简介

这是我个人用于复习的笔记,一本习题补注。由于我个人偏好的复习手段的特点,因此我把许多对我个人而言没什么复习价值的习题作了省略。为什么我没有用中文?因为我将来要学习的绝大多数数学课本都是全英的,国内目前的专业翻译速度慢、不全面,所以我只好用英文。但我讨厌英文单词的冗长性,这会让我复习起来很不爽,所以我对许多常用词汇适当地作了简写。这份习题补注的内容范围和标识说明,我已经在README中写得很清楚,不再赘述。这份笔记尚处于缓慢的编撰进度中。

eigvec	eigenvector
mini poly	minimal polynomial
char poly	characteristic polynomial

1.B

1 Prove that $\forall v \in V, -(-v) = v$.

Solution: $\begin{pmatrix} (-(-v)) + (-v) = 0 \\ v + (-v) = 0 \end{pmatrix}$ \Rightarrow By the uniques of add inv.

s of add inv. \Box

Or.
$$-(-v) = (-1)((-1)v) = ((-1)(-1))v = 1 \cdot v = v$$
.

2 Suppose $a \in \mathbb{F}$, $v \in V$, and av = 0. Prove that a = 0 or v = 0.

SOLUTION: Suppose $a \neq 0$, $\exists a^{-1} \in \mathbf{F}$, $a^{-1}a = 1$, hence $v = 1 \cdot v = (a^{-1}a)v = a^{-1}(av) = a^{-1} \cdot 0 = 0$.

3 Suppose $v, w \in V$. Explain why $\exists ! x \in V, v + 3x = w$.

SOLUTION:

[Existns] Let $x = \frac{1}{3}(w - v)$.

[*Uniques*] Suppose $v + 3x_1 = w$,(I) $v + 3x_2 = w$ (II). Then (I) - (II) $: 3(x_1 - x_2) = 0 \Rightarrow x_1 = x_2$.

Or.
$$v + 3x = w \Leftrightarrow 3x = w - v \Leftrightarrow x = \frac{1}{3}(w - v)$$
.

5 *Show that in the def of a vecsp, the add inv condition can be replaced by* [1.29].

Suppose V satisfies all conds in the def, except we've replaced the add inv cond with [1.29]. Prove that the add inv is true.

SOLUTION: Using [1.31].
$$0v = 0$$
 for all $v \in V \iff (1 + (-1))v = 1 \cdot v + (-1)v = v + (-v) = 0$.

6 Let ∞ and $-\infty$ denote two distinct objects, neither of which is in R.

Define an add and scalar multi on $R \cup \{\infty, -\infty\}$ as you could guess.

The operations of real numbers is as usual. While for $t \in R$ define

$$t\infty = \begin{cases} -\infty & \text{if } t < 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t > 0, \end{cases} \qquad t(-\infty) = \begin{cases} -\infty & \text{if } t > 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t < 0, \end{cases}$$

and (I) $t + \infty = \infty + t = \infty + \infty = \infty$,

(II)
$$t + (-\infty) = (-\infty) + t = (-\infty) + (-\infty) = -\infty$$
,

(III)
$$\infty + (-\infty) = (-\infty) + \infty = 0$$
.

With these operations of add and scalar multi, is $\mathbb{R} \cup \{\infty, -\infty\}$ a vecsp over \mathbb{R} ? Explain.

SOLUTION: Not a vecpsp, since the add and scalar mult is not assoc and distr.

By Assoc:
$$(a + \infty) + (-\infty) \neq a + (\infty + (-\infty))$$
.

Or. By Distr:
$$\infty = (2 + (-1))\infty \neq 2\infty + (-\infty) = \infty + (-\infty) = 0$$
.

ENDED

1.C

7 Give a nontrivial example of $U \subseteq \mathbb{R}^2$,

U is closed under taking add invs and under add, but *U* is not a subsp of \mathbb{R}^2 .

SOLUTION: Let $U = \mathbb{Z}^2$, $(\mathbb{Z}^*)^2$, $(\mathbb{Q}^*)^2$, $\mathbb{Q}^2 \setminus \{0\}$, or $\mathbb{R}^2 \setminus \{0\}$.

8 Give a nontrivial example of $U \subseteq \mathbb{R}^2$,

U is closed under scalar multi, but U is not a subsp of \mathbb{R}^2 .

SOLUTION: Let $U = \{(x, y) \in \mathbb{R}^2 : x = 0 \lor y = 0\}$.

9 A function $f: \mathbb{R} \to \mathbb{R}$ is called periodic if $\exists p \in \mathbb{N}^+, f(x) = f(x+p)$ for all $x \in \mathbb{R}$. Is the set of periodic functions from \mathbb{R} to \mathbb{R} a subsp of $\mathbb{R}^\mathbb{R}$? Explain.

SOLUTION: Denote the set by S.

Suppose $h(x) = \cos(x) + \sin(\sqrt{2}x) \in S$, since $\cos(x)$, $\sin(\sqrt{2}x) \in S$.

Assume $\exists p \in \mathbb{N}^+$ such that h(x) = h(x+p), $\forall x \in \mathbb{R}$. Let $x = 0 \Rightarrow h(0) = h(\pm p) = 1$.

Thus $1 = \cos(p) + \sin(\sqrt{2}p) = \cos(p) - \sin(\sqrt{2}p)$

$$\Rightarrow \sin(\sqrt{2}p) = 0$$
, $\cos(p) = 1 \Rightarrow p = 2k\pi, k \in \mathbb{Z}$, while $p = \frac{m\pi}{\sqrt{2}}, m \in \mathbb{Z}$.

Hence
$$2k = \frac{m}{\sqrt{2}} \Rightarrow \sqrt{2} = \frac{m}{2k} \in \mathbb{Q}$$
. Contradiction!

OR. Because [I] : $\cos(x) + \sin(\sqrt{2}x) = \cos(x+p) + \sin(\sqrt{2}x + \sqrt{2}p)$. By differentiating twice, [II] : $\cos(x) + 2\sin(\sqrt{2}x) = \cos(x+p) + 2\sin(\sqrt{2}x + \sqrt{2}p)$.

$$[II] - [I] : \sin(\sqrt{2}x) = \sin(\sqrt{2}x + \sqrt{2}p)$$

$$2[I] - [II] : \cos(x) = \cos(x + p)$$

$$\Rightarrow p = \frac{m\pi}{\sqrt{2}} = 2k\pi, \text{ if } x = 0. \text{ Contradicts.}$$

• Suppose U, W, V_1, V_2, V_3 are subsps of V.

 $15 U + U \ni u + w \in U.$

$$16 U+W\ni u+w=w+u\in W+U.$$

17
$$(V_1 + V_2) + V_3 \ni (v_1 + v_2) + v_3 = v_1 + (v_2 + v_3) \in V_1 + (V_2 + V_3).$$

18 Does the add on the subsps of V have an add identity? Which subsps have add invs?

SOLUTION:

(a) Suppose $\boldsymbol{\Omega}$ is the additive identity.

For any subsp U of V. $\Omega \subseteq U + \Omega = U \Rightarrow \Omega \subseteq U$. Let $U = \{0\}$, then $\Omega = \{0\}$.

(b) Now suppose *W* is an add inv of $U \Rightarrow U + W = \Omega$.

Note that
$$U + W \supseteq U, W \Rightarrow \Omega \supseteq U, W$$
. Thus $U = W = \Omega = \{0\}$.

11 Prove that the intersection of every collection of subsps of V is a subsp of V.

SOLUTION: Suppose $\{U_{\alpha}\}_{\alpha\in\Gamma}$ is a collection of subsps of V; here Γ is an arbitrary index set.

We show that $\bigcap_{\alpha \in \Gamma} U_{\alpha}$, which equals the set of vecs that are in U_{α} for each $\alpha \in \Gamma$, is a subsp of V.

- (-) $0 \in \bigcap_{\alpha \in \Gamma} U_{\alpha}$. Nonempty.
- $(\stackrel{\frown}{_}) u, v \in \bigcap_{\alpha \in \Gamma} U_{\alpha} \Rightarrow u + v \in U_{\alpha}, \ \forall \alpha \in \Gamma \Rightarrow u + v \in \bigcap_{\alpha \in \Gamma} U_{\alpha}.$ Closed under add.
- $(\equiv) \ u \in \bigcap_{\alpha \in \Gamma} U_{\alpha}, \lambda \in \mathbb{F} \Rightarrow \lambda u \in U_{\alpha}, \ \forall \alpha \in \Gamma \Rightarrow \lambda u \in \bigcap_{\alpha \in \Gamma} U_{\alpha}.$ Closed under scalar multi.

Thus $\bigcap_{\alpha \in \Gamma} U_{\alpha}$ is nonempty subset of V that is closed under add and scalar multi.

12 Suppose U, W are subsps of V. Prove that $U \cup W$ is a subsp of $V \iff U \subseteq W$ or $W \subseteq U$. **SOLUTION:** (a) Suppose $U \subseteq W$. Then $U \cup W = W$ is a subsp of V. (b) Suppose $U \cup W$ is a subsp of V. Suppose $U \not\subseteq W$ and $U \not\supseteq W$ ($U \cup W \neq U$ and W). Then $\forall a \in U$ but $a \notin W$; $b \in W$ but $b \notin U$. $a + b \in U \cup W$. Consider $a + b \in U \Rightarrow b = (a + b) + (-a) \in U$, contradicts! $\Rightarrow U \cup W = U \text{ or } W. \text{ Contradicts!}$ Consider $a + b \in W \Rightarrow a = (a + b) + (-b) \in W$, contradicts! Thus $U \subseteq W$ and $U \supseteq W$. **13** *Prove that the union of three subsps of V is a subsp of V* if and only if one of the subsps contains the other two. This exercise is not true if we replace F with a field containing only two elements. **SOLUTION:** Suppose U_1 , U_2 , U_3 are subsps of V. Denote $U_1 \cup U_2 \cup U_3$ by \mathcal{U} . (a) Suppose that one of the subsps contains the other two. Then $\mathcal{U} = U_1, U_2$ or U_3 is a subsp of V. (b) Suppose that $U_1 \cup U_2 \cup U_3$ is a subsp of V. By distinct we notice that $A \cup B \cup C = (A \cup B) \cup (B \cup C) = (A \cup C) \cup (B \cup C) = (A \cup B) \cup (A \cup C)$. Also note that, if $U \cup W = V$ is a vecsp, then in general U and W are not subsps of V. Hence this literal trick is invalid. (I) If any U_i is contained in the union of the other two, say $U_1 \subseteq U_2 \cup U_3$, then $\mathcal{U} = U_2 \cup U_3$. By applying Problem (12) we conclude that one U_i contains the other two. Thus we are done. (II) Assume that no U_i is contained in the union of the other two, and no U_i contains the union of the other two. Say $U_1 \not\subseteq U_2 \cup U_3$ and $U_1 \not\supseteq U_2 \cup U_3$. $\exists u \in U_1 \land u \notin U_2 \cup U_3; \ v \in U_2 \cup U_3 \land v \notin U_1.$ Let $W = \{v + \lambda u : \lambda \in F\} \subseteq \mathcal{U}.$ Note that $W \cap U_1 = \emptyset$, for if $v + \lambda u \in U_1$ then $v + \lambda u - \lambda u = v \in U_1$ while $v \notin U_1$. $\forall v + \lambda u \in W, \exists i \in \{2,3\}, v + \lambda u \in U_i.$ Because U_2 , U_3 are subsps and hence have at least one element. If $U_2 = U_3$, then $\mathcal{U} = U_1 \cup U_2$ and by Problem (12) we are done. Otherwise, $\exists \lambda, \mu \in F$ with $\lambda \neq \mu$ such that $v + \lambda u, v + \mu u \in U_i$ for some $i \in \{2, 3\}$. Then $u \in U_i$ while $u \notin U_2 \cup U_3$. Contradicts. Example: Suppose $U = \{(x, x, y, y) \in \mathbf{F}^4 : x, y \in \mathbf{F}\}, W = \{(x, x, x, y) \in \mathbf{F}^4 : x, y \in \mathbf{F}\}.$ *Prove that* $U + W = \{(x, x, y, z) \in \mathbb{F}^4 : x, y, z \in \mathbb{F}\}.$ Let T denote $\{(x, x, y, z) \in \mathbb{F}^4 : x, y, z \in \mathbb{F}\}$. By def, $U + W \subseteq T$. And $T \ni (x, x, y, z) \Rightarrow (0, 0, y - x, y - x) + (x, x, x, -y + x + z) \in U + W$. Hence $T \subseteq U + W$.

Let $W = \{(0,0,z,w,u) \in \mathbb{F}^5 : z,w,u \in \mathbb{F}\}$. Then $U \cap W = \{0\}$. And $\mathbb{F}^5 \ni (x,y,z,w,u) \Rightarrow (x,y,x+y,x-y,2x) + (0,0,z-x-y,w-x-y,u-2x) \in U+W$.

21 Suppose $U = \{(x, y, x + y, x - y, 2x) \in \mathbf{F}^5 : x, y \in \mathbf{F}\}$. Find a W such that $\mathbf{F}^5 = U \oplus W$.

SOLUTION:

23 Give an example of vecsps V_1, V_2, U such that $V_1 \oplus U = V_2 \oplus U$, but $V_1 \neq V_2$. **SOLUTION**: $V = \mathbb{F}^2$, $U = \{(x, x) \in \mathbb{F}^2 : x \in \mathbb{F}\}$, $V_1 = \{(x, 0) \in \mathbb{F}^2 : x \in \mathbb{F}\}$, $V_2 = \{(0, x) \in \mathbb{F}^2 : x \in \mathbb{F}\}$. **22** Suppose $U = \{(x, y, x + y, x - y, 2x) \in \mathbb{F}^5 : x, y \in \mathbb{F}\}.$ Find three subsps W_1 , W_2 , W_3 of \mathbf{F}^5 , none of which equals $\{0\}$, such that $\mathbf{F}^5 = U \oplus W_1 \oplus W_2 \oplus W_3$. **SOLUTION:** (1) Let $W_1 = \{(0,0,z,0,0) \in \mathbb{F}^5 : z \in \mathbb{F}\}$. Then $W_1 \cap U = \{0\}$. Let $U_1 = U \oplus W_1$. Then $U_1 = \{(x, y, z, x - y, 2x) \in \mathbb{F}^5 : x, y, z \in \mathbb{F}\}$. (Check it!) (2) Let $W_2 = \{(0,0,0,w,0) \in \mathbb{F}^5 : w \in \mathbb{F}\}$. Then $W_2 \cap U_1 = \{0\}$. Let $U_2 = U_1 \oplus W_2$. Then $U_2 = \{(x, y, z, w, 2x) \in \mathbb{F}^5 : x, y, z, w \in \mathbb{F}\}.$ (3) Let $W_3 = \{(0,0,0,0,u) \in \mathbb{F}^5 : u \in \mathbb{F}\}$. Then $W_3 \cap U_2 = \{0\}$. Let $U_3 = U_2 \oplus W_3$. Then $U_3 = \{(x, y, z, w, u) \in \mathbb{F}^5 : x, y, z, w, u \in \mathbb{F}\}.$ Thus $\mathbf{F}^5 = ((U \oplus W_1) \oplus W_2) \oplus W_3$. **24** Let $V_E = \{ f \in \mathbb{R}^{\mathbb{R}} : f(x) = f(-x) \}$, $V_O = \{ f \in \mathbb{R}^{\mathbb{R}} : -f(x) = f(-x) \}$. Show that $V_E \oplus V_O = \mathbb{R}^{\mathbb{R}}$. **SOLUTION:** (a) $V_E \cap V_O = \{ f \in \mathbb{R}^{\mathbb{R}} : f(x) = f(-x) = -f(-x) \} = \{ 0 \}.$ $\begin{aligned} f_e \in V_E &\iff f_e(x) = f_e(-x) &\iff \det f_e(x) = \frac{g(x) + g(-x)}{2} \\ f_o \in V_O &\iff f_o(x) = -f_o(-x) &\iff \det f_o(x) = \frac{g(x) - g(-x)}{2} \end{aligned} \right\} \Rightarrow \forall g \in \mathbb{R}^R, g(x) = f_e(x) + f_o(x). \quad \Box$ (b) **ENDED** 2·A A list (v) of length 1 in V is linely inde $\iff v \neq 0$. **2** (a) | P | |Q|(b) [P] A list (v, w) of length 2 in V is linely inde $\iff \forall \lambda, \mu \in \mathbf{F}, v \neq \lambda w, w \neq \mu v$. [Q]**SOLUTION:** (a) $Q \stackrel{1}{\Rightarrow} P : v \neq 0 \Rightarrow \text{if } av = 0 \text{ then } a = 0 \Rightarrow (v) \text{ linely inde.}$ $P \stackrel{?}{\Rightarrow} Q : (v)$ linely inde $\Rightarrow v \neq 0$, for if v = 0, then $av = 0 \Longrightarrow a = 0$. $\begin{array}{c}
 \neg Q \stackrel{3}{\Rightarrow} \neg P : v = 0 \Rightarrow av = 0 \text{ while we can let } a \neq 0 \Rightarrow (v) \text{ is linely dep.} \\
 \neg P \stackrel{4}{\Rightarrow} \neg Q : (v) \text{ linely dep} \Rightarrow av = 0 \text{ while } a \neq 0 \Rightarrow v = 0.
 \end{array}$ COMMENT: (1) with (3) and (2) with (4) will do as well. (b) $P \stackrel{1}{\Rightarrow} Q : (v, w)$ linely inde \Rightarrow if av + bw = 0, then $a = b = 0 \Rightarrow$ no scalar multi. $Q \stackrel{?}{\Rightarrow} P$: no scalar multi \Rightarrow if av + bw = 0, then $a = b = 0 \Rightarrow (v, w)$ linely inde. $\neg P \stackrel{3}{\Rightarrow} \neg Q : (v, w)$ linely dep \Rightarrow if av + bw = 0, then a or $b \neq 0 \Rightarrow$ scalar multi $\neg Q \stackrel{4}{\Rightarrow} \neg P :$ scalar multi \Rightarrow if av + bw = 0, then a or $b \neq 0 \Rightarrow$ linely dep. **COMMENT:** (1) with (3) and (2) with (4) will do as well.

1 Prove that $[P](v_1, v_2, v_3, v_4)$ spans $V \iff (v_1 - v_2, v_2 - v_3, v_3 - v_4, v_4)$ also spans V[Q]. **SOLUTION:** Notice that $V = \text{span}(v_1, \dots, v_n) \iff \forall v \in V, \exists a_1, \dots, a_n \in \mathbb{F}, v = a_1v_1 + \dots + a_nv_n$ Assume that $\forall v \in V$, $\exists a_1, \dots, a_4, b_1, \dots, b_4 \in \mathbb{F}$, (that is, if $\exists a_i$, then we are to find b_i , vice versa) $v = a_1v_1 + a_2v_2 + a_3v_3 + a_4v_4$ $= b_1(v_1 - v_2) + b_2(v_2 - v_3) + b_3(v_3 - v_4) + b_4v_4$ $= b_1v_1 + (b_2 - b_1)v_2 + (b_3 - b_2)v_3 + (b_4 - b_3)v_4.$ Now we can let $b_i = \sum_{r=1}^{i} a_r$ if we are to prove Q with P already assumed; or let $a_i = b_i - b_{i-1}$ with $b_{-1} = 0$, if we are to prove P with Q already assumed. **6** Prove that [P] (v_1, v_2, v_3, v_4) is linely inde \iff [Q] $(v_1 - v_2, v_2 - v_3, v_3 - v_4, v_4)$ is linely inde. **SOLUTION:** $P \Rightarrow Q: a_1(v_1 - v_2) + a_2(v_2 - v_3) + a_3(v_3 - v_4) + a_4v_4 = 0$ $\Rightarrow a_1v_1 + (a_2 - a_1)v_2 + (a_3 - a_2)v_3 + (a_4 - a_3)v_4 = 0$ $\Rightarrow a_1 = a_2 - a_1 = a_3 - a_2 = a_4 - a_3 = 0$ $Q \Rightarrow P : a_1v_1 + a_2v_2 + a_3v_3 + a_4v_4 = 0$ $\Rightarrow a_1(v_1 - v_2) + (a_1 + a_2)(v_2 - v_3) + (a_1 + a_2 + a_3)(v_3 - v_4) + (a_1 + \dots + a_4)v_4 = 0$ $\Rightarrow a_1 = a_1 + a_2 = a_1 + a_2 + a_3 = a_1 + \dots + a_4 = 0.$ • Suppose (v_1, \ldots, v_m) is a list of vecs in V. For $k \in \{1, \ldots, m\}$, let $w_k = v_1 + \cdots + v_k$. (a) Show that span $(v_1, \dots, v_m) = \text{span}(w_1, \dots, w_m)$. (b) Show that $[P](v_1,...,v_m)$ is linely inde $\iff (w_1,...,w_m)$ is linely inde [Q]. **SOLUTION:** (a) let $a_k = \sum_{i=1}^k b_i \iff a_1 v_1 + \dots + a_m v_m = b_1 w_1 + \dots + b_m w_m \implies \text{let } b_1 = a_1, \ b_k = a_k - \sum_{i=1}^{k-1} b_i = \sum_{i=1}^k (-1)^{k-j} a_j.$ (b) $P \Rightarrow Q: b_1 w_1 + \dots + b_m w_m = 0 = a_1 v_1 + \dots + a_m v_m$, where $0 = a_k = \sum_{i=1}^n b_i$ $Q \Rightarrow P: a_1v_1 + \dots + a_mv_m = 0 = b_1w_1 + \dots + b_mw_m = 0$, where $0 = b_1 = a_1$, $0 = b_k = \sum_{i=1}^{k} (-1)^{k-i}a_i$ Or. Because $W = \operatorname{span}(v_1, \dots, v_m) = \operatorname{span}(w_1, \dots, w_m)$. By [2.21](b), a list of length (m-1) spans W, then by [2.23], (w_1, \dots, w_m) linely dep $\Rightarrow (v_1, \dots, v_m)$ linely dep. Conversely it is true as well. **10** Suppose $(v_1, ..., v_m)$ is linely inde in V and $w \in V$. *Prove that if* $(v_1 + w, ..., v_m + w)$ *is linely depe, then* $w \in \text{span}(v_1, ..., v_m)$. **SOLUTION:** Suppose $a_1(v_1 + w) + \cdots + a_m(v_m + w) = 0$, $\exists a_i \neq 0 \Rightarrow a_1v_1 + \cdots + a_mv_m = 0 = -(a_1 + \cdots + a_m)w$. Then $a_1 + \cdots + a_m \neq 0$, for if not, $a_1v_1 + \cdots + a_mv_m = 0$ while $a_i \neq 0$ for some i, contradicts. Or. By contrapositive, $w \notin \text{span}(v_1, ..., v_m)$, similarly. Or. $\exists j \in \{1, ..., m\}, v_i + w \in \text{span}(v_1 + w, ..., v_{i-1} + w)$. If j = 1 then $v_1 + w = 0$ and we are done. If $j \ge 2$, then $\exists a_i \in F$, $v_i + w = a_1(v_1 + w) + \dots + a_{i-1}(v_{i-1} + w) \iff v_i + \lambda w = a_1v_1 + \dots + a_{i-1}v_{i-1}$. Where $\lambda = 1 - (a_1 + \dots + a_{i-1})$. Note that $\lambda \neq 0$, for if not, $v_i + \lambda w = v_i \in \text{span}(v_1, \dots, v_{i-1})$, contradicts. Now $w = \lambda^{-1}(a_1v_1 + \dots + a_{i-1}v_{i-1} - v_i) \Rightarrow w \in \operatorname{span}(v_1, \dots, v_m).$

11 Suppose $(v_1, ..., v_m)$ is linely inde in V and $w \in V$. Show that $[P](v_1, ..., v_m, w)$ is linely inde $\iff w \notin \text{span}(v_1, ..., v_m)[Q]$. $\begin{aligned} \textbf{Solution:} & \ ^\neg Q \Rightarrow ^\neg P : \textbf{Suppose} \ w \in \text{span} \ (v_1, \dots, v_m). \ \text{Then} \ (v_1, \dots, v_m, w) \ \text{is linely depe.} \\ & \ ^\neg P \Rightarrow ^\neg Q : \textbf{Suppose} \ (v_1, \dots, v_m, w) \ \text{is linely dep.} \ \text{Then by} \ [2.21] \ w \in \text{span} \ (v_1, \dots, v_m). \end{aligned}$ **14** Prove that [P] V is infinite-dim \iff [Q] $there is a sequence <math>(v_1, v_2, \dots)$ in V such that (v_1, \dots, v_m) is linely inde for each $m \in \mathbb{N}^+$. **SOLUTION:** $P \Rightarrow Q$: Suppose V is infinite-dim, so that no list spans V. Step 1 Pick a $v_1 \neq 0$, (v_1) linely inde. Step m Pick a $v_m \notin \text{span}(v_1, ..., v_{m-1})$, by Problem (10)(b), $(v_1, ..., v_m)$ is linely inde. This process recursively defines the desired sequence $(v_1, v_2, ...)$. $\neg P \Rightarrow \neg Q$: Suppose *V* is finite-dim and *V* = span $(w_1, ..., w_m)$. Let (v_1, v_2, \dots) be a sequence in V, then $(v_1, v_2, \dots, v_{m+1})$ must be linely dep. Or. $Q \Rightarrow P$: Suppose there is such a sequence. Choose an m. Suppose a linely inde list $(v_1, ..., v_m)$ spans V. (Similar to [2.16]) Then $\exists v_{m+1} \in V \setminus \text{span}(v_1, ..., v_m)$. Hence no list spans *V* . Thus *V* is infinite-dim. **16** Prove that the vecsp of all continuous functions in $\mathbb{R}^{[0,1]}$ is infinite-dim. **SOLUTION**: Denote the vecsp by U. Choose an $m \in \mathbb{N}^+$. Suppose $a_0, \dots, a_m \in \mathbb{R}$ are such that $a_0 + a_1x + \dots + a_mx^m = 0$, $\forall x \in [0, 1]$. Then the poly has infinitely many roots and hence $a_0 = \cdots = a_m = 0$. Thus $(1, x, ..., x^m)$ is linely inde in $\mathbb{R}^{[0,1]}$. Similar to [2.16], U is infinite-dim. OR. Note that for $a_n = \frac{1}{n}$, $a_1 < a_2 < \dots < a_m$, $\forall m \in \mathbb{N}^+$. Suppose $f_n = \begin{cases} x - \frac{1}{n}, & x \in \left(\frac{1}{n}, 1\right) \\ 0, & x \in \left[0, \frac{1}{n}\right] \end{cases}$ Then for any $m, f_1\left(\frac{1}{m}\right) = \dots = f_m\left(\frac{1}{m}\right)$, while $f_{m+1}\left(\frac{1}{m}\right) \neq 0$. Hence $f_{m+1} \notin \text{span}(f_1, \dots, f_m)$. Thus by Problem (14), U is infinite-dim. **17** Suppose $p_0, p_1, \ldots, p_m \in \mathcal{P}_m(\mathbf{F})$ such that $p_k(2) = 0$ for each $k \in \{0, \ldots, m\}$. *Prove that* $(p_0, p_1, ..., p_m)$ *is not linely inde in* $\mathcal{P}_m(\mathbf{F})$. **SOLUTION:** Suppose $(p_0, p_1, ..., p_m)$ is linely inde. Define $p \in \mathcal{P}_m(\mathbf{F})$ by $p(z) = z \ \forall z \in \mathbf{F}$. But $\forall a_i \in F, z \neq a_0 p_0(z) + \dots + a_m p_m(z)$, for if not, let z = 2, contradicts. Thus $z \notin \text{span}(p_0, p_1, \dots, p_m)$. Then span $(p_0, p_1, \dots, p_m) \subseteq \mathcal{P}_m(\mathbf{F})$ while the list (p_0, p_1, \dots, p_m) has length (m + 1). Hence (p_0, p_1, \dots, p_m) is linely depe in $\mathcal{P}_m(\mathbf{F})$. For if not, because $(1, z, ..., z^m)$ of length (m + 1) spans $\mathcal{P}_m(\mathbf{F})$, thus by [2.23] trivially, (p_0, p_1, \dots, p_m) spans $\mathcal{P}_m(\mathbf{F})$. Contradicts. OR. Note that $\mathcal{P}_m(\mathbf{F}) = \operatorname{span} \underbrace{(1, z, \dots, z^m)}_{\text{of length } (m+1)}$ and then $(p_0, p_1, \dots, p_m, x)$ of length (m+2) is linely dep. (See the above) Now $z \notin \text{span}(p_0, p_1, \dots, p_m)$ and hence (p_0, p_1, \dots, p_m) is linely dep.

7	Prove or give a counterexample: If v_1, v_2, v_3	v_{4}	is a basis of	V and U is a subsp of V
	such that $v_1, v_2 \in U$ and $v_3 \notin U$ and $v_4 \notin$	U, t	then (v_1, v_2)	is a basis of U.

SOLUTION: A counterexample:

Let $V = \mathbb{R}^4$ and e_i be the j^{th} standard basis.

Let
$$v_1 = e_1, v_2 = e_2, v_3 = e_3 + e_4, v_4 = e_4$$
. Then (v_1, \dots, v_4) is a basis of \mathbb{R}^4 .

Let
$$U = \operatorname{span}(e_1, e_2, e_3) = \operatorname{span}(v_1, v_2, v_3 - v_4)$$
. Then $v_3 \notin U$ and (v_1, v_2) is not a basis of U .

• Note for " $C_V U \cap \{0\}$ ":

" $C_V U \cap \{0\}$ " is supposed to be a subsp W such that $V = U \oplus W$.

But if we let
$$u \in U \setminus \{0\}$$
 and $w \in W \setminus \{0\}$, then $\begin{cases} w \in C_V U \cap \{0\} \\ u \pm w \in C_V U \cap \{0\} \end{cases} \Rightarrow u \in C_V U \cap \{0\}$. Contradicts.

To fix this, denote the set $\{W_1, W_2 \dots\}$ by $\mathcal{S}_V U$, where for each W_i , $V = U \oplus W_i$. See also in (1.C.23).

1 Find all vecsps that have exactly one basis.

SOLUTION: The trivial vecsp $\{0\}$ will do. Indeed, the only basis of $\{0\}$ is the empty list.

Now consider a field containing only the add identity 0 and the multi identity 1, and we specify that 1+1=0. Hence the vecsp $\{0,1\}$ will do, the list (1) will be the unique basis.

Are there other vecsps? Suppose so.

- (I) Consider F = R or C. Let (v_1, \dots, v_m) be a basis of $V \neq \{0\}$. While there are infinitely many bases distinct from this one. Hence we fail.
- (II) Consider other **F**. Note that a field contains at least 0 and 1 By *some theories or facts* given in the course of Elementary Abstract Algebra, we fail.
- Suppose $(v_1, ..., v_m)$ is a list of vecs in V. For $k \in \{1, ..., m\}$, let $w_k = v_1 + \cdots + v_k$. Show that $[P](v_1, ..., v_m)$ is a basis of $V \iff [Q](w_1, ..., w_m)$ is a basis of V.

Solution: Notice that (u_1, \dots, u_n) is a basis of $U \iff \forall u \in U, \exists ! a_i \in F, u = a_1u_1 + \dots + a_nu_n$.

$$P \Rightarrow Q: \ \forall v \in V, \ \exists \,! \, a_i \in \mathbb{F}, \ v = a_1 v_1 + \dots + a_m v_m \Rightarrow v = b_1 w_1 + \dots + b_m v_m, \ \exists \,! \, b_1 = a_1, b_k = \sum_{j=1}^k (-1)^{k-j} a_j.$$

$$Q \Rightarrow P: \ \forall v \in V, \ \exists \,! \, b_i \in \mathbf{F}, \ v = b_1 w_1 + \dots + b_m w_m \Rightarrow v = a_1 v_1 + \dots + a_m v_m, \ \exists \,! \, a_k = \sum_{j=1}^k b_j.$$

• Suppose V is finite-dim and U, W are subsps of V such that V = U + W. Prove that there exists a basis of V consisting of vecs in $U \cup W$.

SOLUTION: Let $(u_1, ..., u_m)$ and $(w_1, ..., w_n)$ be bases of U and W respectively.

Then
$$V = \text{span}(u_1, ..., u_m) + \text{span}(w_1, ..., w_n) = \text{span}(u_1, ..., u_m, w_1, ..., w_n).$$

Hence, by [2.31], we get a basis of V consisting of vecs in U or W.

8 Suppose U and W are subsps of V such that $V = U \oplus W$. Suppose $(u_1, ..., u_m)$ is a basis of U and $(w_1, ..., w_n)$ is a basis of W. Prove that $(u_1, ..., u_m, w_1, ..., w_n)$ is a basis of V.

SOLUTION:

$$\forall v \in V, \exists ! u \in U, w \in W, v = u + w = (a_1u_1 + \dots + a_mu_m) + (b_1w_1 + \dots + b_nw_n), \exists ! a_i, b_i \in \mathbf{F}$$

$$\Rightarrow (a_1u_1 + \dots + a_mu_m) = -(b_1w_1 + \dots + b_nw_n) \in U \cap W = \{0\}. \text{ Thus } a_1 = \dots = a_m = b_1 = \dots = b_n. \quad \Box$$

• **Note For** *linely inde sequence and* [2.34]:

" $V = \text{span}(v_1, \dots, v_n, \dots)$ " is an invalid expression.

If we allow using "infinite list", then we must guarantee that (v_1, \dots, v_n, \dots) is a spanning "list" such that for all $v \in V$, there exists a smallest positive integer n such that $v = a_1v_1 + \dots + a_nv_n$, The key point is, how can we guarantee that such a "list" exists?

ENDED

2·C

1 (COROLLARY for [2.38,39])

Suppose U is a subsp of V such that dim $V = \dim U$. Then V = U.

9 Suppose $(v_1, ..., v_m)$ is linely inde in V and $w \in V$. Prove that dim span $(v_1 + w, ..., v_m + w) \ge m - 1$.

SOLUTION: Using the result of Problem (10) and (11) in 2.A.

Note that $v_i - v_1 = (v_i + w) - (v_1 + w) \in \text{span}(v_1 + w, ..., v_n + w)$, for each i = 1, ..., m.

 (v_1, \dots, v_m) linely inde $\Rightarrow (v_1, v_2 - v_1, \dots, v_m - v_1)$ linely inde $\Rightarrow (\underbrace{v_2 - v_1, \dots, v_m - v_1})$ linely inde.

 $\not \subseteq w \notin \operatorname{span}(v_1, \dots, v_m) \Rightarrow (v_1 + w, \dots, v_m + w)$ is linely inde.

Hence $m \ge \dim \operatorname{span}(v_1 + w, \dots, v_m + w) \ge m - 1$.

10 Suppose m is a positive integer and $p_0, p_1, \ldots, p_m \in \mathcal{P}(\mathbf{F})$ are such that each p_k has degree k. Prove that (p_0, p_1, \ldots, p_m) is a basis of $\mathcal{P}_m(\mathbf{F})$.

SOLUTION:

Using mathematical induction on *m*.

- (i) For p_0 , $\deg p_0 = 0 \Rightarrow \operatorname{span}(p_0) = \operatorname{span}(1)$.
- (ii) Suppose for $i \ge 1$, span $(p_0, p_1, ..., p_i) = \text{span } (1, x, ..., x^i)$.

Then span $(p_0, p_1, ..., p_i, p_{i+1}) \subseteq \text{span } (1, x, ..., x^i, x^{i+1}).$

 $\mathbb{Z} \deg p_{i+1} = i+1, \quad p_{i+1}(x) = a_{i+1}x^{i+1} + r_{i+1}(x); \quad a_{i+1} \neq 0, \quad \deg r_{i+1} \leq i.$

$$\Rightarrow x^{i+1} = \frac{1}{a_{i+1}} \left(p_{i+1}(x) - r_{i+1}(x) \right) \in \text{span} \left(1, x, \dots, x^i, p_{i+1} \right) = \text{span} \left(p_0, p_1, \dots, p_i, p_{i+1} \right).$$

$$\therefore x^{i+1} \in \operatorname{span}(p_0, p_1, \dots, p_i, p_{i+1}) \Rightarrow \operatorname{span}(1, x, \dots, x^i, x^{i+1}) \subseteq \operatorname{span}(p_0, p_1, \dots, p_i, p_{i+1}).$$

Thus
$$\mathcal{P}_m(\mathbf{F}) = \operatorname{span}(1, x, \dots, x^m) = \operatorname{span}(p_0, p_1, \dots, p_m).$$

Or. 用比较系数法. Denote the coefficient of x^i in $p \in \mathcal{P}(\mathbf{F})$ by $\xi_i(p)$.

Suppose $L = a_m p_m(x) + \dots + a_1 p_1(x) + a_0 p_0(x) = 0 \cdot x^m + \dots + 0 \cdot x + 0 \cdot 1 = R, \forall x \in \mathbf{F}.$

We use induction on m to show that $a_m = \cdots = a_0 = 0$.

- (i) k = m, $\xi_m(L) = a_m \xi_m(p_m) = \xi_m(R) = 0 \ \ \ \ \deg p_m = m$, $\xi_m(p_m) \neq 0 \Rightarrow a_m = 0$. Now $L = a_{m-1} p_{m-1}(x) + \dots + a_0 p_0(x)$.
- (ii) $1 \le k \le m$, $\xi_k(L) = a_k \xi_k(p_k) = \xi_k(R) = 0 \ \ \ \ \ \deg p_k = k$, $\xi_k(p_k) \ne 0 \Rightarrow a_k = 0$. Now $L = a_{k-1} p_{k-1}(x) + \dots + a_0 p_0(x)$.

• (4E 2.C.10) Suppose m is a positive integer. For $0 \le k \le m$, let $p_k(x) = x^k (1-x)^{m-k}$. Show that $(p_0, ..., p_m)$ is a basis of $\mathcal{P}(\mathbf{F})$.

The basis in this exercise leads to what are called Bernstein polynomials. You can do a web search to learn how Bernstein polynomials are used to approximate continuous functions on [0,1].

SOLUTION: Using mathematical induction.

(i)
$$k = 0, 1, 2, p_m(x) = x^m, p_{m-1}(x) = x^{m-1} - x^m, p_{m-2}(x) = x^{m-2} + x^m - 2x^{m-1}$$

(ii)
$$k \ge 2$$
. Suppose for $p_{m-k}(x)$, $\exists ! a_i \in \mathbf{F}$, $x^{m-k} = p_{m-k}(x) + a_m x^m + \dots + a_{m-k+1} x^{m-k+1}$.

Then for $p_{m-k-1}(x)$, $\exists ! c_i \in \mathbf{F}$,

$$\begin{split} x^{m-k-1} &= p_{m-k-1}(x) + C_{k+1}^1(-1)^2 x^{m-k} + \dots + C_{k+1}^k(-1)^{k+1} x^{m-1} + (-1)^{k-2} x^m \\ \Rightarrow c_{m-i} &= C_{k+1}^{k+1-i} (-1)^{k-i}. \end{split}$$

Thus for each
$$x^i$$
, $\exists ! b_i \in \mathbf{F}, x^i = b_m p_m(x) + \dots + b_{m-i} p_{m-i}(x)$

$$\Rightarrow \operatorname{span}(x^m, \dots, x, 1) = \operatorname{span}\underbrace{(p_m, \dots, p_1, p_0)}_{\text{Basis}}.$$

For any $m, k \in \mathbb{N}^+$ such that $k \leq m$. Define $p_{k,m}$ by $p_{k,m}(x) = x^k (1-x)^{m-k}$.

Define the statement S(m) by $S(m):(p_{0,m},...,p_{m,m})$ is linely inde (and therefore is a basis).

We use induction on to show that S(m) holds for all $m \in \mathbb{N}^+$.

(i)
$$m = 1$$
. Suppose $a_0(1-x) + a_1x = 0$, $\forall x \in \mathbf{F}$. Then
$$\begin{cases} x = 0 \Rightarrow a_0 = 0; \\ x = 1 \Rightarrow a_1. \end{cases}$$

$$m = 2$$
. Suppose $a_0(1-x)^2 + a_1(1-x)x + a_2x^2$, $\forall x \in \mathbf{F}$. Then
$$\begin{cases} x = 0 \Rightarrow a_0 + a_1 = 0; \\ x = 1 \Rightarrow a_2 = 0; \\ x = 2 \Rightarrow a_0 + 2a_1 = 0. \end{cases}$$

(ii) $2 \le m$. Assume that S(m) holds.

Suppose
$$\sum_{k=0}^{m+2} a_k p_{k,m+2}(x) = \sum_{k=0}^{m+2} a_k x^k (1-x)^{m+2-k} = 0, \forall x \in \mathbf{F}.$$

While
$$x = 0 \Rightarrow a_0 = 0$$
; $x = 1 \Rightarrow a_{m+2} = 0$. Then $\sum_{k=1}^{m+1} a_k x^k (1-x)^{m+2-k} = 0$;

And note that
$$\sum_{k=1}^{m+1} a_k x^k (1-x)^{m+2-k}$$

$$= x(1-x)\sum_{k=1}^{m+1} a_k x^{k-1} (1-x)^{m+1-k}$$

$$=x(1-x)\sum_{k=0}^m a_{k+1}x^k(1-x)^{m-k}=x(1-x)\sum_{k=0}^m a_{k+1}p_{k,m}(x).$$

Hence
$$x(1-x) \sum_{k=0}^{m} a_{k+1} p_{k,m}(x) = 0, \forall x \in \mathbf{F} \Rightarrow \sum_{k=0}^{m} a_{k+1} p_{k,m}(x) = 0, \forall x \in \mathbf{F} \setminus \{0,1\}.$$

Hence $x(1-x) \sum_{k=0}^{m} a_{k+1} p_{k,m}(x) = 0, \forall x \in \mathbb{F} \Rightarrow \sum_{k=0}^{m} a_{k+1} p_{k,m}(x) = 0, \forall x \in \mathbb{F} \setminus \{0,1\}.$ Because $\sum_{k=0}^{m} a_{k+1} p_{k,m}(x)$ has infinitely many zeros. We have $\sum_{k=0}^{m} a_{k+1} p_{k,m}(x) = 0, \forall x \in \mathbb{F}.$

By assumption, $a_1 = \cdots = a_m = 0$, while $a_0 = a_{m+2} = 0$,

and also
$$a_{m+1} = 0$$
 (because $\sum_{k=0}^{m} a_{k+1} p_{k,m}(x) = a_{m+1} p_{m,m}(x) = a_{m+1} x^m = 0$, $\forall x \in \mathbf{F}$.)

Thus $(p_{0,m+2}, \dots, p_{m+2,m+2})$ is linely inde and S(m+2) holds.

Since
$$S(m) \Rightarrow S(m+2)$$
 for all $m \in \mathbb{N}^+$. We have
$$\begin{cases} S(1) \Rightarrow S(3) \Rightarrow \cdots \Rightarrow S(2k+1) \Rightarrow \cdots; \\ S(2) \Rightarrow S(4) \Rightarrow \cdots \Rightarrow S(2k) \Rightarrow \cdots. \end{cases}$$

Hence S(m) holds for all $m \in \mathbb{N}^+$.

- **7** (a) Let $U = \{ p \in \mathcal{P}_4(\mathbf{F}) : p(2) = p(5) = p(6) \}$. Find a basis of U.
 - (b) Extend the basis in (a) to a basis of $\mathcal{P}_4(\mathbf{F})$.
 - (c) Find a subsp W of $\mathcal{P}_4(\mathbf{F})$ such that $\mathcal{P}_4(\mathbf{F}) = U \oplus W$.

SOLUTION: Suppose $p(z) = az^4 + bz^3 + cz^2 + dz + e$ such that p(2) = p(5) = p(6).

Then
$$\begin{vmatrix} p(2) = 16a + 8b + 4c + 2d + e & (I) \\ p(5) = 625a + 125b + 25c + 5d + e & (II) \\ p(6) = 1296a + 216b + 36c + 6d + e & (III) \end{vmatrix} \Rightarrow \begin{cases} (II) - (I) = 0 \\ (III) - (II) = 0 \end{cases}$$

You don't have to compute to know that the dimension of the set of solutions is 3.

(Because $\nexists p \in \mathcal{P}_2(\mathbf{F})$ with $1 \le \deg p \le 2, p(2) = p(5) = p(6)$.)

- (a) A basis: 1, (z-2)(z-5)(z-6), z(z-2)(z-5)(z-6).
- (b) Extend to a basis of $\mathcal{P}_4(\mathbf{F})$ as $1, z, z^2, (z-2)(z-5)(z-6), z(z-2)(z-5)(z-6)$.
- (c) Let $W = \operatorname{span}(z, z^2) = \{az + bz^2 : a, b \in \mathbb{F}\}$, so that $\mathcal{P}_4(\mathbb{F}) = U \oplus W$.

