots, \alpha_A \in \{1, \dots, m\}$ be all the disti indices for which $E_k = U \cap E_k$.

Thus $U = (U \cap E_1) \oplus \cdots \oplus (U \cap E_m) = E_{\alpha_1} \oplus \cdots E_{\alpha_A} = \operatorname{span}(v_{\alpha_1}, \dots, v_{\alpha_A}).$

By [5.10], $(e^{\lambda_1 x}, \dots, e^{\lambda_n x})$ is liney indep in \mathbb{R}^R . (b) Let $V = \text{span}(\cos(\lambda_1 x), \dots, \cos(\lambda_n x))$. Now $u \in U \Rightarrow (T - \lambda I)(u) \in U \Rightarrow Tu \in U$.	
(b) Supp U is invarsp under T of dim $m = \dim V - 1$. (If $m = 0$, then done.) Let $B_U = (u_1, \dots, u_m)$, $B_V = (u_0, u_1, \dots, u_m)$. We discuss in cases: (I) If $Tu_0 \in U$, then range $T = U$ so that T is not surj \iff null $T \neq \{0\} \iff 0$ is an eigval of T . (II) If $Tu_0 \notin U$, then $Tu_0 = a_0u_0 + a_1u_1 + \dots + a_mu_m$. If range $T _U = U \iff a_1 = \dots = a_m = 0 \iff Tu_0 \in \operatorname{span}(u_0)$ then done. • Note For [5.17]:

Supp $T \in \mathcal{L}(V)$, $p \in \mathcal{P}(\mathbf{F})$. Prove $\operatorname{null} p(T)$ and range p(T) are invard T. Solus: Using the commu in [5.10].

(a) Supp $u \in \text{null } p(T)$. Then p(T)u = 0.

Thus
$$p(T)(Tu) = (p(T)T)u(Tp(T))u = T(p(T)u) = 0$$
. Hence $Tu \in \text{null } p(T)$.

(b) Supp $u \in \text{range } p(T)$. Then $\exists v \in V \text{ suth } u = p(T)v$.

Thus
$$Tu = T(p(T)v) = p(T)(Tv) \in \text{range } p(T)$$
.

• Note For [5.21]: Every optor on a finide nonzero complex vecsp has an eigval.

Supp *V* is a finide complex vecsp of dim n > 0 and $T \in \mathcal{L}(V)$.

Choose a nonzero $v \in V$. $(v, Tv, T^2v, ..., T^nv)$ of len n + 1 is linely depe.

Supp $a_0I + a_1T + \cdots + a_nT^n = 0$. Then $\exists a_i \neq 0$.

Thus \exists nonconst p of smallest deg $(\deg p > 0)$ suth p(T)v = 0.

Becs $\exists \lambda \in \mathbb{C}$ suth $p(\lambda) = 0 \Rightarrow \exists q \in \mathcal{P}(\mathbb{C}), p(z) = (z - \lambda)q(z), \forall z \in \mathbb{C}$.

Thus $0 = p(T)v = (T - \lambda I)(q(T)v)$. By the min of deg p and deg $q < \deg p$, $q(T)v \neq 0$.

Then $(T - \lambda I)$ is not inje. Thus λ is an eigval of T with eigvec q(T)v.

• Exa: an optor on a complex vecsp with no eigvals

Define $T \in \mathcal{L}(\mathcal{P}(\mathbf{C}))$ by (Tp)(z) = zp(z).