• TIPS:

 $(1) \dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim V_2 + \dim V_3 - \dim(V_2 + V_3) - \dim(V_1 + (V_2 \cap V_3)).$

- $(2) \dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim V_2 + \dim V_3 \dim(V_1 + V_3) \dim(V_2 + (V_1 \cap V_3)).$
- (3) $\dim(V_1 \cap V_2 \cap V_3) = \dim V_1 + \dim V_2 + \dim V_3 \dim(V_1 + V_2) \dim(V_3 + (V_1 \cap V_2)).$

For (1). Because $\dim(V_1\cap V_2\cap V_3)=\dim V_1+\dim(V_2\cap V_3)-\dim(V_1+(V_2\cap V_3)).$ And $\dim(V_2\cap V_3)=\dim V_2+\dim V_3-\dim(V_2+V_3).$ Moreover, $\dim(\bigcap_{i=1}^m V_i).$

• (4E 2.C.14) Suppose V is a 10-dim vecsp and V_1, V_2, V_3 are subsps of V with dim $V_1 = \dim V_2 = \dim V_3 = 7$. Prove that $V_1 \cap V_2 \cap V_3 \neq \{0\}$.

SOLUTION: By TIPS, $\dim(V_1 \cap V_2 \cap V_3) \ge \dim V_1 + \dim V_2 + \dim V_3 - 2\dim V > 0$.

• (4E 2.C.15) Suppose V is finite-dim and V_1, V_2, V_3 are subsps of V with dim V_1 + dim V_2 + dim V_3 > 2 dim V. Prove that $V_1 \cap V_2 \cap V_3 \neq \{0\}$.

SOLUTION: By Tips, $\dim(V_1 \cap V_2 \cap V_3) > 2\dim V - \dim(V_2 + V_3) - \dim(V_1 + (V_2 \cap V_3)) \ge 0$.

• COMMENT:

Suppose V_1, \dots, V_m are subsps of V, with each dim $V_i = \left\lceil \frac{\dim V}{2} \right\rceil$, and $V_j \cap V_k \neq \{0\}$ for each $j \neq k$.

We can give an example such that $\bigcap_{i=1}^{m} V_i = \{0\}$:

m = 3, $V = \text{span}(v_1, v_2, v_3)$, $V_1 = \text{span}(v_1, v_2)$, $V_2 = \text{span}(v_2, v_3)$, $V_3 = \text{span}(v_1, v_3)$.

But if dim $V_i \ge \left\lfloor \frac{\dim V}{2} \right\rfloor + 2$, then s.

• (4E 2.C.16)

Suppose V is finite-dim and U is a subsp of V with $U \neq V$. Let $n = \dim V$, $m = \dim U$. Prove that there exist (n - m) subsps of V, say U_1, \ldots, U_{n-m} , each of dimension (n - 1), such that $\bigcap^{n-m} U_i = U$.

SOLUTION: Let $(v_1, ..., v_m)$ be a basis of U, extend to a basis of V as $(v_1, ..., v_m, ..., v_n)$.

Define $U_i = \operatorname{span}(v_1, \dots, v_m, v_{m+1}, \dots, v_{m+i-1}, v_{m+i+1}, \dots, v_n)$ for each i. Thus we are done.

EXAMPLE: Suppose dim V = 6, dim U = 3.

$$\begin{array}{c} U_{1} = \operatorname{span}\left(v_{1}, v_{2}, v_{3}\right) \oplus \operatorname{span}\left(v_{5}, v_{6}\right) \\ (\underbrace{v_{1}, v_{2}, v_{3}, v_{4}, v_{5}, v_{6}}_{\operatorname{Basis of V}}), \operatorname{define} & U_{2} = \operatorname{span}\left(v_{1}, v_{2}, v_{3}\right) \oplus \operatorname{span}\left(v_{4}, v_{6}\right) \\ \underbrace{U_{3} = \operatorname{span}\left(v_{1}, v_{2}, v_{3}\right) \oplus \operatorname{span}\left(v_{4}, v_{5}\right)}_{\operatorname{Basis of V}} \end{array} \right\} \Rightarrow \operatorname{dim} U_{i} = 6 - 1, \ i = \underbrace{1, 2, 3}_{6 - 3 = 3}. \quad \Box$$

14 Suppose that V_1, \ldots, V_m are finite-dim subsps of V.

Prove that $V_1 + \cdots + V_m$ is finite-dim and $\dim(V_1 + \cdots + V_m) \le \dim V_1 + \cdots + \dim V_m$.

 $\textbf{Solution:} \ \ \text{Choose a basis} \ \mathcal{E}_i \ \text{of} \ V_i \Rightarrow V_1 + \dots + V_m = \text{span} \ (\mathcal{E}_1 \cup \dots \cup \mathcal{E}_m); \ \ \dim U_i = \text{card} \ \mathcal{E}_i.$

Then $\dim(V_1 + \cdots + V_m) = \dim \operatorname{span}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m)$.

 \mathbb{Z} dim span $(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m) \leq \operatorname{card}(\mathcal{E}_1 \cup \cdots \cup \mathcal{E}_m) \leq \operatorname{card}\mathcal{E}_1 + \cdots + \operatorname{card}\mathcal{E}_m$.

Thus $\dim(V_1 + \dots + V_m) \le \dim U_1 + \dots + \dim U_m$.

Comment: $\dim(V_1 + \dots + V_m) = \dim U_1 + \dots + \dim U_m \iff V_1 + \dots + V_m$ is a direct sum.

For each i, $(V_1 + \cdots + V_i) \cap V_{i+1} = \{0\} \iff V_1 + \cdots + V_m$ is a direct sum $\iff \square$

17 Suppose V_1 , V_2 , V_3 are subsps of a finite-dim vecsp, then

$$\dim(V_1 + V_2 + V_3) = \dim V_1 + \dim V_2 + \dim V_3$$

$$-\dim(V_1 \cap V_2) - \dim(V_1 \cap V_3) - \dim(V_2 \cap V_3) + \dim(V_1 \cap V_2 \cap V_3).$$

Explain why you might think and prove the formula above or give a counterexample.

SOLUTION:

[Similar to] Given three sets *A*, *B* and *C*.

Because $|X \cup Y| = |X| + |Y| - |X \cap Y|$; $(X \cup Y) \cap Z = (X \cap Z) \cup (Y \cap Z)$.

Now $|(A \cup B) \cup C| = |A \cup B| + |C| - |(A \cup B) \cap C|$.

And $|(A \cup B) \cap C| = |(A \cap C) \cup (B \cap C)| = |A \cap C| + |B \cap C| - |A \cap B \cap C|$.

Hence $|(A \cup B) \cup C| = |A| + |B| + |C| + |A \cap B \cap C| - |A \cap B| - |A \cap C| - |B \cap C|$.

Because $(V_1 + V_2) + V_3 = V_1 + (V_2 + V_3) = (V_1 + V_3) + V_2$.

$$\dim(V_1 + V_2 + V_3) = \dim(V_1 + V_2) + \dim(V_3) - \dim((V_1 + V_2) \cap V_3)$$
 (1)

$$= \dim(V_2 + V_3) + \dim(V_1) - \dim\left((V_2 + V_3) \cap V_1\right) \quad (2)$$

$$= \dim(V_1 + V_3) + \dim(V_2) - \dim((V_1 + V_3) \cap V_2)$$
 (3)

Notice that in general, $(X + Y) \cap Z \neq X \cap Z + Y \cap Z$.

For example, $X = \{(x,0) \in \mathbb{R}^2 : x \in \mathbb{R}\}$, $Y = \{(0,y) \in \mathbb{R}^2 : y \in \mathbb{R}\}$, $Z = \{(z,z) \in \mathbb{R}^2 : z \in \mathbb{R}\}$.

• Corollary: If V_1 , V_2 and V_3 are finite-dim vecsps, then $\frac{(1)+(2)+(3)}{3}$:

$$\dim(V_1 + V_2 + V_3) = \dim V_1 + \dim V_2 + \dim V_3$$

$$-\frac{\dim(V_{1}\cap V_{2})+\dim(V_{1}\cap V_{3})+\dim(V_{2}\cap V_{3})}{3}\\-\frac{\dim\left((V_{1}+V_{2})\cap V_{3}\right)+\dim\left((V_{1}+V_{3})\cap V_{2}\right)+\dim\left((V_{2}+V_{3})\cap V_{1}\right)}{3}$$

The formula above may seem strange because the right side does not look like an integer.

ENDED

3·A

• TIPS:
$$T: V \to W$$
 is linear $\iff \left| \begin{array}{c} \forall v, u \in V, T(v+u) = Tv + Tu \\ \forall v, u \in V, \lambda \in \mathbf{F}, T(\lambda v) = \lambda (Tv) \end{array} \right| \iff T(v+\lambda u) = Tv + \lambda Tu.$

3 Suppose $T \in \mathcal{L}(\mathbf{F}^n, \mathbf{F}^m)$. Prove that $\exists A_{i,k} \in \mathbf{F}$ such that $T(x_1, \dots, x_n) = (A_{1,1}x_1 + \dots + A_{1,n}x_n, \dots, A_{m,1}x_1 + \dots + A_{m,n}x_n)$ for any $(x_1, \ldots, x_n) \in \mathbf{F}^n$. **SOLUTION:** Note that (1,0,...,0,0),...,(0,0,...,0,1) is a basis of \mathbf{F}^n . Let $T(1,0,0,\ldots,0,0) = (A_{1,1},\ldots,A_{m,1}),$ $T(0,1,0,\ldots,0,0) = (A_{1,2},\ldots,A_{m,2}),$ Then by [3.5], we are done. $T(0,0,0,\dots,0,1) = (A_{1,n},\dots,A_{m,n}).$ **4** Suppose $T \in \mathcal{L}(V, W)$ and $(v_1, ..., v_m)$ is a list of vecs in V such that (Tv_1, \ldots, Tv_m) is linely inde in W. Prove that (v_1, \ldots, v_m) is linely inde. **SOLUTION:** Suppose $a_1v_1 + \cdots + a_mv_m = 0$. Then $a_1Tv_1 + \cdots + a_mTv_m = 0$. Thus $a_1 = \cdots = a_m = 0$. **5** *Prove that* $\mathcal{L}(V, W)$ *is a vecsp,* **SOLUTION**: Note that $\mathcal{L}(V, W)$ is a subsp of W^V . 7 Show that every linear map from a one-dim vecsp to itself is multi by some scalar. More precisely, prove that if dim V = 1 and $T \in \mathcal{L}(V)$, then there exists $\lambda \in \mathbf{F}$ such that $Tv = \lambda v$ for all $v \in V$. **SOLUTION:** Let *u* be a nonzero vec in $V \Rightarrow V = \text{span}(u)$. Because $Tu \in V \Rightarrow Tu = \lambda u$ for some λ . Suppose $v \in V \Rightarrow v = au$, $\exists ! a \in \mathbf{F}$. Then $Tv = T(au) = \lambda au = \lambda v$. **8** Give an example of a function $\varphi: \mathbf{R}^2 \to \mathbf{R}$ such that $\varphi(av) = a\varphi(v)$ for all $a \in \mathbb{R}$ and all $v \in \mathbb{R}^2$ but φ is not linear. Define $T(x,y) = \begin{cases} x + y, & \text{if } (x,y) \in \text{span } (3,1), \\ 0, & \text{otherwise.} \end{cases}$ OR. Define $T(x,y) = \sqrt[3]{(x^3 + y^3)}$. **9** Give an example of a function $\varphi: \mathbb{C} \to \mathbb{C}$ such that $\varphi(w+z) = \varphi(w) + \varphi(z)$ for all $w, z \in \mathbb{C}$ but φ is not linear. (Here C is thought of as a complex vecsp.) **SOLUTION:** Suppose $V_{\rm C}$ is the complexification of a vecsp V. Suppose $\varphi: V_{\rm C} \to V_{\rm C}$. Define $\varphi(u + iv) = u = \text{Re}(u + iv)$ Or. Define $\varphi(u + iv) = v = \text{Im}(u + iv)$. • Prove or give a counterexample: If $q \in \mathcal{P}(R)$ and $T : \mathcal{P}(R) \to \mathcal{P}(R)$ is defined by $Tp = q \circ p$, then T is linear. **SOLUTION:** Because in general, $q(p_1(x) + \lambda p_2(x)) \neq (q \circ p_1)(x) + \lambda (q \circ p_2)(x)$.

• OR(3.D.16) Suppose V is finite-dim and $T \in \mathcal{L}(V)$. Suppose ST = TS for every $S \in \mathcal{L}(V)$. Prove that T is a scalar multi of the identity.

C	_	гт	TT	เด	ът
	()	LΙ	l. L.	1()	N

If $V = \{0\}$, then we are done. Now suppose $V \neq \{0\}$.

Assume that (v, Tv) is linely depe for every $v \in V$, then by (2.A.2.(b)), $Tv = \lambda_v v$ for some $\lambda_v \in F$.

To prove that λ_v is independent of v

(in other words, for any two distinct nonzero vecs v and w in V, we have $\lambda_v \neq \lambda_w$), we discuss in two cases:

$$(-) \text{ If } (v,w) \text{ is linely inde, } \lambda_{v+w}(v+w) = T(v+w) = Tv + Tw = a_vv + a_ww \\ \Rightarrow (\lambda_{v+w} - \lambda_v)v + (\lambda_{v+w} - \lambda_w)w = 0 \\ (=) \text{ Otherwise, suppose } w = cv, a_ww = Tw = cTv = ca_vv = a_vw \Rightarrow (a_w - a_v)w \end{cases} \Rightarrow a_w = a_v$$

Now we prove the assumption by contradiction.

Suppose (v, Tv) is linely inde for every nonzero vec $v \in V$.

Fix one v. Extend to $(v, Tv, u_1, ..., u_n)$ a basis of V.

Define
$$S \in \mathcal{L}(V)$$
 by $S(av + bTv + c_1u_1 + \dots + c_nu_n) = bv \Rightarrow S(Tv) = v = T(Sv) = 0$. Contradicts. \square

Or. Let (v_1, \dots, v_m) be a basis of V.

Define $\varphi \in \mathcal{L}(V, \mathbf{F})$ by $\varphi(v_1) = \cdots = \varphi(v_m) = 1$. Let $\lambda = \varphi(Tv_1) \in \mathbf{F}$.

For any $v \in V$, define $S_v \in \mathcal{L}(V)$ by $S_v u = \varphi(u)v$.

Then
$$Tv = T(\varphi(v_1)v) = T(S_v v_1) = S_v(Tv_1) = \varphi(Tv_1)v = \lambda v.$$

10 Suppose U is a subsp of V with $U \neq V$. Suppose $S \in \mathcal{L}(U, W)$ and $S \neq 0$ (which means that $Su \neq 0$ for some $u \in U$).

Define $T: V \to W$ by $Tv = \begin{cases} Sv, \text{if } v \in U, \\ 0, \text{if } v \in V \setminus U. \end{cases}$ Prove that T is not a linear map on V.

SOLUTION:

Suppose *T* is a linear map. And $v \in V \setminus U$, $u \in U$ such that $Su \neq 0$.

Then $v + u \in V \setminus U$, (for if not, $v = (v + u) - u \in U$) while $T(v + u) = 0 = Tv + Tu = 0 + Su \Rightarrow Su = 0$.

Hence we get a contradiction.

11 Suppose V is finite-dim. Prove that every linear map on a subsp of V can be extended to a linear map on V. In other words, show that if *U* is a subsp of *V* and $S \in \mathcal{L}(U, W)$, then there exists $T \in \mathcal{L}(V, W)$ such that Tu = Su for all $u \in U$.

SOLUTION:

Define
$$T \in \mathcal{L}(V, W)$$
 by $T(a_1u_1 + \dots + a_nu_n + a_{n+1}u_{n+1} + \dots + a_mu_m) = a_1Su_1 + \dots + a_nSu_n$.
Where we let (u_1, \dots, u_n) be a basis of U , extend to a basis of V as $(u_1, \dots, u_n, \dots, u_m)$.

12 Suppose V is finite-dim with dim V > 0, and W is infinite-dim. *Prove that* $\mathcal{L}(V,W)$ *is infinite-dim.*

SOLUTION:

Let $(v_1, ..., v_n)$ be a basis of V. Let $(w_1, ..., w_m)$ be linely inde in W for any $m \in \mathbb{N}^+$.

Define
$$T_{x,y} \in \mathcal{L}(V,W)$$
 by $T_{x,y}(v_z) = \delta_{zy}w_y$, $\forall x \in \{1,\ldots,n\}, y \in \{1,\ldots,m\}$, where $\delta_{zy} = \begin{cases} 0, & z \neq y, \\ 1, & z = y. \end{cases}$

Suppose $a_1T_{x,1} + \dots + a_mT_{x,m} = 0$. Then $(a_1T_{x,1} + \dots + a_mT_{x,m})(v_x) = 0 = a_1w_1 + \dots + a_mw_m$.

 $\Rightarrow a_1 = \cdots = a_m = 0$. $\not \subseteq m$ arbitrary.

Thus $(T_{x,1}, \dots, T_{x,m})$ is a linely inde list in $\mathcal{L}(V, W)$ for any x and length m. Hence by (2.A.14). **13** Suppose $(v_1, ..., v_m)$ is a linely depe list of vecs in V. Suppose also that $W \neq \{0\}$. Prove that there exist $(w_1, ..., w_m) \in W$ such that no $T \in \mathcal{L}(V, W)$ satisfies $Tv_k = w_k$ for each k = 1, ..., m.

SOLUTION:

We prove by contradiction. By linear dependence lemma, $\exists j \in \{1, \dots, m\}$ such that $v_j \in \operatorname{span}(v_1, \dots, v_{j-1})$.

Fix *j*. Let $w_j \neq 0$, while $w_1 = \dots = w_{j-1} = w_{j+1} = w_m = 0$.

Define *T* by $Tv_k = w_k$ for all *k*. Suppose $a_1v_1 + \cdots + a_mv_m = 0$ (where $a_i \neq 0$).

Then $T(a_1v_1 + \cdots + a_mv_m) = 0 = a_1w_1 + \cdots + a_mw_m = a_jw_j$ while $a_j \neq 0$ and $w_j \neq 0$. Contradicts. \square

OR. We prove the contrapositive:

Suppose for any list $(w_1, ..., w_m) \in W$, $\exists T \in \mathcal{L}(V, W), Tv_k = w_k$ for each w_k .

(We need to) Prove that (v_1, \dots, v_n) is linely inde.

Suppose $\exists a_i \in F, a_1v_1 + \cdots + a_nv_n = 0$. Choose a nonzero $w \in W$.

By assumption, for the list $(\overline{a_1}w, \dots, \overline{a_m}w)$, $\exists T \in \mathcal{L}(V, W)$, $Tv_k = \overline{a_k}w$ for each v_k .

$$0 = T(\sum_{k=1}^{m} a_k v_k) = \sum_{k=1}^{m} a_k T v_k = \sum_{k=1}^{m} a_k \overline{a_k} w = (\sum_{k=1}^{m} |a_k|^2) w. \text{ Hence } \sum_{k=1}^{m} |a_k|^2 = 0 \Rightarrow a_k = 0.$$

• (4E 3.A.16)

Suppose V is finite-dim. Show that the only two-sided ideals of $\mathcal{L}(V)$ are $\{0\}$ and $\mathcal{L}(V)$. A subsp \mathcal{E} of $\mathcal{L}(V)$ is called a two-sided ideal of $\mathcal{L}(V)$ if $TE \in \mathcal{E}, ET \in \mathcal{E}, \forall E \in \mathcal{E}, T \in \mathcal{L}(V)$.

SOLUTION:

Let $(v_1, ..., v_n)$ be a basis of V. If $\mathcal{E} = 0$, then we are done.

Suppose $\mathcal{E} \neq 0$ and \mathcal{E} is a two-sided ideal of $\mathcal{L}(V)$. Let $S \in \mathcal{E} \setminus \{0\}$.

Suppose $Sv_i \neq 0$ and $Sv_i = a_1v_1 + \cdots + a_nv_n$, where $a_k \neq 0$.

Define $R_{x,y} \in \mathcal{L}(V)$ by $R_{x,y}(v_x) = v_y$, $R_{x,y}(v_z) = 0$ ($z \neq x$). Then for any $x, y \in \mathbb{N}^+$,

$$(R_{k,y}S)(v_i) = a_k v_y \Rightarrow \left((R_{k,y}S) \circ R_{x,i} \right) (v_x) = a_k v_y, \ \left((R_{k,y}S) \circ R_{x,i} \right) (v_z) = 0 \ (z \neq x).$$

Thus $R_{k,y}SR_{x,i} = a_kR_{x,y}$. Denote by $T_{x,y}$.

Getting
$$(\frac{1}{a_k}T_{1,1} + \dots + \frac{1}{a_k}T_{n,n})v_j = v_j \Rightarrow \sum_{r=1}^n \frac{1}{a_k}T_{r,r} = I.$$

X By assumption, $T_{x,y} \in \mathcal{E} \Rightarrow I \in \mathcal{E}$.

Hence for any $T \in \mathcal{L}(V)$, $I \circ T = T \circ I = T \in \mathcal{E} \Rightarrow \mathcal{E} = \mathcal{L}(V)$.

ENDED

 \Box

3.B

2 Suppose $S, T \in \mathcal{L}(V)$ are such that range $S \subseteq \text{null } T$. Prove that $(ST)^2 = 0$.

SOLUTION: $TS = 0 \Rightarrow STST = (ST)^2 = 0.$

3 Suppose (v_1, \ldots, v_m) in V. Define $T \in \mathcal{L}(\mathbf{F}^m, V)$ by $T(z_1, \ldots, z_m) = z_1v_1 + \cdots + z_mv_m$.

- (a) The surj of T corresponds to $(v_1, ..., v_m)$ spanning V.
- (b) The inje of T corresponds to $(v_1, ..., v_m)$ being linely inde.
- 7 Suppose V is finite-dim with $2 \le \dim V$ and also $\dim V \le \dim W$, if W is finite-dim. Show that $U = \{T \in \mathcal{L}(V, W) : \operatorname{null} T \ne \{0\}\}$ is not a subsp of $\mathcal{L}(V, W)$.

Solution:	
Let (v_1, \ldots, v_n) be a basis of V , (w_1, \ldots, w_m) be linely inde in W .	
(Let dim $W=m$, if W is finite, otherwise, let $m\in\{n,n+1,\dots\}; 2\leq n\leq m$).	
Define $T_1 \in \mathcal{L}(V, W)$ as $T_1: v_1 \mapsto 0$, $v_2 \mapsto w_2$, $v_i \mapsto w_i$.	
Define $T_2 \in \mathcal{L}(V, W)$ as $T_2: v_1 \mapsto w_1, v_2 \mapsto 0, v_i \mapsto w_i, i = 3,, n$.	
Thus $T_1 + T_2 \notin U$.	
Comment: If dim $V=0$, then $V=\{0\}=\mathrm{span}().\ \forall\ T\in\mathcal{L}(V,W)$, T is inje. Hence $U=\emptyset$.	
If dim $V = 1$, then $V = \text{span}(v_0)$. Thus $U = \text{span}(T_0)$, where $T_0v_0 = 0$.	
If V is infinite-dim, the result is true as well.	
8 Suppose W is finite-dim with dim $W \ge 2$ and also dim $V \ge \dim W$, if V is finite-dim Show that $U = \{ T \in \mathcal{L}(V, W) : \text{range } T \ne W \}$ is not a subsp of $\mathcal{L}(V, W)$.	п.
SOLUTION:	
Let (v_1, \ldots, v_n) be linely inde in V , (w_1, \ldots, w_m) be a basis of W .	
(Let $n = \dim V$, if V is finite, otherwise we choose $n \in \{m, m+1, \dots\}; 2 \le m \le n$).	
Define $T_1 \in \mathcal{L}(V, W)$ as $T_1: v_1 \mapsto 0$, $v_2 \mapsto w_2$, $v_j \mapsto w_j$, $v_{m+i} \mapsto 0$.	
Define $T_2 \in \mathcal{L}(V, W)$ as $T_2: v_1 \mapsto w_1, v_2 \mapsto 0, v_j \mapsto w_j, v_{m+i} \mapsto 0.$	
For each $j=2,\ldots,m;\ i=1,\ldots,n-m,$ if V is finite, otherwise let $i\in\mathbb{N}^+.$	
Thus $T_1 + T_2 \notin U$.	
Comment: If dim $W=0$, then $W=\{0\}=\mathrm{span}().\ \forall\ T\in\mathcal{L}(V,W)$, T is surj. Hence $U=\emptyset$.	
If dim $W = 1$, then $W = \text{span}(v_0)$. Thus $U = \text{span}(T_0)$, where $T_0v_0 = 0$.	
If W is infinite-dim, the result is true as well.	
9 Suppose $T \in \mathcal{L}(V, W)$ is inje and (v_1, \dots, v_n) is linely inde in V .	
Prove that $(Tv_1,, Tv_n)$ is linely inde in W.	
SOLUTION:	
$a_1 T v_1 + \dots + a_n T v_n = 0 = T(\sum_{i=1}^n a_i v_i) \iff \sum_{i=1}^n a_i v_i = 0 \iff a_1 = \dots = a_n = 0.$	
10 Suppose $(v_1,, v_n)$ spans V and $T \in \mathcal{L}(V, W)$. Show that $(Tv_1,, Tv_n)$ spans ran	ge T.
SOLUTION:	
(a) range $T = \{Tv : v \in V\} = \{Tv : v \in \text{span}(v_1, \dots, v_n)\} \Rightarrow Tv_1, \dots, Tv_n \in \text{range } T \Rightarrow \text{By } [2.7].$	
OR. span $(Tv_1,, Tv_n) \ni a_1 Tv_1 + + a_n Tv_n = T(a_1 v_1 + + a_n v_n) \in \text{range } T.$	
(b) $\forall w \in \text{range } T, \exists v \in V, w = Tv. (\exists a_i \in F, v = a_1v_1 + \dots + a_nv_n) \Rightarrow w = a_1Tv_1 + \dots + a_nTv_n$	$_{i}\Rightarrow\Box$
11 Suppose $S_1,, S_n$ are inje linear maps and $S_1S_2S_n$ makes sence. Prove that $S_1S_2S_n$ is inje.	
$ \textbf{Solution:} \ \ S_1S_2\dots S_n(v) = 0 \Longleftrightarrow S_2S_3\dots S_n(v) = 0 \Longleftrightarrow \cdots \Longleftrightarrow S_n(v) = 0 \Longleftrightarrow v = 0. $	
12 Suppose that V is finite-dim and that $T \in \mathcal{L}(V, W)$. Prove that	
there exists a subsp U of V such that $U \cap \text{null } T = \{0\}$ and range $T = \{Tu : u \in U\}$	[}.
SOLUTION:	

 $\forall v \in V, \ \exists ! \ w \in \text{null} \ T, u \in U, v = w + u. \ \text{Then} \ Tv = T(w + u) = Tu \in \{Tu : u \in U\} \Rightarrow \Box$ Comment: V can be infinite-dim. See the above of [2.34].

By [2.34], there exists a subsp U of V such that $V = U \oplus \text{null } T$.

16 Suppose there exists a linear map on V whose null space and range are both finite-dim. Prove that V is finite-dim.

SOLUTION:

Denote the linear map by T. Let $(Tv_1, ..., Tv_n)$ be a basis of range T, $(u_1, ..., u_m)$ be a basis of null T.

Then for all $v \in V$, $T(\underbrace{v - a_1v_1 - \cdots - a_nv_n}) = 0$, where $Tv = a_1Tv_1 + \cdots + a_nTv_n$. $\Rightarrow u = b_1u_1 + \cdots + b_mu_m \Rightarrow v = a_1v_1 + \cdots + a_nv_n + b_1u_1 + \cdots + b_mu_m$.

$$\Rightarrow u = b_1 u_1 + \dots + b_m u_m \Rightarrow v = a_1 v_1 + \dots + a_n v_n + b_1 u_1 + \dots + b_m u_m$$

Getting $V \subseteq \text{span}(v_1, \dots, v_n, u_1, \dots, u_m)$. Thus V is finite-dim.

17 Suppose V and W are both finite-dim. Prove that there exists an inje $T \in \mathcal{L}(V, W)$ if and only if dim $V \leq \dim W$.

SOLUTION:

- (a) Suppose there exists an inje T. Then dim $V = \dim \operatorname{range} T \leq \dim W$.
- (b) Suppose dim $V \le \dim W$, letting (v_1, \dots, v_n) and (w_1, \dots, w_m) be bases of V and W respectively. Define $T \in \mathcal{L}(V, W)$ by $Tv_i = w_i$, $i = 1, ..., n (= \dim V)$.
- **18** Suppose V and W are both finite-dim. Prove that there exists a surj $T \in \mathcal{L}(V, W)$ if and only if dim $V \geq \dim W$.

SOLUTION:

- (a) Suppose there exists a surj T. Then dim $V = \dim W + \dim \operatorname{null} T \Rightarrow \dim W \leq \dim V$.
- (b) Suppose dim $V \ge \dim W$, letting (v_1, \dots, v_n) and (w_1, \dots, w_m) be bases of V and W respectively. Define $T \in \mathcal{L}(V, W)$ by $T(a_1v_1 + \dots + a_mv_m + a_{m+1}v_{m+1} + \dots + a_nv_n) = a_1w_1 + \dots + a_mw_m$.
- **19** Suppose V and W are finite-dim and that U is a subsp of V. *Prove that* $\exists T \in \mathcal{L}(V, W)$, $\operatorname{null} T = U \iff \dim U \geq \dim V - \dim W$.

SOLUTION:

- (a) Suppose $\exists T \in \mathcal{L}(V, W)$, null T = U. Then dim null $T = \dim U \ge \dim V \dim W$.
- (b) Suppose $\underline{\dim U} \ge \underline{\dim V} \underline{\dim W}$ ($\Rightarrow \dim W = p \ge n = \dim V \dim U$).

Let $(u_1, ..., u_m)$ be a basis of U, extend to a basis of V as $(u_1, ..., u_m, v_1, ..., v_n)$.

Let $(w_1, ..., w_p)$ be a basis of W.

Define
$$T \in \mathcal{L}(V, W)$$
 by $T(a_1v_1 + \dots + a_nv_n + b_1u_1 + \dots + b_mu_m) = a_1w_1 + \dots + a_nw_n$.

• Tips: Suppose $T \in \mathcal{L}(V, W)$ and $R = (Tv_1, ..., Tv_n)$ is linely inde in range T. (Let dim range T = n, if range T is finite, otherwise let $n \in \mathbb{N}^+$.) By (3.A.4), $L = (v_1, ..., v_n)$ is linely inde in V.

• New Notation:

Denote \mathcal{K}_R by span L, if range T is finite-dim, otherwise, denote it by a vecsp in \mathcal{S}_V null T. *Note that if* range T *is finite-dim, then* $\mathcal{K}_{\text{range }T} = \mathcal{K}_R$ *for any basis* R *of* range T.

• New Theorem: $\mathcal{K}_R \in \mathcal{S}_V$ null T.

Suppose range *T* is finite-dim. Otherwise, we are done immediately.

$$\mathcal{K}_R \oplus \operatorname{null} T = V \Longleftarrow \begin{cases} \text{ (a) } T(\sum\limits_{i=1}^n a_i v_i) = 0 \Rightarrow \sum\limits_{i=1}^n a_i T v_i = 0 \Rightarrow a_1 = \dots = a_n = 0 \Rightarrow \mathcal{K}_R \cap \operatorname{null} T = \{0\}. \\ \text{ (b) } \forall v \in V, T v = \sum\limits_{i=1}^n a_i T v_i \Rightarrow T v - \sum\limits_{i=1}^n a_i T v_i = T(v - \sum\limits_{i=1}^n a_i v_i) = 0 \\ \Rightarrow v - \sum\limits_{i=1}^n a_i v_i \in \operatorname{null} T \Rightarrow v = (v - \sum\limits_{i=1}^n a_i v_i) + (\sum\limits_{i=1}^n a_i v_i) \Rightarrow \mathcal{K}_R + \operatorname{null} T = V. \end{cases}$$

- Comment: $\operatorname{null} T \in \mathcal{S}_V \mathcal{K}_R$.
- (4E 3.B.21) Suppose V is finite-dim, $T \in \mathcal{L}(V, W)$, and U is a subsp of W. Prove that $\mathcal{K}_U = \{ v \in V : Tv \in U \}$ is a subsp of V and $\dim \mathcal{K}_U = \dim \operatorname{null} T + \dim(U \cap \operatorname{range} T)$.

SOLUTION:

For any $u, w \in \mathcal{K}_U$ and $\lambda \in \mathbf{F}$, $T(u + \lambda w) = Tu + \lambda Tw \in U \Rightarrow \mathcal{K}_U$ is a subsp of V.

Define $S \in \mathcal{L}(\mathcal{K}_U, U)$ as Rv = Tv for all $v \in \mathcal{K}_U$. Hence range $R = U \cap \text{range } T$.

Suppose Tv = 0 for some $v \in V$. $X \in U \Rightarrow Rv = 0$. Thus null $T \subseteq \text{null } R$.

20 Suppose $T \in \mathcal{L}(V, W)$. Prove that T is inje $\iff \exists S \in \mathcal{L}(W, V)$, $ST = I \in \mathcal{L}(V)$. Solution:

- (a) Suppose $\exists S \in \mathcal{L}(W, V)$, ST = I. Then if $Tv = 0 \Rightarrow ST(v) = 0 = v$.
- (b) Suppose T is inje. Let $R = (Tv_1, ..., Tv_n)$ be linely inde in range $T \subseteq W$, where $n = \dim \operatorname{range} T$ if finite-dim, otherwise $n \in \mathbb{N}^+$.

Then $\mathcal{K}_R \oplus \text{null } T = V$. And supose $U \oplus \text{range } T = W$.

Define $S \in \mathcal{L}(W, V)$ by $S(Tv_i) = v_i$ and Su = 0, $u \in U$. Thus ST = I.

21 Suppose $T \in \mathcal{L}(V, W)$. Prove that T is surj $\iff \exists S \in \mathcal{L}(W, V), TS = I \in \mathcal{L}(W)$.

SOLUTION:

- (a) Suppose $\exists S \in \mathcal{L}(W, V)$, TS = I. Then $\forall w \in W, TS(w) = w \in \text{range } T \Rightarrow \text{range } T = W$.
- (b) Suppose T is surj. Let $R = (Tv_1, ..., Tv_n)$ be linely inde in range T = W, where $n = \dim \operatorname{range} T$ if finite-dim, otherwise $n \in \mathbf{N}^+$.

Then $\mathcal{K}_R \oplus \operatorname{null} T = V$. Define $S \in \mathcal{L}(W, V)$ by $S(Tv_i) = v_i$. Then TS = I.

22 Suppose U and V are finite-dim vecsps and $S \in \mathcal{L}(V, W)$ and $T \in \mathcal{L}(U, V)$. Prove that dim null $ST \leq \dim \text{null } S + \dim \text{null } T$.

SOLUTION:

Define $R \in \mathcal{L}(\text{null } ST, V)$ by Ru = Tu for all $u \in \text{null } ST \subseteq U$.

S(Tu) = 0 = S(Ru)
$$\Rightarrow$$
 range $R \subseteq$ null $S \Rightarrow$ dim range $R \le$ dim null $S \Rightarrow \Box$

$$Tu = 0 = Ru \Rightarrow \text{null } R \supseteq \text{null } T \Rightarrow \text{dim null } R = \text{dim null } T$$

Or. For any $u \in U$, note that $u \in \text{null } ST \iff S(Tu) = 0 \iff Tu \in \text{null } S$.

Thus $\operatorname{null} ST = \mathcal{K}_{\operatorname{null} S \cap \operatorname{range} T} = \{u \in U : Tu \in \operatorname{null} S\}$. By Problem (4E 3B.21),

 $\dim \operatorname{null} ST = \dim \operatorname{null} T + \dim (\operatorname{null} S \cap \operatorname{range} T) \leq \dim \operatorname{null} T + \dim \operatorname{null} S.$

COROLLARY:

- (1) If *T* is inje, then dim null $T = 0 \Rightarrow \dim \text{null } ST \leq \dim \text{null } S$.
- (2) If *T* is surj, then range $R = \text{null } S \Rightarrow \dim \text{null } ST = \dim \text{null } S + \dim \text{null } T$.
- (3) If *S* is inje, then range $R = \{0\} \Rightarrow \dim \text{null } ST = \dim \text{null } R = \dim \text{null } T$.

23 Suppose U and V are finite-dim vecsps and $S \in \mathcal{L}(V, W)$ and $T \in \mathcal{L}(U, V)$.
Prove that dim range $ST \leq \min \{\dim \operatorname{range} S, \dim \operatorname{range} T\}$.
SOLUTION:

$$\operatorname{range} ST = \{Sv : v \in \operatorname{range} T\} = \operatorname{span} (Su_1, \dots, Su_{\dim \operatorname{range} T}),$$
 where
$$\operatorname{span} (u_1, \dots, u_{\dim \operatorname{range} T}) = \operatorname{range} T.$$

 $\dim \operatorname{range} ST \leq \dim \operatorname{range} T \setminus \dim \operatorname{range} ST \leq \dim \operatorname{range} S \Rightarrow \Box$

OR. Note that range $(S|_{range T}) = range ST$.

Thus dim range $ST = \dim \operatorname{range}(S|_{\operatorname{range}T}) = \dim \operatorname{range}T - \dim \operatorname{null}(S|_{\operatorname{range}T}) \leq \operatorname{range}T.$

COROLLARY:

- (1) If *S* is inje, then dim range $ST = \dim \operatorname{range} T$.
- (2) If T is surj, then dim range $ST = \dim \text{range } S$.
- (a) Suppose dim V = 5 and $S, T \in \mathcal{L}(V)$ are such that ST = 0. Prove that dim range $TS \leq 2$.
 - (b) Give an example of $S, T \in \mathcal{L}(\mathbf{F}^5)$ with ST = 0 and dim range TS = 2.

SOLUTION:

By Problem (23), dim range $TS \le \min \left\{ \underbrace{\frac{5-\dim \operatorname{null} T}{\dim \operatorname{range} S}}, \underbrace{\frac{5-\dim \operatorname{null} S}{\dim \operatorname{range} T}} \right\}$.

We show that dim range $TS \le 2$ by contradiction. Assume that dim range $TS \ge 3$.

Then $\min \{5 - \dim \operatorname{null} T, 5 - \dim \operatorname{null} S\} \ge 3 \Rightarrow \max \{\dim \operatorname{null} T, \dim \operatorname{null} S\} \le 2$.

And $ST = 0 \Rightarrow \operatorname{range} T \subseteq \operatorname{null} S \Rightarrow \operatorname{dim} \operatorname{range} TS \leq \operatorname{dim} \operatorname{range} T \leq \operatorname{dim} \operatorname{null} S$.

Thus dim range $TS \le 5$ – dim range $TS \Rightarrow$ dim range $TS \le \frac{5}{2}$.

EXAMPLE: Let $(v_1, ..., v_5)$ be a basis of \mathbf{F}^5 . Define $S, T \in \mathcal{L}(\mathbf{F}^5)$ by:

$$T: \quad v_1 \mapsto 0, \quad \ v_2 \mapsto 0, \quad \ v_i \mapsto v_i \ ;$$

$$S: v_1 \mapsto v_4, v_2 \mapsto v_5, v_i \mapsto 0 ; i = 3,4,5.$$

• Suppose dim V = n and $S, T \in \mathcal{L}(V)$ are such that ST = 0. Prove that dim range $TS \leq \left\lfloor \frac{n}{2} \right\rfloor$.

SOLUTION:

By Problem (23), dim range $TS \le \min \left\{ \underbrace{\frac{n - \dim \text{null } T}{\dim \text{range } S}, \underbrace{\frac{n - \dim \text{null } S}{\dim \text{range } T}} \right\}$. We prove by contradiction.

Assume that dim range $TS \ge \left| \frac{n}{2} \right| + 1$.

Then min $\{n - \dim \operatorname{null} T, n - \dim \operatorname{null} S\} \ge \left\lfloor \frac{n}{2} \right\rfloor + 1$

$$\Rightarrow$$
 max {dim null T , dim null S } $\leq n - \left\lfloor \frac{n}{2} \right\rfloor - 1$.

 \mathbb{Z} dim null $ST = n \le \dim \text{null } S + \dim \text{null } T \le 2(n - \left\lfloor \frac{n}{2} \right\rfloor - 1)$

$$\Rightarrow \left\lfloor \frac{n}{2} \right\rfloor + 1 \leq \frac{n}{2}$$
. Contradicts. Thus dim range $TS \leq \left\lfloor \frac{n}{2} \right\rfloor$.

OR. dim null $S = n - \dim \operatorname{range} S \le n - \dim \operatorname{range} TS$.

And $ST = 0 \Rightarrow \dim \operatorname{range} TS \leq \dim \operatorname{range} T \leq \dim \operatorname{null} S \leq n - \dim \operatorname{range} TS$ $\Rightarrow 2 \dim \operatorname{range} TS \leq n \Rightarrow \dim \operatorname{range} TS \leq \frac{n}{2}$ $\Rightarrow \dim \operatorname{range} TS \leq \left\lfloor \frac{n}{2} \right\rfloor \text{ (because dim range } TS \text{ is an integer).} \square$

24 Suppose that W is finite-dim and $S, T \in \mathcal{L}(V, W)$.

Prove that null $S \subseteq \text{null } T \iff \exists E \in \mathcal{L}(W) \text{ such that } T = ES.$

SOLUTION:

Suppose $\exists E \in \mathcal{L}(W)$ such that T = ES. Then null $T = \text{null } ES \supseteq \text{null } S$.

Suppose null $S \subseteq \text{null } T$. Let $R = (Sv_1, \dots, Sv_n)$ be a basis of range S

 \Rightarrow (v_1, \dots, v_n) is linely inde.

Let $\mathcal{K}_R = \text{span}(v_1, \dots, v_n) \Rightarrow V = \mathcal{K}_R \oplus \text{null } S$.

Define $E \in \mathcal{L}(W)$ by $E(Sv_i) = Tv_i$, Eu = 0; for each i = 1 ..., n and $u \in \text{null } S$.

Hence $\forall v \in V$, $(\exists! a_i \in \mathbb{F}, u \in \text{null } S)$, $Tv = a_1 T v_1 + \dots + a_n T v_n = E(a_1 S v_1 + \dots + a_n S v_n) \Rightarrow T = ES. \square$

OR. Extend *R* to a basis $(Sv_1, ..., Sv_n, w_1, ..., w_m)$ of *W*.

Define $E \in \mathcal{L}(W)$ by $E(Sv_k) = Tv_k$, $Ew_i = 0$.

Because $\forall v \in V$, $\exists a_i \in \mathbf{F}$, $Sv = a_1Sv_1 + \dots + a_nSv_n$ $\Rightarrow S\left(v - (a_1v_1 + \dots + a_nv_n)\right) = 0$ $\Rightarrow v - (a_1v_1 + \dots + a_nv_n) \in \text{null } S$ $\Rightarrow v - (a_1v_1 + \dots + a_nv_n) \in \text{null } T.$ $\Rightarrow T\left(v - (a_1v_1 + \dots + a_nv_n)\right) = 0$

Thus $Tv = a_1v_1 + \dots + a_nv_n$. Hence $E(Sv) = a_1E(Sv_1) + \dots + a_nE(Sv_n) = a_1Tv_1 + \dots + a_nTv_n = Tv$. \Box

25 Suppose that V is finite-dim and $S,T \in \mathcal{L}(V,W)$.

Prove that range $S \subseteq \text{range } T \iff \exists E \in \mathcal{L}(V) \text{ such that } S = TE.$

SOLUTION:

Suppose $\exists E \in \mathcal{L}(V)$ such that S = TE. Then range $S = \text{range } TE \subseteq \text{range } T$.

Suppose range $S \subseteq \text{range } T$. Let (v_1, \dots, v_m) be a basis of V.

Because range $S \subseteq \text{range } T \Rightarrow Sv_i \in \text{range } T \text{ for each } i. \text{ Suppose } u_i \in V \text{ for each } i \text{ such that } Tu_i = Sv_i.$

Thus defining $E \in \mathcal{L}(V)$ by $Ev_i = u_i$ for each $i \Rightarrow S = TE$.

26 Prove that the differentiation map $D \in \mathcal{P}(\mathbf{R})$ is surj.

SOLUTION:

[Informal Proof]

Note that $\deg Dx^n = n - 1$.

Because span $(Dx, Dx^2, ...) \subseteq \text{range } D$. \mathbb{X} By (2.C.10), span $(Dx, Dx^2, ...) = \text{span } (1, x, ...) = \mathcal{P}(\mathbf{R})$. \square

[Proper Proof]

We will recursively define a sequence of polynomials $(p_k)_{k=0}^{\infty}$ where $Dp_k = x^k$.

Because dim $Dx = (\deg x) - 1 = 0$, we have $Dx = C \in \mathbb{F}$. Define $p_0 = C^{-1}x$. Then $Dp_0 = C^{-1}Dx = 1$.

Suppose we have defined p_0, \dots, p_n such that $Dp_k = x^k$ for each $k \in \{0, \dots, n\}$.

Because deg $D(x^{n+2}) = n+1$, we let $D(x^{n+2}) = a_{n+1}x^{n+1} + a_nx^n + \dots + a_1x + a_0$, where $a_{n+1} \neq 0$.

Then $a_{n+1}^{-1}D(x^{n+2}) = x^{n+1} + a_{n+1}^{-1}(a_nDp_n + \dots + a_1Dp_1 + a_0Dp_0)$ $\Rightarrow x^{n+1} = D\left(a_{n+1}^{-1}(x^{n+2} - a_n p_n - \dots - a_1 p_1 - a_0 p_0)\right).$ Thus defining $p_{n+1} = a_{n+1}^{-1}(x^{n+2} - a_n p_n - \dots - a_1 p_1 - a_0 p_0)$, we have $Dp_{n+1} = x^{n+1}$. Hence we get the sequence $(p_k)_{k=0}^{\infty}$ by recursion. Now it suffices to show that D is surj. Let $p = \sum_{k=0}^{\deg p} a_k x^k \in \mathcal{P}(\mathbf{R})$. Then $D\left(\sum_{k=0}^{\deg p} a_k p_k\right) = \sum_{k=0}^{\deg p} a_k D p_k = \sum_{k=0}^{\deg p} a_k x^k = p.$ **27** Suppose $p \in \mathcal{P}(R)$. Prove that $\exists q \in \mathcal{P}(R)$ such that 5q'' + 3q' = p. **SOLUTION:** Define $B \in \mathcal{L}(\mathcal{P}(\mathbf{R}))$ by $B = 5D^2 + 3D \Rightarrow B(q) = 5q'' + 3q'$. Note that $\deg Bx^n = n - 1$. Similar to Problem (26), we conclude that B is surj. **28** Suppose $T \in \mathcal{L}(V, W)$ and $(w_1, ..., w_m)$ is a basis of range T. Prove that $\exists \ \varphi_1, \dots, \varphi_m \in \mathcal{L}(V, \mathbf{F}) \ such \ that \ for \ all \ v \in V, Tv = \varphi_1(v)w_1 + \dots + \varphi_m(v)w_m.$ **SOLUTION:** Suppose $(v_1, ..., v_m)$ in V such that $Tv_i = w_i$ for each i. Then (v_1, \ldots, v_m) is linely inde, extend it to a basis of V as $(v_1, \ldots, v_m, u_1, \ldots, u_n)$. Note that $\forall v \in V, v = a_1v_1 + \dots + a_mv_m + b_1u_1 + \dots + b_nu_n, \exists ! a_i, b_i \in \mathbf{F} \Rightarrow Tv = a_1w_1 + \dots + a_mw_m$ Define $\varphi_i : V \to \mathbf{F}$ by $\varphi_i(v) = a_i v_i$ for each i. We now check the linearity. $\forall v, u \in V \ (\exists ! a_i, b_i, c_i, d_i \in \mathbf{F}), \lambda \in \mathbf{F}, \varphi_i(v + \lambda u) = a_i + \lambda c_i = \varphi(v) + \lambda \varphi(u).$ **29** Suppose $\varphi \in \mathcal{L}(V, \mathbf{F}) \setminus \{0\}$. Suppose $u \in V \setminus \{0\}$. Prove that $V = \{0\}$ and $\{0\}$ and $\{0\}$ are $\{0\}$. **SOLUTION:** (a) $\forall v = cu \in \text{null } \varphi \cap \{au : a \in \mathbf{F}\}\$, $\varphi(v) = 0 = c\varphi(u) \Rightarrow c = 0$. Hence $\text{null } \varphi \cap \{au : a \in \mathbf{F}\} = \{0\}$. $(b) \ \forall \ v \in V, v = \left(v - \frac{\varphi(v)}{\varphi(u)}u\right) + \frac{\varphi(v)}{\varphi(u)}u. \left| \begin{array}{l} v - \frac{\varphi(v)}{\varphi(u)}u \in \operatorname{null}\varphi \\ \frac{\varphi(v)}{\varphi(u)}u \in \{au : a \in \mathbf{F}\} \end{array} \right| \\ \Rightarrow V = \operatorname{null}\varphi \oplus \{au : a \in \mathbf{F}\}. \ \Box$ This may seems strange. Here we explain why. $\varphi \neq 0 \Rightarrow \varphi(v_i) = a_i \neq 0$ for each v_i , for some linely inde list (v_1, \dots, v_k) . Fix one v_k . Then $\varphi\left(v_k-\frac{a_k}{a_j}v_j\right)=0$ for each $j=1,\ldots,k-1,k+1,\ldots,n$. Thus span $\left\{v_k-\frac{a_k}{a_j}v_j\right\}_{j\neq k}\subseteq \operatorname{null}\varphi$. Hence every vecsp in \mathcal{S}_V null φ is one-dim. **30** Suppose $\varphi_1, \varphi_2 \in \mathcal{L}(V, \mathbf{F})$ and $\text{null } \varphi_1 = \text{null } \varphi_2 = \text{null } \varphi$. Prove that $\exists c \in \mathbf{F}, \varphi_1 = c\varphi_2$ **SOLUTION:** If null $\varphi = V$, then $\varphi_1 = \varphi_2 = 0$, we are done. Suppose $u \in V/\text{null } \varphi \Rightarrow \varphi_1(u), \varphi_2(u) \neq 0$. By Problem (29), $V = \text{null } \varphi \oplus \text{span } (u)$. Hence for any $v \in V$, $v = w + a_v u$, $\exists ! w \in \text{null } \varphi, a_v \in F$. $\varphi_1(v) = a_v \varphi_1(u), \ \varphi_2(v) = a_v \varphi_2(u) \Rightarrow a_v = \frac{\varphi_1(v)}{\varphi_1(u)} = \frac{\varphi_2(v)}{\varphi_2(u)} \Rightarrow \frac{\varphi_1(u)}{\varphi_2(u)} = \frac{\varphi_1(v)}{\varphi_2(v)} = c \in \mathbf{F}.$ Thus $\varphi_1 = c\varphi_2$. • Suppose V is finite-dim, X is a subsp of V, and Y is a finite-dim subsp of W.

Prove that if dim X + dim Y = dim V, then $\exists T \in \mathcal{L}(V, W)$, null T = X and range T = Y.

SOLUTION:

Suppose dim X + dim Y = dim V. Let $(u_1, ..., u_n)$ be a basis of X, $R = (w_1, ..., w_m)$ be a basis of Y.

Extend (u_1, \ldots, u_n) to a basis of V as $(u_1, \ldots, u_n, v_1, \ldots, v_m)$.

Define
$$T \in \mathcal{L}(V, W)$$
 by $T(\sum_{i=1}^{m} a_i v_i + \sum_{i=1}^{n} b_i u_i) = \sum_{i=1}^{m} a_i w_i$.
Now we show that null $T = X$ and range $T = Y$

Suppose
$$v \in V$$
. Then $\exists ! a_i, b_j \in F$, $v = \sum_{i=1}^m a_i v_i + \sum_{i=1}^n b_i u_i$.

$$v \in \operatorname{null} T \Rightarrow Tv = 0 \Rightarrow a_1 = \dots = a_m = 0 \Rightarrow v \in X$$

$$v \in X \Rightarrow v \in \operatorname{null} T$$

$$\Rightarrow \operatorname{null} T = X.$$

$$w \in \operatorname{range} T \Rightarrow \exists \ v = \sum_{i=1}^{m} a_i v_i + \sum_{i=1}^{n} b_i u_i \in V, Tv = w = \sum_{i=1}^{m} a_i w_i \Rightarrow w \in Y$$

$$w \in Y \Rightarrow w = a_1 T v_1 + \dots + a_m T v_m = T(a_1 v_1 + \dots + a_m v_m) \Rightarrow w \in \operatorname{range} T$$

$$\Rightarrow \operatorname{range} T = Y. \qquad \Box$$

• Suppose V is finite-dim and $T \in \mathcal{L}(V, W)$. Let $(Tv_1, ..., Tv_n)$ be a basis of range T.

Extend (v_1, \ldots, v_n) to a basis of V as $(v_1, \ldots, v_n, u_1, \ldots, u_m)$.

Prove or give a counterexample: $(u_1, ..., u_m)$ *is a basis of* null T.

SOLUTION: A counterexample:

Suppose dim
$$V = 3$$
, $Tv_1 = Tv_2 = Tv_3 = w_1$. Then span $(Tv_1, Tv_2, Tv_3) = \text{span } (w_1)$.

Extend
$$(v_i)$$
 to (v_1, v_2, v_3) for each i . But none of (v_1, v_2) , (v_1, v_3) , (v_2, v_3) is a basis of null T .

COMMENT: $(v_2 - v_1, v_3 - v_1), (v_1 - v_2, v_3 - v_2)$ or $(v_1 - v_3, v_2 - v_3)$ are all bases of null T.

• Suppose V is finite-dim and $T \in \mathcal{L}(V, W)$. Let $(u_1, ..., u_m)$ be a basis of null T.

Extend (u_1, \ldots, u_m) to a basis of V as $(u_1, \ldots, u_m, v_1, \ldots, v_n)$.

Prove or give a counterexample: $(Tv_1, ..., Tv_n)$ *spans* range T.

SOLUTION:

$$\forall w \in \text{range } T, \ \exists v \in V, \ (\exists ! a_i, b_i \in \mathbf{F}), Tv = T(a_1v_1 + \dots + a_nv_n) = w$$

 $\Rightarrow w \in \text{span } (Tv_1, \dots, Tv_n) \Rightarrow \text{range } T \subseteq \text{span } (Tv_1, \dots, Tv_n).$

COMMENT: If *T* is inje, then $(Tv_1, ..., Tv_n)$ is a basis of range *T*.

• OR(5.B.4) Suppose $P \in \mathcal{L}(V)$ and $P^2 = P$. Prove that $V = \text{null } P \oplus \text{range } P$.

SOLUTION:

Let (P^2v_1, \dots, P^2v_n) be a basis of range P^2 . Then (Pv_1, \dots, Pv_n) is linely inde in V.

$$\begin{array}{l} \operatorname{Let} \, \mathcal{K} = \operatorname{span} \, (Pv_1, \ldots, Pv_n) \Rightarrow V = \mathcal{K} \oplus \operatorname{null} P^2 \\ \mathbb{X} \, \mathcal{K} = \operatorname{range} P = \operatorname{range} P^2; \ \operatorname{null} P = \operatorname{null} P^2 \end{array} \right\} \Rightarrow \square$$

Or. (a) Suppose $v \in \text{null } P \cap \text{range } P$.

Then $\exists u \in V, v = Pu, Pv = 0 \Rightarrow v = Pu = P^2u = Pv = 0$. Hence $\text{null } P \cap \text{range } P = \{0\}$.

(b) Note that v = Pv + (v - Pv) and $P^2v = Pv$ for all $v \in V$.

Then
$$P(v - Pv) = 0 \Rightarrow v - Pv \in \text{null } P$$
. Hence $V = \text{range } P + \text{null } P$.

• Suppose V is finite-dim with dim V > 1. Show that if $\varphi : \mathcal{L}(V) \to \mathbf{F}$ is a linear map such that $\varphi(ST) = \varphi(S) \cdot \varphi(T)$ for all $S, T \in \mathcal{L}(V)$, then $\varphi = 0$.

SOLUTION: Using notations in (4E 3.A.16).

Suppose
$$\varphi \neq 0 \Rightarrow \exists i, j \in \{1, ..., n\}, \, \varphi(R_{i,j}) \neq 0.$$

Because
$$R_{i,j} = R_{x,j} \circ R_{i,x}, \ \forall x = 1, ..., n$$

 $\Rightarrow \varphi(R_{i,i}) = \varphi(R_{x,i}) \cdot \varphi(R_{i,x}) \neq 0 \Rightarrow \varphi(R_{x,i}) \neq 0 \text{ and } \varphi(R_{i,x}) \neq 0.$

Again, because $R_{i,x} = R_{y,x} \circ R_{i,y}$, $\forall y = 1, ..., n$. Thus $\varphi(R_{y,x}) \neq 0$ for any x, y = 1, ..., n.

Let $l \neq i, k \neq j$ and then $\varphi(R_{l,k} \circ R_{i,j}) = \varphi(0) = 0 = \varphi(R_{l,k}) \cdot \varphi(R_{i,j})$

$$\Rightarrow \varphi(R_{l,k}) = 0 \text{ or } \varphi(R_{i,j}) = 0. \text{ Contradicts.}$$

Or. Note that by (4E 3.A.16), $\exists S, T \in \mathcal{L}(V), ST - TS \neq 0$.

Then $\varphi(ST - TS) = \varphi(S)\varphi(T) - \varphi(T)\varphi(S) = 0 \Rightarrow ST - TS \in \text{null } \varphi \neq \{0\}.$

Thus $\forall E \in \text{null } \varphi, T \in \mathcal{L}(V), \varphi(ET) = \varphi(TE) = 0 \Rightarrow ET, TE \in \text{null } \varphi.$

Hence null φ is a nonzero two-sided ideal of $\mathcal{L}(V)$.

• Suppose that V and W are real vecsps and $T \in \mathcal{L}(V, W)$.

Define $T_C: V_C \to W_C$ by $T_C(u + iv) = Tu + iTv$ for all $u, v \in V$.

- (a) Show that T_C is a (complex) linear map from V_C to W_C .
- (b) Show that T_C is inje \iff T is inje.
- (c) Show that range $T_C = W_C \iff \text{range } T = W$.

SOLUTION:

- $$\begin{split} \text{(a)} &\quad \forall u_1 + \mathrm{i} v_1, u_2 + \mathrm{i} v_2 \in V_{\mathrm{C}}, \lambda \in \mathbf{F}, \\ &\quad T\left((u_1 + \mathrm{i} v_1) + \lambda (u_2 + \mathrm{i} v_2)\right) = T\left((u_1 + \lambda u_2) + \mathrm{i} (v_1 + \lambda v_2)\right) = T(u_1 + \lambda u_2) + \mathrm{i} T(v_1 + \lambda v_2) \\ &= Tu_1 + \mathrm{i} Tv_1 + \lambda Tu_2 + \mathrm{i} \lambda Tv_2 = T(u_1 + \mathrm{i} v_1) + \lambda T(u_2 + \mathrm{i} v_2). \end{split}$$
- (b) Suppose $T_{\mathbf{C}}$ is inje. Let $T(u) = 0 \Rightarrow T_{\mathbf{C}}(u + \mathrm{i}0) = Tu = 0 \Rightarrow u = 0$. Suppose T is inje. Let $T_{\mathbf{C}}(u + \mathrm{i}v) = Tu + \mathrm{i}Tv = 0 \Rightarrow Tu = Tv = 0 \Rightarrow u + \mathrm{i}v = 0$.
- (c) Suppose T_{C} is surj. $\forall w \in W$, $\exists u \in V, T(u + i0) = Tu = w + i0 = w \Rightarrow T$ is surj. Suppose T is surj. $\forall w, x \in W, \exists u, v \in V, Tu = w, Tv = x$ $\Rightarrow \forall w + ix \in W_{C}, \exists u + iv \in V, T(u + iv) = w + ix \Rightarrow T_{C}$ is surj.

ENDED

3·C

- Note For [3.47]: $LHS = (AC)_{j,k} = \sum_{r=1}^{n} A_{j,r} C_{r,k} = \sum_{r=1}^{n} (A_{j,r})_{1,r} (C_{\cdot,k})_{r,1} = (A_{j,r}C_{\cdot,k})_{1,1} = A_{j,r}C_{\cdot,k} = RHS.$
- Note For [3.48]:

• NOTE FOR [3.49]:
$$:: [(AC)_{\cdot,k}]_{j,1} = (AC)_{j,k} = \sum_{r=1}^{n} A_{j,r} C_{r,k} = \sum_{r=1}^{n} A_{j,r} (C_{\cdot,k})_{r,1} = (AC_{\cdot,k})_{j,1}$$
$$:: (AC)_{\cdot,k} = A_{\cdot,\cdot} C_{\cdot,k} = AC_{\cdot,k}$$

•Suppose $C \in \mathbf{F}^{m,c}$, $R \in \mathbf{F}^{c,p}$.

(a) For
$$k = 1, ..., p$$
, $(CR)_{\cdot,k} = CR_{\cdot,k} = C_{\cdot,k} = \sum_{r=1}^{c} C_{\cdot,r} R_{r,k} = R_{1,k} C_{\cdot,1} + \cdots + R_{c,k} C_{\cdot,c}$

(b) For
$$j = 1, ..., m$$
, $(CR)_{j,\cdot} = C_{j,\cdot}R = C_{j,\cdot}R_{\cdot,\cdot} = \sum_{r=1}^{c} C_{j,r}R_{r,\cdot} = C_{j,1}R_{1,\cdot} + \cdots + C_{j,c}R_{c,\cdot}$

EXAMPLE:

$$P = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix} \begin{pmatrix} 5 & 6 & 7 \\ 8 & 9 & 10 \end{pmatrix} \in \mathbf{F}^{2,3}.$$

$$P_{\cdot,1} = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix} \begin{pmatrix} 5 \\ 8 \end{pmatrix} = 5 \begin{pmatrix} 1 \\ 3 \end{pmatrix} + 8 \begin{pmatrix} 2 \\ 4 \end{pmatrix} = \begin{pmatrix} 21 \\ 47 \end{pmatrix};$$

$$P_{\cdot,2} = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix} \begin{pmatrix} 6 \\ 9 \end{pmatrix} = 6 \begin{pmatrix} 1 \\ 3 \end{pmatrix} + 9 \begin{pmatrix} 2 \\ 4 \end{pmatrix} = \begin{pmatrix} 24 \\ 54 \end{pmatrix};$$

$$P_{\cdot,3} = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix} \begin{pmatrix} 7 \\ 10 \end{pmatrix} = 7 \begin{pmatrix} 1 \\ 3 \end{pmatrix} + 10 \begin{pmatrix} 2 \\ 4 \end{pmatrix} = \begin{pmatrix} 27 \\ 61 \end{pmatrix};$$

$$P_{1,\cdot} = \begin{pmatrix} 1 & 2 \end{pmatrix} \begin{pmatrix} 5 & 6 & 7 \\ 8 & 9 & 10 \end{pmatrix} = 1 \begin{pmatrix} 5 & 6 & 7 \end{pmatrix} + 2 \begin{pmatrix} 8 & 9 & 10 \end{pmatrix} = \begin{pmatrix} 21 & 24 & 27 \end{pmatrix};$$

$$P_{2,\cdot} = \begin{pmatrix} 3 & 4 \end{pmatrix} \begin{pmatrix} 5 & 6 & 7 \\ 8 & 9 & 10 \end{pmatrix} = 3 \begin{pmatrix} 5 & 6 & 7 \end{pmatrix} + 4 \begin{pmatrix} 8 & 9 & 10 \end{pmatrix} = \begin{pmatrix} 47 & 54 & 61 \end{pmatrix};$$

• Note For [3.52]: $A \in \mathbf{F}^{m,n}, c \in \mathbf{F}^{n,1} \Rightarrow Ac \in \mathbf{F}^{m,1}$

$$(Ac)_{j,1} = \sum_{r=1}^{n} A_{j,r} c_{r,1} = \left[\sum_{r=1}^{n} (A_{\cdot,r} c_{r,1}) \right]_{j,1} = (c_1 A_{\cdot,1} + \dots + c_n A_{\cdot,n})_{j,1}$$

$$\therefore Ac = A_{\cdot,\cdot}c_{\cdot,1} = \sum_{r=1}^{n} A_{\cdot,r}c_{r,1} = c_1A_{\cdot,1} + \dots + c_nA_{\cdot,n}$$
 Or. By $(Ac)_{\cdot,1} = Ac_{\cdot,1}$ Using (a) above.

• Exercise 11: $a \in \mathbf{F}^{1,n}, C \in \mathbf{F}^{n,p} \Rightarrow aC \in \mathbf{F}^{1,p}$

$$\therefore aC = a_{1,\cdot}C_{\cdot,\cdot} = \sum_{r=1}^{n} a_{1,r}C_{r,\cdot} = a_{1}C_{1,\cdot} + \dots + a_{n}C_{n,\cdot}$$
 OR. By $(aC)_{1,\cdot} = a_{1,\cdot}C$. Using (b) above.

• COLUMN-ROW FACTORIZATION (CR Factorization)

Suppose
$$A \in \mathbb{F}^{m,n}$$
, $A \neq 0$. Let $S_c = \operatorname{span}(A_{\cdot,1}, \dots, A_{\cdot,n}) \subseteq \mathbb{F}^{m,1}$, $\dim S_c = c$.

And
$$S_r = \operatorname{span}(A_1, \dots, A_n) \subseteq \mathbf{F}^{1,n}, \dim S_r = r$$
.

Prove that A = CR. $\exists C \in \mathbf{F}^{m,c}$, $R \in \mathbf{F}^{c,n}$.

SOLUTION: Notice that $A \neq 0 \Rightarrow c, r \geq 1$.

Let $(C_{\cdot,1},\ldots,C_{\cdot,c})$ be a basis of S_c , forming $C \in \mathbf{F}^{m,c}$.

Then for any $A_{.,k}$, $A_{.,k} = R_{1,k}C_{.,1} + \dots + R_{c,k}C_{.,c} = (CR)_{.,k}$, $\exists ! R_{1,k}, \dots, R_{c,k} \in F$.

Hence, by letting $R = \begin{pmatrix} R_{1,1} & \cdots & R_{1,n} \\ \vdots & \ddots & \vdots \\ R_{C,1} & \cdots & R_{C,n} \end{pmatrix}$, we have A = CR.

Or. Let $(R_{1,r}, ..., R_{c,r})$ be a basis of S_r , forming $R \in \mathbf{F}^{c,n}$.

For any
$$A_{j,\cdot}$$
, $A_{j,\cdot} = C_{j,1}R_{1,\cdot} + \dots + C_{j,c}R_{c,\cdot} = (CR)_{j,\cdot}$, $\exists ! C_{j,1}, \dots, C_{j,c} \in \mathbb{F}$. Similarly.

EXAMPLE:

$$A = \begin{pmatrix} 10 & 7 & 4 & 1 \\ 26 & 19 & 12 & 5 \\ 46 & 33 & 20 & 7 \end{pmatrix} \stackrel{(1)}{=} \begin{pmatrix} 1 & 0 \\ 0 & 1 \\ 2 & 1 \end{pmatrix} \begin{pmatrix} 10 & 7 & 4 & 1 \\ 26 & 19 & 12 & 5 \end{pmatrix} \stackrel{(2)}{=} \begin{pmatrix} 7 & 4 \\ 19 & 12 \\ 33 & 20 \end{pmatrix} \begin{pmatrix} 2 & -1 \\ 1 & 0 \\ 0 & 1 \\ -1 & 2 \end{pmatrix}$$

- (I) Because $\begin{pmatrix} 46 & 33 & 20 & 7 \end{pmatrix} = 2 \begin{pmatrix} 10 & 7 & 4 & 1 \end{pmatrix} + \begin{pmatrix} 26 & 19 & 12 & 5 \end{pmatrix}$. Hence dim $S_r = 2$. We choose (A_1, A_2) as the basis.
- (II) Because $\begin{pmatrix} 10 \\ 26 \\ 46 \end{pmatrix} = 2 \begin{pmatrix} 7 \\ 19 \\ 33 \end{pmatrix} \begin{pmatrix} 4 \\ 12 \\ 20 \end{pmatrix}; \quad \begin{pmatrix} 1 \\ 5 \\ 7 \end{pmatrix} = 2 \begin{pmatrix} 4 \\ 12 \\ 20 \end{pmatrix} \begin{pmatrix} 7 \\ 19 \\ 33 \end{pmatrix}.$

Hence dim $S_c = 2$. We choose $(A_{.2}, A_{.3})$ as the basis.

• COLUMN RANK EQUALS ROW RANK (Using the notation above)

For any
$$A_{j,\cdot} \in S_r$$
, $A_{j,\cdot} = (CR)_{j,\cdot} = C_{j,1}R = C_{j,1}R_{1,\cdot} + \cdots + C_{j,c}R_{c,\cdot}$
 $\Rightarrow \operatorname{span}(A_{1,\cdot},\ldots,A_{m,\cdot}) = S_r = \operatorname{span}(R_{1,\cdot},\ldots,R_{c,\cdot}) \Rightarrow \dim S_r = r \leq c = \dim S_c.$
Apply the result to $A^t \in \mathbf{F}^{n,m} \Rightarrow \dim S_r^t = \dim S_c = c \leq r = \dim S_r = \dim S_c^t.$

- Suppose $T \in \mathcal{L}(V)$, and u_1, \ldots, u_n and v_1, \ldots, v_n are bases of V. Prove that the following are equi. Here $A = \mathcal{M}(T)$ means $\mathcal{M}(T, (u_1, \ldots, u_n), (v_1, \ldots, v_n))$.
 - (a) T is inje.
 - (b) The cols of $\mathcal{M}(T)$ are linely inde in $\mathbf{F}^{n,1}$.
 - (c) The cols of $\mathcal{M}(T)$ span $\mathbf{F}^{n,1}$.
 - (d) The rows of $\mathcal{M}(T)$ span $\mathbf{F}^{1,n}$.
 - (e) The rows of $\mathcal{M}(T)$ are linely inde in $\mathbf{F}^{1,n}$.

SOLUTION: T is inje \iff dim $V = \dim \operatorname{range} T + \dim \operatorname{null} T = \dim \operatorname{range} T$

 \iff $(Tu_1, ..., Tu_n)$ is linely inde in V, and therefore is a basis of V \iff $(\mathcal{M}(Tu_1), ..., \mathcal{M}(Tu_n))$ is linely inde, as well as $(A_{.,1}, ..., A_{.,n})$ \iff $(A_{.,1}, ..., A_{.,n})$ is a basis of $\mathbf{F}^{n,1}$.

 $\left(\ \, \text{$\mathbb{Z}$ dim span} \left(A_{\cdot,1}, \ldots, A_{\cdot,n} \right) = \dim \operatorname{span} \left(A_{1,\cdot}, \ldots, A_{n,\cdot} \right) = n \ \, \right) \\ \iff \left(A_{1,\cdot}, \ldots, A_{n,\cdot} \right) \text{ is a basis of } \mathbf{F}^{1,n}.$

• Suppose A is an m-by-n matrix with $A \neq 0$. Prove that the rank of A is $1 \iff \exists (c_1, \ldots, c_m) \in \mathbf{F}^m$ and $(d_1, \ldots, d_n) \in \mathbf{F}^n$ such that $A_{j,k} = c_j \cdot d_k$ for every $j = 1, \ldots, m$ and every $k = 1, \ldots, n$.

SOLUTION: Using the notation in CR Factorization.

(a) Suppose
$$A = \begin{pmatrix} c_1 \\ \vdots \\ c_m \end{pmatrix} \begin{pmatrix} d_1 & \cdots & d_n \end{pmatrix} = \begin{pmatrix} c_1 d_1 & \cdots & c_1 d_n \\ \vdots & \ddots & \vdots \\ c_m d_1 & \cdots & c_m d_n \end{pmatrix}.$$
 ($\exists c_j, d_k \in \mathbb{F}, \forall j, k$)

Then $S_c = \operatorname{span} \begin{pmatrix} \begin{pmatrix} c_1 d_1 \\ \vdots \\ c_m d_1 \end{pmatrix}, \begin{pmatrix} c_1 d_2 \\ \vdots \\ c_m d_2 \end{pmatrix}, \dots, \begin{pmatrix} c_1 d_n \\ \vdots \\ c_m d_n \end{pmatrix} \end{pmatrix} = \operatorname{span} \begin{pmatrix} \begin{pmatrix} c_1 \\ \vdots \\ c_m \end{pmatrix}.$

Or. $S_r = \operatorname{span} \begin{pmatrix} \begin{pmatrix} c_1 d_1 & \cdots & c_1 d_n \\ \vdots \\ c_2 d_1 & \cdots & c_2 d_n \end{pmatrix}, \begin{pmatrix} c_2 d_1 & \cdots & c_2 d_n \\ \vdots \\ c_m d_1 & \cdots & c_m d_n \end{pmatrix} = \operatorname{span} \begin{pmatrix} \begin{pmatrix} d_1 & \cdots & d_n \end{pmatrix} \end{pmatrix}.$ Hence the rank of A is 1.

(b) Suppose the rank of *A* is dim $S_c = \dim S_r = 1$

Let
$$c_j = \frac{A_{j,1}}{A_{1,1}} = \frac{A_{j,2}}{A_{1,2}} = \dots = \frac{A_{j,n}}{A_{1,n}}, \qquad d'_k = \frac{A_{1,k}}{A_{1,1}} = \frac{A_{2,k}}{A_{2,1}} = \dots = \frac{A_{m,k}}{A_{m,1}}. \quad (\forall j, k)$$

$$\Rightarrow A_{j,k} = d'_k A_{j,1} = c_j A_{1,k} = c_j d'_k A_{1,1} = c_j d_k. \text{ Letting } d_k = d'_k A_{1,1}.$$

1 Suppose $T \in \mathcal{L}(V, W)$. Show that with resp to each choice of bases of V and W, the matrix of T has at least dim range T nonzero entries.

SOLUTION:

Let $(v_1, ..., v_n)$ and $(w_1, ..., w_m)$ be bases of V and W respectively. We prove by contradiction.

Suppose $A = \mathcal{M}(T, (v_1, ..., v_n), (w_1, ..., w_m))$ has at most (dim range T-1) nonzero entries.

Then by Pigeon Hole Principle, at least one of $A_{\cdot,k} = 0$.

Thus there are at most (dim range T-1) nonzero vecs in Tv_1, \ldots, Tv_n .

While range $T = \operatorname{span}(Tv_1, \dots, Tv_n) \Rightarrow \operatorname{dim}\operatorname{range} T \leq \operatorname{dim}\operatorname{range} T - 1$. We get a contradiction.

3 Suppose V and W are finite-dim and $T \in \mathcal{L}(V, W)$.

Prove that there exist a basis of V and a basis of W such that

[letting $A = \mathcal{M}(T)$ with resp to these bases],

 $A_{k,k} = 1, A_{i,j} = 0$, where $1 \le k \le \dim \operatorname{range} T, i \ne j$.

SOLUTION:

Let $R = (Tv_1, ..., Tv_n)$ be a basis of range T, extend it to the basis of W as $(Tv_1, ..., Tv_n, w_1, ..., w_n)$.

Let $\mathcal{K}_R = \text{span}(v_1, \dots, v_n)$. Let (u_1, \dots, u_m) be a basis of null T.

Then $(v_1, \ldots, v_n, u_1, \ldots, u_m)$ is the basis of V.

Thus $T(v_k) = Tv_k$, $T(u_j) = 0 \Rightarrow A_{k,k} = 1$, $A_{i,j}$ for each $k \in \{1, ..., \dim \operatorname{range} T\}$ and $j \in \{1, ..., m\}$.

4 Suppose $(v_1, ..., v_m)$ is a basis of V and W is finite-dim. Suppose $T \in \mathcal{L}(V, W)$.

Prove that there exists a basis $(w_1, ..., w_n)$ of W such that $\begin{pmatrix} 1 \\ 0 \\ \vdots \end{pmatrix}$ or $\begin{pmatrix} 0 \\ \vdots \\ 0 \end{pmatrix}$. [letting $A = \mathcal{M}(T, (v_1, ..., v_m), (w_1, ..., w_n))$], $A_{\cdot,1} = \begin{pmatrix} 0 \\ \vdots \\ 0 \end{pmatrix}$.

SOLUTION: If $Tv_1 = 0$, then we are done. If not then extend (Tv_1) .

5 Suppose $(w_1, ..., w_n)$ is a basis of W and V is finite-dim. Suppose $T \in \mathcal{L}(V, W)$.

Prove that there exists a basis $(v_1, ..., v_m)$ *of* V *such that*

 $[letting\ A=\mathcal{M}\left(T,(v_1,\ldots,v_m),(w_1,\ldots,w_n)\right)], A_{1,\cdot}=\begin{pmatrix}0&\ldots&0\end{pmatrix} or \begin{pmatrix}1&0&\ldots&0\end{pmatrix}.$

SOLUTION:

Let (u_1, \dots, u_m) be a basis of V. If $A_{1, \dots} = 0$, then let $v_i = u_i$ for each $i = 1, \dots, n$, we are done.

Otherwise, $(A_{1,1} \cdots A_{1,m}) \neq 0$, choose one $A_{1,k} \neq 0$.

Let
$$v_1 = \frac{u_k}{A_{1,k}}$$
; $v_j = u_{j-1} - A_{1,j-1}v_1$ for $j = 2, ..., k$; $v_i = u_i - A_{1,i}v_1$ for $i = k+1, ..., n$.

6 Suppose V and W are finite-dim and $T \in \mathcal{L}(V, W)$. Prove that dim range T = 1if and only if there exist a basis of V and a basis of W such that with resp to these bases, all entries of $A = \mathcal{M}(T)$ equal 1.

SOLUTION: Denote the bases of *V* and *W* by $B_V = (v_1, ..., v_n)$ and $B_W = (w_1, ..., w_m)$ respectively.

(a) Suppose B_V , B_W are the bases such that all entries of A equal 1.

Then $Tv_i = w_1 + \cdots + w_m$ for all $i = 1, \dots, n$. Hence dim range T = 1.

(b) Suppose dim range T = 1. Then dim null $T = \dim V - 1$.

Let (u_2, \dots, u_n) be a basis of null T. Extend it to a basis of V as (u_1, u_2, \dots, u_n) .

Let $w_1 = Tv_1 - w_2 - \cdots - w_m$. Extend it to B_W the basis of W.

Let $v_1 = u_1, v_i = u_1 + u_i$. Extend it to B_V the basis of V.

12 Give an example of 2-by-2 mtcs A and B such that $AB \neq BA$.

SOLUTION:
$$\begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix} \begin{pmatrix} 0 & 1 \\ 1 & 0 \end{pmatrix} = \begin{pmatrix} 0 & 1 \\ -1 & 0 \end{pmatrix}; \qquad \begin{pmatrix} 0 & 1 \\ 1 & 0 \end{pmatrix} \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix} = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix}.$$

13 Prove that the distr property holds for matrix add and matrix multi.

In other words, suppose A, B, C, D, E and F are matrices whose sizes are such that A(B+C) and (D+E)F make sense.

Explain why AB + AC and DF + EF both make sense and prove that.

SOLUTION: Using [3.36], [3.43].

(a) Left distr: Suppose $A \in \mathbf{F}^{m,n}$ and $B, C \in \mathbf{F}^{n,p}$.

Because $[A(B+C)]_{j,k} = \sum_{r=1}^{n} A_{j,r}(B+C)_{r,k} = \sum_{r=1}^{n} (A_{j,r}B_{r,k} + A_{j,r}C_{r,k}).$ Hence we conclude that A(B+C) = AB + AC.

OR. Let $(e_1, ..., e_M)$ be the standard basis of \mathbf{F}^M , where $M = \max\{m, n, p\}$.

Suppose $T \in \mathcal{L}(\mathbf{F}^n, \mathbf{F}^m)$ such that $Te_k = \sum_{j=1}^m A_{j,k} e_j$ for each k = 1, ..., n. Then $\mathcal{M}(T) = A$.

Similarly, define S, R such that $\mathcal{M}(S) = B$, $\mathcal{M}(R) = C$.

Thus
$$T(S+R) = TS + TR$$
 $\Rightarrow \mathcal{M}(T(S+R)) = \mathcal{M}(TS+TR)$
 $\Rightarrow \mathcal{M}(T)[\mathcal{M}(S) + \mathcal{M}(R)] = \mathcal{M}(T)\mathcal{M}(S) + \mathcal{M}(T)\mathcal{M}(R)$
 $\Rightarrow A(B+C) = AB + AC.$

Suppose
$$\mathcal{M}(T) = D$$
, $\mathcal{M}(S) = E$, $\mathcal{M}(R) = F$.

Then (T + S)R = TR + SR

(b) Right distr: Similarly. $\Rightarrow \mathcal{M}((T+S)R) = \mathcal{M}(TR) + \mathcal{M}(SR)$

 $\Rightarrow \left[\mathcal{M}(T) + \mathcal{M}(S) \right] \mathcal{M}(R) = \mathcal{M}(T) \mathcal{M}(R) + \mathcal{M}(S) \mathcal{M}(R)$

14 *Prove that matrix multi is associ. In other words,*

suppose A, B and C are mtcs whose sizes are such that (AB)C makes sense.

Explain why A(BC) makes sense and prove that (AB)C = A(BC).

SOLUTION:

Because
$$[(AB)C]_{j,k} = (AB)_{j,k}C_{\cdot,k} = \sum_{s=1}^{n} (A_{j,s}B_{s,\cdot})C_{\cdot,k} = \sum_{s=1}^{n} A_{j,s}(B_{s,\cdot}C_{\cdot,k}) = \sum_{s=1}^{n} A_{j,s}(BC)_{s,k} = A(BC)_{j,k}$$

Hence we conclude that $(AB)C = A(BC)$.

OR. Suppose $A \in \mathbb{F}^{m,n}$, $B \in \mathbb{F}^{n,p}$, $C \in \mathbb{F}^{p,s}$.

Let $(e_1, ..., e_M)$ be the standard basis of \mathbf{F}^M , where $M = \max\{m, n, p, s\}$.

Suppose $T \in \mathcal{L}(\mathbf{F}^n, \mathbf{F}^m)$ such that $Te_k = \sum_{i=1}^m A_{j,k} e_j$ for each k = 1, ..., n. Then $\mathcal{M}(T) = A$.

Similarly, define S, R such that $\mathcal{M}(S) = B$, $\mathcal{M}(R) = C$.

Hence $(TS)R = T(SR) \Rightarrow \mathcal{M}((TS)R) = \mathcal{M}(T(SR))$

$$\Rightarrow [\mathcal{M}(T)\mathcal{M}(S)] \mathcal{M}(R) = \mathcal{M}(T) [\mathcal{M}(S)\mathcal{M}(R)]$$

$$\Rightarrow (AB)C = A(BC).$$

15 Suppose A is an n-by-n matrix and $1 \le j, k \le n$.

Show that the entry in row j, col k, of A^3

(which is defined to mean AAA) is $\sum_{p=1}^{n} \sum_{r=1}^{n} A_{j,p} A_{p,r} A_{r,k}$.

SOLUTION:

$$(AAA)_{j,k} = (AA)_{j,\cdot}A_{\cdot,k} = \sum_{p=1}^n (A_{j,p}A_{p,\cdot})A_{\cdot,k} = \sum_{p=1}^n \sum_{r=1}^n A_{j,p}A_{p,r}A_{r,k}.$$

OR.
$$(AAA)_{j,k} = \sum_{r=1}^{n} (AA)_{j,r} A_{r,k} = \sum_{r=1}^{n} (\sum_{p=1}^{n} A_{j,p} A_{p,r}) A_{r,k}$$

$$= \sum_{r=1}^{n} (A_{j,1} A_{1,r} A_{r,k} + \dots + A_{j,n} A_{n,r} A_{r,k})$$

$$= A_{j,1} \sum_{r=1}^{n} A_{1,r} A_{r,k} + \dots + A_{j,n} \sum_{r=1}^{n} A_{n,r} A_{r,k} = \sum_{p=1}^{n} \sum_{r=1}^{n} A_{j,p} A_{p,r} A_{r,k}. \square$$

ENDED

3.D

• Suppose $T \in \mathcal{L}(V, W)$ is inv. Show that T^{-1} is inv and $(T^{-1})^{-1} = T$.

SOLUTION: $TT^{-1} = (T^{-1})^{-1}T^{-1} = I \in \mathcal{L}(V)$ $T^{-1}T = T^{-1}(T^{-1})^{-1} = I \in \mathcal{L}(W)$ $\Rightarrow T = (T^{-1})^{-1}$, by the uniques of inverse. \Box

1 Suppose $T \in \mathcal{L}(U, V)$ and $S \in \mathcal{L}(V, W)$ are both inv linear maps.

Prove that $ST \in \mathcal{L}(U, W)$ is inv and that $(ST)^{-1} = T^{-1}S^{-1}$.

Solution: $(ST)(T^{-1}S^{-1}) = STT^{-1}S^{-1} = I \in \mathcal{L}(W)$ $\Rightarrow (ST)^{-1} = T^{-1}S^{-1}$, by the uniques of inverse. \Box

9 Suppose V is finite-dim and $S, T \in \mathcal{L}(V)$.

Prove that ST is inv \iff *S and T are inv.*

SOLUTION:

Suppose S, T are inv. Then $(ST)(T^{-1}S^{-1}) = (T^{-1}S^{-1})(ST) = I$. Hence ST is inv.

Suppose ST is inv. Let $R = (ST)^{-1} \Rightarrow R(ST) = (ST)R = I$.

$$Tv = 0 \Rightarrow v = R(ST)v = RS(Tv) = 0$$

$$\forall v \in V, v = (ST)Rv = S(TRv) \in \text{range } S$$
 \Rightarrow T is inje, S is surj.

Notice that *V* is finite-dim. Hence *S*, *T* are inv.

OR. Suppose ST is inv but S or T is not inv (\Rightarrow not surj and inje).

If S is not inv then dim range $S < \dim V$ and by Problem (23) in (3.B),

dim range $ST \le \dim \text{range } S < \dim V$. Thus ST is not surj. Contradicts.

If T is not inv then dim range T < 0. Similarly, ST is not surj. Contradicts.

10 Suppose V is finite-dim and $S,T \in \mathcal{L}(V)$. Prove that $ST = I \iff TS = I$.

SOLUTION:

Suppose
$$ST = I$$
. $Tv = 0 \Rightarrow v = STv = 0$ $v \in V \Rightarrow v = S(Tv) \in \text{range } S$ $\Rightarrow T$ is inje, S is surj.

Notice that V is finite-dim. Thus T, S are inv.

OR. By Problem (9), V is finite-dim and ST = I is inv $\Rightarrow S$, T are inv.

 $S((TS)v) = ST(Sv) = Sv \Rightarrow (TS)v = v \Rightarrow S$ is inv.

Or.
$$ST = I \Rightarrow S = T^{-1} \Rightarrow S^{-1} = T$$
. $\not \supset S = S \Rightarrow TS = S^{-1}S = I$.

Reversing the roles of *S* and *T*, we conclude that $TS = I \Rightarrow ST = I$.

11 Suppose V is finite-dim and $S, T, U \in \mathcal{L}(V)$ and STU = I. Show that T is inv and that $T^{-1} = US$.

SOLUTION: Using Problem (9) and (10).

$$(ST)U = U(ST) = (US)T = T(US) = S(TU) = (TU)S = I.$$

 $\Rightarrow U^{-1} = ST, \quad T^{-1} = US, \quad S^{-1} = TU.$

12 Show that the result in Exercise 11 can fail without the hypothesis that V is finite-dim.

SOLUTION:

Let
$$V=\mathbf{R}^{\infty}$$
, $S(a_1,a_2,\dots)=(a_2,\dots)$, $T(a_1,\dots)=(0,a_1,\dots)$, $U=I$. Then $STU=I$ but T^{-1} is not inv.

13 Suppose V is finite-dim and R, S, $T \in \mathcal{L}(V)$ are such that RST is surj. *Prove that* S *is inje.*

SOLUTION: By Problem (1) and (9), Notice that V is finite-dim. Then RST is inv.

$$(RST)^{-1} = ((RS)T)^{-1} = T^{-1}(RS)^{-1} = T^{-1}S^{-1}R^{-1}.$$

OR. Let
$$X = (RST)^{-1}$$
 $| Tv = 0 \Rightarrow v = X(RSTv) = 0 \Rightarrow T$ is inje, and therefore is inv. $\forall v \in V, v = (RST)Xv \in \text{range } R \Rightarrow R$ is surj, and therefore is inv.

Thus
$$S = R^{-1}(RST)T^{-1}$$
 is inv.

15 Prove that every linear map from $\mathbf{F}^{n,1}$ to $\mathbf{F}^{m,1}$ is given by a matrix multi. In other words, prove that if $T \in \mathcal{L}(\mathbf{F}^{n,1},\mathbf{F}^{m,1})$, then $\exists A \in \mathbf{F}^{m,n}, Tx = Ax, \ \forall x \in \mathbf{F}^{n,1}$.

SOLUTION:

Let
$$E_i \in \mathbf{F}^{n,1}$$
 for each $i = 1, ..., n$ (where $M = \max\{m, n\}$) be such that $(E_i)_{j,1} = \begin{cases} 0, & i \neq j \\ 1, & i = j \end{cases}$

Then $(E_1, ..., E_n)$ is linely inde and thus is a basis of $\mathbf{F}^{n,1}$.

Similarly, let $(R_1, ..., R_m)$ be a basis of $\mathbf{F}^{m,1}$.

Suppose
$$T(E_i) = A_{1,i}R_1 + \dots + A_{m,i}R_m$$
 for each $i = 1, \dots, n$. Hence by letting $A = \begin{pmatrix} A_{1,1} & \cdots & A_{1,n} \\ \vdots & \ddots & \vdots \\ A_{m,1} & \cdots & A_{m,n} \end{pmatrix}$. \square

COMMENT: $\mathcal{M}(T) = A$. Conversely it is true as well.

• OR(10.A.2) Suppose $A, B \in \mathbf{F}^{n,n}$. Prove that $AB = I \iff BA = I$.

SOLUTION: Using Problem (10) and (15).