Supp $p \in \mathcal{P}(\mathbf{C})$ is a nonzero poly. Then deg $Tp = \deg p + 1$, and thus $Tp \neq \lambda p$, $\forall \lambda \in \mathbf{C}$. Hence *T* has no eigvals. **13** Supp V is a complex vecsp and $T \in \mathcal{L}(V)$ has no eigvals. *Prove every subsp of V invard T is either* $\{0\}$ *or infinide.* **Solus**: Supp *U* is a finide nonzero invarsp on C. Prove [5.21]. **SOLUS:** Becs dim $\mathcal{P}_{\dim V}(\mathbf{C}) = \dim V + 1$. Then S is not inje. Hence $\exists 0 \neq p \in \mathcal{P}_{\dim V}(\mathbf{C}), p(T)v = 0$. Using [4.14], write $p(z) = c(z - \lambda_1) \cdots (z - \lambda_m)$. Apply T to both sides: $p(T) = c(T - \lambda_1 I) \cdots (T - \lambda_m I)$. Thus at least one of $(T - \lambda_i I)$ is not inje (becs p(T) is not inje). **17** Supp $0 \neq v \in V$. Define $S \in \mathcal{L}(\mathcal{P}_{(\dim V)^2}(\mathbf{C}), \mathcal{L}(V))$ by S(p) = p(T). Prove [5.21]. Solus: Becs dim $\mathcal{P}_{(\dim V)^2}(\mathbf{C}) = (\dim V)^2 + 1$. Then *S* is not inje. Hence $\exists p \in \mathcal{P}_{(\dim V)^2}(\mathbf{C}) \setminus \{0\}, 0 = S(p) = p(T) = c(T - \lambda_1 I) \cdots (T - \lambda_m I)$, where $c \neq 0$. Thus $(T - \lambda_1 I) \cdots (T - \lambda_m I) = 0 \Longrightarrow \exists j, (T - \lambda_j)$ is not inje. **COMMENT:** \exists monic $q \in \text{null } S \neq \{0\}$ of smallest deg, S(q) = q(T) = 0, then q is the *min poly*. • **Note For** [8.40]: *def for min poly* Supp V is finide and $T \in \mathcal{L}(V)$. Asum dim V > 0 and that the desired result is true for all optors on all vecsps of smaller dim. Let $u \in V$, $u \neq 0$. The list $(u, Tu, ..., T^{\dim V}u)$ of len $(1 + \dim V)$ is linely depe. Then $\exists ! T^m$ of smallest deg suth $T^m u \in \text{span}(u, Tu, ..., T^{m-1}u)$. Thus $\exists c_i \in \mathbf{F}, c_0 u + c_1 T u + \dots + c_{m-1} T^{m-1} u + T^m u = 0.$ Define q by $q(z) = c_0 + c_1 z + \dots + c_{m-1} z^{m-1} + z^m$. Then $0 = T^k(q(T)u) = q(T)(T^ku), \forall k \in \{1, ..., m-1\} \subseteq \mathbb{N}.$ Becs $(u, Tu, ..., T^{m-1}u)$ is liney indep. Thus dim null $q(T) \ge m \Rightarrow \dim \operatorname{range} q(T) = \dim V - \dim \operatorname{null} q(T) \le \dim V - m$. Let W = range q(T). By asum, $\exists s \in M_T^0$ of smallest deg (and deg $s \leq \dim W$,) so that $s(T|_W) = 0$. Hence $\forall v \in V$, ((sq)(T))(v) = s(T)(q(T)v) = 0. Thus $sq \in M_T^0$ and $\deg sq \leqslant \dim V$. | Uniques Part | Supp $p, q \in M_T^0$ are of the smallest deg. Then (p-q)(T) = 0. $\mathbb{Z} \deg(p-q) = m < \min\{\deg p_i\}_{i \in \Gamma}$. Solus: Becs the list $(I, T,, T^{\left(\dim V\right)^2})$ of len $\dim \mathcal{L}(V) + 1$ is linely depe in $\dim \mathcal{L}(V)$. Supp $m \in \mathbb{N}^+$ is the smallest suth $T^m = a_0I + \cdots + a_{m-1}T^{m-1}$. Then q defined by $q(z) = z^m - a_{m-1}z^{m-1} - \cdots - a_0$ is the min poly (see [8.40]). For any $k \in \mathbb{N}^+$, $T^{m+k} = T^k(T^m) \in \operatorname{span}(I, T,, T^{m-1}) = U$. Hence $\operatorname{span}(I, T,, T^{\left(\dim V\right)^2}) = \operatorname{span}(I, T,, T^{\left(\dim V\right)^2 - 1}) = U$. Note that by the min of m , $(I, T,, T^{m-1})$ is liney indep.	
Thus dim $U = m = \dim \operatorname{span}(I, T,, T^{\left(\dim V\right)^2 - 1}) = \dim \operatorname{span}(I, T,, T^n)$ for all $m < n \in \mathbb{N}^+$.