Define
$$T, S \in \mathcal{L}(\mathbf{F}^{n,1}, \mathbf{F}^{n,1})$$
 by $Tx = Ax, Sx = Bx$ for all $x \in \mathbf{F}^{n,1}$. Then $\mathcal{M}(T) = A, \mathcal{M}(S) = B$.
Thus $AB = I \Leftrightarrow A(Bx) = x \Leftrightarrow T(Sx) = x \Leftrightarrow TS = I \Leftrightarrow ST = I \Leftrightarrow \mathcal{M}(S)\mathcal{M}(T) = BA = I.\square$

• Note For [3.60]: Suppose $(v_1, ..., v_n)$ is a basis of V and $(w_1, ..., w_m)$ is a basis of W.

Define
$$E_{i,j} \in \mathcal{L}(V, W)$$
 by $E_{i,j}(v_x) = \delta_{ix}w_j$; $\delta_{ix} = \begin{cases} 0, & i \neq x \\ 1, & i = x \end{cases}$ Corollary: $E_{l,k}E_{i,j} = \delta_{jl}E_{i,k}$.

Denote
$$\mathcal{M}(E_{i,j})$$
 by $\mathcal{E}^{(j,i)}$. $(\mathcal{E}^{(j,i)})_{l,k} = \begin{cases} 0, & i \neq k \text{ or } j \neq l \\ 1, & i = k \text{ and } j = l \end{cases}$

Because $\mathcal{L}(V, W)$ and $\mathbf{F}^{m,n}$ are iso. And $T = \mathcal{M}^{-1}\mathcal{M}(T)$, $E_{i,j} = \mathcal{M}^{-1}\mathcal{E}^{(j,i)}$.

Hence
$$\forall T \in \mathcal{L}(V, W), \ \exists ! A_{i,j} \in \mathbf{F}(\ \forall i \in \{1, ..., m\}, j \in \{1, ..., n\}), \mathcal{M}(T) = A = \begin{pmatrix} A_{1,1} & ... & A_{1,n} \\ \vdots & \ddots & \vdots \\ A_{m,1} & ... & A_{m,n} \end{pmatrix}$$

$$\text{Thus } A = \begin{pmatrix} A_{1,1}\mathcal{E}^{(1,1)} + & \cdots & +A_{1,n}\mathcal{E}^{(1,n)} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{m,1}\mathcal{E}^{(m,1)} + & \cdots & +A_{m,n}\mathcal{E}^{(m,n)} \end{pmatrix} \\ \Longleftrightarrow T = \begin{pmatrix} A_{1,1}E_{1,1} + & \cdots & +A_{1,n}E_{n,1} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{m,1}E_{1,m} + & \cdots & +A_{m,n}E_{n,m} \end{pmatrix}.$$

$$\therefore \mathcal{L}(V, W) = \operatorname{span}\left(\underbrace{\begin{bmatrix} E_{1,1}, & \cdots & E_{n,1}, \\ \vdots & \ddots & \vdots \\ E_{1,m}, & \cdots & E_{n,m} \end{bmatrix}}_{\widetilde{B}}; \quad \mathbf{F}^{m,n} = \operatorname{span}\left(\underbrace{\begin{bmatrix} \mathcal{E}^{(1,1)}, & \cdots & \mathcal{E}^{(1,n)}, \\ \vdots & \ddots & \vdots \\ \mathcal{E}^{(m,1)}, & \cdots & \mathcal{E}^{(m,n)} \end{bmatrix}}_{\widetilde{B}_{m}}.$$

Hence by [2.42] and [3.61], we conclude that B is a basis of $\mathcal{L}(V, W)$ and that B_M is a basis of $\mathbf{F}^{m,n}$.

∘ Suppose V is finite-dim and $S \in \mathcal{L}(V)$.

Define $A \in \mathcal{L}(\mathcal{L}(V))$ by $\mathcal{A}(T) = ST$ for $T \in \mathcal{L}(V)$.

- (a) Show that dim null $A = (\dim V)(\dim \operatorname{null} S)$.
- (b) *Show that* dim range $A = (\dim V)(\dim \operatorname{range} S)$.

SOLUTION:

- (a) For all $T \in \mathcal{L}(V)$, $ST = 0 \iff \text{range } T \subseteq \text{null } S$. Thus $\text{null } \mathcal{A} = \mathcal{L}(V, \text{null } S)$.
- (b) For all $R \in \mathcal{L}(V)$, range $R \subseteq \operatorname{range} S \iff \exists T \in \mathcal{L}(V), R = ST$. (By Problem (25) in 3.B) Thus range $\mathcal{A} = \mathcal{L}(V, \operatorname{range} S)$.

Or. Using Note For[3.60].

Let (w_1, \dots, w_m) be a basis of range S, extend it to a basis of V as $(w_1, \dots, w_m, \dots, w_n)$.

Let $v_i \in V$ such that $Sv_i = w_i$ for m = 1, ..., m. Extend $(v_1, ..., v_m)$ to a basis of V as $(v_1, ..., v_m, ..., v_n)$. Define $E_{i,j} \in \mathcal{L}(V)$ by $E_{i,j}(v_x) = \delta_{ix}w_i$.

Thus
$$S = E_{1,1} + \dots + E_{m,m}$$
; $\mathcal{M}(S, (v_1, \dots, v_n), (w_1, \dots, w_n)) = \begin{pmatrix} 1 & 0 & \dots & 0 & 0 & \dots & 0 \\ 0 & 1 & \dots & 0 & 0 & \dots & 0 \\ \vdots & \vdots & \ddots & \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \dots & 1 & 0 & \dots & 0 \\ 0 & 0 & \dots & 0 & 0 & \dots & 0 \\ \vdots & \vdots & \ddots & \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \dots & 0 & 0 & \dots & 0 \end{pmatrix}$

Define $R_{i,j} \in \mathcal{L}(V)$ by $R_{i,j}(w_x) = \delta_{ix}v_i$.

Let
$$E_{j,k}R_{i,j} = Q_{i,k}$$
, $R_{j,k}E_{i,j} = G_{i,k}$

Because
$$\forall T \in \mathcal{L}(V)$$
, $\exists ! A_{i,j} \in \mathbf{F}(\forall i,j=1,\dots,n)$, $T = \begin{pmatrix} A_{1,1}R_{1,1} + & \cdots & +A_{1,m}R_{m,1} + & \cdots & +A_{1,n}R_{n,1} \\ + & \cdots & + & \cdots & + \\ \vdots & \ddots & \vdots & \ddots & \vdots \\ + & \cdots & + & \cdots & + \\ A_{m,1}R_{1,m} + & \cdots & +A_{m,m}R_{m,m} + & \cdots & +A_{m,n}R_{n,m} \\ + & \cdots & + & \cdots & + \\ \vdots & \ddots & \vdots & \ddots & \vdots \\ + & \cdots & + & \cdots & + \\ A_{n,1}R_{1,n} + & \cdots & +A_{n,m}R_{m,n} + & \cdots & +A_{n,n}R_{n,n} \end{pmatrix}$

$$\Rightarrow \mathcal{A}(T) = ST = (\sum_{r=1}^{m} E_{r,r}) (\sum_{i=1}^{n} \sum_{j=1}^{n} A_{i,j} R_{j,i}) = \sum_{i=1}^{m} \sum_{j=1}^{n} A_{i,j} Q_{j,i} = \begin{pmatrix} A_{1,1} Q_{1,1} + & \cdots & + A_{1,m} Q_{m,1} + & \cdots & + A_{1,n} Q_{n,1} \\ + & \cdots & + & \cdots & + \\ \vdots & \ddots & \vdots & \ddots & \vdots \\ + & \cdots & + & \cdots & + \\ A_{m,1} Q_{1,m} + & \cdots & + A_{m,m} Q_{m,m} + & \cdots & + A_{m,n} Q_{n,m} \end{pmatrix}$$

Thus null
$$\mathcal{A} = \operatorname{span}\begin{pmatrix} R_{1,m+1}, & \cdots, R_{n,m+1}, \\ \vdots & \ddots & \vdots \\ R_{1,n}', & \cdots, R_{n,n}' \end{pmatrix}$$
, range $\mathcal{A} = \operatorname{span}\begin{pmatrix} Q_{1,1}, & \cdots, Q_{n,1}, \\ \vdots & \ddots & \vdots \\ Q_{1,m}', & \cdots, Q_{n,m}' \end{pmatrix}$.

Hence (a) dim null $A = n \times (n - m)$; (b) dim range $A = n \times m$.

COMMENT: Define $\mathcal{B} \in \mathcal{L}(\mathcal{L}(V))$ by $\mathcal{B}(T) = TS$ for $T \in \mathcal{L}(V)$.

Similarly,
$$\mathcal{B}(T) = TS = (\sum_{i=1}^{n} \sum_{j=1}^{n} A_{i,j} R_{j,i}) (\sum_{r=1}^{m} E_{r,r}) = \sum_{i=1}^{n} \sum_{j=1}^{m} A_{i,j} G_{j,i} = \begin{pmatrix} A_{1,1} G_{1,1} + & \cdots & + A_{1,m} G_{m,1} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{m,1} G_{1,m} + & \cdots & + A_{m,m} G_{m,m} \\ + & \cdots & + \\ \vdots & \ddots & \vdots \\ + & \cdots & + \\ A_{n,1} G_{1,n} + & \cdots & + A_{n,m} G_{m,n} \end{pmatrix}.$$

• OR(10.A.1) Suppose $T \in \mathcal{L}(V)$ and $(v_1, ..., v_n)$ is a basis of V. Prove that $\mathcal{M}(T, (v_1, ..., v_n))$ is inv $\iff T$ is inv.

SOLUTION:

Notice that \mathcal{M} is an iso of $\mathcal{L}(V)$ onto $\mathbf{F}^{n,n}$.

- (a) $T^{-1}T = TT^{-1} = I \Rightarrow \mathcal{M}(T^{-1})\mathcal{M}(T) = \mathcal{M}(T)\mathcal{M}(T^{-1}) = I \Rightarrow \mathcal{M}(T^{-1}) = \mathcal{M}(T)^{-1}$.
- (b) $\mathcal{M}(T)\mathcal{M}(T)^{-1} = \mathcal{M}(T)^{-1}\mathcal{M}(T) = I$. $\exists ! S \in \mathcal{L}(V)$ such that $\mathcal{M}(T)^{-1} = \mathcal{M}(S)$
- $\Rightarrow \mathcal{M}(T)\mathcal{M}(S) = \mathcal{M}(S)\mathcal{M}(T) = I = \mathcal{M}(TS) = \mathcal{M}(ST)$
- $\Rightarrow \mathcal{M}^{-1}\mathcal{M}(TS) = \mathcal{M}^{-1}\mathcal{M}(ST) = I = TS = ST \Rightarrow S = T^{-1}.$

• OR(10.A.4) Suppose that $(\beta_1, ..., \beta_n)$ and $(\alpha_1, ..., \alpha_n)$ are bases of V. Let $T \in \mathcal{L}(V)$ be such that $Tv_k = u_k$ for each k = 1, ..., n.

Prove that $\mathcal{M}(T,(\alpha_1,\ldots,\alpha_n)) = \mathcal{M}(I,(\beta_1,\ldots,\beta_n),(\alpha_1,\ldots,\alpha_n)).$

SOLUTION:

For ease of notation, let $\mathcal{M}(T, \alpha \to \beta) = \mathcal{M}\left(T, (\alpha_1, \dots, \alpha_n), (\beta_1, \dots, \beta_n)\right), \ \mathcal{M}\left(T, \alpha \to \alpha\right) = \mathcal{M}(T, (\alpha_1, \dots, \alpha_n))$

Denote $\mathcal{M}(T, \alpha \to \alpha)$ by A and $\mathcal{M}(I, \beta \to \alpha)$ by B.

$$\forall k \in \{1, \dots, n\}, Iu_k = u_k = B_{1,k}\alpha_1 + \dots + B_{n,k}\alpha_n = Tv_k = A_{1,k}\alpha_1 + \dots + A_{n,k}\alpha_n \Rightarrow A = B. \qquad \square$$

OR. Note that $\mathcal{M}(T, \alpha \to \beta)$ is the identity matrix.

$$\mathcal{M}(T,\alpha\to\alpha)=\mathcal{M}(I,\beta\to\alpha)\underbrace{\mathcal{M}(T,\alpha\to\beta)}_{=\mathcal{M}(I,\beta\to\beta)}=\mathcal{M}(I,\beta\to\alpha).$$

Or. Note that $\mathcal{M}(T, \beta \to \beta)\mathcal{M}(I, \alpha \to \beta) = \mathcal{M}(T, \alpha \to \beta) = I$.

$$\mathcal{M}(T,\alpha\to\alpha)=\mathcal{M}(I,\alpha\to\beta)^{-1}[\underbrace{\mathcal{M}(T,\beta\to\beta)\mathcal{M}(I,\alpha\to\beta)}]=\mathcal{M}(I,\beta\to\alpha).$$

COMMENT: Denote $\mathcal{M}(T, \beta \to \beta)$ by A'.

$$u_k = Iu_k = B_{1,k}\alpha_1 + \cdots + B_{n,k}\alpha_n, \ \forall \ k \in \{1,\ldots,n\}.$$

Or. $\mathcal{M}(T, \beta \to \beta) = \mathcal{M}(T, \alpha \to \beta)\mathcal{M}(I, \beta \to \alpha) = B$.

16 Suppose V is finite-dim and $S \in \mathcal{L}(V)$.

Prove that $\exists \lambda \in \mathbf{F}, S = \lambda I \iff ST = TS$ *for every* $T \in \mathcal{L}(V)$.

SOLUTION: Using the notation and result in (o).

Suppose $S = \lambda I$. Then $ST = TS = \lambda T$ for every $T \in \mathcal{L}(V)$. Conversely, if S = 0, then we are done.

Suppose $S \neq 0$, ST = TS, $\forall T \in \mathcal{L}(V)$. Let $S = E_{1,1} + \cdots + E_{m,m} \Rightarrow \mathcal{M}\left(S, (v_1, \dots, v_1)\right) = \mathcal{M}\left(I, (w_1, \dots, w_n), (v_1, \dots, v_n)\right).$ Then $\forall k \in \{m+1,\ldots,n\}, 0 \neq SR_{k,1} = R_{k,1}S$. Hence $n = \dim V = \dim \operatorname{range} S = m$. Note that $R_{i,j}S = SR_{i,j} \iff Q_{i,j} = G_{i,j}$. Thus $Q_{i,j}(w_i) = w_j = a_{i,i}v_j = G_{i,j}(a_{1,i}v_1 + \cdots + a_{n,i}v_n)$. Where: $a_{i,j} = \mathcal{M}\left(I, (w_1, \dots, w_n), (v_1, \dots, v_n)\right)_{i,j} \Longleftrightarrow w_i = Iw_i = a_{1,i}v_1 + \dots + a_{n,i}v_n;$ For each j, for all i. Thus $a_{i,i} = a_{k,k} = \lambda$, $\forall k \neq i$. $\text{Hence } w_i = \lambda v_i \Rightarrow \mathcal{M}(S) \ = \begin{pmatrix} \lambda & & 0 \\ & \ddots & \\ 0 & & \lambda \end{pmatrix} = \ \mathcal{M}\left(\lambda I, (v_1, \dots, v_n)\right) \Rightarrow S = \mathcal{M}^{-1}\left(\mathcal{M}(\lambda I)\right) = \lambda I.$ • OR(10.A.3) Suppose V is finite-dim and $T \in \mathcal{L}(V)$. *Prove that T has the same matrix with resp to every basis of V* if and only if T is a scalar multi of the identity operator. **SOLUTION:** [Compare with the first solution of Problem (16) in (3.A)] Suppose $T = \lambda I$ for some $\lambda \in \mathbf{F}$. Then T has the same matrix with resp to every basis of V. Conversely, if T = 0, then we are done; Suppose $T \neq 0$. And v is a nonzero vec in V. Assume that (v, Tv) is linely inde. Extend (v, Tv) to a basis of V as $(v, Tv, u_3, ..., u_n)$. Let $B = \mathcal{M}(T, (v, Tv, u_3, ..., u_n))$. $\Rightarrow Tv = B_{1,1}v + B_{2,1}(Tv) + B_{3,1}u_3 + \dots + B_{n,1}u_n \Rightarrow B_{2,1} = 1, B_{i,1} = 0, \forall i \neq 2.$ By assumption, $A = \mathcal{M}(T, (v, w_2, ..., w_n)) = B$ for any basis $(v, w_2, ..., w_n)$. Then $A_{2,1} = 1, A_{i,1} = 1$ $0 (\cdots)$. $\Rightarrow Tv = w_2$, which is not true if we let $w_2 = u_3$, $w_3 = Tv$, $w_j = u_j$ (j = 4, ..., n). Contradicts. Hence (v, Tv) is linely depe $\Rightarrow \forall v \in V, \exists \lambda_v \in F, Tv = \lambda_v v$. Now we show that λ_v is independent of v, that is, to show that for any two nonzero distinct vecs $v, w \in V, \lambda_v = \lambda_w$. Thus $T = \lambda I, \exists \lambda \in F$. $= \lambda_v v + \lambda_w w = Tv + Tw \Rightarrow \lambda_{v+w} = \lambda_v = \lambda_w$ $= \lambda_v v + \lambda_w w = Tv + Tw \Rightarrow \lambda_{v+w} = \lambda_v = \lambda_w$ $(v, w) \text{ is linely depe, } w = cv \Rightarrow Tw = \lambda_w w = \lambda_w cv = c\lambda_v v = T(cv) \Rightarrow \lambda_v = \lambda_w$ (v, w) is linely inde $\Rightarrow T(v + w) = \lambda_{v+w}(v + w) = \lambda_{v+w}v + \lambda_{v+w}w$ OR. Conversely, denote $\mathcal{M}(T,(u_1,\ldots,u_m))$ by A, where the basis (u_1,\ldots,u_m) is arbitrary. Fix one basis (v_1, \ldots, v_m) and then $(v_1, \ldots, \frac{1}{2}v_k, \ldots, v_m)$ is also a basis for any given $k \in \{1, \ldots, m\}$. Fix one k. Now we have $T(\frac{1}{2}v_k) = A_{1,k}v_1 + \dots + A_{k,k}(\frac{1}{2}v_k) + \dots + A_{m,k}v_m$ $\Rightarrow Tv_k = 2A_{1,k}v_1 + \dots + A_{k,k}v_k + \dots + 2A_{m,k}v_m = A_{1,k}v_1 + \dots + A_{k,k}v_k + \dots + A_{m,k}v_m.$ Then $A_{j,k} = 2A_{j,k} \Rightarrow A_{j,k} = 0$ for all $j \neq k$. Thus $Tv_k = A_{k,k}v_k$, $\forall k \in \{1, ..., m\}$. Now we show that $A_{k,k} = A_{j,j}$ for all $j \neq k$. Choose j,k such that $j \neq k$. Consider the basis $(v'_1, \ldots, v'_i, \ldots, v'_k, \ldots, v'_m)$, where $v'_{i} = v_{k}$, $v_{k}' = v_{i}$ and $v'_{i} = v_{i}$ for all $i \in \{1, ..., m\} \setminus \{j, k\}$. Remember that $\mathcal{M}\left(T,\left(v_{1}^{\prime},\ldots,v_{m}^{\prime}\right)\right)=\mathcal{M}\left(T,\left(v_{1},\ldots,v_{m}\right)\right)=A.$ Hence $T(v'_k) = A_{1,k}v'_1 + \dots + A_{k,k}v'_k + \dots + A_{m,k}v'_m = A_{k,k}v'_k = A_{k,k}v_j$, while $T(v'_k) = T(v_j) = A_{j,j}v_j$. Thus $A_{k,k} = A_{i,i}$. **17** Suppose V is finite-dim. Show that the only two-sided ideals of $\mathcal{L}(V)$ are $\{0\}$ and $\mathcal{L}(V)$. A subsp \mathcal{E} of $\mathcal{L}(V)$ is called a two-sided ideal of $\mathcal{L}(V)$ if $TE \in \mathcal{E}, ET \in \mathcal{E}, \forall E \in \mathcal{E}, T \in \mathcal{L}(V)$.

SOLUTION: Using NOTE FOR[3.60]. Let $(v_1, ..., v_n)$ be a basis of V. If $\mathcal{E} = 0$, then we are done. Suppose $\mathcal{E} \neq 0$ and \mathcal{E} is a two-sided ideal of $\mathcal{L}(V)$.

Then for any $E_{i,j} \in \mathcal{E}$, ($\forall x, y = 1, ..., n$), by assumption, $E_{j,x}E_{i,j} = E_{i,x} \in \mathcal{E}$, $E_{i,j}E_{y,i} = E_{y,j} \in \mathcal{E}$.

Again, $E_{y,x'}, E_{y',x} \in \mathcal{E}$ for all $x', y', x, y = 1,, n$. Thus \mathcal{E}	$\mathcal{E} = \mathcal{L}(V).$
---	---------------------------------

18 *Show that V and* $\mathcal{L}(\mathbf{F}, V)$ *are iso vecsps.*

SOLUTION:

Define $\Psi \in \mathcal{L}(V, \mathcal{L}(\mathbf{F}, V))$ by $\Psi(v) = \Psi_v$; where $\Psi_v \in \mathcal{L}(\mathbf{F}, V)$ and $\Psi_v(\lambda) = \lambda v$.

- (a) $\Psi(v) = \Psi_v = 0 \Rightarrow \forall \lambda \in F, \Psi_v(\lambda) = \lambda v = 0 \Rightarrow v = 0$. Hence Ψ is inje.
- (b) $\forall T \in \mathcal{L}(\mathbf{F}, V)$, let $v = T(1) \Rightarrow T(\lambda) = \lambda v = \Psi_v(\lambda)$, $\forall \lambda \in \mathbf{F} \Rightarrow T = \Psi(T(1))$. Hence Ψ is surj. \square

Or. Define $\Phi \in \mathcal{L}(\mathcal{L}(\mathbf{F}, V), V)$ by $\Phi(T) = T(1)$.

- (a) Suppose $\Phi(T) = 0 = T(1) = \lambda T(1) = T(\lambda)$, $\forall \lambda \in \mathbf{F} \Rightarrow T = 0$. Thus Φ is inje.
- (b) For any $v \in V$, define $T \in \mathcal{L}(\mathbf{F}, V)$ by $T(\lambda) = \lambda v$. Then $\Phi(T) = T(1) = v$. Thus Φ is surj. \square Comment: $\Phi = \Psi^{-1}$.
- Suppose $q \in \mathcal{P}(\mathbf{R})$. Prove that $\exists p \in \mathcal{P}(\mathbf{R}), q(x) = (x^2 + x)p''(x) + 2xp'(x) + p(3), \forall x \in \mathbf{R}$.

SOLUTION:

Note that $deg[(x^2 + x)p''(x) + 2xp'(x) + p(3)] = deg p$.

Define $T_n: \mathcal{P}_n(\mathbf{R}) \to \mathcal{P}_n(\mathbf{R})$ by $T_n(p) = (x^2 + x)p''(x) + 2xp'(x) + p(3)$.

As can be easily checked, T_n is an operator.

Because $\deg(T_n p) = \deg p$. If $T_n(p) = 0 \Rightarrow \deg(T_n p) = -\infty$, then $\deg p = -\infty \Rightarrow p = 0$.

Hence T_n is inje and therefore is surj.

For all $q \in \mathcal{P}(\mathbf{R})$, if q = 0, let m = 0; if $q \neq 0$, let $m = \deg q$. We have $q \in \mathcal{P}_m(\mathbf{R})$.

Hence $\exists p \in \mathcal{P}_m(\mathbf{R}), q(x) = T_m(p) = (x^2 + x)p''(x) + 2xp'(x) + p(3)$ for all $x \in \mathbf{R}$.

- **19** Suppose $T \in \mathcal{L}(\mathcal{P}(\mathbf{R}))$ is inje. $\deg Tp \leq \deg p$ for every nonzero $p \in \mathcal{P}(\mathbf{R})$.
 - (a) *Prove that T is surj.*
 - (b) Prove that for every nonzero p, $\deg Tp = \deg p$.

SOLUTION:

- (a) T is inje $\iff T|_{\mathcal{P}_n(\mathbb{R})}: \mathcal{P}_n(\mathbb{R}) \to \mathcal{P}_n(\mathbb{R})$ is inje for any $n \in \mathbb{N}^+$ $\iff T|_{\mathcal{P}_n(\mathbb{R})}$ is surj for any $n \in \mathbb{N}^+ \iff T$ is surj.
- (b) Using mathematical induction.
 - (i) $\deg p = 0 \Rightarrow p = C \Rightarrow \deg Tp = \deg p = 0$. $\deg p = -\infty \Rightarrow p = 0 \Rightarrow \deg Tp = \deg p = -\infty$.
 - (ii) Suppose $\deg f = \deg Tf$ for all $f \in \mathcal{P}_n(\mathbf{R})$. Then suppose $\deg g = n+1, g \in \mathcal{P}_{n+1}(\mathbf{R})$.

Assume that $\deg Tg < \deg g$ ($\Rightarrow \deg Tg \leq n, Tg \in \mathcal{P}_n(\mathbf{R})$).

Then by (a), $\exists f \in \mathcal{P}_n(\mathbf{R}), T(f) = (Tg). \ \ \ \ \ \ T \text{ is inje} \Rightarrow f = g.$

While $\deg f = \deg Tf = \deg Tg < \deg g$. Contradicts the assumption.

Hence $\deg Tp = \deg p$ for all $p \in \mathcal{P}_{n+1}(\mathbf{R})$.

Thus $\deg Tp = \deg p$ for all $p \in \mathcal{P}(\mathbf{R})$.

• Suppose $T \in \mathcal{L}(V)$ and $(v_1, ..., v_m)$ is a list in V such that $(Tv_1, ..., Tv_m)$ spans V. Prove that $(v_1, ..., v_m)$ spans V.

SOLUTION:

Because $V = \operatorname{span}\left(Tv_1,\ldots,Tv_m\right) \Rightarrow T$ is surj, $\not \subseteq V$ is finite-dim $\Rightarrow T$ is inv $\Rightarrow T^{-1}$ is inv. $\forall v \in V, \ \exists \ a_i \in F, v = a_1Tv_1 + \cdots + a_nTv_n \Rightarrow T^{-1}v = a_1v_1 + \cdots + a_nv_n \Rightarrow \operatorname{range} T^{-1} \subseteq \operatorname{span}\left(v_1,\ldots,v_n\right)$. \square

OR. Reduce $(Tv_1, ..., Tv_n)$ to a basis of V as $(Tv_{\alpha_1}, ..., Tv_{\alpha_m})$, where $m = \dim V$ and $\alpha_i \in \{1, ..., m\}$. Then $(v_{\alpha_1}, \dots, v_{\alpha_m})$ is linely inde of length m, therefore is a basis of V, contained in the list (v_1, \dots, v_m) . **2** Suppose V is finite-dim and dim V > 1. *Prove that the set of non-inv operators on* V *is not a subsp of* $\mathcal{L}(V)$ *.* **SOLUTION**: Denote the set by U. Suppose dim V = n > 1. Let $(v_1, ..., v_n)$ be a basis of V. Define $S, T \in \mathcal{L}(V)$ by $S(a_1v_1 + \dots + a_nv_n) = a_1v_1$ and $T(a_1v_1 + \dots + a_nv_n) = a_2v_1 + \dots + a_nv_n$. Hence S + T = I is inv. Thus *U* is not closed under add and therefore is not a subsp. **C**OMMENT: If dim V = 1, then $U = \{0\}$ is a subsp of $\mathcal{L}(V)$. **3** Suppose V is finite-dim, U is a subsp of V, and $S \in \mathcal{L}(U, V)$. *Prove that there exists an inv* $T \in \mathcal{L}(V, V)$ *such that* Tu = Su for every $u \in U$ if and only if S is inje. [Compare this with (3.A.11).] **SOLUTION:** (a) Tu = Su for every $u \in U \Rightarrow u = T^{-1}Su \Rightarrow S$ is inje. Or. null $S = \text{null } T \cap U = \{0\} \cap U = \{0\}$. (b) Suppose $(u_1, ..., u_m)$ be a basis of U and S is inje $\Rightarrow (Su_1, ..., Su_m)$ is linely inde in V. Extend these to bases of V as $(u_1, \ldots, u_m, v_1, \ldots, v_n)$ and $(Su_1, \ldots, Su_m, w_1, \ldots, w_n)$. Define $T \in \mathcal{L}(V)$ by $T(u_i) = Su_i$; $Tv_i = w_i$, for each $i \in \{1, ..., m\}$, $j \in \{1, ..., n\}$. **4** Suppose that W is finite-dim and $S, T \in \mathcal{L}(V, W)$. *Prove that* $\operatorname{null} S = \operatorname{null} T(=U) \iff S = ET, \exists inv E \in \mathcal{L}(W).$ **SOLUTION:** Define $E \in \mathcal{L}(W)$ by $E(Tv_i) = Sv_i$, $E(w_i) = x_i$, for each $i \in \{1, ..., m\}$, $j \in \{1, ..., n\}$. Where: Let $(Tv_1, ..., Tv_m)$ be a basis of range T, extend it to a basis of W as $(Tv_1, ..., Tv_m, w_1, ..., w_n)$. Let (u_1, \ldots, u_n) be a basis of U. Then by (3.B.Tips), $(v_1, \ldots, v_m, u_1, \ldots, u_n)$ is a basis of V. $\therefore E$ is inv \mathbb{X} null $S = \text{null } T \Rightarrow V = \text{span}(v_1, \dots, v_m) \oplus \text{null } S \Rightarrow \text{span}(Sv_1, \dots, Sv_m) = \text{range } S$. and S = ET. And dim range $T = \dim \operatorname{range} S = \dim V - \operatorname{null} U = m$. Hence (Sv_1, \dots, Sv_m) is a basis of range S. Thus we let $(Sv_1, ..., Sv_m, x_1, ..., x_n)$ be a basis of W. Conversely, $S = ET \Rightarrow \text{null } S = \text{null } ET$. Then $v \in \text{null } ET \iff ET(v) = 0 \iff Tv = 0 \iff v \in \text{null } T$. Hence null ET = null T = null S. **5** Suppose that W is finite-dim and $S, T \in \mathcal{L}(V, W)$. *Prove that* range $S = \text{range } T(=R) \iff S = TE, \exists inv E \in \mathcal{L}(V).$ **SOLUTION:** Define $E \in \mathcal{L}(V)$ as $E: v_i \mapsto r_i$; $u_j \mapsto s_j$; for each $i \in \{1, ..., m\}$, $j \in \{1, ..., n\}$. Where: Let $(Tv_1, ..., Tv_m)$ and $(Sr_1, ..., Sr_m)$ be bases of R such that $\forall i, Tv_i = Sr_i$. Let $(u_1, ..., u_n)$ and $(s_1, ..., s_n)$ be bases of null T and null S respectively. \therefore *E* is inv and S = TE. Thus $(v_1, \ldots, v_m, u_1, \ldots, u_n)$ and $(r_1, \ldots, r_m, s_1, \ldots, s_n)$ are bases of V. Conversely, $S = TE \Rightarrow \text{range } S = \text{range } TE$. Then $w \in \text{range } S \iff \exists v \in V, Sv = TE(v) = T(E(v)) = w \in \text{range } T$. Hence range S = range T.

6 Suppose V and W are finite-dim and $S, T \in \mathcal{L}(V, W)$. $[\dim \operatorname{null} S = \dim \operatorname{null} T = n]$ *Prove that* $S = E_2TE_1$, $\exists inv E_1 \in \mathcal{L}(V)$, $E_2 \in \mathcal{L}(W) \iff \dim \text{null } S = \dim \text{null } T$. **SOLUTION:** Define $E_1: v_i \mapsto r_i$; $u_i \mapsto s_j$; for each $i \in \{1, ..., m\}$, $j \in \{1, ..., n\}$. Define $E_2: Tv_i \mapsto Sr_i$; $x_i \mapsto y_i$; for each $i \in \{1, ..., m\}, j \in \{1, ..., n\}$. Where: Let $(Tv_1, ..., Tv_m)$ and $(Sr_1, ..., Sr_m)$ be bases of range T and range S. Let $(u_1, ..., u_n)$ and $(s_1, ..., s_n)$ be bases of null T and null S respectively. $\therefore E_1, E_2$ are inv and $S = E_2 T E_1$. Thus $(v_1, \ldots, v_m, u_1, \ldots, u_n)$ and $(r_1, \ldots, r_m, s_1, \ldots, s_n)$ are bases of V. Extend $(Tv_1, ..., Tv_m)$ and $(Sr_1, ..., Sr_m)$ to bases of W as $(Tv_1, ..., Tv_m, x_1, ..., x_v)$ and $(Sr_1, ..., Sr_m, y_1, ..., y_v)$. Conversely, $S = E_2 T E_1 \Rightarrow \dim \text{ null } S = \dim \text{ null } E_2 T E_1$. $v \in \operatorname{null} E_2 T E_1 \iff E_2 T E_1(v) = 0 \iff T E_1(v) = 0$. Hence $\operatorname{null} E_2 T E_1 = \operatorname{null} T E_1 = \operatorname{null} S$. \mathbb{X} By (3.B.22.COROLLARY), E is inv \Rightarrow dim null $TE_1 = \dim \text{null } T = \dim \text{null } S$. **8** Suppose V is finite-dim and $T: V \to W$ is a surj linear map of V onto W. Prove that there is a subsp U of V such that $T|_{U}$ is an iso of U onto W. $T|_U$ is the function whose domain is U, with $T|_U$ defined by $T|_U(u) = Tu$ for every $u \in U$. **SOLUTION:** T is surj \Rightarrow range $T = W \Rightarrow \dim \operatorname{range} T = \dim W = \dim V - \dim \operatorname{null} T$. Let $(w_1, ..., w_m)$ be a basis of range $T = W \Rightarrow \forall w_i, \exists ! v_i \in V, Tv_i = w_i$. $\Rightarrow (v_1, \dots, v_m)$ is a basis of \mathcal{K} . Thus dim $\mathcal{K} = \dim W$. Thus $T|_{\mathcal{K}}$ maps a basis of \mathcal{K} to a basis of range T = W. Denote \mathcal{K} by U. OR. By Problem (12) in (3.B), there is a subsp U of V such that $U \cap \text{null } T = \{0\} = \text{null } T|_U$, range $T = \{Tu : u \in U\} = \text{range } T|_U$. • Suppose V and W are finite-dim and U is a subsp of V. Let $\mathcal{E} = \{T \in \mathcal{L}(V, W) : U \subset \text{null } T\}.$ (a) Show that \mathcal{E} is a subsp of $\mathcal{L}(V, W)$. (b) Find a formula for dim \mathcal{E} in terms of dim V, dim W and dim U. *Hint:* Define $\Phi : \mathcal{L}(V, W) \to L(U, W)$ by $\Phi(T) = T|_U$. What is null Φ ? What is range Φ ? **SOLUTION:** (a) $\forall S, T \in \mathcal{E}, \lambda \in \mathbf{F}, \forall u \in U, Su = \lambda Tu = (S + \lambda T)u = 0 \Rightarrow (S + \lambda T) \in \mathcal{E}.$ (b) Define Φ as in the hint. Because $T \in \text{null } \Phi \Longleftrightarrow \Phi(T) = 0 \Longleftrightarrow \forall u \in U, Tu = 0 \Longleftrightarrow T \in \mathcal{E}$. Hence null $\Phi = \mathcal{E}$. Because $S \in \mathcal{L}(U, W) \Rightarrow \exists T \in \mathcal{L}(V, W), \Phi(T) = S$, by $(3.B.11) \Rightarrow S \in \text{range } T$. Hence range $\Phi = \mathcal{L}(U, W)$. Thus dim null $\Phi = \dim \mathcal{E} = \dim \mathcal{L}(V, W) - \dim \operatorname{range} \Phi = (\dim V - \dim U) \dim W$. OR. Extend $(u_1, ..., u_m)$ a basis of U to $(u_1, ..., u_m, v_1, ..., v_n)$ a basis of V. Let $p = \dim W$. (See Note For[3.60])

$$\forall \ T \in \mathcal{E}, k \in \{1, \dots, m\}, TE_{k,k} = 0 \Rightarrow \operatorname{span} \left\{ \begin{matrix} E_{1,1}, & \cdots & , E_{m,1}, \\ \vdots & \ddots & \vdots \\ E_{1,p}', & \cdots & , E_{m,p}' \end{matrix} \right\} \cap \mathcal{E} = \{0\}.$$
Denote it by R

Then $\dim \mathcal{E} = \dim \mathcal{L}(V, W) - \dim R - \dim(R \cap \mathcal{E}) = (\dim V - \dim U) \dim W$.

ENDED

3·E

2 Suppose V_1, \ldots, V_m are vecsps such that $V_1 \times \cdots \times V_m$ is finite-dim. *Prove that every* V_i *is finite-dim.*

SOLUTION: Denote $V_1 \times \cdots \times V_m$ by U. Denote $\{0\} \times \cdots \{0\} \times V_i \times \{0\} \cdots \times \{0\}$ by U_i .

Let $(v_1, ..., v_M)$ be a basis of U. Note that $\forall u_i \in V_i, \in U_i \subseteq U$, for each i.

Define
$$R_i \in \mathcal{L}(V_i, U)$$
 by $R_i(u_i) = (0, \dots, 0, u_i, 0, \dots, 0)$.
Define $S_i \in \mathcal{L}(U, V_i)$ by $S_i(u_1, \dots, u_i, \dots, u_m) = u_i$ $\} \Rightarrow S_i|_{U_i} = R_i^{-1}|_{U_i}$.

Thus U_i and V_i are iso. X U_i is a subsp of a finite-dim vecsp U.

3 Give an example of a vecsp V and its two subsps U_1 , U_2 such that $U_1 \times U_2$ and $U_1 + U_2$ are iso but $U_1 + U_2$ is not a direct sum.

SOLUTION:

NOTE that at least one of U_1 , U_2 must be infinite-dim.

For if not, $U_1 \times U_2$ is finite-dim and $\dim(U_1 \times U_2) = \dim(U_1 + U_2) = \dim U_1 + \dim U_2$.

And V must be infinite-dim. For if not, both U_1 and U_2 are finite-dim subsps.

Let
$$V=\mathbf{F}^{\infty}=U_1, U_2=\left\{(x,0,\cdots)\in\mathbf{F}^{\infty}:x\in\mathbf{F}\right\}.$$

Define
$$T \in \mathcal{L}(U_1 \times U_2, U_1 + U_2)$$
 by $T((x_1, x_2, \dots), (x, 0, \dots)) = (x, x_1, x_2, \dots)$
Define $S \in \mathcal{L}(U_1 + U_2, U_1 \times U_2)$ by $S(x, x_1, x_2, \dots) = ((x_1, x_2, \dots), (x, 0, \dots))$ $\Rightarrow S = T^{-1}$.

4 Suppose V_1, \ldots, V_m are vecsps.

Prove that $\mathcal{L}(V_1 \times \cdots \times V_m, W)$ and $\mathcal{L}(V_1, W) \times \cdots \times \mathcal{L}(V_m, W)$ are iso.

SOLUTION: Using the notations in Problem (2).

Note that
$$T(u_1, ..., u_m) = T(u_1, 0, ..., 0) + \cdots + T(0, ..., u_m)$$
.

Define
$$\varphi: T \mapsto (T_1, \dots, T_m)$$
 by $\varphi(T) = (TR_1, \dots, TR_m)$.
Define $\psi: (T_1, \dots, T_m) \mapsto T$ by $\psi(T_1, \dots, T_m) = T_1S_1 + \dots + T_mS_m$. $\} \Rightarrow \psi = \varphi^{-1}$.

5 Suppose W_1, \ldots, W_m are vecsps.

Prove that $\mathcal{L}(V, W_1 \times \cdots \times W_m)$ and $\mathcal{L}(V, W_1) \times \cdots \times \mathcal{L}(V, W_m)$ are iso.

SOLUTION: Using the notations in Problem (2).

Note that
$$Tv = (w_1, ..., w_m)$$
. Define $T_i \in \mathcal{L}(V, W_i)$ by $T_i(v) = w_i$.

Define
$$\varphi : T \mapsto (T_1, \dots, T_m)$$
 by $\varphi(T) = (S_1 T, \dots, S_m T)$.

$$\begin{array}{l} \text{Define } \varphi: T \mapsto (T_1, \dots, T_m) \text{ by } \varphi(T) = (S_1 T, \dots, S_m T). \\ \text{Define } \psi: (T_1, \dots, T_m) \mapsto T \text{ by } \psi(T_1, \dots, T_m) = T_1 S_1 + \dots + T_m S_m. \end{array} \right\} \Rightarrow \psi = \varphi^{-1}.$$

6 For $m \in \mathbb{N}^+$, define V^m by $\underbrace{V \times \cdots \times V}_{::}$. Prove that V^m and $\mathcal{L}(\mathbf{F}^m, V)$ are iso.

SOLUTION:

Define $T:(v_1,\ldots,v_m)\to \varphi$, where $\varphi:(a_1,\ldots,a_m)\mapsto v$ is defined by $\varphi(a_1,\ldots,a_m)=a_1v_1+\cdots+a_mv_m$.

- (a) Suppose $T(v_1, \dots, v_m) = 0$. Then $\forall (a_1, \dots, a_n) \in \mathbb{F}^m$, $\varphi(a_1, \dots, a_m) = a_1v_1 + \dots + a_mv_m = 0$ $\Rightarrow (v_1, \dots, v_m) = 0 \Rightarrow T$ is inje.
- (b) Suppose $\psi \in \mathcal{L}(\mathbf{F}^m, V)$. Let (e_1, \dots, e_m) be the standard basis of \mathbf{F}^m . Then $\forall (b_1, \dots, b_n) \in \mathbf{F}^m$, $\left[T\left(\psi(e_1), \dots, \psi(e_m) \right) \right] (b_1, \dots, b_m) = b_1 \psi(e_1) + \dots + b_m \psi(e_m) = \psi(b_1 e_1 + \dots + b_m e_m) = \psi(b_1, \dots, b_m).$ Thus $T\left(\psi(e_1), \dots, \psi(e_m) \right) = \psi$. Hence T is surj. \square

7 Suppose $v, x \in V$ (arbitrary) and U and W are subsps of V.

Suppose v + U = x + W. Prove that U = W.

SOLUTION:

- (a) $\forall u \in U$, $\exists w \in W, v + u = x + w$, let u = 0, now $v = x + w \Rightarrow v x \in W$.
- (b) $\forall w \in W$, $\exists u \in U, v + u = x + w$, let w = 0, now $x = v + u \Rightarrow x v \in U$.

Thus
$$\pm (v - x) \in U \cap W \Rightarrow \begin{cases} u = (x - v) + w \in W \Rightarrow U \subseteq W \\ w = (v - x) + u \in U \Rightarrow W \subseteq U \end{cases} \Rightarrow U = W.$$

- Let $U = \{(x, y, z) \in \mathbb{R}^3 : 2x + 3y + 5z = 0\}$. Suppose $A \subseteq \mathbb{R}^3$. Prove that A is a translate of $U \iff \exists c \in \mathbb{R}, A = \{(x, y, z) \in \mathbb{R}^3 : 2x + 3y + 5z = c\}$. [Do it in your mind.]
- Suppose $T \in \mathcal{L}(V, W)$ and $c \in W$. Prove that $U = \{x \in V : Tx = c\}$ is either \emptyset or is a translate of null T.

SOLUTION:

If $c \in W$ but $c \notin \text{range } T$, then $U = \emptyset$ and we are done.

Suppose $c \in \text{range } T$, then $\exists u \in V, Tu = c \Rightarrow u \in U$.

Suppose $y \in \text{null } T \Rightarrow y + u \in U \iff T(y + u) = Ty + c = c$.

Thus $u + \text{null } T \subseteq U$. Hence u + null T = U,

for if not, suppose $z \notin u + \text{null } T \text{ but } Tz = c \Leftrightarrow z \in U$,

then $\forall w \in \text{null } T, z \neq u + w \Leftrightarrow z - u \notin \text{null } T$.

$$\not \subseteq \tilde{T}(z + \text{null } T) = \tilde{T}(u + \text{null } T) \Rightarrow z + \text{null } T = u + \text{null } T \Rightarrow z - u \in \text{null } T, \text{ contradicts.}$$

COROLLARY: The set of solutions to a system of linear equations such as [3.28] is either \emptyset or a translate of the null subsp.

8 Suppose A is a nonempty subset of V.

Prove that A is a translate of some subsp of $V \iff \lambda v + (1 - \lambda)w \in A$, $\forall v, w \in A, \lambda \in F$.

SOLUTION:

Suppose A = a + U, where U is a subsp of V. $\forall a + u_1, a + u_2 \in A, \lambda \in \mathbb{F}$,

$$\lambda(a + u_1) + (1 - \lambda)(a + u_2) = a + [\lambda(u_1 - u_2) + u_2] \in A.$$

Suppose $\lambda v + (1 - \lambda)w \in A$, $\forall v, w \in A$, $\lambda \in F$. Suppose $a \in A$ and let $A' = \{x - a : x \in A\}$.

Then $\forall x - a, y - a \in A', \lambda \in \mathbf{F}$,

- (I) $\lambda(x-a) = [\lambda x + (1-\lambda)a] a \in A'$. Then let $\lambda = 2$.
- (II) $\lambda(x-a) + (1-\lambda)(y-a) = \frac{1}{2}(x-a) + \frac{1}{2}(y-a) = \frac{1}{2}x + (1-\frac{1}{2})(y) a \in A'$. By (I), $2 \times \left[\frac{1}{2}(x-a) + \frac{1}{2}(y-a)\right] = (x-a) + (y-a) \in A'$.

Thus A' is a subsp of V. Hence $a + A' = \{(x - a) + a : x \in A\} = A$ is a translate.

SOLUTION:

Suppose $v + u_1, w + u_2 \in A_1 \cap A_2 \neq \emptyset$. By Problem (8), $\forall \lambda \in F, \lambda(v + u_1) + (1 - \lambda)(w + u_2) \in A_1$ and A_2 . Thus $A_1 \cap A_2$ is a translate of some subsp of V. \square

10 Prove that the intersection of any collection of translates of subsps of V is either a translate of some subsp or \emptyset .

SOLUTION:

Suppose $\{A_{\alpha}\}_{\alpha\in\Gamma}$ is a collection of translates of subsps of V, where Γ is an arbitrary index set. Suppose $x,y\in\bigcap_{\alpha\in\Gamma}A_{\alpha}\neq\emptyset$, then by Problem (18), $\forall\lambda\in\mathbf{F},\lambda x+(1-\lambda)y\in A_{\alpha}$ for every $\alpha\in\Gamma$. Thus $\bigcap_{\alpha\in\Gamma}A_{\alpha}$ is a translate of some subsp of V.

- **11** Suppose $A = \left\{ \lambda_1 v_1 + \dots + \lambda_m v_m : \sum_{i=1}^m \lambda_i = 1 \right\}$, where each $v_i \in V, \lambda_i \in F$.
 - (a) Prove that \hat{A} is a translate of some subsp of V
 - (b) Prove that if B is a translate of some subsp of V and $\{v_1, ..., v_m\} \subseteq B$, then $A \subseteq B$.
 - (c) Prove that A is a translate of some subsp of V and dim V < m.

SOLUTION:

(a) By Problem (8),
$$\forall u, w \in A, \lambda \in \mathbf{F}, \exists a_i, b_i \mathbf{F}, \lambda u + (1 - \lambda)w = \left(\lambda \sum_{i=1}^m a_i + (1 - \lambda) \sum_{i=1}^m b_i\right)v_i \in A.$$

- (b) Let $v = \lambda_1 v_+ \cdots + \lambda_m v_m \in A$. To show that $v \in B$, use induction on m by k.
 - $\begin{aligned} \text{(i) } k &= 1, v = \lambda_1 v_1 \Rightarrow \lambda_1 = 1. \ \ \ \ \, \forall \ v_1 \in \textit{B}. \ \text{Hence } v \in \textit{B}. \\ k &= 2, v = \lambda_1 v_1 + \lambda_2 v_2 \Rightarrow \lambda_2 = 1 \lambda_1. \ \ \ \, \forall \ v_1, v_2 \in \textit{B}. \ \text{By problem (8)}, v \in \textit{B}. \end{aligned}$
 - (ii) $2 \le k \le m$, we assume that $v = \lambda_1 v_1 + \dots + \lambda_k v_k \in A \subseteq B$. $(\forall \lambda_i \text{ such that } \sum_{i=1}^k \lambda_i = 1)$

For
$$u = \mu_1 v_1 + \dots + \mu_k v_k + \mu_{k+1} v_{k+1} \in A$$
. $\forall i = 1, \dots, k, \ \exists \ \mu_i \neq 1$, fix one such i by ι . Then $\sum_{i=1}^{k+1} \mu_i - \mu_i = 1 - \mu_i \Rightarrow (\sum_{i=1}^{k+1} \frac{\mu_i}{1 - \mu_i}) - \frac{\mu_i}{1 - \mu_i} = 1$. Let $w = \underbrace{\frac{\mu_1}{1 - \mu_i} v_1 + \dots + \frac{\mu_{\iota-1}}{1 - \mu_{\iota}} v_{\iota-1} + \frac{\mu_{\iota+1}}{1 - \mu_{\iota}} v_{\iota+1} + \dots + \frac{\mu_{k+1}}{1 - \mu_{\iota}} v_{k+1}}_{k \ terms}$.

Let
$$\lambda_i = \frac{\mu_i}{1 - \mu_i}$$
 for $i = 1, ..., i - 1$; $\lambda_j = \frac{\mu_{j+1}}{1 - \mu_i}$ for $j = i, ..., k$. Then,
$$\sum_{i=1}^k \lambda_i = 1 \Rightarrow w \in B$$

$$v_i \in B \Rightarrow u' = \lambda w + (1 - \lambda)v_i \in B$$

$$\Rightarrow \text{Let } \lambda = 1 - \mu_i. \text{ Thus } u' = u \in B \Rightarrow A \subseteq B.$$

(c) Fix a $k \in \{1, ..., m\}$. Given $\lambda_i \in \mathbf{F} \ (i \in \{1, ..., m\} \setminus \{k\})$.

$$\begin{split} & \text{Let } \lambda_k = 1 - \lambda_1 - \dots - \lambda_{k-1} - \lambda_{k+1} - \dots - \lambda_m \\ & \text{Then } \lambda_1 v_1 + \dots + \lambda_k v_k + \dots + \lambda_m v_m = v_k + \sum_{i=1}^m \lambda_i (v_i - v_k). \\ & \text{Thus } A = v_k + \text{span } (v_1 - v_k, \dots, v_{k-1} - v_k, v_{k+1} - v_k, \dots, v_m - v_k). \end{split}$$

12 Suppose U is a subsp of V such that V/U is finite-dim. Prove that is V is iso to $U \times (V/U)$.

SOLUTION:

Let $(v_1 + U, ..., v_n + U)$ be a basis of V/U. Note that $\forall v \in V, \exists ! a_1, ..., a_n \in F, v + U = \sum_{i=1}^n a_i(v_i + U) = (\sum_{i=1}^n a_i v_i) + U$

$$\Rightarrow (v - a_1v_1 - \dots - a_nv_n) = u \in U \text{ for some } u; v = \sum_{i=1}^n a_iv_i + u.$$
Thus define $\varphi \in \mathcal{L}(V, U \times (V/U))$ by $\varphi(v) = (u, \sum_{i=1}^n a_iv_i + U)$
and $\psi \in \mathcal{L}(U \times (V/U), V)$ by $\psi(u, w + U) = u + w; w = \sum_{i=1}^n b_iv_i + U.$
So that $\psi = \varphi^{-1}$.

Suppose $V = U \oplus W$, (w_1, \dots, w_m) is a basis of W .

Prove that $(w_1 + U, \dots, w_m + U)$ is a basis of V/U .

• Suppose $V = U \oplus W$, $(w_1, ..., w_m)$ is a basis of W. *Prove that* $(w_1 + U, ..., w_m + U)$ *is a basis of* V/U.

SOLUTION:

Note that $\forall v \in V, \exists ! u \in U, w \in W, v = u + w \not \subseteq \exists ! c_i \in F \text{ such that } w = \sum_{i=1}^{m} c_i w_i \Rightarrow v = u + \sum_{i=1}^{m} c_i w_i.$

Thus
$$v + U = \sum_{i=1}^m c_i w_i + U \Rightarrow v + U \in \text{span}(w_1 + U, \dots, w_m + U) \Rightarrow V/U \subseteq \text{span}(w_1 + U, \dots, w_m + U).$$

Now suppose $a_1(w_1 + U) + \dots + a_m(w_m + U) = 0 + U \Rightarrow \sum_{i=1}^m a_i w_i \in U$ while $U \cap W = \{0\}$.

Then
$$\sum_{i=1}^{m} a_i w_i = 0 \Rightarrow a_1 = \dots = a_m = 0.$$

13 Suppose $(v_1 + U, ..., v_m + U)$ is a basis of V/U and $(u_1, ..., u_n)$ is a basis of U. Prove that $(v_1, \ldots, v_m, u_1, \ldots, u_n)$ is a basis of V.

SOLUTION:

By Problem (12), U and V/U are finite-dim $\Rightarrow U \times (V/U)$ is finite-dim, so is V.

 $\dim V = \dim (U \times (V/U)) = \dim U + \dim V/U = m + n.$

Or. Note that
$$\forall v \in V, v + U = \sum_{i=1}^{m} a_i v_i + U, \ \exists \,! \, a_i \in \mathbf{F} \Rightarrow U \ni v - \sum_{i=1}^{m} a_i v_i = \sum_{i=1}^{m} b_i v_i, \ \exists \,! \, b_i \in \mathbf{F}.$$

$$\Rightarrow v \in \mathrm{span}\,(v_1, \dots, v_m, u_1, \dots, u_n).$$

 \nearrow Notice that $(\sum_{i=1}^{m} a_i v_i) + U = 0 + U \iff \sum_{i=1}^{m} a_i v_i \in U) \iff a_1 = \dots = a_m = 0.$

Hence span $(v_1, \dots, v_m) \cap U = \{0\} \Rightarrow \text{span}(v_1, \dots, v_m) \oplus U = V$

Thus $(v_1, \ldots, v_m, u_1, \ldots, u_n)$ is linely inde, so is a basis of V.

- **14** Suppose $U = \{(x_1, x_2, \dots) \in \mathbf{F}^{\infty} : x_k \neq 0 \text{ for only finitely many } k\}.$
 - (a) Show that U is a subsp of \mathbf{F}^{∞} . [Do it in your mind]
 - (b) Prove that \mathbf{F}^{∞}/U is infinite-dim.

SOLUTION:

For $u=(x_1,\ldots,x_p,\ldots)\in \mathbf{F}^{\infty}$, denote x_p by u[p]. For each $r\in \mathbf{N}^+$.

$$\text{Define } e_r[p] = \left\{ \begin{array}{l} 1, (p-1) \equiv 0 \, (\text{mod } r) \\ 0, \text{otherwise} \end{array} \right., \\ \text{simply } e_r = (1, \underbrace{0, \ldots, 0}_{(p-1) \, \textit{times}}, 1, \underbrace{0, \ldots, 0}_{(p-1) \, \textit{times}}, 1, \ldots) \in \mathbf{F}^{\infty}.$$

Choose $m \in \mathbb{N}^+$ arbitrarily.

Suppose
$$a_1(e_1 + U) + \dots + a_m(e_m + U) = (a_1e_1 + \dots + a_me_m) + U = 0 + U = 0$$
.

$$\Rightarrow a_1e_1 + \dots + a_me_m = u \text{ for some } u \in U.$$

Then suppose $u = (x_1, \dots, x_t, 0, \dots) \Rightarrow u[t + i] = 0, \forall i \in \mathbb{N}^+$,

then let
$$j=s\cdot m!+1\geq t\ (\exists\ s\in \mathbf{N}^+)$$
 so that $e_1[j]=\cdots=e_m[j]=1,\ u[j+i]=0.$

Now we have: $u[j+i] = (\sum_{r=1}^m a_r e_r)[j+i] = \sum_{r=1}^m a_r e_r[s \cdot m! + 1 + i] = a_{i_1} + \dots + a_{i_{\tau(i)}} = 0$,

$$\Rightarrow (\sum_{r=1}^{m} a_r e_r)[j+i] = a_{i_1} + \dots + a_{i_{\tau(i)}} = 0. \ (\Delta)$$

where $i_1,\dots,i_{\tau(i)}$ are distinct ordered factors of i ($1=i_1\leq\dots\leq i_{\tau(i)}=i$).

(Note that by definition, $e_r[s \cdot m! + 1 + i] = 1 \iff s \cdot m! + i \equiv i \equiv 0 \pmod{r} \iff r \mid i$.)

```
Let i'=i_{\tau(i)-1}. Notice that i'_l=i_l, \forall l\in\{1,\ldots,\tau(i')\}; \text{ and } \tau(i')=\tau(i)-1.
  Again by (\Delta), (\Sigma_{r=1}^m a_r e_r)[j+i'] = a_{i\iota_1}+\cdots+a_{i\iota_{\tau(i\iota)}}=a_{i_1}+\cdots+a_{i_{\tau(i)-1}}=0.
   Thus a_{i-(i)} = a_i = 0 for any i \in \{1, ..., m\}.
  Hence (e_1, \dots, e_m) is linely inde in \mathbf{F}^{\infty}, so is (e_1, \dots, e_m, \dots), since m \in \mathbf{N}^+.
   \not \subseteq e_i \notin U \Rightarrow (e_1 + U, e_2 + U, ...) is linely inde in F^{\infty}/U. By [2.B.14].
                                                                                                                                15 Suppose \varphi \in \mathcal{L}(V, \mathbf{F}) \setminus \{0\}. Prove that dim V/(\text{null }\varphi) = 1.
SOLUTION: By [3.91] (d), dim range \varphi = 1 = \dim V / (\operatorname{null} \varphi).
                                                                                                                                • Note For [3.88, 3.90, 3.91]:
  For any W \in \mathcal{S}_V U, because V = U \oplus W. \forall v \in V, \exists ! u_v \in U, w_v \in W, v = u_v + w_v.
  Define T \in \mathcal{L}(V, W) by T(v) = w_v. Hence null T = U, range T = W.
  Then \tilde{T} \in \mathcal{L}(V/\text{null }T,W) is defined as \tilde{T}(v+U) = Tv = w_v.
  Thus \tilde{T} is inje (by [3.91(b)]) and surj (range \tilde{T} = range T = W),
  and therefore is an iso. We conclude that V/U and W, namely any vecsp in S_V, are iso.
16 Suppose dim V/U = 1. Prove that \exists \varphi \in \mathcal{L}(V, \mathbf{F}) such that null \varphi = U.
SOLUTION:
   Suppose V_0 is a subsp of V such that V = U \oplus V_0. Then V_0 and V/U are iso. dim V_0 = 1.
   Define a linear map \varphi : v \mapsto \lambda by \varphi(v_0) = 1, \varphi(u) = 0, where v_0 \in V_0, u \in U.
                                                                                                                                17 Suppose V/U is finite-dim. W is a subsp of V.
    (a) Show that if V = U + W, then dim W \ge \dim V/U.
    (b) Suppose dim W = \dim V/U and V = U \oplus W. Find such W.
SOLUTION: Let (w_1, ..., w_n) be a basis of W
   (a) \forall v \in V, \exists u \in U, w \in W such that v = u + w \Rightarrow v + U = w + U
       Then V/U \subseteq \text{span}(w_1 + U, \dots, w_n + U) \Rightarrow V/U = \text{span}(w_1 + U, \dots, w_n + U).
       Hence dim V/U = \dim \operatorname{span}(w_1 + U, \dots, w_n + U) \le \dim W.
   (b) Let W \in \mathcal{S}_V U. In other words,
        reduce (w_1+U,\ldots,w_n+U) to a basis of V/U as (w_1+U,\ldots,w_m+U) and let W=\text{span}(w_1,\ldots,w_m).
18 Suppose T \in \mathcal{L}(V, W) and U is a subsp of V. Let \pi denote the quotient map.
    Prove that \exists S \in \mathcal{L}(V/U, W) such that T = S \circ \pi if and only if U \subseteq \text{null } T.
SOLUTION:
   (a) Define S \in \mathcal{L}(V/U, W) by S(v + U) = Tv. We have to check it is well-defined.
       Suppose v_1 + U = v_2 + U, while v_1 \neq v_2.
       Then (v_1 - v_2) \in U \Rightarrow S((v_1 - v_2) + U) = T(v_1 - v_2) = 0 \Rightarrow Tv_1 = Tv_2. Checked.
   (b) Suppose \exists S \in \mathcal{L}(V/U, W), T = S \circ \pi.
        Then \forall u \in U, Tu = S \circ \pi(u) = S(0 + U) = 0 \Rightarrow U \subseteq \text{null } T.
                                                                                                                                20 Define \Gamma : \mathcal{L}(V/U, W) \to \mathcal{L}(V, W) by \Gamma(S) = S \circ \pi \ (= \pi'(S)).
    (a) Prove that \Gamma is linear: By [3.9] distr properties and [3.6].
    (b) Prove that \Gamma is inje:
```

 $\Gamma(S) = 0 = S \circ \pi \iff \forall v \in V, S(\pi(v)) = 0 \iff \forall v + U \in V/U, S(v + U) = 0 \iff S = 0.$

ENDED

3.F

• By (18) in (3.D), $\varphi: V \to \mathcal{L}(\mathbf{F}, V)$ is an iso. Now we prove that (v_1, \ldots, v_m) is linely inde $\iff (\varphi(v_1), \ldots, \varphi(v_m))$ is linely inde.

SOLUTION:

(a) Suppose $(v_1, ..., v_m)$ is linely inde and $\vartheta \in \text{span } (\varphi(v_1), ..., \varphi(v_m))$.

Let $\vartheta=0=a_1\varphi(v_1)+\cdots+a_m\varphi(v_m)$. Then $\vartheta(1)=0=a_1v_1+\cdots+a_mv_m\Rightarrow a_1=\cdots=a_m=0$.

Or. Because φ is inje. Suppose $a_1\varphi(v_1)+\cdots+a_m\varphi(v_m)=0=\varphi(a_1v_1+\cdots+a_mv_m)$.

Then $a_1v_1 + \dots + a_mv_m = 0 \Rightarrow a_1 = \dots = a_m = 0$.

Thus $(\varphi(v_1), \dots, \varphi(v_m))$ is linely inde.

(b) Suppose $(\varphi(v_1), \dots, \varphi(v_m))$ is linely inde and $v \in \text{span}(v_1, \dots, v_m)$.

Let $v=0=a_1v_1+\cdots+a_mv_m$. Then $\varphi(v)=a_1\varphi(v_1)+\cdots+a_m\varphi(v_m)=0 \Rightarrow a_1=\cdots=a_m=0$.

Thus v_1, \dots, v_m is linely inde.

• Suppose $T \in \mathcal{L}(V, W)$ and $(w_1, ..., w_m)$ is a basis of range T. Hence $\forall v \in V$, $Tv = \varphi_1(v)w_1 + \cdots + \varphi_m(v)w_m$, $\exists ! \varphi_1(v), ..., \varphi_m(v)$, thus defining functions $\varphi_1, ..., \varphi_m$ from V to F. Show that each $\varphi_i \in V'$.

SOLUTION:

For each w_i , $\exists v_i \in V$, $Tv_i = w_i$, getting a linely inde list $(v_1, ..., v_m)$.

Now we have $Tv = a_1Tv_1 + \cdots + a_mTv_m$, $\forall v \in V$, $\exists ! a_i \in F$.

Let (ψ_1, \dots, ψ_m) be the dual basis of range T. Then $(T'(\psi_i))(v) = \psi_i \circ T(v) = a_i$.

Thus letting $\varphi_i = \psi_i \circ T$.

• Suppose $\varphi, \beta \in V'$. Prove that $\text{null } \varphi \subseteq \text{null } \beta \iff \beta = c\varphi$. $\exists c \in F$.

SOLUTION: Using (3.B.29, 30)

(a) Suppose $\operatorname{null} \varphi \subseteq \operatorname{null} \beta$. Choose a $u \notin \operatorname{null} \beta$. $V = \operatorname{null} \beta \oplus \{au : a \in F\}$.

If null $\varphi = \text{null } \beta$, then let $c = \frac{\beta(u)}{\varphi(u)}$, we are done.

Otherwise, suppose $u' \in \text{null } \beta$, but $u' \notin \text{null } \varphi$, then $V = \text{null } \varphi \oplus \{bu' : b \in \mathbf{F}\}$.

 $\forall v \in V, v = w + au = w' + bu', \exists ! w, w' \in \text{null } \varphi, a, b \in \mathbf{F}.$

Thus $\beta(v) = a\beta(u)$, $\varphi(v) = b\varphi(u')$. Let $c = \frac{a\beta(u)}{b\varphi(u')}$. We are done

(b) Suppose $\beta = c\varphi$ for some $c \in \mathbf{F}$.

If c = 0, then null $\beta = V \supseteq \text{null } \varphi$, we are done.

Otherwise, $\begin{cases} \forall v \in \operatorname{null} \varphi, \varphi(v) = 0 = \beta(v) \Rightarrow \operatorname{null} \varphi \subseteq \operatorname{null} \beta. \\ \forall v \in \operatorname{null} \beta, \beta(v) = 0 = \varphi(v) \Rightarrow \operatorname{null} \beta \subseteq \operatorname{null} \varphi. \end{cases} \Rightarrow \operatorname{null} \varphi = \operatorname{null} \beta.$ $\Rightarrow \operatorname{null} \varphi \subseteq \operatorname{null} \beta.$

5 Prove that $(V_1 \times \cdots \times V_m)'$ and ${V'}_1 \times \cdots \times {V'}_m$ are iso.

SOLUTION: Using notations in (3.E.2).

$$\begin{array}{l} \text{Define } \varphi: \; (V_1 \times \cdots \times V_m)' \to V'_1 \times \cdots \times V'_m \\ \text{by } \varphi(T) = (T \circ R_1, \ldots, T \circ R_m) = \left(R'_1(T), \ldots, R'_m(T)\right). \\ \text{Define } \psi: V'_1 \times \cdots \times V'_m \to (V_1 \times \cdots \times V_m)' \\ \text{by } \psi(T_1, \ldots, T_m) = T_1 S_1 + \cdots + T_m S_m = S'_1(T_1) + \cdots + S'_m(T_m). \end{array} \right\} \Rightarrow \psi = \varphi^{-1}.$$

• Suppose $(v_1, ..., v_n)$ is a basis of V and $(\varphi_1, ..., \varphi_n)$ is the dual basis of V'. **9** Suppose $(v_1, ..., v_n)$ is a basis of V and $(\varphi_1, ..., \varphi_n)$ is the corresptd dual basis of V'. Suppose $\psi \in V'$. Prove that $\psi = \psi(v_1)\varphi_1 + \cdots + \psi(v_n)\varphi_n$. Solution: $\psi(v) = \psi(\sum_{i=1}^n a_i v_i) = \sum_{i=1}^n a_i \psi(v_i) = \sum_{i=1}^n \psi(v_i) \varphi_i(v) = [\psi(v_1) \varphi_1 + \dots + \psi(v_n) \varphi_n](v).$ Comment: For other basis (u_1, \dots, u_n) and the dual basis (ρ_1, \dots, ρ_n) , $\psi = \psi(u_1) \rho_1 + \dots + \psi(u_n) \rho_n.$ **35** Prove that $(\mathcal{P}(\mathbf{R}))'$ and \mathbf{R}^{∞} are iso. **SOLUTION:** Define $\theta \in \mathcal{L}\left((\mathcal{P}(\mathbf{R}))', \mathbf{R}^{\infty}\right)$ by $\theta(\varphi) = (\varphi(1), \varphi(x), \dots, \varphi(x^n), \dots)$. Inje: $\theta(\varphi) = 0 \Rightarrow \forall x^k$ in the basis $(1, x, ..., x^n, ...)$ of $\mathcal{P}_n(\mathbf{R})$ for any n, $\varphi(x^k) = 0 \Rightarrow \varphi = 0$. Surj: $\forall (a_0, a_1, \dots, a_n, \dots) \in \mathbf{F}^{\infty}$, let ψ be such that $\psi(x^k) = a_k$ and thus $\theta(\psi) = (a_0, a_1, \dots, a_n, \dots)$. Hence θ is an iso from $(\mathcal{P}(\mathbf{R}))'$ onto \mathbf{R}^{∞} . **7** Suppose $m \in \mathbb{N}^+$. Show that the dual basis of the basis $(1, x, ..., x_m)$ of $\mathcal{P}_m(\mathbb{R})$ is $\varphi_0, \varphi_1, ..., \varphi_m$, where $\varphi_k = \frac{p^{(k)}(0)}{k!}$. Here $p^{(k)}$ denotes the k^{th} derivative of p, with the understanding that the 0^{th} derivative of p is p. **SOLUTION:** For each j and k, $(x^{j})^{(k)} =$ $\begin{cases} j(j-1) \dots (j-k+1) \cdot x^{(j-k)}, & j \geq k. \\ j(j-1) \dots (j-j+1) = j!, & j = k. \\ 0, & j \leq k. \end{cases}$ Then $(x^{j})^{(k)}(0) =$ $\begin{cases} 0, & j \neq k. \\ k!, & j = k. \end{cases}$ Thus $\varphi_k = \psi_k$, where ψ_1, \dots, ψ_m is the dual basis of $(1, x, \dots, x_m)$ of $\mathcal{P}_m(\mathbf{R})$. **8** Suppose $m \in \mathbb{N}^+$. (a) By [2.C.10], $B = (1, x - 5, ..., (x - 5)^m)$ is a basis of $\mathcal{P}_m(\mathbf{R})$. (b) $\varphi_k = \frac{p^{(k)}(5)}{l}$ for each k = 0, 1, ..., m. Then $(\varphi_0, \varphi_1, ..., \varphi_m)$ is the dual basis of B. **13** Define $T: \mathbb{R}^3 \to \mathbb{R}^2$ by T(x, y, z) = (4x + 5y + 6z, 7x + 8y + 9z). Let (φ_1, φ_2) , (ψ_1, ψ_2, ψ_3) denote the dual basis of the standard basis of \mathbb{R}^2 and \mathbb{R}^3 . (a) Describe the linear functionals $T'(\varphi_1), T'(\varphi_2) \in \mathcal{L}(\mathbb{R}^3, \mathbb{R})$ For any $(x, y, z) \in \mathbb{R}^3$, $(T'(\varphi_1))(x, y, z) = 4x + 5y + 6z$, $(T'(\varphi_2))(x, y, z) = 7x + 8y + 9z$. (b) Write $T'(\varphi_1)$ and $T'(\varphi_2)$ as linear combinations of ψ_1, ψ_2, ψ_3 . $T'(\varphi_1) = 4\psi_1 + 5\psi_2 + 6\psi_3, \ T'(\varphi_2) = 7\psi_1 + 8\psi_2 + 9\psi_3.$ **14** Define $T: \mathcal{P}(\mathbf{R}) \to \mathcal{P}(\mathbf{R})$ by $(Tp)(x) = x^2p(x) + p''(x)$ for each $x \in \mathbf{R}$.

(b) Suppose $\varphi \in \mathcal{P}(\mathbf{R})'$ is defined by $\varphi(p) = \int_0^1 p(x) dx$. Evaluate $(T'(\varphi))(x^3)$. $(T'(\varphi))(x^3) = \int_0^1 (x^5 + 6x) dx = \int_0^1 (\frac{1}{6}x^6 + 3x^2)' dx = \frac{6}{19}$.

 $(T'(\varphi))(p) = [x^2p(x) + p''(x)]'(4) = [2xp(x) + x^2p'(x) + p'''(x)](4) = 8p(4) + 16p'(4) + p'''(4).$

(a) Suppose $\varphi \in \mathcal{P}(\mathbf{R})'$ is defined by $\varphi(p) = p'(4)$. Describe $T'(\varphi) \in \mathcal{P}(\mathbf{R})'$.

12 Show that the dual map of the identity operator on V is the identity operator on V' .	
SOLUTION : $I'(\varphi) = \varphi \circ I = \varphi$, $\forall \varphi \in V'$. • Suppose W is finite-dim and $T \in \mathcal{L}(V, W)$. Prove that $T' = 0 \iff T = 0$.	
SOLUTION: $T = 0 \iff T'(\varphi) = \varphi \circ T = 0$ for all $\varphi \in V' \iff T' = 0$.	
• Suppose V and W are finite-dim and $T \in \mathcal{L}(V,W)$. Prove that T is inv $\iff T'$ is inv. Solution: By [3.108] and [3.110].	
16 Suppose V and W are finite-dim. Define Γ by $\Gamma(T) = T'$ for any $T \in \mathcal{L}(V, W)$. Prove that Γ is an iso of $\mathcal{L}(V, W)$ onto $\mathcal{L}(W', V')$.	
SOLUTION:	
V,W are finite-dim \Rightarrow dim $\mathcal{L}(V,W)=\dim \mathcal{L}(W',V')$. And by [3.101], Γ is linear. $\mathbb{Z}(W)$ Suppose $\Gamma(T)=T'=0$. By Problem (15), $T=0$. Thus T is inje $\Rightarrow T$ is inv.	
4 Suppose V is finite-dim and U is a subsp of V , $U \neq V$. Prove that $\exists \varphi \in V' \setminus \{0\}$, $\varphi(u) = 0$ for all $u \in U$.	
SOLUTION:	
Let (u_1, \dots, u_m) be a basis of U , extend to $(u_1, \dots, u_m, u_{m+1}, \dots, u_{m+n})$ a basis of V .	
Choose a $k \in \{1,, n\}$. Define $\varphi \in V'$ by $\varphi(u_i) = \begin{cases} 1, & \text{if } i = m + k. \\ 0, & \text{otherwise.} \end{cases}$	
Or. Equivalent to proving that $U^0 \neq \{0\}$. By [3.106], dim $U^0 = \dim V - \dim U > 0$.	
• Suppose V is a vecsp and $U \subseteq V$. 17 $U^0 = \{ \varphi \in V' : U \subseteq null \varphi \}$. Noticing $\varphi \in V'$, $U \subseteq null \varphi \iff \forall u \in U, \varphi(u) = 0$.	
18 $U = \{0\} \iff \forall \varphi \in V', U \subseteq \text{null } \varphi \iff U^0 = V'.$	
19 $U = V \iff U_V^0 = \{0\} = V_V^0$. By the inverse and contrapositive of Problem (4).	
20, 21 Suppose U and W are subsets of V. Prove that $U \subseteq W \iff W^0 \subseteq U^0$.	
Solution: (a) Suppose $U \subseteq W$. Then $\forall w \in W, u \in U, \varphi \in W^0, \varphi(w) = 0 = \varphi(u) \Rightarrow \varphi \in U^0$. Thus $W^0 \subseteq U^0$. (b) Suppose $W^0 \subseteq U^0$. Then $\varphi \in W^0 \Rightarrow \varphi \in U^0$. Hence $\operatorname{null} \varphi \supseteq W \Rightarrow \operatorname{null} \varphi \supseteq U$. Thus $W \supseteq U$. Corollary: $W^0 = U^0 \iff U = W$.	
22 Suppose U and W are subsps of V. Prove that $(U + W)^0 = U^0 \cap W^0$.	
SOLUTION: (a) $U \subseteq U + W \\ W \subseteq U + W$ $\Rightarrow (U + W)^0 \subseteq U^0 \\ (U + W)^0 \subseteq W^0$ $\Rightarrow (U + W)^0 \subseteq U^0 \cap W^0$.	
(b) $\forall \varphi \in U^0 \cap W^0$, $\varphi(u+w) = 0$, where $u \in U$, $w \in W \Rightarrow \varphi \in (U+W)^0$. Thus $(U+W)^0 \supseteq U^0 \cap W$	0.□
23 Suppose U and W are subsets of V. Prove that $(U \cap W)^0 = U^0 + W^0$.	
SOLUTION: $ \begin{pmatrix} U \cap W \subseteq U \\ U \cap W \subseteq W \end{pmatrix} \Rightarrow \frac{(U \cap W)^0 \supseteq U^0}{(U \cap W)^0 \supseteq W^0} \Rightarrow (U \cap W)^0 \supseteq U^0 + W^0 \supseteq U^0 \cap W^0. $	

(b) $\forall \varphi \in U^0, \psi \in W^0$ and $\forall v \in U \cap W, (\varphi + \psi)(v) = \varphi(v) + \psi(v) = 0$. Thus $U^0 + W^0 \subseteq (U \cap W)^0$. \square	
• Corollary: Suppose $\{V_{\alpha_i}\}_{\alpha_i \in \Gamma}$ is a collection of subsps of V .	
Then $\left(\sum_{\alpha_i \in \Gamma} V_{\alpha_i}\right)^0 = \bigcap_{\alpha_i \in \Gamma} \left(V_{\alpha_i}^0\right)$; And $\left(\bigcap_{\alpha_i \in \Gamma} V_{\alpha_i}\right)^0 = \sum_{\alpha_i \in \Gamma} \left(V_{\alpha_i}^0\right)$.	
24 Suppose V is finite-dim and U is a subsp of V. Prove, using the pattern of [3.104], that $dimU + dimU^0 = dimV$.	
Solution: Let (u_1, \ldots, u_m) be a basis of U , extend to a basis of V as $(u_1, \ldots, u_m, \ldots, u_n)$, and let $(\varphi_1, \ldots, \varphi_m, \ldots, \varphi_n)$ be the dual basis. (a) Suppose $\varphi \in \text{span}(\varphi_{m+1}, \ldots, \varphi_n)$, then $\exists a_i \in \mathbf{F}, \varphi = a_{m+1}\varphi_{m+1} + \cdots + a_n\varphi_n$. For all $u \in U$, $\varphi(u) = 0$. Thus $\varphi \in U^0$, getting span $(\varphi_{m+1}, \ldots, \varphi_n) \subseteq U^0$. (b) Suppose $\varphi \in U^0$, then $\exists a_i \in \mathbf{F}, \varphi = a_1\varphi_1 + \cdots + a_m\varphi_m + \cdots + a_n\varphi_n$. For all $u_i \in U$, $0 = \varphi(u_i) = \sum_{i=1}^n \varphi(u_i) = a_i$. Then $\varphi = a_{m+1}\varphi_{m+1} + \cdots + a_n\varphi_n$.	
Thus $\varphi \in \text{span}(\varphi_{m+1}, \dots, \varphi_n)$, getting span $(\varphi_{m+1}, \dots, \varphi_n) \supseteq U^0$. Hence span $(\varphi_{m+1}, \dots, \varphi_n) = U^0$, dim $U^0 = n - m = \dim V - \dim U$.	
25 Suppose U is a subsp of V . Explain why $U = \{v \in V : \varphi(v) = 0, \forall \varphi \in U^0\}$. Solution: Note that $U = \{v \in V : v \in U\}$ is a subsp of V and $\varphi(v) = 0$ for every $\varphi \in U^0 \iff v \in U$. \square	
26 Suppose V is finite-dim, Ω is a subsp of V' . Prove that $\Omega = \{v \in V : \varphi(v) = 0, \forall \varphi \in \Omega\}^0$. Solution: Using the corollary in Problem $(20, 21)$. Suppose $U = \{v \in V : \forall \varphi \in \Omega, \varphi(v) = 0\}$. Getting $U^0 = \{v \in V : \forall \varphi \in \Omega, \varphi(v) = 0\}^0$. We need to show that $\Omega = U^0$. (a) $\forall \varphi \in \Omega, v \in U, \varphi(v) = 0 \Rightarrow \varphi \in U^0 \Rightarrow \Omega \subseteq U^0$. (b) $v \in U \Leftrightarrow \left\{ \begin{array}{l} \forall \varphi \in \Omega, \varphi(v) = 0 \\ \forall \psi \in U^0, \psi(v) = 0 \end{array} \right.$ Thus $\Omega \supseteq U^0$.	
27 Suppose $T \in \mathcal{L}(\mathcal{P}_5(\mathbf{R}) \text{ and } \mathrm{null} T' = \mathrm{span}(\varphi), \text{ where } \varphi \text{ is the linear functional on } \mathcal{P}_5(\mathbf{R}) \text{ defined by } \varphi(p) = p(8). \text{ Prove that } \mathrm{range}T = \{p \in \mathcal{P}_5(\mathbf{R}) : p(8) = 0\} \text{ .}$ Solution: By Problem (26), $\mathrm{span}(\varphi) = \{p \in \mathcal{P}_5(\mathbf{R}) : \psi(p) = 0, \forall \psi \in \mathrm{span}(\varphi)\}^0$, Hence $\mathrm{span}(\varphi) = \{p \in \mathcal{P}_5(\mathbf{R}) : \varphi(p) = p(8) = 0\}^0$, $\nabla \mathrm{span}(\varphi) = \mathrm{null}T' = (\mathrm{range}T)^0$. By the corollary in Problem (20, 21), $\mathrm{range}T = \{p \in \mathcal{P}_5(\mathbf{R}) : p(8) = 0\}$.	
28, 29 Suppose V , W are finite-dim, $T \in \mathcal{L}(V, W)$. (a) Suppose $\exists \varphi \in W'$, $\operatorname{null} T' = \operatorname{span}(\varphi)$. Prove that $\operatorname{range} T = \operatorname{null} \varphi$. (b) Suppose $\exists \varphi \in V'$, $\operatorname{range} T' = \operatorname{span}(\varphi)$. Prove that $\operatorname{null} T = \operatorname{null} \varphi$. Solution: Using Problem (26), [3.107] and [3.109].	

Because span $(\varphi) = \{v \in V : \forall \psi \in \text{span}(\varphi), \psi(v) = 0\}^0 = \{v \in V : \varphi(v) = 0\}^0 = (\text{null } \varphi)^0.$ (a) $(\operatorname{range} T)^0 = \operatorname{null} T' = \operatorname{span} (\varphi) = (\operatorname{null} \varphi)^0 \Longleftrightarrow \operatorname{range} T = \operatorname{null} \varphi.$

(b) $(\operatorname{null} T)^0 = \operatorname{range} T' = \operatorname{span}(\varphi) = (\operatorname{null} \varphi)^0 \iff \operatorname{null} T = \operatorname{null} \varphi$.

31 Suppose V is finite-dim and $(\varphi_1, ..., \varphi_n)$ is a basis of V'.

```
SOLUTION: Using Problem (29) and (30) in (3,B).
   \forall \varphi_i, null \varphi_i \oplus \{au_i : a \in \mathbf{F}\} = V.
   Because \varphi_1, \dots, \varphi_m is linely inde. null \varphi_i \neq \text{null } \varphi_i for each i, j \in \mathbb{N}^+ such that i \neq j.
   Thus (u_1, ..., u_m) is linely inde, for if not, then \exists i, j such that null \varphi_i = \text{null } \varphi_i, contradicts.
   \mathbb{X} dim V' = m = \dim V. Then (u_1, \dots, u_m) is a basis of V whose dual basis is (\varphi_1, \dots, \varphi_n).
                                                                                                                                                                   \Box.
• Suppose V is finite-dim and \varphi_1, \dots, \varphi_m \in V'. Prove that the following sets are the same.
   (a) span (\varphi_1, \dots, \varphi_m)
   (b) ((\operatorname{null} \varphi_1) \cap \cdots \cap (\operatorname{null} \varphi_m))^0
   (c) \{\varphi \in V' : (\text{null } \varphi_1) \cap \cdots \cap (\text{null } \varphi_m) \subseteq \text{null } \varphi\}
SOLUTION: By Problem (17), (b) and (c) are equi. By Problem (26) and the corollary in Problem (23),
         \frac{\left(\left(\operatorname{null}\varphi_{1}\right)\cap\cdots\cap\left(\operatorname{null}\varphi_{m}\right)\right)^{0}=\left(\operatorname{null}\varphi_{1}\right)^{0}+\cdots+\left(\operatorname{null}\varphi_{m}\right)^{0}.}{\mathbb{Z}\operatorname{span}\left(\varphi_{i}\right)=\left\{v\in V:\forall\psi\in\operatorname{span}\left(\varphi_{i}\right),\psi(v)=0\right\}^{0}=\left(\operatorname{null}\varphi_{i}\right)^{0}.} \right\}\Rightarrow(a)=(b). 
COROLLARY: 30 Suppose V is finite-dim and \varphi_1, \ldots, \varphi_m is a linely inde list in V'.
                            Then dim ((\operatorname{null} \varphi_1) \cap \cdots \cap (\operatorname{null} \varphi_m)) = (\dim V) - m.
6 Define \Gamma: V' \to \mathbf{F}^m by \Gamma(\varphi) = (\varphi(v_1), \dots, \varphi(v_m)), where v_1, \dots, v_m \in V.
   (a) Show that span (v_1, ..., v_m) = V \iff \Gamma is inje.
   (b) Show that (v_1, ..., v_m) is linely inde \iff \Gamma is surj.
SOLUTION:
              Suppose \Gamma is inje. Then let \Gamma(\varphi) = 0, getting \varphi = 0 \Leftrightarrow \text{null } \varphi = V = \text{span } (v_1, \dots, v_m).
              Suppose span (v_1, ..., v_m) = V. Then let \Gamma(\varphi) = 0, getting \varphi(v_i) = 0 for each i,
                                                                         null φ = span (v_1, ..., v_m) = V, thus φ = 0, Γ is inje.
              Suppose \Gamma is surj. Then let \Gamma(\varphi_i) = e_i for each i, where (e_1, \dots, e_m) is the standard basis of \mathbf{F}^m.
                      Then (\varphi_1, \dots, \varphi_m) is linely inde, suppose a_1v_1 + \dots + a_mv_m = 0,
                     then for each i, we have \varphi_i(a_1v_1+\cdots+a_mv_m)=a_i=0. Thus v_1,\ldots,v_n is linely inde.
   (b)
              Suppose (v_1, \dots, v_m) is linely inde. Let (\varphi_1, \dots, \varphi_m) be the dual basis of span (v_1, \dots, v_m).
                     Thus for each (a_1, \ldots, a_m) \in \mathbf{F}^m, we have \varphi = a_1 \varphi_1 + \cdots + a_m \varphi_m so that \Gamma(\varphi) = (a_1, \ldots, a_m). \square
• Define \Gamma: V \to \mathbf{F}^m by \Gamma(v) = (\varphi_1(v), \dots, \varphi_m(v)), where \varphi_1, \dots, \varphi_m \in V'.
   (c) Show that span (\varphi_1, ..., \varphi_m) = V' \iff \Gamma is inje.
   (d) Show that (\varphi_1, ..., \varphi_m) is linely inde \iff \Gamma is surj.
SOLUTION:
             Suppose \Gamma is inje. Then \Gamma(v) = 0 \Leftrightarrow \forall i, \varphi_i(v) = 0 \Leftrightarrow v \in (\operatorname{null} \varphi_1) \cap \cdots \cap (\operatorname{null} \varphi_m) \Leftrightarrow v = 0.
                    Getting (\operatorname{null} \varphi_1) \cap \cdots \cap (\operatorname{null} \varphi_m) = \{0\}. By Problem (\bullet) above, span (\varphi_1, \dots, \varphi_m) = V'
             Suppose span (\varphi_1, \dots, \varphi_m) = V'. Again by Problem (\bullet), (\text{null } \varphi_1) \cap \dots \cap (\text{null } \varphi_m) = \{0\}.
                     Thus \Gamma(v) = 0 \Rightarrow \forall i, \varphi_i(v) = 0 \Rightarrow v = 0.
              Suppose (\varphi_1, \dots, \varphi_m) is linely inde. Then by Problem (31), (v_1, \dots, v_m) is linely inde.
                     Thus for any (a_1, \ldots, a_m) \in \mathbf{F}, by letting v = \sum_{i=1}^m a_i v_i, then \varphi_i(v) = a_i \Rightarrow \Gamma(v) = (a_1, \ldots, a_m).
              Suppose \Gamma is surj. Let e_1, \dots, e_m be a basis of \mathbf{F}^m.
                    For every e_i, \exists v_i \in V such that \Gamma(v_i) = (\varphi_1(v_i), \dots, \varphi_m(v)) = e_i,
                     fix v_i (\Rightarrow (v_1,...,v_m) is linely inde). Thus \varphi_i(v_i) = 1, \varphi_i(v_i) = 0.
                     Hence (\varphi_1, \dots, \varphi_m) is the dual basis of the basis v_1, \dots, \varphi_m of span (v_1, \dots, v_m).
```

Show that there exists a basis of V whose dual basis is $(\varphi_1, \dots, \varphi_n)$.