If

$$\Rightarrow T^m = -c_0 I - c_1 T - \dots - c_{m-1} T^{m-1},$$

Now supp $\deg q \geqslant \deg p$. We use induc on $\deg q$.

- (i) $\deg q = \deg p$, then the desired result is true, as shown above.
- (ii) $\deg q > \deg p$, asum the desired result is true for $\deg q = n$.

getting
$$s$$
 defined by $s(z) = d_0 + d_1 z + \dots + d_{m-1} z^{m-1}$.

Thus
$$g(T) = s(T) \Rightarrow f(T) = g(T) + b_{n+1}T^{n+1} = s(T) + b_{n+1}T^{n+1}$$

 $\mathbb{Z} \operatorname{span}(v, Tv, \dots, T^{m-1}v)$ is invard T.

And

$$\Rightarrow f(T) = (d_0 + k_0) + (d_1 + k_1)z + \dots + (d_{m-1} + k_{m-1})z^{m-1} = h(T)$$

$$p(z) = a_0 + a_1 z + \dots + a_{m-1} z^{m-1} + z^m$$

Find the min poly of T^{-1} .

Solus:

Notice that *V* is finide. Then $p(0) = a_0 \neq 0 \Rightarrow 0$ is not a zero of $p \Rightarrow T - 0I = T$ is inv.

Then
$$p(T) = a_0I + a_1T + \cdots + T^m = 0$$

We now show $(T^{-1})^k \notin \text{span}(I, T^{-1}, ..., (T^{-1})^{k-1})$

for every $k \in \{1, ..., m-1\}$ by ctradic, so that q is exactly the min poly of T^{-1} .

Apply T^k to both sides, getting $I = b_0 T^k + b_1 T^{k-1} + \dots + b_{k-1} T$, hence $T^k \in \text{span}(I, T, \dots, T^{k-1})$. Thus f defined by $f(z) = z^k + \frac{b_1}{b_0}z^{k-1} + \dots + \frac{b_{k-1}}{b_0}z - \frac{1}{b_0}$ is a poly multi of p. While $\deg f < \deg p$. Ctradic.

• Note For [8.49]:

Supp V is a finide complex vecsp and $T \in \mathcal{L}(V)$. By [4.14], the min poly has the form $(z - \lambda_1) \cdots (z - \lambda_m)$, where $\lambda_1, \dots, \lambda_m$ are all the eigenst of T, **possibly with repetitions**.

• COMMENT:

A nonzero poly has at most as many disti zeros as its deg (see [4.12]). Thus by the upper bound for the deg of min poly given in Note For [8.40], and by [8.49,]we can *give an alternative proof of* [5.13].

• NOTICE (See also 4E 5.B.20,24)

Supp $\alpha_1, \dots, \alpha_n$ are all the disti eigvals of T,

and therefore are all the disti zeros of the min poly.

Also, the min poly of *T* is a poly multi of, but not equal to, $(z - \alpha_1) \cdots (z - \alpha_n)$.

If we define q by $q(z) = (z - \alpha_1)^{\dim V - (n-1)} \cdots (z - \alpha_n)^{\dim V - (n-1)}$,

then q is a poly multi of the ch poly (see [8.34] and [8.26])

(Becs dim V > n and n - 1 > 0, $n \lceil \dim V - (n - 1) \rceil > \dim V$.)

The ch poly has the form $(z - \alpha_1)^{\gamma_1} \cdots (z - \alpha_n)^{\gamma_n}$, where $\gamma_1 + \cdots + \gamma_n = \dim V$.

The min poly has the form $(z - \alpha_1)^{\delta_1} \cdots (z - \alpha_n)^{\delta_n}$, where $0 \leq \delta_1 + \cdots + \delta_n \leq \dim V$.