33 Suppose $A \in \mathbf{F}^{m,n}$. Define $T: A \to A^t$. Prove that T is an iso of $\mathbf{F}^{m,n}$ onto $\mathbf{F}^{n,m}$ Solution: By [3.111], T is linear. Note that $(A^t)^t = A$. (a) For any $B \in \mathbf{F}^{n,m}$, let $A = B^t$ so that $T(A) = B$. Thus T is surj. (b) If $T(A) = 0$ for some $A \in \mathbf{F}^{n,m}$, then $A = 0$. Thus T is inje, for if not, $\exists j,k \in \mathbf{N}^+$ such that $A_{j,k} \neq 0$, then $T(A)_{k,j} \neq 0$, contradicts.	
32 Suppose $T \in \mathcal{L}(V)$, and (u_1, \ldots, u_m) , (v_1, \ldots, v_m) are bases of V . Prove that T is $inv \Leftrightarrow the \ rows \ of \ \mathcal{M}\left(T, (u_1, \ldots, u_m), (v_1, \ldots, v_m)\right)$ form a basis of $\mathbf{F}^{1,n}$. Solution: Note that T is inveritibe $\Leftrightarrow T'$ is inv. And $\mathcal{M}(T') = \mathcal{M}(T)^t = A^t$, denote it by B . Let $(\varphi_1, \ldots, \varphi_m)$ be the dual basis of (v_1, \ldots, v_m) , (ψ_1, \ldots, ψ_m) be the dual basis of (u_1, \ldots, u_m) . (a) Suppose T is inv, so is T' . Because $T'(\varphi_1), \ldots, T'(\varphi_m)$ is linely inde. Noticing that $T'(\varphi_i) = B_{1,i}\psi_1 + \cdots + B_{m,i}\psi_m$. Thus the cols of B , namely the rows of A , are linely inde (check it by contradiction). (b) Suppose the rows of A are linely inde, so are the cols of B . Then $(T'(\varphi_1), \ldots, T'(\varphi_m))$ is a basis of range T' , namely V' . Thus T' is surj. Hence T' is inv, so is T .	
 34 The double dual space of V, denoted by V'', is defined to be the dual space of V'. In other words, V'' = L(V', F). Define Λ: V → V'' by (Λv)(φ) = φ(v). (a) Show that Λ is a linear map from V to V''. (b) Show that if T ∈ L(V), then T'' ∘ Λ = Λ ∘ T, where T'' = (T')'. (c) Show that if V is finite-dim, then Λ is an iso from V onto V''. Suppose V is finite-dim. Then V and V' are iso, but finding an iso from V onto V' generally requires choosing a basis of V. In contrast, the iso Λ from V onto V'' does not require a choice of basis and thus is considered more nat 	
Solution: (a) $\forall \varphi \in V', \ \forall v, w \in V, a \in \mathbf{F}, \ (\Lambda(v+aw)) \ (\varphi) = \varphi(v+aw) = \varphi(v) + a\varphi(w) = (\Lambda v)(\varphi) + a(\Lambda w)$ Thus $\Lambda(v+aw) = \Lambda v + a\Lambda w$. Hence Λ is linear. (b) $(T''(\Lambda v)) \ (\varphi) = ((\Lambda v) \circ (T')) \ (\varphi) = (\Lambda v) \ (T'(\varphi)) = (T'(\varphi)) \ (v) = (\varphi \circ T)(v) = \varphi(Tv)$ $(\Lambda(Tv)) \ (\varphi)$. Hence $T''(\Lambda v) = (\Lambda(Tv))$, getting $T'' \circ \Lambda = \Lambda \circ T$.	$(\varphi).$
(c) Suppose $\Lambda v = 0$. Then $\forall \varphi \in V'$, $(\Lambda v)(\varphi) = \varphi(v) = 0 \Rightarrow v = 0$. Thus Λ is inje. \mathbb{X} Because V is finite-dim. dim $V = \dim V' = \dim V''$. Hence Λ is an iso.	
36 Suppose U is a subsp of V . Define $i: U \to V$ by $i(u) = u$. Thus $i' \in \mathcal{L}(V', U')$. (a) Show that null $i' = U^0$: null $i' = (\operatorname{range} i)^0 = U^0 \Leftarrow \operatorname{range} i = U$. (b) Prove that if V is finite-dim, then $\operatorname{range} i' = U'$: $\operatorname{range} i' = (\operatorname{null} i)^0_U = (\{0\})^0_U = U'$. (c) Prove that if V is finite-dim, then \tilde{i}' is an iso from V'/U^0 onto U' : The iso in (c) is natural in that it does not depend on a choice of basis in either vecsp.	
SOLUTION: Note that $\tilde{i'}: V'/\text{null } i' \to \text{range } i' \Rightarrow \tilde{i'}: V'/U^0 \to U'$. By (a), (b) and [3.91(d)].	
37 Suppose U is a subsp of V and π is the quotient map. Thus $\pi' \in \mathcal{L}((V/U)', V')$. (a) Show that π' is inje: Because π is surj. Use [3.108]. (b) Show that $\pi' = U^0$. (c) Conclude that π' is an iso from $(V/U)'$ onto U^0 .	

The iso in (c) is natural in that it does not depend on a choice of basis in either vecsp.

In fact, there is no assumption here that any of these vecsps are finite-dim.

SOLUTION: [3.109] is not available. Using (3.E.18), also see (3.E.20).

- (b) $\psi \in \text{range } \pi' \iff \exists \varphi \in (V/U)', \psi = \varphi \circ \pi \iff \text{null } \psi \supseteq U \iff \psi \in U^0$. Hence $\text{range } \pi' = U^0$.
- (c) $\psi \in U^0 \iff \text{null } \psi \supseteq U \iff \exists \varphi \in (V/U)', \psi = \varphi \circ \pi = \pi(\varphi)$. Thus π' is surj. And by (a).

ENDED

4

• **Note For [4.8]:** division algorithm for polynomials

Suppose $p, s \in \mathcal{P}(\mathbf{F})$, with $s \neq 0$. Then $\exists ! q, r \in \mathcal{P}(\mathbf{F})$ such that p = sq + r and $\deg r < \deg s$. Another Proof: Suppose $\deg p \geq \deg s$. Then $(\underbrace{1, z, \ldots, z^{\deg s - 1}}_{\text{of length } \deg s}, \underbrace{s, zs, \cdots, z^{\deg p - \deg s}}_{\text{of length } (\deg p - \deg s + 1)})$ is a basis of $\mathcal{P}_{\deg p}(\mathbf{F})$.

Because $q \in \mathcal{P}(\mathbf{F})$, $\exists ! a_i, b_i \in \mathbf{F}$,

$$\begin{split} q &= a_0 + a_1 z + \dots + a_{\deg s - 1} z^{\deg s - 1} + b_0 s + b_1 z s + \dots + b_{\deg p - \deg s} z^{\deg p - \deg s} s \\ &= \underbrace{a_0 + a_1 z + \dots + a_{\deg s - 1} z^{\deg s - 1}}_r + s \underbrace{(b_0 + b_1 z + \dots + b_{\deg p - \deg s} z^{\deg p - \deg s})}_q \,. \end{split}$$

With r, q as defined uniquely above, we are done.

• **Note For [4.11]:** each zero of a poly corresponds to a degree-one factor; Another Proof:

First suppose $p(\lambda) = 0$. Write $p(z) = a_0 + a_1 z + \dots + a_m z^m$, $\exists ! a_0, a_1, \dots, a_m \in \mathbf{F}$ for all $z \in \mathbf{F}$.

Then $p(z) = p(z) - p(\lambda) = a_1(z - \lambda) + \dots + a_m(z^m - \lambda^m)$ for all $z \in \mathbf{F}$.

Hence $\forall k \in \{1,\ldots,m\}, z^k - \lambda^k = (z-\lambda)(z^{k-1}\lambda^0 + z^{k-2}\lambda^1 + \cdots + z^{k-(j+1)}\lambda^j + \cdots + z\lambda^{k-2} + z^0\lambda^{k-1}).$

Thus
$$p(z) = \sum_{j=1}^{m} a_j(z - \lambda) \sum_{i=1}^{k} \lambda^{i-1} z^{k-i} = (z - \lambda) \sum_{j=1}^{m} a_j \sum_{i=1}^{k} \lambda^{i-1} z^{k-i} = (z - \lambda) q(z).$$

• Note For [4.13]: fundamental theorem of algebra, first version

Every nonconst poly with complex coefficients has a zero in C. Another Proof:

For any $w \in C$, $k \in \mathbb{N}^+$, by polar coordinates, $\exists r \ge 0, \theta \in \mathbb{R}$, $r(\cos \theta + i \sin \theta) = w$.

By De Moivre' theorem, $w^k = [r(\cos\theta + i\sin\theta)]^k = r^k(\cos k\theta + i\sin k\theta)$.

Hence $\left(r^{1/k}(\cos\frac{\theta}{k} + i\sin\frac{\theta}{k})\right)^k = w$. Thus every complex number has a k^{th} root.

Suppose a nonconst $p \in \mathcal{P}(\mathbf{C})$ with highest-order nonzero term $c_m z_m$.

Then
$$|p(z)| \to \infty$$
 as $|z| \to \infty$ (because $\frac{|p(z)|}{|z_m|} \to |c_m|$ as $|z| \to \infty$).

Thus the continuous function $z \to |p(z)|$ has a global minimum at some point $\zeta \in \mathbb{C}$.

To show that $p(\zeta) = 0$, assume $p(\zeta) \neq 0$. Define $q \in \mathcal{P}(\mathbf{C})$ by $q(z) = \frac{p(z + \zeta)}{p(\zeta)}$.

The function $z \to |q(z)|$ has a global minimum value of 1 at z = 0.

Write $q(z) = 1 + a_k z^k + \dots + a_m z^m$, where $k \in \mathbb{N}^+$ is the smallest such that $a_k \neq 0$.

Let $\beta \in \mathbb{C}$ be such that $\beta^k = -\frac{1}{a_k}$.

There is a const c > 1 so that if $t \in (0,1)$, then $|q(t\beta)| \le |1 + a_k t^k \beta^k| + t^{k+1} c = 1 - t^k (1 - tc)$.

Now letting t = 1/(2c), we get $|q(t\beta)| < 1$. Contradicts. Hence $p(\zeta) = 0$, as desired.

• Prove that if $w, z \in \mathbb{C}$, then $||w| - |z|| \le |w - z|$.

$$|w - z|^2 = (w - z)(\overline{w} - \overline{z})$$

$$= |w|^2 + |z|^2 - (w\overline{z} + \overline{w}z)$$

$$= |w|^2 + |z|^2 - (\overline{w}z + \overline{w}z)$$

$$= |w|^2 + |z|^2 - 2Re(\overline{w}z)$$

$$\geq |w|^2 + |z|^2 - 2|\overline{w}z|$$

$$= |w|^2 + |z|^2 - 2|w||z| = ||w| - |z||^2.$$

Geometric interpretation: The length of each side of a triangle is greater than or equal to the difference of the lengths of the two other sides.

• Suppose V is on \mathbb{C} and $\varphi \in V'$. Define $\sigma : V \to \mathbb{R}$ by $\sigma(v) = \mathbb{R}e \varphi(v)$ for each $v \in V$. Show that $\varphi(v) = \sigma(v) - i\sigma(iv)$ for all $v \in V$.

SOLUTION:

Notice that $\varphi(v) = \operatorname{Re} \varphi(v) + i \operatorname{Im} \varphi(v) = \sigma(v) + i \operatorname{Im} \varphi(v)$.

 $\mathbb{X} \operatorname{Re} \varphi(iv) = \operatorname{Re} [i\varphi(v)] = -\operatorname{Im} \varphi(v) = \sigma(iv).$

Hence $\varphi(v) = \sigma(v) - i\sigma(iv)$.

2 Suppose $m \in \mathbb{N}^+$. Is the set $U = \{0\} \cup \{p \in \mathcal{P}(\mathbb{F}) : \deg p = m\}$ a subsp of $\mathcal{P}(\mathbb{F})$?

SOLUTION:

$$x^{m}, x^{m} + x^{m-1} \in U$$
 but $\deg [(x^{m} + x^{m-1}) - (x^{m})] \neq m \Rightarrow (x^{m} + x^{m-1}) - (x^{m}) \notin U$.

Hence *U* is not closed under add, and therefore is not a subsp.

3 Suppose $m \in \mathbb{N}^+$. Is the set $U = \{0\} \cup \{p \in \mathcal{P}(\mathbb{F}) : 2 \mid \deg p\}$ a subsp of $\mathcal{P}(\mathbb{F})$?

SOLUTION:

$$x^{2}, x^{2} + x \in U$$
 but $deg[(x^{2} + x) - (x^{2})]$ is odd and hence $(x^{2} + x) - (x^{2}) \notin U$.

Thus *U* is not closed under add, and therefore is not a subsp.

5 Suppose that $m \in \mathbb{N}, z_1, ..., z_{m+1}$ are distinct elements of \mathbb{F} , and $w_1, ..., w_{m+1} \in \mathbb{F}$. Prove that $\exists ! p \in \mathcal{P}_m(\mathbb{F})$ such that $p(z_k) = w_k$ for each k = 1, ..., m+1.

SOLUTION:

Define $T:\mathcal{P}_m(\mathbf{F})\to\mathbf{F}^{m+1}$ by $Tq=\left(q(z_1),\ldots,q(z_m),q(z_{m+1})\right)$. As can be easily checked, T is linear.

We need to show that T is surj, so that such p exists; and that T is inje, so that such p is unique.

$$Tq=0 \Longleftrightarrow q(z_1)=\cdots=q(z_m)=q(z_{m+1})=0$$

 \iff $q = 0 \in \mathcal{P}_m(\mathbf{F})$, for if not, q of deg m has at least m + 1 distinct roots. Contradicts [4.12].

 $\dim \operatorname{range} T = \dim \mathcal{P}_m(\mathbf{F}) - \dim \operatorname{null} T = m+1 = \dim \mathbf{F}^{m+1}. \ \ \ \mathsf{X} \ \ \operatorname{range} T \subseteq \mathbf{F}^{m+1}. \ \ \mathsf{Hence} \ T \ \ \mathsf{is} \ \mathsf{surj}. \quad \ \Box$

6 Suppose $p \in \mathcal{P}_m(\mathbb{C})$ has degree m. Prove that p has m distinct zeros $\iff p$ and its derivative p' have no zeros in common.

SOLUTION:

(a) Suppose p has m distinct zeros. By [4.14] and deg p=m, let $p(z)=c(z-\lambda_1)\cdots(z-\lambda_m)$, $\exists\,!\,c,\lambda_i\in\mathbf{C}$.

For each
$$j \in \{1, ..., m\}$$
, let $\frac{p(z)}{(z - \lambda_j)} = q_j \in \mathcal{P}_{m-1}(\mathbf{C})$, then $p(z) = (z - \lambda_j)q_j(z)$ and $q_j(\lambda_j) \neq 0$.

$$p'(z) = (z - \lambda_i)q_i'(z) + q_i(z) \Rightarrow p'(\lambda_i) = q_i(\lambda_i) \neq 0$$
, as desired.

(b) To prove the implication on the other direction, we prove the contrapositive:

Sup	pose	v has	less	than	m	distinct	roots.
~~~	P	7 - 2020					10000

We must show that p and its derivative p' have at least one zero in common.

Let  $\lambda$  be a zero of p, then write  $p(z) = (z - \lambda)^n q(z)$ ,  $\exists ! n \in \mathbb{N}^+, q \in \mathcal{P}_{m-n}(\mathbb{C})$ .

$$p'(z) = (z - \lambda)^n q'(z) + n(z - \lambda)^{n-1} q(z) \Rightarrow p'(\lambda) = 0, \lambda \text{ is a common root of } p' \text{ and } p.$$

## **7** Prove that every $p \in \mathcal{P}(\mathbf{R})$ of odd degree has a zero.

## SOLUTION:

Using the notation and proof of [4.17].  $\deg p = 2M + m$  is odd  $\Rightarrow m$  is odd. Hence  $\lambda_1$  exists.

OR. Using calculus only.

Suppose  $p \in \mathcal{P}_m(\mathbf{F})$ , deg p = m, m is odd.

Let 
$$p(x) = a_0 + a_1 x + \dots + a_m x^m$$
. Then  $a_m \neq 0$ . Denote  $|a_m|^{-1} a_m$  by  $\delta$ 

Write 
$$p(x) = x^m \left( \frac{a_0}{x^m} + \frac{a_1}{x^{m-1}} + \dots + \frac{a_{m-1}}{x} + a_m \right)$$
.

Thus p(x) is continuous, and  $\lim_{x \to -\infty} p(x) = -\delta \infty$ ;  $\lim_{x \to \infty} p(x) = \delta \infty$ .

Hence we conclude that p has at least one real zero.  $\square$ 

# **8** For $p \in \mathcal{P}(\mathbf{R})$ , define $Tp : \mathbf{R} \to \mathbf{R}$ by $(Tp)(x) = \begin{cases} \frac{p(x) - p(3)}{x - 3} & \text{if } x \neq 3, \\ p'(3) & \text{if } x = 3 \end{cases}$ for all $x \in \mathbf{R}$ .

Show that  $Tp \in \mathcal{P}(\mathbf{R})$  for all  $p \in \mathcal{P}(\mathbf{R})$  and that  $T : \mathcal{P}(\mathbf{R}) \to \mathcal{P}(\mathbf{R})$  is a linear map.

## **SOLUTION:**

For 
$$x \neq 3$$
,  $T(x^n) = \frac{x^n - 3^n}{x - 3} = \sum_{i=1}^n 3^{i-1} x^{n-i}$ .

For 
$$x = 3$$
,  $T(x^n) = 3^{n-1} \cdot n$ . Note that if  $x = 3$ , then  $\sum_{i=1}^n 3^{i-1} x^{n-i} = \sum_{i=1}^n 3^{n-1} = 3^{n-1} \cdot n$ .

Hence for all  $x \in \mathbb{R}$  and for all  $n \in \mathbb{N}$ ,  $T(x^n) = \sum_{i=1}^n 3^{i-1} x^{n-i} \in \mathcal{P}(\mathbb{R})$ .

Because *T* is linear, we conclude that  $Tp \in \mathcal{P}(\mathbf{R})$  for all  $p \in \mathcal{P}(\mathbf{R})$ .

Now we show that *T* is linear:

$$\forall p, q \in \mathcal{P}(\mathbf{R}), \lambda \in \mathbf{R}, T(p + \lambda q)(x) = \begin{cases} \frac{(p + \lambda q)(x) - (p + \lambda q)(3)}{x - 3} & \text{if } x \neq 3, \\ (p + \lambda q)'(3) & \text{if } x = 3 \end{cases} \text{ for all } x \in \mathbf{R}.$$

Notice that 
$$\begin{cases} (p + \lambda q)(x) - (p + \lambda q)(3) = (p(x) - p(3)) + (\lambda q(x) - \lambda q(3)) \\ (p + \lambda q)'(3) = p'(3) + \lambda q'(3). \end{cases}$$

Thus 
$$T(p + \lambda q)(x) = (T(p) + \lambda T(q))(x)$$
 for all  $x \in \mathbb{R}$ .

## **9** Suppose $p \in \mathcal{P}(\mathbf{C})$ . Define $q : \mathbf{C} \to \mathbf{C}$ by $q(z) = p(z)p(\overline{z})$ . Prove that $q \in \mathcal{P}(\mathbf{R})$ .

#### **SOLUTION:**

$$p(z) = a_n z^n + \dots + a_1 z + a_0 \Rightarrow p(\overline{z}) = a_n \overline{z}^n + \dots + a_1 \overline{z} + a_0 \Rightarrow \overline{p(\overline{z})} = \overline{a_n} z^n + \dots + \overline{a_1} z + \overline{a_0}.$$

Note that 
$$q(z) = p(z)\overline{p(\overline{z})} = \overline{p(\overline{z})}p(z) = p(\overline{z})p(\overline{\overline{z}}) = \overline{q(\overline{z})}$$
.

Hence letting 
$$q(z) = c_m x^m + \dots + c_1 x + c_0 \implies \overline{c_k} = c_k, c_k \in \mathbb{R}$$
 for each  $k$ .

## **10** Suppose $m \in \mathbb{N}$ and $p \in \mathcal{P}_m(\mathbb{C})$ such that $p(x_k) \in \mathbb{R}$ for each $x_k$ , where $x_0, x_1, \dots, x_m \in \mathbb{R}$ are distinct. Prove that $p \in \mathcal{P}(\mathbb{R})$ .

## **SOLUTION:**

Let 
$$p(x_k) = y_k$$
 for each  $k$ . By Problem (5),  $\exists ! q \in \mathcal{P}_m(\mathbf{R})$  such that  $q(x_k) = y_k$ . Hence  $p = q$ .

OR. Using the Lagrange Interpolating Polynomial.

Define 
$$q(x) = \sum_{j=0}^{m} \frac{(x - x_0)(x - x_1) \cdots (x - x_{j-1})(x - x_{j+1}) \cdots (x - x_m)}{(x_j - x_0)(x_j - x_1) \cdots (x_j - x_{j-1})(x_j - x_{j+1}) \cdots (x_j - x_m)} p(x_j).$$

 $\mathbb{X}$  For each  $j, x_i, p(x_i) \in \mathbb{R} \Rightarrow q \in \mathcal{P}_m(\mathbb{R}) \subseteq \mathcal{P}_m(\mathbb{C})$ .

Notice that  $q(x_k) = 1 \cdot p(x_k) \Rightarrow (q - p)(x_k) = 0$  for each  $k \in \{0, 1, ..., m\}$ .

Then (q-p) has (m+1) distinct zeros, while  $(q-p) \in \mathcal{P}_m(\mathbb{C})$ . Hence by [4.12],  $q-p=0 \Rightarrow p=q.\square$ 

## **11** Suppose $p \in \mathcal{P}(\mathbf{F})$ with $p \neq 0$ . Let $U = \{pq : q \in \mathcal{P}(\mathbf{F})\}$ .

- (a) Show that dim  $\mathcal{P}(\mathbf{F})/U = \deg p$ .
- (b) Find a basis of  $\mathcal{P}(\mathbf{F})/U$ .

## SOLUTION:

*U* is a subsp of  $\mathcal{P}(\mathbf{F})$  because  $\forall f, g \in \mathcal{P}(\mathbf{F}), \lambda \in \mathbf{F}, pf + \lambda pg = p(f + \lambda g) \in U$ .

NOTE: Define  $P :\to \mathcal{P}(\mathbf{F})$  by  $(Pq)(x) = p(q(x)) = (p \circ q)(x)$  ( $\neq p(x)q(x)$ ). P is not linear.

(a) By [4.8], 
$$\forall f \in \mathcal{P}(\mathbf{F}), \exists ! q, r \in \mathcal{P}(\mathbf{F}), f = (p)q + (r); \deg r < \deg p$$
.

Hence  $\forall f \in \mathcal{P}(\mathbf{F}), \exists ! pq \in U, r \in \mathcal{P}_{\deg p-1}(\mathbf{F}), f = (pq) + (r); r \notin U.$ 

Thus  $\mathcal{P}(\mathbf{F}) = U \oplus \mathcal{P}_{\deg p-1}(\mathbf{F})$ . Therefore  $\mathcal{P}(\mathbf{F})/U$  and  $\mathcal{P}_{\deg p-1}(\mathbf{F})$  are iso.

Or. 
$$\forall f \in \mathcal{P}(\mathbf{F}), \exists ! q, r \in \mathcal{P}(\mathbf{F}), f = (p)q + (r); \deg r < \deg p.$$

Define  $R : \mathcal{P}(\mathbf{F}) \to \mathcal{P}_{\deg v-1}(\mathbf{F})$  by (Rf)(z) = r(z) for each  $z \in \mathbf{F}$ .

$$\forall f,g \in \mathcal{P}(\mathbf{F}), \lambda \in \mathbf{F}, R(f+\lambda g)(z) = R(f) + \lambda R(g).$$

BECAUSE:  $\forall f, g \in \mathcal{P}(\mathbf{F}), \lambda \in \mathbf{F}$ ,

$$\exists ! q_1, r_1 \in \mathcal{P}(\mathbf{F}), f = (p)q_1 + (r_1), \deg r_1 < \deg p;$$

$$\exists ! q_2, r_2 \in \mathcal{P}(\mathbf{F}), g = (p)q_2 + (r_2), \deg r_2 < \deg p;$$

$$\exists \,!\, q_3, r_3 \in \mathcal{P}(F), \lambda g = (p)q_3 + (r_3) = (p)(\lambda q_2) + (\lambda r_2), \ \deg r_3 < \deg p \ \text{ and } \deg \lambda r_2 < \deg p.$$

$$\Rightarrow q_3 = \lambda q_2, r_3 = \lambda r_2.$$

$$\exists\,!\,q_0,r_0\in\mathcal{P}(\mathbf{F}),(f+\lambda g)=(p)q_0+(r_0)$$

$$= (p)(q_1 + \lambda q_2) + (r_1 + \lambda r_2), \deg r_0 < \deg p \text{ and } \deg(r_1 + \lambda r_2) < \deg p.$$

$$\Rightarrow q_1 + \lambda q_2 = q_0$$
;  $r_1 + \lambda r_2 = r_0$ .

Hence *R* is linear.

$$R(f) = 0 \iff f = pq, \exists ! q \in \mathcal{P}(\mathbf{F}). \text{ Thus null } R = U.$$

$$\forall r \in \mathcal{P}_{\deg p-1}(\mathbf{F}), \det f = p+r, \text{ then } R(f) = r. \text{ Thus range } R = \mathcal{P}_{\deg p-1}(\mathbf{F}).$$

Finally, by [3.91(d)],  $\mathcal{P}(\mathbf{F})$ /null R, namely  $\mathcal{P}(\mathbf{F})/U$ , and range R, namely  $\mathcal{P}_{\deg p-1}(\mathbf{F})$ , are iso.

(b) 
$$(1 + U, x + U, ..., x^{\deg p - 1}) + U$$
) can be a basis of  $\mathcal{P}(\mathbf{F})/U$ .

- Suppose nonconst  $p, q \in \mathcal{P}(\mathbf{C})$  have no zeros in common. Let  $m = \deg p$ ,  $n = \deg q$ . Use (a)-(c) below to prove that  $\exists ! r \in \mathcal{P}_{n-1}(\mathbf{C}), s \in \mathcal{P}_{m-1}(\mathbf{C})$  such that rp + sq = 1.
  - (a) Define  $T: \mathcal{P}_{n-1}(\mathbf{C}) \times \mathcal{P}_{m-1}(\mathbf{C}) \to \mathcal{P}_{m+n-1}(\mathbf{C})$  by T(r,s) = rp + sq. Show that the linear map T is inje.
  - (b) Show that the linear map T in (a) is surj.
  - (c) Use (b) to conclude that  $\exists ! r \in \mathcal{P}_{n-1}(\mathbf{C}), s \in \mathcal{P}_{m-1}(\mathbf{C})$  such that rp + sq = 1.

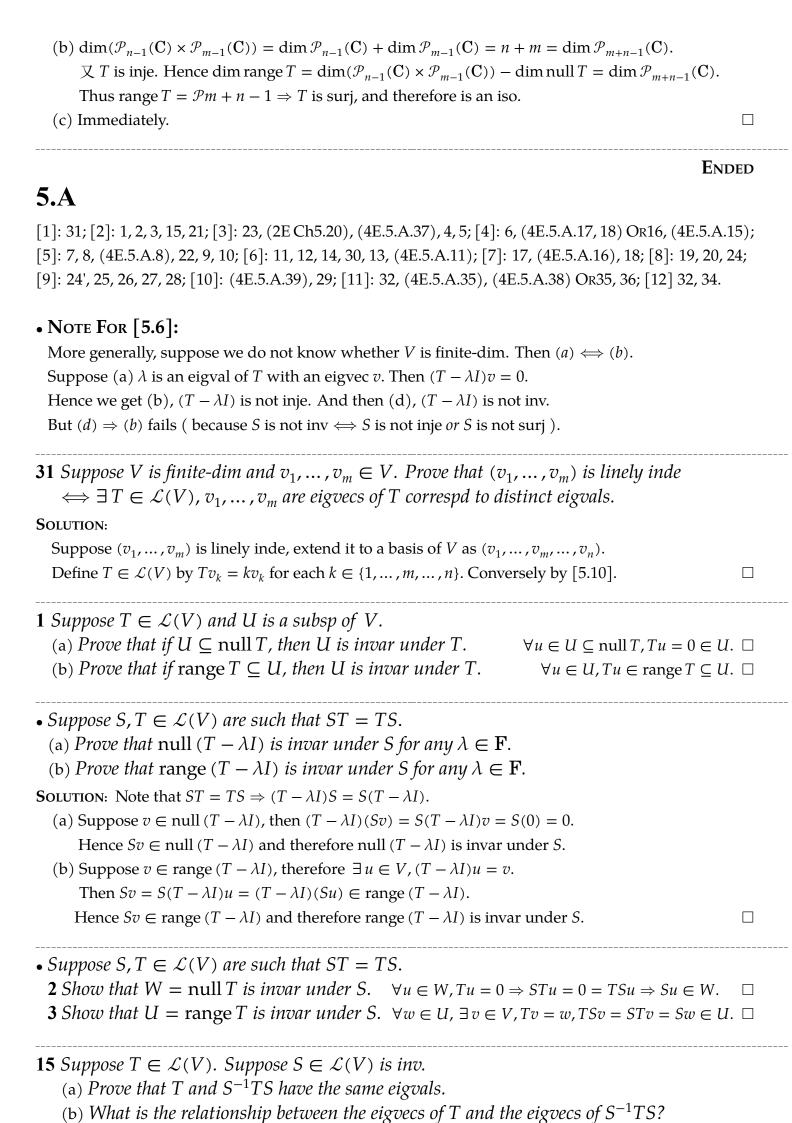

## SOLUTION:

(a) T is linear because  $\forall r_1, r_2 \in \mathcal{P}_{n-1}(\mathbb{C}), s_1, s_2 \in \mathcal{P}_{m-1}(\mathbb{C}), \lambda \in \mathbb{F}$ ,

$$T\left((r_1,s_1) + \lambda(r_2,s_2)\right) = T(r_1 + \lambda r_2, s_1 + \lambda s_2) = (r_1 + \lambda r_2)p + (s_1 + \lambda s_2)q = T(r_1,s_1) + \lambda T(r_2,s_2).$$

Suppose T(r,s) = rp + sq = 0. Notice that p,q have no zeros in common.

Then 
$$r = s = 0$$
, for if not, write  $\frac{q(z)}{r(z)} = \frac{p(z)}{s(z)}$ , while for any zero  $\lambda$  of  $q$ ,  $\frac{q(\lambda)}{r(z)} = 0 \neq \frac{p(\lambda)}{s(z)}$ .

_					
S	വ	L	JT	$\mathbf{I}$	N:

Suppose  $\lambda$  is an eigval of T with an eigvec v.

Then  $S^{-1}TS(S^{-1}v) = S^{-1}Tv = S^{-1}(\lambda v) = \lambda S^{-1}v$ .

Thus  $\lambda$  is also an eigval of  $S^{-1}TS$  with an eigvec  $S^{-1}v$ .

Suppose  $\lambda$  is an eigval of  $S^{-1}TS$  with an eigvec v.

Then  $S(S^{-1}TS)v = TSv = \lambda Sv$ .

Thus  $\lambda$  is also an eigval of T with an eigvec Sv.

Or. Note that  $S(S^{-1}TS)S^{-1} = T$ . Hence every eigval of  $S^{-1}TS$  is an eigval of  $S(S^{-1}TS)S^{-1} = T$ .

And every eigvec v of  $S^{-1}TS$  is  $S^{-1}v$ , every eigvec u of T is Su.

## **21** Suppose $T \in \mathcal{L}(V)$ is inv.

- (a) Suppose  $\lambda \in \mathbf{F}$  with  $\lambda \neq 0$ . Prove that  $\lambda$  is an eigend of  $T \iff \frac{1}{\lambda}$  is an eigend of  $T^{-1}$ .
- (b) Prove that T and  $T^{-1}$  have the same eigvecs.

## **SOLUTION:**

(a) Suppose  $\lambda$  is an eigval of T with an eigvec v.

Then  $T^{-1}Tv = \lambda T^{-1}v = v \Rightarrow T^{-1}v = \frac{1}{\lambda}v$ . Hence  $\frac{1}{\lambda}$  is an eigval of  $T^{-1}$ .

(b) Suppose  $\frac{1}{\lambda}$  is an eigval of  $T^{-1}$  with an eigvec v.

Then  $TT^{-1}v = v = \frac{1}{\lambda}Tv \Rightarrow Tv = \lambda v$ . Hence  $\lambda$  is an eigval of T.

Or. Note that  $(T^{-1})^{-1} = T$  and  $1/(\frac{1}{\lambda}) = \lambda$ .

## **23** Suppose $S, T \in \mathcal{L}(V)$ . Prove that ST and TS have the same eigenls.

## SOLUTION:

Suppose  $\lambda$  is an eigval of ST with an eigvec v. Then  $T(STv) = \lambda Tv = TS(Tv)$ .

If Tv = 0 (while  $v \neq 0$ ), then T is not inje  $\Rightarrow (TS - 0I)$  and (ST - 0I) are not inje.

Thus  $\lambda = 0$  is an eigval of ST and TS with the same eigvec v.

Otherwise,  $Tv \neq 0$ , then  $\lambda$  is an eigval of TS. Reversing the roles of T and S.

• (2E Ch5.20)

Suppose  $T \in \mathcal{L}(V)$  has dim V distinct eigvals and  $S \in \mathcal{L}(V)$  has the same eigvecs (but might not with the same eigvals). Prove that ST = TS.

### **SOLUTION:**

Let  $n = \dim V$ . For each  $j \in \{1, ..., n\}$ , let  $v_j$  be an eigence with eigenal  $\lambda_j$  of T and  $\alpha_j$  of S.

Then  $(v_1, ..., v_n)$  is a basis of V. Because  $(ST)v_i = \alpha_i \lambda_i v_i = (TS)v_i$  for each j. Hence ST = TS.

• Suppose V is finite-dim and  $T \in \mathcal{L}(V)$ .

Define  $A \in \mathcal{L}(\mathcal{L}(V))$  by A(S) = TS for each  $S \in \mathcal{L}(V)$ .

*Prove that the set of eigvals of* T *equals the set of eigvals of* A.

## SOLUTION:

(a) Suppose  $v_1, \dots, v_m$  are all linely inde eigers of T

with correspd eigvals  $\lambda_1, \dots, \lambda_m$  respectively (possibly with repetitions).

Extend to a basis of V as  $(v_1, \ldots, v_m, \ldots, v_n)$ .

Then for each  $k \in \{1, ..., m\}$ , span  $(v_k) \subseteq \text{null } (T - \lambda_k I)$ .

Define  $S_k \in \mathcal{L}(V)$  by  $S_k(v_j) = v_k$  for each  $j \in \{1, ..., n\}$ ,

so that range  $S_k = \text{span}(v_k)$  for each  $k \in \{1, ..., m\}$ , then  $\mathcal{A}(S_k) = TS_k = \lambda_k S_k$ . Thus the eigvals of T are eigvals of A. (b) Suppose  $\lambda_1, \dots, \lambda_m$  are all eigvals of  $\mathcal{A}$  with eigvecs  $S_1, \dots, S_m$  respectively. Then for each  $k \in \{1, ..., m\}$ ,  $\exists v \in V, 0 \neq u = S_k(v) \in V \Rightarrow Tu = (TS_k)v = (\lambda_k S_k)v = \lambda_k u$ . Thus the eigvals of  $\mathcal{A}$  are eigvals of T. (a) Suppose  $\lambda$  is an eigval of T with an eigvec v. Let  $v_1 = v$  and extend to a basis  $(v_1, ..., v_m)$  of V. Define  $S \in \mathcal{L}(V)$  by  $Sv_1 = v_1$ ,  $Sv_k = 0$  for  $k \ge 2$ . Then  $(T - \lambda I)Sv_1 = 0 = (T - \lambda I)Sv_k = 0$ . Hence  $(T - \lambda I)S = 0 \Rightarrow TS = \lambda S$  while  $S \neq 0$ . Thus  $\lambda$  is also an eigval of  $\mathcal{A}$ . (b) Suppose  $\lambda$  is an eigval of  $\mathcal{A}$  with an eigvec S. Then  $(T - \lambda I)S = 0$  while  $S \neq 0$ . Hence  $(T - \lambda I)$  is not inje. Thus  $\lambda$  is also an eigval of T. **COMMENT:** Define  $\mathcal{B} \in \mathcal{L}(\mathcal{L}(V))$  by  $\mathcal{B}(S) = ST$ ,  $\forall S \in \mathcal{L}(V)$ . Then the eigenst of  $\mathcal{B}$  are not the eigenst of T. **4** Suppose  $T \in \mathcal{L}(V)$  and  $V_1, \dots, V_m$  are invar subsps of V under T. *Prove that*  $V_1 + \cdots + V_m$  *is invar under* T. **SOLUTION:** For each i = 1, ..., m,  $\forall v_i \in V_i, Tv_i \in V_i$ Hence  $\forall v = v_1 + \dots + v_m \in V_1 + \dots + V_m$ ,  $Tv = Tv_1 + \dots + Tv_m \in V_1 + \dots + V_m$ . **6** *Prove or give a counterexample:* If V is finite-dim and U is a subsp of V that is invar under every operator on V, then  $U = \{0\}$  or U = V. **SOLUTION:** Notice that *V* might be  $\{0\}$ . In this case we are done. Suppose dim  $V \ge 1$ . We prove by contrapositive: Suppose  $U \neq \{0\}$  and  $U \neq V$ . Prove that  $\exists T \in \mathcal{L}(V)$  such that U is not invar under T. Let *W* be such that  $V = U \oplus W$ . Let  $(u_1, ..., u_m)$  be a basis of U and  $(w_1, ..., w_n)$  be a basis of W. Hence  $(u_1, \ldots, u_m, w_1, \ldots, w_n)$  is a basis of V. Define  $T \in \mathcal{L}(V)$  by  $T(a_1u_1 + \dots + a_mu_m + b_1w_1 + \dots + b_nw_n) = b_1w_1 + \dots + b_nw_n$ . • Suppose  $\mathbf{F} = \mathbf{R}, T \in \mathcal{L}(V)$ . (a) (OR (9.11))  $\lambda \in \mathbf{R}$ . Prove that  $\lambda$  is an eigral of  $T \iff \lambda$  is an eigral of  $T_{\mathbf{C}}$ . (b) (OR Problem (16))  $\lambda \in \mathbb{C}$ . Prove that  $\lambda$  is an eigval of  $T_{\mathbb{C}} \iff \overline{\lambda}$  is an eigval of  $T_{\mathbb{C}}$ . **SOLUTION:** (a) Suppose  $v \in V$  is an eigvec correspd to the eigval  $\lambda$ . Then  $Tv = \lambda v \Rightarrow T_{\mathbf{C}}(v + \mathbf{i}0) = Tv + \mathbf{i}T0 = \lambda v$ . Thus  $\lambda$  is an eigval of T. Suppose  $v + iu \in V_C$  is an eigvec correspd to the eigval  $\lambda$ . Then  $T_{\rm C}(v+{\rm i}u)=\lambda v+{\rm i}\lambda u\Rightarrow Tv=\lambda v, Tu=\lambda u.$  (Note that v or u might be zero ). Thus  $\lambda$  is an eigval of  $T_{\rm C}$ .

(b) Suppose  $\lambda$  is an eigval of  $T_C$  with an eigvec v + iu.

Let  $(v_1, ..., v_n)$  be a basis of V. Write  $v = \sum_{i=1}^n a_i v_i$ ,  $u = \sum_{i=1}^n b_i v_i$ , where  $a_i, b_i \in \mathbb{R}$ .

Or.

Then  $T_{\rm C}(v+{\rm i}u)=Tv+{\rm i}Tu=\lambda v+{\rm i}\lambda u=\lambda\sum_{i=1}^n(a_i+{\rm i}b_i)v_i$ . Conjugating two sides, we have:  $\overline{T_{\mathrm{C}}(v+\mathrm{i}u)} = \overline{Tv+\mathrm{i}Tu} = \overline{Tv} - \mathrm{i}\overline{Tu} = Tv - \mathrm{i}Tu = T_{\mathrm{C}}(\overline{v+\mathrm{i}u}) = \lambda \sum_{i=1}^n (a_i+\mathrm{i}b_i)v_i = \overline{\lambda} \sum_{i=1}^n (a_i-\mathrm{i}b_i)v_i.$ Hence  $\overline{\lambda}$  is an eigval of  $T_{\mathbb{C}}$ . To prove the other direction, notice that  $(\overline{\lambda}) = \lambda$ . • Suppose V is finite-dim,  $T \in \mathcal{L}(V)$ , and  $\lambda \in \mathbf{F}$ . Show that  $\lambda$  is an eigval of  $T \iff \lambda$  is an eigval of the dual operator  $T' \in \mathcal{L}(V')$ . **SOLUTION:** (a) Suppose  $\lambda$  is an eigval of T with an eigvec v. Then  $(T - \lambda I_V)$  is not inv.  $\mathbb{Z}$  V is finite-dim. Thus by [3.108, 110], [3.101] and Problem (12) in (3.F),  $(T - \lambda I_V)' = T' - \lambda I_V$ , is not inv. Hence  $\lambda$  is an eigval of T'. (b) Suppose  $\lambda$  is an eigval T' with an eigvec  $\psi$ . Then  $T'(\psi) = \psi \circ T = \lambda \psi$ .  $\not \subset \psi \neq 0 \Rightarrow \exists v \in V \text{ such that } \psi(v) \neq 0. \text{ Note that } \psi(Tv) = \lambda \psi(v).$ Thus  $\lambda = \frac{\psi(Tv)}{\psi(v)} \Rightarrow Tv = \frac{\psi(Tv)}{\psi(v)}v = \lambda v$ . Hence  $\lambda$  is an eigval of T. **7** Suppose  $T \in \mathcal{L}(\mathbb{R}^2)$  is defined by T(x,y) = (-3y,x). Find the eigenst of T. **SOLUTION:** Suppose  $\lambda \in \mathbb{R}$  and  $(x,y) \in \mathbb{R}^2 \setminus \{0\}$  such that  $T(x,y) = (-3y,x) = \lambda(x,y)$ . Then  $-3y = \lambda x$  and  $x = \lambda y$ . Thus  $-3y = \lambda^2 y \Rightarrow \lambda^2 = -3$ , ignoring the possibility of y = 0 (because if y = 0, then x = 0). Hence the set of solution for this equation is  $\emptyset$ , and therefore T has no eigvals in  $\mathbb{R}$ . **8** Define  $T \in \mathcal{L}(\mathbf{F}^2)$  by T(w,z) = (z,w). Find all eigens and eigens of T. **SOLUTION:** Suppose  $\lambda \in \mathbb{F}$  and  $(w, z) \in \mathbb{F}^2$  such that  $T(w, z) = (z, w) = \lambda(w, z)$ . Then  $z = \lambda w$  and  $w = \lambda z$ . Thus  $z = \lambda^2 z \Rightarrow \lambda^2 = 1$ , ignoring the possibility of z = 0 (  $z = 0 \Rightarrow w = 0$  ). Hence  $\lambda_1 = -1$  and  $\lambda_2 = 1$  are all eigends of T. For  $\lambda_1 = -1$ , z = -w, w = -z; For  $\lambda_2 = 1$ , z = w. Thus the set of all eigvecs is  $\{(z, -z), (z, z) : z \in \mathbb{F} \land z \neq 0\}$ . • Suppose  $P \in \mathcal{L}(V)$  is such that  $P^2 = P$ . *Prove that if*  $\lambda$  *is an eigval of* P*, then*  $\lambda = 0$  *or*  $\lambda = 1$ . **SOLUTION:** (See also at (3.B), just below Problem (25), where (5.B.4) was answered.) Suppose  $\lambda$  is an eigval with an eigvec v. Then  $P(Pv) = Pv \Rightarrow \lambda^2 v = \lambda v$ . Thus  $\lambda = 1$  or 0. **22** Suppose  $T \in \mathcal{L}(V)$  and  $\exists$  nonzero vecs u, w in V such that Tu = 3w and Tw = 3u. *Prove that* 3 *or* -3 *is an eigval of* T. **SOLUTION:** COMMENT: Tu = 3w,  $Tw = 3u \Rightarrow T(Tu) = 9u \Rightarrow T^2$  has an eigval 9.  $Tu = 3w, Tw = 3u \Rightarrow T(u + w) = 3(u + w), T(u - w) = 3(w - u) = -3(u - w).$ **9** Define  $T \in \mathcal{L}(\mathbf{F}^3)$  by  $T(z_1, z_2, z_3) = (2z_2, 0, 5z_3)$ . Find all eigvals and eigvecs of T.

SOLUTION:

Suppose  $\lambda$  is an eigval of T with an eigvec  $(z_1, z_2, z_3) \in \mathbb{F}^3$ .

Then  $T(z_1, z_2, z_3) = (2z_2, 0, 5z_3) = \lambda(z_1, z_2, z_3)$ . Thus  $2z_2 = \lambda z_1$ ,  $0 = \lambda z_2$ ,  $5z_3 = \lambda z_3$ . We discuss in two cases: For  $\lambda = 0$ ,  $z_2 = z_3 = 0$  and  $z_1$  can be arbitrary ( $z_1 \neq 0$ ). For  $\lambda \neq 0$ ,  $z_2 = 0 = z_1$ , and  $z_3$  can be arbitrary (  $z_3 \neq 0$  ), then  $\lambda = 5$ . The set of all eigvecs is  $\{(0,0,z), (z,0,0) : z \in F \land z \neq 0\}$ . **10** Define  $T \in \mathcal{L}(\mathbf{F}^n)$  by  $T(x_1, x_2, x_3, ..., x_n) = (x_1, 2x_2, 3x_3, ..., nx_n)$ (a) Find all eigvals and eigvecs of T. (b) Find all invar subsps of V under T. **SOLUTION:** (a) Suppose  $v = (x_1, x_2, x_3, ..., x_n)$  is an eigeve of T with an eigeval  $\lambda$ . Then  $Tv = \lambda v = (x_1, 2x_2, 3x_3, ..., nx_n) = (\lambda x_1, \lambda x_2, \lambda x_3, ..., \lambda x_n)$ . Hence  $1, \dots, n$  are eigvals of T. And  $\{(0,\ldots,0,x_{\lambda},0,\ldots,0)\in \mathbf{F}^n:\lambda=1,\ldots,n,\ x_{\lambda}\in \mathbf{F}\wedge x_{\lambda}\neq 0\}$  is the set of all eigences of T. (b) Let  $V_{\lambda} = \{(0, \dots, 0, x_{\lambda}, 0, \dots, 0) \in \mathbb{F}^n : x_{\lambda} \in \mathbb{F} \land x_{\lambda} \neq 0\}$ . Then  $V_1, \dots, V_n$  are invar under T. Hence by Problem (4), every sum of  $V_1, \dots, V_n$  is a invar subsp of V under T. **11** Define  $T: \mathcal{P}(\mathbf{R}) \to \mathcal{P}(\mathbf{R})$  by Tp = p'. Find all eigends and eigenst of T. **SOLUTION:** Note that in general,  $\deg p' < \deg p$  (  $\deg 0 = -\infty$  ). Suppose  $\lambda$  is an eigval of T with an eigvec p. Suppose  $\lambda \neq 0$ . Then  $\deg \lambda p > \deg p'$  while  $\lambda p \neq p'$ . Contradicts. Thus  $\lambda = 0$ . Therefore  $\deg \lambda p = -\infty = \deg p \Rightarrow p$  is a nonzero const poly. Hence the set of all eigvecs is  $\{C: C \in \mathbb{R} \land C \neq 0\} = \mathcal{P}_0(\mathbb{R}) \setminus \{0\}$ . **12** Define  $T \in \mathcal{L}(\mathcal{P}_4(\mathbf{R}))$  by (Tp)(x) = xp'(x) for all  $x \in \mathbf{R}$ . Find all eigvals and eigvecs of T. **SOLUTION:** Suppose  $\lambda$  is an eigval of T with an eigvec p, then  $(Tp)(x) = xp'(x) = \lambda p(x)$ . Let  $p = a_0 + a_1 x + \dots + a_n x^n$ . Then  $xp'(x) = a_1x + 2a_2x^2 + \dots + na_nx^n = \lambda a_0 + \lambda a_1x + \lambda a_2x^2 + \dots + \lambda a_nx^n$ . Similar to Problem (10), 0, 1, ..., n are eigvals of T. The set of all eigvecs of *T* is  $\{cx^{\lambda} : \lambda = 0, 1, ..., n, c \in \mathbb{F} \land c \neq 0\}$ . **30** Suppose  $T \in \mathcal{L}(\mathbf{R}^3)$  and  $-4, 5, \sqrt{7}$  are eigens of T. Prove that  $\exists x \in \mathbb{R}^3$  such that  $Tx - 9x = (-4, 5, \sqrt{7})$ . **SOLUTION**: Because 9 is not an eigval. Hence (T - 9I) is surj. **14** Suppose  $V = U \oplus W$ , where U and W are nonzero subsps of V. Define  $P \in \mathcal{L}(V)$  by P(u + w) = u for each  $u \in U$  and each  $w \in W$ . Find all eigvals and eigvecs of P. **SOLUTION:** 

Then  $P(u+w) = u = \lambda u + \lambda w \Rightarrow (\lambda - 1)u + \lambda w = 0$ . By [1.44] and  $V = U \oplus W$ ,  $(\lambda - 1)u = \lambda w = 0$ .

Suppose  $\lambda$  is an eigval of P with an eigvec (u + w).

Thus if  $\lambda = 1$ , then w = 0; if  $\lambda = 0$ , then u = 0.

Hence the eigvals of *P* are 0 and 1, the set of all eigvecs in *P* is  $U \cup W$ .

**13** Suppose V is finite-dim,  $T \in \mathcal{L}(V)$ , and  $\lambda \in F$ .

*Prove that*  $\exists \alpha \in \mathbf{F}, |\alpha - \lambda| < \frac{1}{1000}$  and  $(T - \alpha I)$  is inv.

SOLUTION:

Let  $\alpha_k \in \mathbf{F}$  be such that  $|\alpha_k - \lambda| = \frac{1}{1000 + k}$  for each  $k = 1, ..., \dim V + 1$ .

Note that each  $T \in \mathcal{L}(V)$  has at most dim V distinct eigvals.

Hence  $\exists k = 1, ..., \dim V + 1$  such that  $\alpha_k$  is not an eigval of T and therefore  $(T - \alpha_k I)$  is inv.

• Suppose V is finite-dim,  $T \in \mathcal{L}(V)$ , and  $\lambda \in \mathbf{F}$ .

*Prove that*  $\exists \delta > 0$  *such that*  $(T - \alpha I)$  *is inv for all*  $\alpha \in \mathbf{F}$  *such that*  $0 < |\alpha - \lambda| < \delta$ .

SOLUTION:

If *T* has no eigvals, then  $(T - \alpha I)$  is inje for all  $\alpha \in \mathbf{F}$  and we are done.

Let  $\delta > 0$  be such that, for each eigval  $\lambda_k, \lambda_k \notin (\lambda - \delta, \lambda) \cup (\lambda, \lambda + \delta)$ .

So that for all  $\alpha \in \mathbf{F}$  such that  $0 < |\alpha - \lambda| < \delta$ ,  $(T - \alpha I)$  is not inje.

17 Give an example of an operator on  $\mathbb{R}^4$  that has no (real) eigvals.

**SOLUTION:** Where  $(e_1, e_2, e_3, e_4)$  is the standard basis of  $\mathbb{R}^4$ .

Define 
$$T \in \mathcal{L}(\mathbf{R}^4)$$
 by  $\mathcal{M}\left(T, (e_1, e_2, e_3, e_4)\right) = \begin{pmatrix} 1 & 1 & 1 & 1 \\ -1 & 1 & -1 & -1 \\ 3 & 8 & 11 & 5 \\ 3 & -8 & -11 & 5 \end{pmatrix}$ .

Suppose  $\lambda$  is an eigval of T with an eigvec (x, y, z, w).

Then 
$$T(x, y, z, w) = \lambda(x, y, z, w) \Rightarrow$$

$$\begin{cases}
(1 - \lambda)x + y + z + w = 0 \\
-x + (1 - \lambda)y - z - w = 0 \\
3x + 8y + (11 - \lambda)z + 5w = 0 \\
3x - 8y - 11z + (5 - \lambda)w = 0
\end{cases}$$

This linear equation has no solutions.

( You can type it on https://zh.numberempire.com/equationsolver.php to check.)

Or. Define  $T \in \mathcal{L}(\mathbf{R}^4)$  by  $T(x_1, x_2, x_3, x_4) = (-x_2, x_1, -x_4, x_3)$ .

Suppose  $\lambda$  is an eigval of T with an eigvec (x, y, z, w).

Then 
$$T(x, y, z, w) = (\lambda x, \lambda y, \lambda z, \lambda w) = (-y, x, -w, z) \Rightarrow \begin{cases} -y = \lambda x \\ x = \lambda y \\ -w = \lambda z \end{cases} \Rightarrow \begin{cases} -xy = \lambda^2 xy \\ -zw = \lambda^2 zw \end{cases}$$

If  $xy \neq 0$  or  $zw \neq 0$ , then  $\lambda^2 = -1$ , we fail.

Otherwise,  $xy = 0 \Rightarrow x = y = 0$ , for if  $x \neq 0$ , then  $\lambda = 0 \Rightarrow x = 0$ , contradicts.

Similarly, y = z = w = 0. Then we fail. Thus T has no eigvals.

• Suppose  $(v_1, \ldots, v_n)$  is a basis of V and  $T \in \mathcal{L}(V)$ ,  $\mathcal{M}\left(T, (v_1, \ldots, v_n)\right) = A$ . Prove that if  $\lambda$  is an eigral of T, then  $|\lambda| \le n \max\left\{\left|A_{j,k}\right| : 1 \le j, k \le n\right\}$ .

SOLUTION:

First we show that  $|\lambda| = n \max \{ |A_{j,k}| : 1 \le j, k \le n \}$  for some cases.

Consider 
$$A = \begin{pmatrix} k & \cdots & k \\ \vdots & \ddots & \vdots \\ k & \cdots & k \end{pmatrix}$$
. Then  $nk$  is an eigval of  $T$  with an eigvec  $v_1 + \cdots + v_n$ .

Now we show that if  $|\lambda| \neq n \max\{|A_{j,k}| : 1 \leq j, k \leq n\}$ , then  $|\lambda| < n \max\{|A_{j,k}| : 1 \leq j, k \leq n\}$ .

## **18** Show that the forward shift operator $T \in \mathcal{L}(\mathbf{F}^{\infty})$

defined by  $T(z_1, z_2, \dots) = (0, z_1, z_2, \dots)$  has no eigvals.

## **SOLUTION:**

Suppose  $\lambda$  is an eigval of T with an eigvec  $(z_1, z_2, ...)$ .

Then 
$$T(z_1, z_2, \dots) = (\lambda z_1, \lambda z_2, \dots) = (0, z_1, z_2, \dots).$$

Thus 
$$\lambda z_1 = 0, \lambda z_2 = z_1, ..., \lambda z_k = z_{k-1}, ...$$

Let 
$$\lambda = 0$$
, then  $\lambda z_2 = z_1 = 0 = \lambda z_k = z_{k-1}$ , therefore  $(z_1, z_2, \dots) = 0$  is not an eigvec.

Suppose 
$$\lambda \neq 0$$
. Then  $\lambda z_1 = 0 \Rightarrow z_1 = 0 \Rightarrow z_2 = 0 = z_k$  for all  $k \in \mathbb{N}^+$ .

And then  $(z_1, z_2, ...) = 0$  is not an eigvec. Hence T has no eigvals.

## **19** Suppose $n \in \mathbb{N}^+$ . Define $T \in \mathcal{L}(\mathbb{F}^n)$ by

$$T(x_1, ..., x_n) = (x_1 + ... + x_n, ..., x_1 + ... + x_n).$$

In other words, the entries of  $\mathcal{M}(T)$  with resp to the standard basis are all 1's. Find all eigenstand eigenstands of T.

## **SOLUTION:**

Suppose  $\lambda$  is an eigval of T with an eigvec  $(x_1, \dots, x_n)$ .

Then 
$$T(x_1, ..., x_n) = (\lambda x_1, ..., \lambda x_n) = (x_1 + ... + x_n, ..., x_1 + ... + x_n).$$

Thus 
$$\lambda x_1 = \dots = \lambda x_n = x_1 + \dots + x_n$$
.

For 
$$\lambda = 0$$
,  $x_1 + \dots + x_n = 0$ .

For  $\lambda \neq 0$ ,  $x_1 = \dots = x_n$  and then  $\lambda x_k = nx_k$  for each k.

Hence 0, n are eigvecs of T.

And the set of all eigences of T is  $\{(x_1, \dots, x_n) \in \mathbb{F}^n : x_1 + \dots + x_n = 0 \lor x_1 = \dots = x_n\}$ .

## **20** Define the backward shift operator $S \in \mathcal{L}(\mathbf{F}^{\infty})$ by $S(z_1, z_2, z_3, \dots) = (z_2, z_3, \dots)$ .

- (a) Show that every element of F is an eigval of S.
- (b) Find all eigvecs of S.

## SOLUTION:

Suppose  $\lambda$  is an eigval of S with an eigvec  $(z_1, z_2, ...)$ .

Then 
$$S(z_1, z_2, z_3 \dots) = (\lambda z_1, \lambda z_2, \dots) = (z_2, z_3, \dots).$$

Thus 
$$\lambda z_1 = z_2, \lambda z_2 = z_3, ..., \lambda z_k = z_{k+1}, ...$$

For 
$$\lambda = 0$$
,  $\lambda z_1 = z_2 = 0 = \lambda z_2 = z_3 = \dots = z_k$  for all  $k$ .

While  $z_1$  can be arbitrary, so that  $(z_1, 0, ...)$  is an eigeec with  $z_1 \neq 0$ .

For 
$$\lambda \neq 0$$
,  $\lambda^k z_1 = \lambda^{k-1} z_2 = \dots = \lambda z_k = z_{k+1}$  for all  $k$ .

Then  $(z_1, \lambda z_1, \lambda^2 z_1, \dots, \lambda^k z_1, \dots)$  is an eigeve with  $z_1 \neq 0$ .

Hence (a) each element of  $\lambda \in \mathbf{F}$  is an eigval of T.

And (b) the set of all eigvecs of T is  $\{(z_1, \lambda z_1, \lambda^2 z_1, \dots, \lambda^k z_1, \dots) \in \mathbb{F}^\infty : \lambda \in \mathbb{F}, z_1 \neq 0\}$ 

## **24** Suppose $A \in \mathbf{F}^{n,n}$ . Define $T \in \mathcal{L}(\mathbf{F}^n)$ by Tx = Ax, where elements of $\mathbf{F}^n$ are thought of as n-by-1 col vecs.

(a) Suppose the sum of the entries in each row of A equals 1.

*Prove that* 1 *is an eigval of* T.

(b) Suppose the sum of the entries in each col of A equals 1. Prove that 1 is an eigval of T.

#### **SOLUTION:**

(a) Suppose  $\lambda$  is an eigval of T with an eigvec  $x = \begin{pmatrix} x_1 \\ \vdots \\ x_n \end{pmatrix}$ .

Then 
$$Tx = Ax = \begin{pmatrix} \sum_{c=1}^{n} A_{1,c} x_c \\ \vdots \\ \sum_{c=1}^{n} A_{n,c} x_c \end{pmatrix} = \lambda \begin{pmatrix} x_1 \\ \vdots \\ x_n \end{pmatrix}$$
. While  $\sum_{r=1}^{n} A_{R,c} = 1$  for each  $R = 1, \dots, n$ .

Thus if we let  $x_1 = \cdots = x_n$ , then  $\lambda = 1$ , and hence is an eigval of T.

(b) Suppose  $\lambda$  is an eigval of T with an eigvec  $x = \begin{pmatrix} x_1 \\ \vdots \\ x_n \end{pmatrix}$ .

Then 
$$Tx = Ax = \begin{pmatrix} \sum_{r=1}^{n} A_{1,r}x_r \\ \vdots \\ \sum_{r=1}^{n} A_{n,r}x_r \end{pmatrix} = \lambda \begin{pmatrix} x_1 \\ \vdots \\ x_n \end{pmatrix}$$
. While  $\sum_{r=1}^{n} A_{r,C} = 1$  for each  $C = 1, \dots, n$ .

Thus 
$$\sum_{r=1}^{n} (Ax)_{r,r} = \sum_{r=1}^{n} (Ax)_{r,1}$$

$$= \sum_{c=1}^{n} (A_{1,c} + \dots + A_{n,c}) x_c = \sum_{c=1}^{n} x_c = \lambda \begin{pmatrix} x_1 \\ \vdots \\ x_n \end{pmatrix}.$$

Hence  $\lambda = 1$ , for all x such that  $\sum_{c=1}^{n} x_{c,1} \neq 0$ .

Or. Prove that (T-I) is not inv, so that we can conclude  $\lambda=1$  is an eigval.

Because 
$$(T-I)x = (A-\mathcal{M}(I))x = \begin{pmatrix} \sum\limits_{r=1}^n A_{1,r}x_r - x_1 \\ \vdots \\ \sum\limits_{r=1}^n A_{n,r}x_r - x_n \end{pmatrix} = \begin{pmatrix} y_1 \\ \vdots \\ y_n \end{pmatrix}.$$

Then 
$$y_1 + \dots + y_n = \sum_{r=1}^n \sum_{c=1}^n (A_{r,c} x_c - x_r) = \sum_{c=1}^n x_c \sum_{r=1}^n A_{r,c} - \sum_{r=1}^n x_r = 0.$$

Thus range 
$$(T-I) \subseteq \{ \begin{pmatrix} y_1 \\ \vdots \\ y_n \end{pmatrix} \in \mathbf{F}^n : y_1 + \dots + y_n = 0 \}$$
. Hence  $(T-I)$  is not surj.  $\square$ 

- Suppose  $A \in \mathbf{F}^{n,n}$ . Define  $T \in \mathcal{L}(\mathbf{F}^n)$  by Tx = xA, where elements of  $\mathbf{F}^n$  are thought of as 1-by-n row vecs.
  - (a) Suppose the sum of the entries in each col of A equals 1. Prove that 1 is an eigval of T.
  - (b) Suppose the sum of the entries in each row of A equals 1. Prove that 1 is an eigval of T.

#### **SOLUTION:**

(a) Suppose  $\lambda$  is an eigval of T with an eigvec  $x = \begin{pmatrix} x_1 & \cdots & x_n \end{pmatrix}$ . Then  $Tx = xA = \begin{pmatrix} \sum_{r=1}^n x_r A_{r,1} & \cdots & \sum_{r=1}^n x_r A_{r,n} \end{pmatrix} = \lambda \begin{pmatrix} x_1 & \cdots & x_n \end{pmatrix}$ . While  $\sum_{r=1}^n A_{r,C} = 1$  for each  $C = 1, \dots, n$ . Thus if we let  $x_1 = \cdots = x_n$ , then  $\lambda = 1$ , hence is an eigval of T.

(b) Suppose  $\lambda$  is an eigval of T with an eigvec  $x = \begin{pmatrix} x_1 & \cdots & x_n \end{pmatrix}$ .

Then 
$$Tx = xA = \left(\sum_{c=1}^{n} x_c A_{c,1} \cdots \sum_{c=1}^{n} x_c A_{c,n}\right) = \lambda \left(x_1 \cdots x_n\right)$$
. While  $\sum_{c=1}^{n} A_{R,c} = 1$  for each  $R = 1, \dots, n$ .

Thus  $\sum_{c=1}^{n} (xA)_{\cdot,c} = \sum_{c=1}^{n} (xA)_{1,c} = \sum_{c=1}^{n} (A_{c,1} + \cdots + A_{c,n}) x_c = \sum_{c=1}^{n} x_c = \lambda \left(x_1 + \cdots + x_n\right)$ .

Hence  $\lambda = 1$ , for all  $x$  such that  $\sum_{r=1}^{n} x_{1,r} \neq 0$ .

OR. Prove that (T - I) is not inv, so that we can conclude  $\lambda = 1$  is an eigval.

Because 
$$(T - I)x = x (A - \mathcal{M}(I)) = = \left(\sum_{c=1}^{n} x_c A_{c,1} - x_1 \cdots \sum_{c=1}^{n} x_c A_{c,n} - x_n\right) = (y_1 \cdots y_n).$$

Then 
$$y_1 + \dots + y_n = \sum_{c=1}^n \sum_{r=1}^n (x_r A_{r,c} - x_c) = \sum_{r=1}^n x_r \sum_{c=1}^n A_{r,c} - \sum_{c=1}^n x_c = 0.$$

Thus range 
$$(T-I) \subseteq \{ (y_1 \cdots y_n) \in \mathbb{F}^n : y_1 + \cdots + y_n = 0 \}$$
. Hence  $(T-I)$  is not surj.  $\square$ 

**25** Suppose  $T \in \mathcal{L}(V)$  and u, w are eigences of T such that u + w is also an eigence of T. *Prove that u and w are eigvecs of T correspd to the same eigval.* 

## **SOLUTION:**

Suppose  $\lambda_1, \lambda_2, \lambda_0$  are eigvals of T correspd to u, w, u + w respectively.

Then 
$$T(u+w) = \lambda_0(u+w) = Tu + Tw = \lambda_1 u + \lambda_2 w \Rightarrow (\lambda_0 - \lambda_1)u = (\lambda_2 - \lambda_0)w$$
.

Notice that u, w, u + w are nonzero.

If (u, w) is linely depe, then let w = cu, therefore

$$\lambda_2 c u = T w = c T u = \lambda_1 c u \qquad \Rightarrow \lambda_2 = \lambda_1.$$

$$\lambda_0(u+w) = T(u+w) = \lambda_1 u + \lambda_1 c u = \lambda_1(u+w) \quad \Rightarrow \lambda_0 = \lambda_1.$$

Otherwise, 
$$\lambda_0 - \lambda_1 = \lambda_2 - \lambda_0 = 0 \implies \lambda_1 = \lambda_2 = \lambda_0$$
.

**26** Suppose  $T \in \mathcal{L}(V)$  is such that every nonzero vec in V is an eigvec of T.

*Prove that T is a scalar multi of the identity operator.* 

## **SOLUTION:**

Because  $\forall v \in V, \exists ! \lambda_v \in F, Tv = \lambda_v v$ . For any two distinct nonzero vecs  $v, w \in V$ ,

$$T(v+w) = \lambda_{v+w}(v+w) = Tv + Tw = \lambda_v v + \lambda_w w \Rightarrow (\lambda_{v+w} - \lambda_v)v = (\lambda_w - \lambda_{v+w})w.$$

If (v, w) is linely inde, then let w = cv, therefore

$$\lambda_v c v = c T v = T w = \lambda_w w \qquad \qquad \Rightarrow \lambda_w = \lambda_v.$$

$$\lambda_{v+w}(v+w) = T(v+w) = Tv + Tw = \lambda_v(v+cv) \Rightarrow \lambda_{v+w} = \lambda_v.$$

Otherwise, 
$$\lambda_v = \lambda_{v+w} = \lambda_w$$
.

## **27, 28** Suppose V is finite-dim and $k \in \{1, ..., \dim V - 1\}$ .

Suppose  $T \in \mathcal{L}(V)$  is such that every subsp of V of dim k is invar under T.

*Prove that T is a scalar multi of the identity operator.* 

## **SOLUTION**: We prove the contrapositive:

Suppose T is not a scalar multi of I. Prove that  $\exists$  an invar subsp U of V under T such that dim U = k.

By Problem (26),  $\exists v \in V$  and  $v \neq 0$  such that v is not an eigeec of T.

Thus (v, Tv) is linely inde. Extend to a basis of V as  $(v, Tv, u_1, \dots, u_n)$ .

Let  $U = \text{span}(v, u_1, \dots, u_{k-1}) \Rightarrow U$  is not an invar subsp of V under T.

Or. Suppose  $0 \neq v = v_1 \in V$  and extend to a basis of V as  $(v_1, \dots, v_n)$ .

Suppose  $Tv_1 = c_1v_1 + \cdots + c_nv_n$ ,  $\exists ! c_i \in \mathbf{F}$ .

Consider a k - dim subsp  $U = \text{span}(v_1, v_{\alpha_1}, \dots, v_{\alpha_{k-1}})$ ,

where  $\alpha_j \in \{2, ..., n\}$  for each j, and  $\alpha_1, ..., \alpha_{k-1}$  are distinct.

```
Because every subsp such U is invar.
  Thus Tv_1 = c_1v_1 + \dots + c_nv_n \in U \Rightarrow c_2 = \dots = c_n = 0,
  for if not, for each c_i \neq 0, choose U_i such that \alpha_i \in \{2, \dots, i-1, i+1, \dots, n\} for each j,
  hence for Tv_1 = c_1v_1 + \cdots + c_{i-1}v_{i-1} + c_{i+1}v_{i+1} + \cdots + c_nv_n \in U_i, we conclude that c_i = 0.
  \Rightarrow Tv_1 = c_1v_1, \not \subseteq v_1 = v \in V is arbitrary \Rightarrow T = \lambda I for some \lambda.
                                                                                                                                   • Suppose V is finite-dim and T \in \mathcal{L}(V). Prove that
  T has an eigval \iff \exists an invar subsp U of V under T such that dim U = \dim V - 1.
SOLUTION:
(a) Suppose \lambda is an eigval of T with an eigvec v.
        ( If dim V = 1, then U = \{0\} and we are done. )
       Extend v_1 = v to a basis of V as (v_1, v_2 ..., v_n).
       Step 1 If \exists w_1 \in \text{span}(v_2, ..., v_n) such that 0 \neq Tw_1 \in \text{span}(v_1),
                then extend w_1 = \alpha_{1,1} to a basis of span (v_2, \dots, v_n) as (\alpha_{1,1}, \dots, \alpha_{1,n-1}).
                Otherwise, we stop at step 1.
       Step k If \exists w_k \in \text{span}(\alpha_{k-1,2},...,\alpha_{k-1,n-k+1}) such that 0 \neq Tw_k \in \text{span}(v_1, w_1,...,w_{k-1}),
                then extend w_k = \alpha_{k,1} to a basis of span (\alpha_{k-1,2}, \dots, \alpha_{k-1,n-k+1}) as (\alpha_{k,1}, \dots, \alpha_{k,n-k}).
                Otherwise, we stop at step k.
       Finally, we stop at step m, thus we get (v_1, w_1, \dots, w_{m-1}) and (\alpha_{m-1,2}, \dots, \alpha_{m-1,n-m+1}),
       range T|_{\text{span}(w_1,...,w_{m-1})} = \text{span}(v_1, w_1, ..., w_{m-2}) \Rightarrow \dim \text{null } T|_{\text{span}(w_1,...,w_{m-1})} = 0,
       span (v_1, w_1, \dots, w_{m-1}) and span (\alpha_{m-1,2}, \dots, \alpha_{m-1,n-m+1}) are invar under T.
                                                        length dim(n-m)
       Let U = \text{span}(\alpha_{m-1,2}, ..., \alpha_{m-1,n-m+1}) \oplus \text{span}(v_1, w_1, ..., w_{m-2}) and we are done.
                                                                                                                                   Comment: Both span (v_2, \ldots, v_n) and span (\alpha_{m-1,2}, \ldots, \alpha_{m-1,n-m+1}) \oplus \text{span}(w_1, \ldots, w_{m-1}) are in
\mathcal{S}_Vspan (v_1).
  (b) Suppose U is an invar subpsace of V under T with dim U = m = \dim V - 1.
        ( If m = 0, then dim V = 1 and we are done. )
        Let (u_1, ..., u_m) be a basis of U, extend to a basis of V as (u_0, u_1, ..., u_m).
        We discuss in cases:
        For Tu_0 \in U, then range T = U so that T is not surj \iff null T \neq \{0\} \iff 0 is an eigval of T.
        For Tu_0 \notin U, then Tu_0 = a_0u_0 + a_1u_1 + \cdots + a_mu_m.
        (1) If Tu_0 \in \text{span}(u_0), then we are done.
        (2) Otherwise, if range T|_{U} = U, then Tu_0 = a_0u_0 and we are done;
                         otherwise, T|_U: U \to U is not surj (\Rightarrow not inje), suppose range T|_U \neq \{0\}
                          (Suppose range T|_U = \{0\}. If dim U = 0 then we are done.
                                                       Otherwise \exists u \in U \setminus \{0\}, Tu = 0 and we are done. )
                          then \exists u \in U \setminus \{0\}, Tu = 0, we are done.
                                                                                                                                   29 Suppose T \in \mathcal{L}(V) and range T is finite-dim.
```

*Prove that T has at most*  $1 + \dim \operatorname{range} T$  *distinct eigvals.* 

Let  $\lambda_1, \dots, \lambda_m$  be the distinct eigends of T and let  $v_1, \dots, v_m$  be the corresponding eigens.

(Because range T is finite-dim. Let  $(v_1, \dots, v_n)$  be a list of all the linely inde eigvecs of T, so that the correspd eigvals are finite. ) For every  $\lambda_k \neq 0$ ,  $T(\frac{1}{\lambda_k}v_k) = v_k$ . And if T = T - 0I is not inje, then  $\exists ! \lambda_A = 0$  and  $Tv_A = \lambda_A v_A = 0$ . Thus for  $\lambda_k \neq 0$ ,  $\forall k$ ,  $(Tv_1, ..., Tv_m)$  is a linely inde list of length m in range T. And for  $\lambda_A = 0$ , there is a linely inde list of length at most (m-1) in range T. Hence, by [2.23],  $m \le \dim \operatorname{range} T + 1$ . **32** Suppose that  $\lambda_1, \dots, \lambda_n$  are distinct real numbers. *Prove that*  $(e^{\lambda_1}x, \dots, e^{\lambda_n}x)$  *is linely inde in*  $\mathbb{R}^{\mathbb{R}}$ . HINT: Let  $V = \text{span}(e^{\lambda_1}x, \dots, e^{\lambda_n}x)$ , and define an operator  $D \in \mathcal{L}(V)$  by Df = f'. Find eigvals and eigvecs of D. **SOLUTION:** Define *V* and  $D \in \mathcal{L}(V)$  as in HINT. Then because for each k,  $D(e^{\lambda_k x}) = \lambda_k e^{\lambda_k x}$ . Thus  $\lambda_1, \dots, \lambda_n$  are distinct eigvals of D. By [5.10],  $(e^{\lambda_1}x, \dots, e^{\lambda_n}x)$  is linely inde in  $\mathbb{R}^{\mathbb{R}}$ . • Suppose  $\lambda_1, \dots, \lambda_n$  are distinct positive numbers. *Prove that*  $(\cos(\lambda_1 x), ..., \cos(\lambda_n x))$  *is linely inde in*  $\mathbb{R}^R$ . **SOLUTION:** Let  $V = \text{span}\left(\cos(\lambda_1 x), \dots, \cos(\lambda_n x)\right)$ . Define  $D \in \mathcal{L}(V)$  by Df = f'. Then because  $D(\cos(\lambda_k x)) = -\lambda_k \sin(\lambda_k x)$ .  $\not \subset D(\sin(\lambda_k x)) = \lambda_k \cos(\lambda_k x)$ . Thus  $D^2(\cos(\lambda_k x)) = -\lambda_k^2 \cos(\lambda_k x)$ . Notice that  $\lambda_1, \dots, \lambda_n$  are distinct  $\Rightarrow -\lambda_1^2, \dots, -\lambda_n^2$  are distinct. Hence  $-\lambda_1^2, \dots, -\lambda_n^2$  are distinct eigvals of  $D^2$ with the correspd eigvecs  $\cos(\lambda_1 x), \dots, \cos(\lambda_n x)$  respectively. And then  $(\cos(\lambda_1 x), \dots, \cos(\lambda_n x))$  is linely inde in  $\mathbb{R}^R$ . • Suppose V is finite-dim,  $T \in \mathcal{L}(V)$ , and U is a subsp of V invar under T. The quotient operator  $T/U \in \mathcal{L}(V/U)$  is defined by (T/U)(v+U) = Tv + U for each  $v \in V$ . (a) Show that the definition of T/U makes sense (which requires using the condition that U is invar under T) and show that T/U is an operator on V/U. (b) (OR Problem 35) Show that each eigral of T/U is an eigral of T. **SOLUTION:** (a) Suppose v + U = w + U ( $\iff v - w \in U$ ). Then because *U* is invar under T,  $T(v-w) \in U \iff Tv+U=Tw+U$ . Hence the definition of T/U makes sense. Now we show that T/U is linear.  $\forall v + U, w + U \in V/U, \lambda \in F, (T/U) ((v + U) + \lambda(w + U))$  $= T(v + \lambda w) + U = (Tv + U) + \lambda (Tw + U)$  $= (T/U)(v+U) + \lambda(T/U)(w).$ (b) Suppose  $\lambda$  is an eigval of T/U with an eigvec v + U.

Then  $(T/U)(v+U) = \lambda(v+U) = Tv + U = \lambda v + U \Rightarrow (T-\lambda I)v \in U$ . If  $(T-\lambda I)v = 0 \Rightarrow Tv = \lambda v$ , then we are done.

```
Otherwise, then (T|_U - \lambda I) : U \to U is inv,
                       hence \exists ! w \in U, (T|_U - \lambda I)(w) = (T - \lambda I)v \Rightarrow T(v - w) = \lambda(v - w).
        Note that v - w \neq 0 (for if not, v \in U \Rightarrow v + U = 0 + U is not an eigvec).
                                                                                                                                         36 Prove or give a counterexample:
     The result of (b) in Exercise 35 is still true if V is infinite-dim.
SOLUTION: A counterexample:
   Consider V = \text{span}(1, e^x, e^{2x}, ...) in \mathbb{R}^{\mathbb{R}}, and a subsp U = \text{span}(e^x, e^{2x}, ...) of V.
   Define T \in \mathcal{L}(V) by Tf = e^x f. Then range T = U is invar under T.
   Consider (T/U)(1 + U) = e^x + U = 0
   \Rightarrow 0 is an eigval of T/U but is not an eigval of T
   (null T = \{0\}, for if not, \exists f \in V \setminus \{0\}, (Tf)(x) = e^x f(x) = 0, \forall x \in \mathbb{R} \Rightarrow f = 0, contradicts).
                                                                                                                                         33 Suppose T \in \mathcal{L}(V). Prove that T/(\text{range } T) = 0.
SOLUTION:
   \forall v + \text{range } T \in V/\text{range } T, v + \text{range } T \in \text{null } (T/(\text{range } T))
   \Rightarrow null (T/(\text{range }T)) = V/\text{range }T \Rightarrow T/(\text{range }T) is a zero map.
                                                                                                                                         34 Suppose T \in \mathcal{L}(V). Prove that T/(\text{null } T) is inje \iff (\text{null } T) \cap (\text{range } T) = \{0\}.
SOLUTION:
   (a) Suppose T/(\text{null }T) is inje.
        Then (T/(\text{null }T))(u + \text{null }T) = Tu + \text{null }T = 0
        \Leftrightarrow Tu \in \text{null } T \not \subset Tu \in \text{range } T \Leftrightarrow u + \text{null } T = 0 \Leftrightarrow u \in \text{null } T \Leftrightarrow Tu = 0.
        Thus (\text{null } T) \cap (\text{range } T) = \{0\}.
   (b) Suppose (null T) \cap (range T) = {0}.
        Then (T/(\operatorname{null} T))(u + \operatorname{null} T) = Tu + \operatorname{null} T = 0
        \Leftrightarrow Tu \in \text{null } T \not \subset Tu \in \text{range } T \Leftrightarrow Tu = 0 \Leftrightarrow u \in \text{null } T \Leftrightarrow u + \text{null } T = 0.
        Thus T/(\text{null }T) is inje.
                                                                                                                                         ENDED

	,			$= u = Tw, \text{ let } w = T^{m-1}v.$		
Suppose	e I is surj. II	$nen \ \forall u \in V, \exists v_1,$	$\ldots$ , $v_n$	$v_n \in V, T(v_1) = T^2 v_2 = \dots = T^m v_m = u.$		
• Note For [	5.17]:					
Suppose T	$\in \mathcal{L}(V), p$	$\in \mathcal{P}(\mathbf{F})$ . Prove	that:	$\operatorname{null} p(T)$ and $\operatorname{range} p(T)$ are invar under $T$ .		
SOLUTION: U	sing the cor	nmutativity in [5.	10].			
(a) Suppose	$u \in \text{null } p(x)$	T). Then $p(T)u =$	0.			
Thus $p(T)$	T(T(Tu)) = (p)	(T)T)u(Tp(T))u	=T(p)	$p(T)u) = 0$ . Hence $Tu \in \text{null } p(T)$ .		
	σ,	$v(T)$ . Then $\exists v \in \mathcal{C}$		•		
Thus Tu	= T(p(T)v)	$p = p(T)(Tv) \in ra$	nge p	TT).		
• Note For [	<b>5.21]:</b> Ever	 ry operator on a fini	te-dim	nonzero complex vecsp has an eigval.		
-	-			$n > 0$ and $T \in \mathcal{L}(V)$ .		
= =				length $n + 1$ is linely depe.		
Suppose $a_0I$ -	$+a_1T+\cdots+$	$-a_nT^n=0$ . Then	$\exists a_i \neq$	0.		
Thus ∃ nonco	nst p of sma	llest degree ( deg p	> 0)	such that $p(T)v = 0$ .		
Because $\exists \lambda$	∈ C such tha	$at p(\lambda) = 0 \Rightarrow \exists q$	$\in \mathcal{P}(0)$	C), $p(z) = (z - \lambda)q(z), \forall z \in C$ .		
Thus $0 = p(T)$	$\nabla v = (T - \lambda)$	I)(q(T)v). By the	minir	mality of $\deg p$ and $\deg q < \deg p$ , $q(T)v \neq 0$ .		
Then $(T - \lambda I)$	) is not inje.	Thus $\lambda$ is an eigv	al of	$\Gamma$ with eigvec $q(T)v$ .		
• Example: an	operator on i	a complex vecsp wit	h no e	igvals		
Define $T \in \mathcal{L}$	$\mathcal{C}(\mathcal{P}(\mathbf{C}))$ by	(Tp)(z) = zp(z).				
Suppose $p \in$	$\mathcal{P}(\mathbf{C})$ is a ne	onzero poly. Ther	ı deg 🛚	$Tp = \deg p + 1$ , and thus $Tp \neq \lambda p$ , $\forall \lambda \in \mathbb{C}$ .		
Hence T has	no eigvals.					
	•	•		(V) has no eigvals. $\Gamma$ is either $\{0\}$ or infinite-dim.		
SOLUTION: Sup	ppose <i>U</i> is a	finite-dim nonze	o inv	ar subsp on C. Then by [5.21], $T _U$ has an eigval.		
Tune For T	T C C	·····				
• TIPS: For $T_1$ ,			7 .	o T ) is inio		
		re all inje. Then (7				
(b) Suppose	(b) Suppose $(T_1 \circ \cdots \circ T_m)$ is not inje. Then at least one of $T_1, \ldots, T_m$ is not inje.					

(c) At least one of  $T_1, \dots, T_m$  is not injer  $\Rightarrow (T_1 \circ \dots \circ T_m)$  is not injer.

**EXAMPLE:** On infinite-dim only. Let  $V = \mathbf{F}^{\infty}$ .

Let *S* be the backward shift ( surj but not inje ) Let *T* be the forward shift ( inje but not surj )  $\Rightarrow$  Then ST = I.

**16** Suppose  $0 \neq v \in V$ . Define  $S \in \mathcal{L}(\mathcal{P}_{\dim V}(\mathbf{C})), V)$  by S(p) = p(T)v. Prove [5.21].

## SOLUTION:

Because  $\dim \mathcal{P}_{\dim V}(\mathbf{C})) = \dim V + 1$ . Then S is not inje. Hence  $\exists \ 0 \neq p \in \mathcal{P}_{\dim V}(\mathbf{C})), p(T)v = 0$ .

Using [4.14], write  $p(z) = c(z - \lambda_1) \cdots (z - \lambda_m)$ . Apply T to both sides:  $p(T) = c(T - \lambda_1 I) \cdots (T - \lambda_m I)$ .

Thus at least one of  $(T - \lambda_i I)$  is not inje (because p(T) is not inje).

**17** Suppose  $0 \neq v \in V$ . Define  $S \in \mathcal{L}\left(\mathcal{P}_{(\dim V)^2}(\mathbf{C})\right)$ ,  $\mathcal{L}(V)$  by S(p) = p(T). Prove [5.21].

## **SOLUTION:**

Because  $\dim \mathcal{P}_{(\dim V)^2}(\mathbf{C}) = (\dim V)^2 + 1$ . Then S is not inje. Hence  $\exists 0 \neq p \in \mathcal{P}_{(\dim V)^2}(\mathbf{C})$ , p(T) = 0.

Using [4.14], write  $p(z) = c(z - \lambda_1) \cdots (z - \lambda_m)$ . Applying T, we have  $0 = p(T) = c(T - \lambda_1 I) \cdots (T - \lambda_m I)$ .

Thus  $(T - \lambda_1 I) \cdots (T - \lambda_m I) = 0 \Rightarrow \exists j, (T - \lambda_i)$  is not inje.

**COMMENT:**  $\exists$  monic  $q \in \text{null } S \neq \{0\}$  of smallest degree, S(q) = q(T) = 0, then q is the *mini poly*.

## • Note For [8.40]: def for mini poly

Suppose V is finite-dim and  $T \in \mathcal{L}(V)$ .

Suppose  $M_T^0 = \{p_j\}_{j \in \Gamma}$  is the set of all monic poly that give 0 whenever T is applied.

Prove that  $\exists ! p_k \in M_T^0$ ,  $\deg p_k = \min\{\deg p_j\}_{j \in \Gamma} \leq \dim V$ .

**SOLUTION:** OR. Another Proof:

[ Existns Part ] We use induction on dim V.

- (i) If dim V = 0, then  $I = 0 \in \mathcal{L}(V)$  and let p = 1, we are done.
- (ii) Suppose dim  $V \ge 1$ .

Assume that dim V > 0 and that the desired result is true for all operators on all vecsps of smaller dim.

Let  $u \in V$ ,  $u \neq 0$ . The list  $(u, Tu, ..., T^{\dim V}u)$  of length  $(1 + \dim V)$  is linely depe.

Then  $\exists ! T^m$  of smallest degree such that  $T^m u \in \text{span}(u, Tu, ..., T^{m-1}u)$ .

Thus  $\exists c_j \in F, c_0 u + c_1 T u + \dots + c_{m-1} T^{m-1} u + T^m u = 0.$ 

Define q by  $q(z) = c_0 + c_1 z + \dots + c_{m-1} z^{m-1} + z^m$ .

Then  $0 = T^k(q(T)u) = q(T)(T^ku), \forall k \in \{1, ..., m-1\} \subseteq \mathbb{N}.$ 

Because  $(u, Tu, ..., T^{m-1}u)$  is linely inde.

Thus  $\operatorname{dim} \operatorname{null} q(T) \ge m \Rightarrow \operatorname{dim} \operatorname{range} q(T) = \operatorname{dim} V - \operatorname{dim} \operatorname{null} q(T) \le \operatorname{dim} V - m$ .

Let W = range q(T).

By assumption,  $\exists s \in M_T^0$  of smallest degree (and deg  $s \leq \dim W$ , ) so that  $s(T|_W) = 0$ .

Hence  $\forall v \in V, ((sq)(T))(v) = s(T)(q(T)v) = 0.$ 

Thus  $sq \in M_T^0$  and  $\deg sq \leq \dim V$ .

## [ Uniques Part ]

Suppose  $p, q \in M_T^0$  are of the smallest degree. Then (p-q)(T) = 0.  $\mathbb{Z} \deg(p-q) = m < \min \left\{ \deg p_j \right\}_{j \in \Gamma}$ . Hence p-q=0, for if not,  $\exists ! c \in \mathbf{F}, c(p-q) \in M_T^0$ . Contradicts.

• (4E 5.31, 4E 5.B.25 and 26) mini poly of restriction operator and mini poly of quotient operator Suppose V is finite-dim,  $T \in \mathcal{L}(V)$ , and U is an invar subsp of V under T. Let p be the mini poly of T.

<ul> <li>(a) Prove that p is a poly multi of the mini poly of T _U.</li> <li>(b) Prove that p is a poly multi of the mini poly of T/U.</li> <li>(c) Prove that (mini poly of T _U) × (mini poly of T/U) is a poly multi of p.</li> <li>(d) Prove that the set of eigvals of T equals the union of the set of eigvals of T _U and the set of eigvals of T/U.</li> </ul>	
SOLUTION:	
(a) $p(T) = 0 \Rightarrow \forall u \in U, p(T)u = 0 \Rightarrow p(T _{U}) = 0 \Rightarrow \text{By } [8.46].$ (b) $p(T) = 0 \Rightarrow \forall v \in V, p(T)v = 0 \Rightarrow p(T/U)(v + U) = p(T)v + U = 0.$ (c) Suppose $r$ is the mini poly of $T _{U}$ , $s$ is the mini poly of $T/U$ . Because $\forall v \in V, s(T/U)(v + U) = s(T)v + U = 0$ . So that $\forall v \in V$ but $v \notin U, s(T)v \in U$ . $\not \subseteq V = 0$ .	
Thus $\forall v \in V$ but $v \notin U$ , $(rs)(T)v = r(s(T)v) = 0$ .	
And $\forall u \in U$ , $(rs)(T)u = r(s(T)u) = 0$ (because $s(T)u = s(T _U)u \in U$ ). Hence $\forall v \in V$ , $(rs)(T)v = 0 \Rightarrow (rs)(T) = 0$ .	
(d) By [8.49], immediately.	
• (4E 5.B.27) Suppose $\mathbf{F} = \mathbf{R}$ , $V$ is finite-dim, and $T \in \mathcal{L}(V)$ . Prove that the mini poly $p$ of $T_{\mathbf{C}}$ equals the mini poly $q$ of $T$ .	
SOLUTION: (a) $\forall u + i0 \in V_C$ , $p(T_C)(u) = p(T)u = 0 \Rightarrow \forall u \in V$ , $p(T)u = 0 \Rightarrow p$ is a poly multi of $q$ . (b) $q(T) = 0 \Rightarrow \forall u + iv \in V_C$ , $q(T_C)(u + iv) = q(T)u + iq(T)v = 0 \Rightarrow q$ is a poly multi of $p$ .	
• (4E 5.B.28) Suppose $V$ is finite-dim and $T \in \mathcal{L}(V)$ . Prove that the mini poly $p$ of $T' \in \mathcal{L}(V')$ equals the mini poly $q$ of $T$ .	
Solution: (a) $\forall \varphi \in V', p(T')\varphi = \varphi \circ (p(T)) = 0 \Rightarrow \forall \varphi \in V', p(T) \in \text{null } \varphi \Rightarrow p(T) = 0, p \text{ is a poly multi}$ (b) $q(T) = 0 \Rightarrow \forall \varphi \in V', \varphi \circ (q(T)) = q(T')\varphi = 0 \Rightarrow q(T) = 0, q \text{ is a poly multi of } p.$	of $q$ .
• (4E 5.32) Suppose $T \in \mathcal{L}(V)$ and $p$ is the mini poly. Prove that $T$ is not inje $\iff$ the const term of $p$ is $0$ .	
SOLUTION:	
<i>T</i> is not inje $\iff$ 0 is an eigval of $T \iff$ 0 is a zero of $p \iff$ the const term of $p$ is 0.	
OR. Because $p(0) = (z - 0)(z - \lambda_1) \cdots (z - \lambda_m) = 0 \Rightarrow T(T - \lambda_1 I) \cdots (T - \lambda_m I) = 0$ $\not$ $T$ is the mini poly $T$ define by $T$ is not inje. $T$ is not inje.	
Conversely, suppose $(T - 0I)$ is not inje, then 0 is a zero of $p$ , so that the const term is 0.	
• (4E 5.B.22) Suppose $V$ is finite-dim, $T \in \mathcal{L}(V)$ . Prove that $T$ is inv $\iff I \in \text{span}(T, T^2, \dots, T^{\text{din}})$ Solution: Denote the mini poly by $p$ , where for all $z \in F$ , $p(z) = a_0 + a_1 z + \dots + z^m$ .	n ^V ).
Notice that <i>V</i> is finite-dim. <i>T</i> is inv $\iff$ <i>T</i> is inje $\iff$ $p(0) \neq 0$ .	
Hence $p(T) = 0 = a_0I + a_1T + \dots + T^m$ , where $a_0 \neq 0$ and $m \leq \dim V$ .	
<b>6</b> Suppose $T \in \mathcal{L}(V)$ and $U$ is a subsp of $V$ invar under $T$ .	