10 Supp $T \in \mathcal{L}(V)$, λ is an eigeal of T with an eigeec v. *Prove for any* $p \in \mathcal{P}(\mathbf{F})$, $p(T)v = p(\lambda)v$.

Solus:

Supp p is defined by $p(z) = a_0 + a_1 z + \dots + a_m z^m$ for all $z \in \mathbb{F}$. Becs for any $n \in \mathbb{N}^+$, $T^n v = \lambda^n v$. Thus $p(T)v = a_0v + a_1Tv + \dots + a_mT^mv = a_0v + a_1\lambda v + \dots + a_m\lambda^mv = p(\lambda)v$.

COMMENT: For any $p \in \mathcal{P}(\mathbf{F})$ suth $p(z) = (z - \lambda_1)^{\alpha_1} \cdots (z - \lambda_m)^{\alpha_m}$, the result is true as well.

Now we prove that $(T - \lambda_1 I)^{\alpha_1} \cdots (T - \lambda_m I)^{\alpha_m} v = (\lambda - \lambda_1)^{\alpha_1} \cdots (\lambda - \lambda_m)^{\alpha_m} v$.

Define q_i by $q_i(z) = (z - \lambda_i)^{\alpha_i}$ for all $z \in \mathbf{F}$.

Becs $(a+b)^n = a^n + C_n^1 a^{n-1} b + \dots + C_n^k a^{n-k} b^k + \dots + C_n^n b^n$.

Let a = z, $b = \lambda_i$, $n = \alpha_i$, so we can write $q_i(z)$ in the form $a_0 + a_1 z + \cdots + a_m z^m$.

Hence $q_i(T)v = q_i(\lambda)v \Rightarrow (T - \lambda_i I)^{\alpha_i}v = (\lambda - \lambda_i)^{\alpha_i}v$.

Then for each $k \in \{2, ..., m\}$, $(T - \lambda_{k-1}I)^{\alpha_{k-1}} (T - \lambda_k I)^{\alpha_k} v$

$$= q_{k-1}(T)(q_k(T)v)$$

= $q_{k-1}(T)(q_k(\lambda)v)$

$$= q_{k-1}(1)(q_k(\lambda))$$

$$= q_{k-1}(\lambda)(q_k(\lambda)v)$$

= $(\lambda - \lambda_{k-1})^{\alpha_{k-1}}(\lambda - \lambda_k)^{\alpha_k}v$.

So that $(T - \lambda_1 I)^{\alpha_1} \cdots (T - \lambda_m I)^{\alpha_m} v$ $= q_1(T) \Big(q_2(T) \Big(\dots \Big(q_m(T)v \Big) \dots \Big) \Big)$ $= q_1(\lambda)(q_2(\lambda)(\dots(q_m(\lambda)v)\dots))$

 $= (\lambda - \lambda_1)^{\alpha_1} \cdots (\lambda - \lambda_m)^{\alpha_m} v.$

Solus:

Hence $(T - aI)(T - dI) = bcI \Rightarrow T^2 - (a + d)T + (ad - bc)I = 0$

(b) If b = c = 0 and a = d. Then $\mathcal{M}(T) = \begin{pmatrix} a & 0 \\ 0 & a \end{pmatrix} = a\mathcal{M}(I)$. Thus T = aI. Hence the min poly is z - a. Othws, by (a), $z^2 - (a + d)z + (ad - bc)$ is a poly multi of the min poly.

 - (a) If $V = \mathbf{F}^2$. Give an exa suth $p \neq q$; (b) If S or T is inv. Prove p = q.

Solus:

(a) Define S by S(x,y)=(x,x). Define T by T(x,y)=(0,y). Then ST(x,y)=0, TS(x,y)=(0,x) for all $(x,y)\in F^2$. Thus $ST=0\neq TS$ and $(TS)^2=0$. Hence the min poly of ST does not equal to the min poly of TS.

(b) Supp S is inv. Becs p,q are monic.

$$q(TS) = 0 = S^{-1}q(ST)S \Rightarrow q(ST) = 0, q \text{ is a poly multi of } p$$