*Prove that U is invar under* p(T) *for every poly*  $p \in \mathcal{P}(F)$ .

## **SOLUTION:**

 $\forall u \in U, Tu \in U \Rightarrow \forall u \in U, Iu, Tu, T(Tu), \dots, T^m u \in U \Rightarrow \forall u \in U, (a_0I + a_1T + \dots + a_mT^m)u \in U. \square$ 

- (4E 5.B.10, 5.B.23) Suppose V is finite-dim,  $T \in \mathcal{L}(V)$  and p is the mini poly with degree m. Suppose  $v \in V$ .
  - (a) Prove that span  $(v, Tv, ..., T^{m-1}v) = \text{span}(v, Tv, ..., T^{j-1}v)$  for some  $j \le m$ .
  - (b) *Prove that* span  $(v, Tv, ..., T^{m-1}v) = \text{span}(v, Tv, ..., T^{m-1}v, ..., T^nv)$ .

## SOLUTION:

**COMMENT:** By Note For [8.40], *j* has an upper bound m-1, *m* has an upper bound dim *V*.

Write  $p(z) = a_0 + a_1 z + \dots + z^m$  ( $m \le \dim V$ ). If v = 0, then we are done. Suppose  $v \ne 0$ .

(a) Suppose  $j \in \mathbb{N}^+$  is the smallest such that  $T^j v \in \text{span}\,(v,Tv,\dots,T^{j-1}v) = U_0$ . Then  $j \leq m$ . Write  $T^j v = c_0 v + c_1 T v + \dots + c_{j-1} T^{j-1} v$ . And because  $T(T^k v) = T^{k+1} \in U_0$ .  $U_0$  is invar under T. By Problem (6),  $\forall k \in \mathbb{N}$ ,  $T^{j+k} v = T^k(T^j v) \in U_0$ .

Thus  $U_0 = \operatorname{span}(v, Tv, \dots, T^{j-1}v, \dots, T^nv)$  for all  $n \ge j-1$ . Let n = m-1 and we are done.

(b) Let  $U = \text{span}(v, Tv, \dots, T^{m-1}v)$ .

By (a),  $U = U_0 = \text{span}(v, Tv, ..., T^{j-1}, ..., T^{m-1}, ..., T^n)$  for all  $n \ge m - 1$ .

• (4E 5.B.21) Suppose V is finite-dim and  $T \in \mathcal{L}(V)$ .

*Prove that the mini poly p has degree at most*  $1 + \dim \operatorname{range} T$ .

If dim range  $T < \dim V - 1$ , then this result gives a better upper bound for the degree of mini poly.

## **SOLUTION:**

If *T* is inje, then range T = V and we are done. Now choose  $0 \neq v \in \text{null } T$ , then  $Tv + 0 \cdot v = 0$ .

1 is the smallest positive integer such that  $T^1v \in \text{span}(v, ..., T^0v)$ . Define q by  $q(z) = z \Rightarrow q(T)v = 0$ .

 $\text{Let } W = \text{range } q(T) = \text{range } T. \ \exists \ \text{monic } s \in \mathcal{P}(\mathbf{F}) \ \text{of smallest degree ( deg} \ s \leq \dim W \ ), \\ s(T|_W) = 0.$ 

Hence sq is the mini poly (see Note For[8.40]) and  $deg(sq) = deg s + deg q \le dim \, range T + 1$ .  $\Box$ 

**19** Suppose V is finite-dim and  $T \in \mathcal{L}(V)$ . Let  $\mathcal{E} = \{q(T) : q \in \mathcal{P}(\mathbf{F})\}$ . Prove that dim  $\mathcal{E}$  equals the degree of the mini poly of T.

## **SOLUTION:**

Because the list  $(I, T, \dots, T^{(\dim V)^2})$  of length  $\dim \mathcal{L}(V) + 1$  is linely depe in  $\dim \mathcal{L}(V)$ .

Suppose  $m \in \mathbb{N}^+$  is the smallest such that  $T^m = a_0 I + \cdots + a_{m-1} T^{m-1}$ .

Then *q* defined by  $q(z) = z^m - a_{m-1}z^{m-1} - \cdots - a_0$  is the mini poly (see [8.40]).

For any  $k \in \mathbb{N}^+$ ,  $T^{m+k} = T^k(T^m) \in \text{span}(I, T, ..., T^{m-1}) = U$ .

Hence span  $(I, T, \dots, T^{(\dim V)^2}) = \operatorname{span}(I, T, \dots, T^{(\dim V)^2 - 1}) = U.$ 

Note that by the minimality of m, the list  $(I, T, ..., T^{m-1})$  is linely inde.

Thus dim  $U = m = \dim \operatorname{span}(I, T, \dots, T^{(\dim V)^2 - 1}) = \dim \operatorname{span}(I, T, \dots, T^n)$  for all  $m < n \in \mathbb{N}^+$ .

Define  $\varphi \in \mathcal{L}(\mathcal{P}_{m-1}(\mathbf{F}), \mathcal{E})$  by  $\varphi(p) = p(T)$ .

- (a) Suppose p(T) = 0.  $\mathbb{Z} \deg p \le m 1 \Rightarrow p = 0$ . Then  $\varphi$  is inje.
- (b)  $\forall S = a_0 I + a_1 T + \dots + a_{m-1} T^{m-1} \in \mathcal{E}$ , define  $p \in \mathcal{P}_{m-1}(\mathbf{F})$  by  $p(z) = a_0 + a_1 z + \dots + a_{m-1} z^{m-1} \Rightarrow \varphi(p) = S$ . Then  $\varphi$  is surj.

Hence  $\mathcal{E}$  and  $\mathcal{P}_{m-1}(\mathbf{F})$  are iso.  $\mathbb{X}$  dim  $\mathcal{P}_{m-1}(\mathbf{F}) = m = \dim U$ .

• (4E 5.B.13) Suppose  $T \in \mathcal{L}(V)$  and  $q \in \mathcal{P}(\mathbf{F})$  is defined by

$$q(z) = a_0 + a_1 z + \dots + a_n z^n$$
, where  $a_n \neq 0$ , for all  $z \in \mathbf{F}$ .

Denote the mini poly of T by p defined by

$$p(z) = c_0 + c_1 z + \dots + c_{m-1} z^{m-1} + z^m \text{ for all } z \in \mathbf{F}.$$

*Prove that*  $\exists ! r \in \mathcal{P}(\mathbf{F})$  *such that* q(T) = r(T),  $\deg r < \deg p$ .

### **SOLUTION:**

If  $\deg q < \deg p$ , then we are done.

If 
$$\deg q = \deg p$$
, notice that  $p(T) = 0 = c_0 I + c_1 T + \dots + c_{m-1} T^{m-1} + T^m$  
$$\Rightarrow T^m = -c_0 I - c_1 T - \dots - c_{m-1} T^{m-1},$$
 define  $r$  by  $r(z) = q(z) + [-a_m z^m + a_m (-c_0 - c_1 z - \dots - c_{m-1} z^{m-1})]$  
$$= (a_0 - a_m c_0) + (a_1 - a_m c_1) z + \dots + (a_{m-1} - a_m c_{m-1}) z^{m-1},$$
 hence  $r(T) = 0$ ,  $\deg r < m$  and we are done.

Now suppose  $\deg q \ge \deg p$ . We use induction on  $\deg q$ .

- (i)  $\deg q = \deg p$ , then the desired result is true, as shown above.
- (ii)  $\deg q > \deg p$ , assume that the desired result is true for  $\deg q = n$ .

Suppose  $f \in \mathcal{P}(\mathbf{F})$  such that  $f(z) = b_0 + b_1 z + \dots + b_n z^n + b_{n+1} z^{n+1}$ .

Apply the assumption to g defined by  $g(z) = b_0 + b_1 z + \cdots + b_n z^n$ ,

getting *s* defined by 
$$s(z) = d_0 + d_1 z + \cdots + d_{m-1} z^{m-1}$$
.

Thus 
$$g(T) = s(T) \Rightarrow f(T) = g(T) + b_{n+1}T^{n+1} = s(T) + b_{n+1}T^{n+1}$$
.

Apply the assumption to t defined by  $t(z) = z^n$ ,

getting 
$$\delta$$
 defined by  $\delta(z) = c_0' + c_1'z + \dots + c_{m-1}'z^{m-1}$ .

Thus 
$$t(T) = T^n = c_0' + c_1'z + \dots + c_{m-1}'z^{m-1} = \delta(T)$$
.

Hence 
$$\exists ! k_i \in \mathbb{F}, T^{n+1} = T(T^n) = k_0 + k_1 z + \dots + k_{m-1} z^{m-1}$$
.

And 
$$f(T) = s(T) + b_{n+1}(k_0 + k_1T + \dots + k_{m-1}T^{m-1})$$

$$\Rightarrow f(T) = (d_0 + k_0) + (d_1 + k_1)z + \dots + (d_{m-1} + k_{m-1})z^{m-1} = h(T), \text{ thus defining } h.$$

• (4E 5.B.14) Suppose V is finite-dim,  $T \in \mathcal{L}(V)$  has mini poly p

defined by 
$$p(z) = a_0 + a_1 z + \dots + a_{m-1} z^{m-1} + z^m$$
,  $a_0 \neq 0$ .

Find the mini poly of  $T^{-1}$ .

## **SOLUTION:**

Notice that *V* is finite-dim. Then  $p(0) = a_0 \neq 0 \Rightarrow 0$  is not a zero of  $p \Rightarrow T - 0I = T$  is inv.

Then  $p(T) = a_0 I + a_1 T + \dots + T^m = 0$ . Apply  $T^{-m}$  to both sides,

$$a_0(T^{-1})^m + a_1(T^{-1})^{m-1} + \dots + a_{m-1}T^{-1} + I = 0.$$

Define 
$$q$$
 by  $q(z) = z^m + \frac{a_1}{a_0} z^{m-1} + \dots + \frac{a_{m-1}}{a_0} z + \frac{1}{a_0}$  for all  $z \in \mathbf{F}$ .

We now show that  $(T^{-1})^k \notin \text{span}(I, T^{-1}, \dots, (T^{-1})^{k-1})$ 

for every  $k \in \{1, ..., m-1\}$  by contradiction, so that q is exactly the mini poly of  $T^{-1}$ .

Suppose  $(T^{-1})^k \in \text{span}(I, T^{-1}, ..., (T^{-1})^{k-1}).$ 

Then let 
$$(T^{-1})^k = b_0 I + b_1 T^{-1} + \dots + b_{k-1} T^{k-1}$$
. Apply  $T^k$  to both sides,

getting 
$$I = b_0 T^k + b_1 T^{k-1} + \dots + b_{k-1} T$$
, hence  $T^k \in \text{span}(I, T, \dots, T^{k-1})$ .

Thus f defined by  $f(z) = z^k + \frac{b_1}{b_0}z^{k-1} + \dots + \frac{b_{k-1}}{b_0}z - \frac{1}{b_0}$  is a poly multi of p.

While  $\deg f < \deg p$ . Contradicts.

Suppose V is a finite-dim complex vecsp and  $T \in \mathcal{L}(V)$ . By [4.14], the mini poly has the form  $(z - \lambda_1) \cdots (z - \lambda_m)$ , where  $\lambda_1, \dots, \lambda_m$  is a list of all eigens of T, possibly with repetitions.

## • COMMENT:

A nonzero poly has at most as many distinct zeros as its degree (see [4.12]). Thus by the upper bound for the deg of mini poly given in Note For [8.40], and by [8.49,] we can give an alternative proof of [5.13]

• NOTICE( See also 4E 5.B.20,24 )

Suppose  $\alpha_1, \dots, \alpha_n$  are all the distinct eigvals of T, and therefore are all the distinct zeros of the mini poly.

Also, the mini poly of T is a poly multi of, but not equal to,  $(z - \alpha_1) \cdots (z - \alpha_n)$ .

If we define *q* by  $q(z) = (z - \alpha_1)^{\dim V - (n-1)} \cdots (z - \alpha_n)^{\dim V - (n-1)}$ ,

then q is a poly multi of the char poly (see [8.34] and [8.26])

(Because dim V > n and n - 1 > 0,  $n[\dim V - (n - 1)] > \dim V$ .)

The char poly has the form  $(z - \alpha_1)^{\gamma_1} \cdots (z - \alpha_n)^{\gamma_n}$ , where  $\gamma_1 + \cdots + \gamma_n = \dim V$ .

The mini poly has the form  $(z - \alpha_1)^{\delta_1} \cdots (z - \alpha_n)^{\delta_n}$ , where  $0 \le \delta_1 + \cdots + \delta_n \le \dim V$ .

**10** Suppose  $T \in \mathcal{L}(V)$ ,  $\lambda$  is an eigral of T with an eigrec v.

*Prove that for any*  $p \in \mathcal{P}(\mathbf{F})$ ,  $p(T)v = p(\lambda)v$ .

## **SOLUTION:**

Suppose p is defined by  $p(z) = a_0 + a_1 z + \dots + a_m z^m$  for all  $z \in \mathbf{F}$ . Because for any  $n \in \mathbf{N}^+$ ,  $T^n v = \lambda^n v$ . Thus  $p(T)v = a_0 v + a_1 T v + \dots + a_m T^m v = a_0 v + a_1 \lambda v + \dots + a_m \lambda^m v = p(\lambda)v$ .

**COMMENT:** For any  $p \in \mathcal{P}(\mathbf{F})$  such that  $p(z) = (z - \lambda_1)^{\alpha_1} \cdots (z - \lambda_m)^{\alpha_m}$ , the result is true as well.

Now we prove that  $(T - \lambda_1 I)^{\alpha_1} \cdots (T - \lambda_m I)^{\alpha_m} v = (\lambda - \lambda_1)^{\alpha_1} \cdots (\lambda - \lambda_m)^{\alpha_m} v$ .

Define  $q_i$  by  $q_i(z) = (z - \lambda_i)^{\alpha_i}$  for all  $z \in \mathbf{F}$ .

Because  $(a + b)^n = a^n + C_n^1 a^{n-1} b + \dots + C_n^k a^{n-k} b^k + \dots + C_n^n b^n$ .

Let a = z,  $b = \lambda_i$ ,  $n = \alpha_i$ , so we can write  $q_i(z)$  in the form  $a_0 + a_1 z + \cdots + a_m z^m$ .

Hence  $q_i(T)v = q_i(\lambda)v \Rightarrow (T - \lambda_i I)^{\alpha_i}v = (\lambda - \lambda_i)^{\alpha_i}v$ .

Then for each  $k \in \{2, ..., m\}$ ,  $(T - \lambda_{k-1}I)^{\alpha_{k-1}}(T - \lambda_k I)^{\alpha_k}v$ 

$$= q_{k-1}(T)(q_k(T)v)$$

$$= q_{k-1}(T)(q_k(\lambda)v)$$

$$= q_{k-1}(\lambda)(q_k(\lambda)v)$$

$$= (\lambda - \lambda_{k-1})^{\alpha_{k-1}} (\lambda - \lambda_k)^{\alpha_k} v.$$

So that  $(T - \lambda_1 I)^{\alpha_1} \cdots (T - \lambda_m I)^{\alpha_m} v$ 

$$=q_1(T)\left(q_2(T)(\dots(q_m(T)v)\dots)\right)$$

$$=q_1(\lambda)(q_2(\lambda)\left(\dots(q_m(\lambda)v)\dots)\right)$$

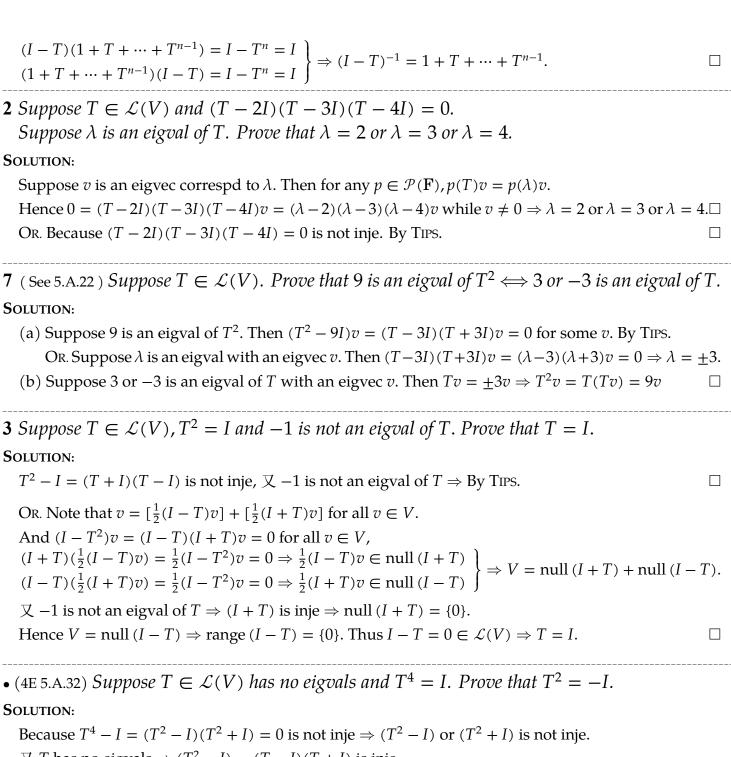

$$= (\lambda - \lambda_1)^{\alpha_1} \cdots (\lambda - \lambda_m)^{\alpha_m} v.$$

**1** Suppose  $T \in \mathcal{L}(V)$  and  $\exists n \in \mathbb{N}^+$  such that  $T^n = 0$ .

*Prove that* (I - T) *is inv and*  $(I - T)^{-1} = I + T + \dots + T^{n-1}$ .

#### **SOLUTION:**

Note that  $1 - x^n = (1 - x)(1 + x + \dots + x^{n-1}).$ 

 $\not$  T has no eigvals  $\Rightarrow$   $(T^2 - I) = (T - I)(T + I)$  is inje.

Hence  $T^2 + I = 0 \in \mathcal{L}(V)$ , for if not,

 $\exists v \in V, (T^2 + I)v \neq 0$  while  $(T^2 - I)((T^2 + I)v) = 0$  but  $(T^2 - I)$  is inje. Contradicts.

Or. Note that  $v = \left[\frac{1}{2}(I - T^2)v\right] + \left[\frac{1}{2}(I + T^2)v\right]$  for all  $v \in V$ .

$$\begin{array}{l} \text{And } (I-T^4)v = (I-T^2)(I+T^2)v = 0 \text{ for all } v \in V, \\ (I+T^2)(\frac{1}{2}(I-T^2)v) = 0 \Rightarrow \frac{1}{2}(I-T^2)v \in \text{null } (I+T^2) \\ (I-T^2)(\frac{1}{2}(I+T^2)v) = 0 \Rightarrow \frac{1}{2}(I+T^2)v \in \text{null } (I-T^2) \end{array} \right\} \Rightarrow V = \text{null } (I+T^2) + \text{null } (I-T^2).$$

 $\not$  T has no eigvals  $\Rightarrow$   $(I - T^2)$  is inje  $\Rightarrow$  null  $(I - T^2) = \{0\}$ .

Hence 
$$V = \text{null } (I + T^2) \Rightarrow \text{range } (I + T^2) = \{0\}$$
. Thus  $I + T^2 = 0 \in \mathcal{L}(V) \Rightarrow T^2 = -I$ .

**8** (OR4E 5.A.31) Give an example of  $T \in \mathcal{L}(\mathbf{R}^2)$  such that  $T^4 = -I$ .

$$T^4 + 1 = (T^2 + iI)(T^2 - iI) = (T + i^{1/2}I)(T - i^{1/2}I)(T - (-i)^{1/2}I)(T + (-i)^{1/2}I).$$
 Note that  $i^{1/2} = \frac{\sqrt{2}}{2} + i\frac{\sqrt{2}}{2}$ ,  $(-i)^{1/2} = \frac{\sqrt{2}}{2} - i\frac{\sqrt{2}}{2}$ . Hence  $T = \pm (\pm i)^{1/2}I$ .

Define 
$$T$$
 by  $T(x,y) = (\frac{\sqrt{2}}{2}x - \frac{\sqrt{2}}{2}y, \frac{\sqrt{2}}{2}x + \frac{\sqrt{2}}{2}y).$ 

$$\mathcal{M}(T) = \begin{pmatrix} \cos(-\pi/4) & \sin(-\pi/4) \\ -\sin(-\pi/4) & \cos(-\pi/4) \end{pmatrix} \Rightarrow \mathcal{M}(T)^4 = \mathcal{M}(T^4) = \begin{pmatrix} \cos(-\pi) & \sin(-\pi) \\ -\sin(-\pi) & \cos(-\pi) \end{pmatrix} = \begin{pmatrix} -1 & 0 \\ 0 & -1 \end{pmatrix} = -\mathcal{M}(I). \quad \Box$$

$$\begin{pmatrix} \operatorname{Using} \begin{pmatrix} \cos \alpha & \sin \alpha \\ -\sin \alpha & \cos \alpha \end{pmatrix}^n = \begin{pmatrix} \cos n\alpha & \sin n\alpha \\ -\sin n\alpha & \cos n\alpha \end{pmatrix}. \end{pmatrix}$$

• (4E 5.B.12 See also at 5.A.9)

Define  $T \in \mathcal{L}(\mathbf{F}^n)$  by  $T(x_1, x_2, x_3, \dots, x_n) = (x_1, 2x_2, 3x_3, \dots, nx_n)$ . Find the mini poly.

## **SOLUTION:**

 $T(x_1,...,0) = By (5.A.9)$  and [8.49], 1, 2, ..., n are zeros of the mini poly of T.

( $\mathbb{X}$  Each eigvals of T corresponds to exact one-dim subsp of  $\mathbb{F}^n$ .)

Define a poly q by  $q(z) = (z-1)(z-2)\cdots(z-n)$ , for all  $z \in \mathbb{F}$ . (Then q is the char poly of T.)

Because  $q(T)e_i = [(T - I) \cdots (T - (j - 1)I)(T - (j + 1)I) \cdots (T - nI)](T - jI)e_i = 0$  for each j,

where  $(e_1, \dots, e_n)$  is the standard basis. Thus  $\forall v \in \mathbf{F}^n, q(T)v = 0$ . Hence q is the mini poly of T.

• Suppose  $n \in \mathbb{N}^+$ . Define  $T \in \mathcal{L}(\mathbb{F}^n)$  by  $T(x_1, \dots, x_n) = (x_1 + \dots + x_n, \dots, x_1 + \dots + x_n)$ . [ See also at (5.A.19) ] Find the mini poly of T.

## **SOLUTION:**

Because n and 0 are all eigvals of T, X For all  $e_k$ ,  $Te_k = e_1 + \cdots + e_n$ ;  $T^2e_k = n(e_1 + \cdots + e_n)$ . Hence  $T^2e_k = n(Te_k) \Rightarrow T^2 = nT \Rightarrow T^2 - nT = T(T-n)$ . Thus z(z-n) is the mini poly of T. 

• (4E 5.B.8)

Suppose  $T \in \mathcal{L}(\mathbb{R}^2)$  is the operator of counterclockwise rotation by the angel  $\theta$ , where  $\theta \in \mathbb{R}^+$ . *Find the mini poly of T.* 

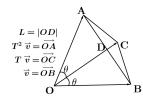

## **SOLUTION:**

If  $\theta = \pi + 2k\pi$ , then T(w,z) = (-w,-z),  $T^2 = I$  and the mini poly is z + 1.

If  $\theta = 2k\pi$ , then T = I and the mini poly is z - 1.

Now suppose (v, Tv) is linely inde. Then span  $(v, Tv) = \mathbb{R}^2$ .

Suppose the mini poly p is defined by  $p(z) = z^2 + bz + c$  for all  $z \in \mathbb{R}$ .

$$\begin{array}{c|c}
T &= |OD| \\
\vec{v} &= \overrightarrow{OA} \\
\vec{v} &= \overrightarrow{OC} \\
\vec{v} &= \overrightarrow{OB} \\
0
\end{array}$$

$$\begin{array}{c|c}
Tv &= \frac{|\vec{v}|}{2L}(T^2v + v) \Rightarrow T &= \frac{|\vec{v}|}{2L}(T^2 + I) \\
L &= |\vec{v}|\cos\theta \Rightarrow \frac{|\vec{v}|}{2L} &= \frac{1}{2\cos\theta}$$

Hence  $p(T) = T^2 - 2\cos\theta T + I = 0$  and  $z^2 - 2\cos\theta z + 1$  is the mini poly of T.

Or. By  $(4 \to 5.B.11)$ ,  $\mathcal{M}\left(T, (e_1, e_2)\right) = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix}$ . Hence the mini poly is  $z \pm 1$  or  $z^2 - 2\cos\theta z + 1.\Box$ 

- (4E 5.B.11) Suppose V is a two-dim vecsp,  $T \in \mathcal{L}(V)$ , and the matrix of T with resp to some basis of V is  $\begin{pmatrix} a & c \\ b & d \end{pmatrix}$ .
  - (a) Show that  $T^2 (a + d)T + (ad bc)I = 0$ .
  - (b) Show that the mini poly of T equals

$$\begin{cases} z-a & \text{if } b=c=0 \text{ and } a=d, \\ z^2-(a+d)z+(ad-bc) & \text{otherwise.} \end{cases}$$

SOLUTION: (a) Suppose the basis is (v, w). Because  $\begin{cases} Tv = av + bw \Rightarrow (T - aI)v = bw, \text{ then apply } (T - dI) \text{ to both sides.} \\ Tw = cv + dw \Rightarrow (T - dI)w = cv, \text{ then apply } (T - aI) \text{ to both sides.} \end{cases}$ 

Hence  $(T - aI)(T - dI) = bcI \Rightarrow T^2 - (a + d)T + (ad - bc)I = 0$ .

(b) If b = c = 0 and a = d. Then  $\mathcal{M}(T) = \begin{pmatrix} a & 0 \\ 0 & a \end{pmatrix} = a\mathcal{M}(I)$ . Thus T = aI. Hence the mini poly is z - a.

Otherwise, by (a),  $z^2 - (a + d)z + (ad - bc)$  is a poly multi of the mini poly.

Now we prove that  $T \notin \text{span}(I)$ , so that then the mini poly of T has exactly degree 2.

( At least one of the assumption of (I),(II) below is true. )

- (I) Suppose a = d, then  $Tv = av + bw \notin \text{span}(v)$ ,  $Tw = cv + aw \notin \text{span}(w)$ .
- (II) Suppose at most one of b, c is not 0. If b = 0, then  $Tw \notin \text{span}(w)$ ; If c = 0, then  $Tv \notin \text{span}(v)$ .

**5** Suppose  $S, T \in \mathcal{L}(V)$ , S is inv, and  $p \in \mathcal{P}(F)$ . Prove that  $p(TS) = S^{-1}p(ST)S$ .

## **SOLUTION:**

We prove  $(TS)^m = S^{-1}(ST)^m S$  for each  $m \in \mathbb{N}$  by induction.

- (i)  $m = 0, 1. TS^0 = I = S^{-1}(ST)^0 S$ ;  $TS = S^{-1}(ST) S$ .
- (ii) m > 1. Assume that  $(TS)^m = S^{-1}(ST)^m S$ .

Then 
$$(TS)^{m+1} = (TS)^m (TS) = S^{-1} (ST)^m STS = S^{-1} (ST)^{m+1} S$$
.

Hence 
$$\forall p \in \mathcal{P}(\mathbf{F}), \, p(TS) = a_0(TS)^0 + a_1(TS) + \dots + a_m(TS)^m$$
  

$$= a_0[S^{-1}(ST)^0S] + a_1[S^{-1}(ST)S] + \dots + a_m[S^{-1}(ST)^mS]$$

$$= S^{-1}[a_0(ST)^0 + a_1(ST) + \dots + a_m(ST)^m]S$$

$$= S^{-1}p(ST)S.$$

## • (4E 5.B.7)

- (a) Give an example of  $S, T \in \mathcal{L}(\mathbf{F}^2)$  such that the mini poly of ST does not equal the mini poly of TS.
- (b) Suppose V is finite-dim and  $S,T \in \mathcal{L}(V)$ . Prove that if S or T is inv, then the mini poly of ST equals the mini poly of TS.

#### **SOLUTION:**

(a) Define *S* by S(x,y) = (x,x). Define *T* by T(x,y) = (0,y).

Then ST(x, y) = 0, TS(x, y) = (0, x) for all  $(x, y) \in \mathbb{F}^2$ .

Thus  $ST = 0 \neq TS$  and  $(TS)^2 = 0$ .

Hence the mini poly of *ST* does not equal to the mini poly of *TS*.

(b) Denote the mini poly of ST by p, and the mini poly TS by q.

Suppose *S* is inv.

$$p(ST) = 0 = Sp(TS)S^{-1} \Rightarrow p(TS) = 0, p \text{ is a poly multi of } q.$$

$$q(TS) = 0 = S^{-1}q(ST)S \Rightarrow q(ST) = 0, q \text{ is a poly multi of } p.$$

$$\Rightarrow p = q.$$

Reversing the roles of *S* and *T*, we conclude that if *T* is inv, then p = q as well.

## **11** Suppose F = C, $T \in \mathcal{L}(V)$ , $p \in \mathcal{P}(C)$ , and $\alpha \in C$ .

*Prove that*  $\alpha$  *is an eigval of*  $p(T) \iff \alpha = p(\lambda)$  *for some eigval*  $\lambda$  *of* T.

## **SOLUTION:**

(a) Suppose  $\alpha$  is an eigval of  $v(T) \Leftrightarrow (v(T) - \alpha I)$  is not inje.

```
Write p(z) - \alpha = c(z - \lambda_1) \cdots (z - \lambda_m) \Rightarrow p(T) - \alpha I = c(T - \lambda_1 I) \cdots (T - \lambda_m I).
       By Tips, \exists (T - \lambda_i I) not inje. Thus p(\lambda_i) - \alpha = 0.
   (b) Suppose \alpha = p(\lambda) and \lambda is an eigval of T with an eigvec v. Then p(T)v = p(\lambda)v = \alpha v.
                                                                                                                                 Or. Define q by q(z) = p(z) - \alpha. \lambda is a zero of q.
        Because q(T)v = (p(T) - \alpha I)v = q(\lambda)v = (p(\lambda) - \alpha)v = 0.
        Hence q(T) is not inje \Rightarrow (p(T) - \alpha I) is not inje.
                                                                                                                                 \boldsymbol{12} (Or4E.5.B.6) Give an example of an operator on R^2
    that shows the result above does not hold if C is replaced with R.
SOLUTION:
   Define T \in \mathcal{L}(\mathbb{R}^2) by T(w,z) = (-z,w).
  By Problem (4E 5.B.11), \mathcal{M}(T, ((1,0), (0,1))) = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} \Rightarrow the mini poly of T is z^2 + 1.
  Define p by p(z) = z^2. Then p(T) = T^2 = -I. Thus p(T) has eigval -1.
   While \nexists \lambda \in \mathbf{R} such that -1 = p(\lambda) = \lambda^2.
                                                                                                                                 • (4E 5.B.17) Suppose V is finite-dim, T \in \mathcal{L}(V), \lambda \in \mathbf{F}, and p is the mini poly of T.
  Show that the mini poly of (T - \lambda I) is the poly q defined by q(z) = p(z + \lambda).
SOLUTION:
   q(T - \lambda I) = 0 \Rightarrow q is poly multi of the mini poly of (T - \lambda I).
   Suppose the degree of the mini poly of (T - \lambda I) is n, and the degree of the mini poly of T is m.
   By definition of mini poly,
   n is the smallest such that (T - \lambda I)^n \in \text{span}(I, (T - \lambda I), \dots, (T - \lambda I)^{n-1});
  m is the smallest such that T^m \in \text{span}(I, T, ..., T^{m-1}).
   Thus n = m. \chi q is monic. By the uniques of mini poly.
                                                                                                                                 • (4E 5.B.18) Suppose V is finite-dim, T \in \mathcal{L}(V), \lambda \in \mathbb{F} \setminus \{0\}, and p is the mini poly of T.
  Show that the mini poly of \lambda T is the poly q defined by q(z) = \lambda^{\deg p} p(\frac{z}{\lambda}).
SOLUTION:
   q(\lambda T) = \lambda^{\deg p} p(T) = 0 \Rightarrow q is a poly multi of the mini poly of \lambda T.
   Suppose the degree of the mini poly of \lambda T is n, and the degree of the mini poly of T is m.
   By definition of mini poly,
  n is the smallest such that (\lambda T)^n \in \text{span}(\lambda I, \lambda T, \dots, (\lambda T)^{n-1});
  m is the smallest such that T^m \in \text{span}(I, T, ..., T^{m-1}).
   \mathbb{X}(\lambda T)^k \in \operatorname{span}(\lambda I, \lambda T, \dots, (\lambda T)^{k-1}) \iff T^k \in \operatorname{span}(I, T \dots, T^{k-1}).
   Thus n = m. \mathbb{Z} q is monic. By the uniques of mini poly.
                                                                                                                                 18 (OR4E 5.B.15) Suppose V is a finite-dim complex vecsp with dim V > 0 and T \in \mathcal{L}(V).
    Define f : \mathbb{C} \to \mathbb{R} by f(\lambda) = \dim \operatorname{range} (T - \lambda I).
    Prove that f is not a continuous function.
SOLUTION: Note that V is finite-dim.
```

Because T has finitely many eigvals. There exist a sequence of number  $\{\lambda_n\}$  such that  $\lim_{n\to\infty}\lambda_n=\lambda_0$ . And  $\lambda_n$  is not an eigval of T for each  $n\Rightarrow \dim \operatorname{range}(T-\lambda_n I)=\dim V\neq \dim \operatorname{range}(T-\lambda_0 I)$ .

Let  $\lambda_0$  be an eigval of T. Then  $(T - \lambda_0 I)$  is not surj. Hence dim range  $(T - \lambda_0 I) < \dim V$ .

• (4E 5.B.9) Suppose  $T \in \mathcal{L}(V)$  is such that with resp to some basis of V, *all entries of the matrix of T are rational numbers.* 

Explain why all coefficients of the mini poly of T are rational numbers.

#### **SOLUTION:**

Let  $(v_1,\ldots,v_n)$  denote the basis such that  $\mathcal{M}\left(T,(v_1,\ldots,v_n)\right)_{j,k}=A_{j,k}\in\mathbf{Q}$  for all  $j,k=1,\ldots,n$ . Denote  $\mathcal{M}\left(v_i, (v_1, \dots, v_n)\right)$  by  $x_i$  for each  $v_i$ .

Suppose p is the mini poly of T and  $p(z) = z^m + \cdots + c_1 z + c_0$ . Now we show that each  $c_i \in \mathbb{Q}$ .

Note that  $\forall s \in \mathbf{N}^+$ ,  $\mathcal{M}(T^s) = \mathcal{M}(T)^s = A^s \in \mathbf{Q}^{n,n}$  and  $T^s v_k = A^s_{1,k} v_1 + \dots + A^s_{n,k} v_n$  for all  $k \in \{1,\dots,n\}$ .

Thus 
$$\begin{cases} \mathcal{M}(p(T)v_1) = (A^m + \dots + c_1A + c_0I)x_1 = \sum_{j=1}^n (A^m + \dots + c_1A + c_0I)_{j,1}x_j = 0; \\ \vdots \\ \mathcal{M}(p(T)v_n) = (A^m + \dots + c_1A + c_0I)x_n = \sum_{j=1}^n (A^m + \dots + c_1A + c_0I)_{j,n}x_j = 0; \\ \text{More clearly,} \end{cases}$$

$$\begin{cases} (A^m + \dots + c_1A + c_0I)_{1,1} = \dots = (A^m + \dots + c_1A + c_0I)_{n,1} = 0; \\ \vdots \ddots \vdots \\ (A^m + \dots + c_1A + c_0I)_{1,n} = \dots = (A^m + \dots + c_1A + c_0I)_{n,n} = 0; \end{cases}$$

Hence we get a system of  $n^2$  linear equations in m unknowns  $c_0, c_1, \dots, c_{m-1}$ .

We conclude that  $c_0, c_1, \dots, c_{m-1} \in \mathbb{Q}$ .

• OR(4E 5.B.16), OR(8.C.18) Suppose  $a_0,\ldots,a_{n-1}\in {\bf F}.$  Let T be the operator on  ${\bf F}^n$  such that

$$\mathcal{M}(T) = \begin{pmatrix} 0 & & & -a_0 \\ 1 & 0 & & & -a_1 \\ & 1 & \ddots & & \vdots \\ & & \ddots & 0 & -a_{n-2} \\ 0 & & & 1 & -a_{n-1} \end{pmatrix}, with resp to the standard basis  $(e_1, \dots, e_n)$ .$$

Show that the mini poly of T is p defined by  $p(z) = a_0 + a_1 z + \cdots + a_{n-1} z^{n-1} + z^n$ .

 $\mathcal{M}(T)$  is called the **companion matrix** of the poly above. This exercise shows that every monic poly is the mini poly of some operator. Hence a formula or an algorithm that could produce exact eigenls for each operator on each  $\mathbf{F}^n$  could then produce exact zeros for each poly [ by 8.36(b) ]. Thus there is no such formula or algorithm. However, efficient numeric methods exist for obtaining very good approximations for the eigvals of an operator.

**SOLUTION**: Note that  $(e_1, Te_1, ..., T^{n-1}e_1)$  is linely inde. X The deg of mini poly is at most n.

$$T^n e_1 = \dots = T^{n-k} e_{1+k} = \dots = Te_n = -a_0 e_1 - a_1 e_2 - a_2 e_3 - \dots - a_{n-1} e_n$$

$$= (-a_0 I - a_1 T - a_2 T^2 - \dots - a_{n-1} T^{n-1}) e_1. \text{ Thus } p(T) e_1 = 0 = p(T) e_j \text{ for each } e_j = T^{j-1} e_1.$$

- Eigenvalues On Odd-Dimensional Real Vector Spaces
- Even-Dimensional Null Space Suppose F = R, V is finite-dim,  $T \in \mathcal{L}(V)$  and  $b, c \in R$  with  $b^2 < 4c$ . *Prove that* dim null  $(T^2 + bT + cI)$  *is an even number.*

## **SOLUTION:**

Denote null  $(T^2 + bT + cI)$  by R. Then  $T|_R + bT|_R + cI_R = (T + bT + cI)|_R = 0 \in \mathcal{L}(R)$ . Suppose  $\lambda$  is an eigval of  $T_R$  with an eigvec  $v \in R$ .

Then 
$$0 = (T|_R^2 + bT|_R + cI_R)(v) = (\lambda^2 + \lambda b + c)v = \left((\lambda + b)^2 + c - \frac{b^2}{4}\right)v$$
.

Because  $c - \frac{b^2}{4} > 0$  and we have v = 0. Thus  $T_R$  has no eigvals. Let *U* be an invar subsp of *R* that has the largest, even dim among all invar subsps. Assume that  $U \neq R$ . Then  $\exists w \in R$  but  $w \notin U$ . Let W be such that  $(w, T|_R w)$  is a basis of W. Because  $T|_R^2 w = -bT|_R w - cw \in W$ . Hence W is an invar subsp of dim 2. Thus  $\dim(U + W) = \dim U + 2 - \dim(U \cap W)$ , where  $U \cap W = \{0\}$ , for if not, because  $w \notin U$ ,  $T|_R w \in U$ ,  $U \cap W$  is invar under  $T|_R$  of one dim ( impossible because  $T|_R$  has no eigees ). Hence U + W is even-dim invar subsp under  $T|_R$ , contradicting the maximality of dim U. Thus the assumption was incorrect. Hence  $R = \text{null}(T^2 + bT + cI) = U$  has even dim. • Operators On Odd-Dimensional Vector Spaces Have Eigenvalues (a) Suppose  $\mathbf{F} = \mathbf{C}$ . Then by [5.21], we are done. (b) Suppose F = R, V is finite-dim, and dim V = n is an odd number. Let  $T \in \mathcal{L}(V)$  and the mini poly is p. Prove that T has an eigval. **SOLUTION:** (i) If n = 1, then we are done. (ii) Suppose  $n \ge 3$ . Assume that every operator, on odd-dim vecsps of dim less than n, has an eigval. If p is a poly multi of  $(x - \lambda)$  for some  $\lambda \in \mathbb{R}$ , then by [8.49]  $\lambda$  is an eigval of T and we are done. Now suppose  $b, c \in \mathbb{R}$  such that  $b^2 < 4c$  and p is a poly multi of  $x^2 + bx + c$  (see [4.17]). Then  $\exists q \in \mathcal{P}(\mathbf{R})$  such that  $p(x) = q(x)(x^2 + bx + c)$  for all  $x \in \mathbf{R}$ . Now  $0 = p(T) = (q(T)) (T^2 + bT + cI)$ , which means that  $q(T)|_{\text{range}(T^2 + bT + cI)} = 0$ . Because deg  $q < \deg p$  and p is the mini poly of T, hence range  $(T^2 + bT + cI) \neq V$ .  $\mathbb{Z}$  dim V is odd and dim null  $(T^2 + bT + cI)$  is even (by our previous result). Thus dim V – dim null ( $T^2 + bT + cI$ ) = dim range ( $T^2 + bT + cI$ ) is odd. By [5.18], range  $(T^2 + bT + cI)$  is an invar subsp of V under T that has odd dim less than n. Our induction hypothesis now implies that  $T|_{\text{range}(T^2+bT+cI)}$  has an eigval. By mathematical induction. • (2E Ch5.24) Suppose  $F = R, T \in \mathcal{L}(V)$  has no eigvals. *Prove that every invar subsp of V under T is even-dim.* **SOLUTION:** Suppose *U* is such a subsp. Then  $T|_U \in \mathcal{L}(U)$ . We prove by contradiction. If dim U is odd, then  $T|_U$  has an eigval and so is T, so that  $\exists$  invar subsp of 1 dim, contradicts. • (4E 5.B.29) Show that every operator on a finite-dim vecsp of dim  $\geq 2$  has a 2-dim invar subsp. **SOLUTION:** Using induction on dim *V*. (i) dim V = 2, we are done. (ii) dim V > 2. Assume that the desired result is true for vecsp of smaller dim. Suppose *p* is the mini poly of degree *m* and  $p(z) = (z - \lambda_1) \cdots (z - \lambda_m)$ . If  $T = \lambda I$  ( $\Leftrightarrow m = 1 \lor m = -\infty$ ), then we are done. ( $m \ne 0$  because dim  $V \ne 0$ .) Now define a *q* by  $q(z) = (z - \lambda_1)(z - \lambda_2)$ . By assumption,  $T|_{\text{null }q(T)}$  has an invar subsp of dim 2. 

## 5.B: II

• (4E 5.C.1) Prove or give a counterexample: If  $T \in \mathcal{L}(V)$  and  $T^2$  has an upper-trig matrix, then T has an upper-trig matrix.

**6** Suppose V is a finite-dim complex vecsp and  $S, T \in \mathcal{L}(V)$  commute. Prove that  $\exists \alpha, \lambda \in \mathbb{C}$  such that range  $(S - \alpha I) + \text{range}(T - \lambda I) \neq V$ .

**SOLUTION:** 

7 Suppose V is a complex vecsp,  $S \in \mathcal{L}(V)$  is diagable, and T commutes with S. Prove that  $\exists$  basis B of V such that S has a diag matrix with resp to B and T has an upper-trig matrix with resp to B.

## **SOLUTION:**

**8** Suppose m=3 in Example [5.72] and  $D_x$ ,  $D_y$  are the commuting partial differentiation operators on  $\mathcal{P}_3(\mathbf{R}^2)$  from that example. Find a basis of  $\mathcal{P}_3(\mathbf{R}^2)$  with resp to which  $D_x$  and  $D_y$  each have an upper-trig matrix.

## SOLUTION:

**9** Suppose V is a finite-dim nonzero complex vecsp.

Suppose that  $\mathcal{E} \subseteq \mathcal{L}(V)$  is such that S and T commute for all  $S, T \in \mathcal{E}$ .

- (a) Prove that  $\exists v \in V$  is an eigrec for every element of  $\mathcal{E}$ .
- (b) Prove that  $\exists$  a basis of V with resp to which every element of  $\mathcal{E}$  has an upper-trig matrix.

### **SOLUTION:**

**10** Give an example of two commuting operators S, T on a finite-dim real vecsp such that S+T has a eigval that does not equal an eigval of S plus an eigval of T and ST has a eigval that does not equal an eigval of S times an eigval of S.
