简介

这是我个人用于复习的「*Linear Algebra Done Right 3E/4E, by Sheldon Axler*」笔记，一本习题选答与课文补注。范围覆盖所有第三版和第四版的课文和习题（除了第一章 A 节、极少数结合上下文太过显而易见的习题。没有任何日后反复推敲价值的当堂习题和方法套路过于雷同的习题）。这份笔记尚处于缓慢的编撰进度中。

习题答案中，有我完全独立思考得出的，有抄 https://linearalgebras.com/ 的，有抄 https://math.stackexchange.com/ 的，有抄 LADR2eSolutions（By Axler）.pdf，有抄最新的 LADR4eSolutions 经典最全（By Axler?）.pdf，还有请教别人，乃至请教 AI 得出来的。

这些文档的许可证件，除 LADR4eSolutions 经典最全（By Axler?）.pdf 找不到/没有指明外，都允许复制/引用。

课文补注中，除了我独立思考总结出的易错误区和技巧、难点之外，还（因为我想要兼容那些使用 LADR 第三版纸质书的读者，包括我在内）把 LADR4e 中对课文定理等等的修改也（作了简化和提炼）摘录上去。部分课文内容因为比较简单，比如 3E 节的积空间，所以我做了概念前置，这相当于更改了原书的内容顺序。

题目标为正常数字 **N** 的，为第三版某章某节第 **N** 题（有个别题是第四版又删去的，这里，或直接摘录，或合并简化，仍然作保留；还有个别题是第四版增添条件、设问的，也一并写在第 **N** 题下）。题目标为 '•' 的，为第四版。因为要面向以第三版为主要教材的学习者，所以为了避免混淆，故而将题号（部分题目的实心黑点后有标注具体第四版的数字标号）、甚至章节略去（一些变动过大的章节除外）。题目顺序会有调换，在每章大标题处会交代清楚。除了原书第四版新加入的章节外，均使用原书第三版的索引。这也许对第四版的使用者很不友好，我在此欢迎有心人士将我的作品修改后在同样的 **CC BY NC SA** 条款下作为**衍生作品**发布。

因为使用中文会给我编撰这份笔记带来额外的中英文输入法切换的工作成本，况且对于专业学习者，直接使用英文不会造成任何困扰。但英文词句的冗长性拖慢我编撰/复习的效率，所以我对许多常用术语作了简写。

作者序

我目前还没有能力和资格评论原书好坏以及线性代数课程教材选用的问题。但作为原书的学习者，我可以说：

相较于（其他课程的）其他教材，以 LADR 作为**自学读本**的**精学**计划，往往在执行中出现一次又一次的时间误判/超时，比如我最开始计划 $40 \times 8h$ 完成 LADR 的精学，差不多是一天（8h）完成一节，还有额外的复习时间。但在实际学习中，（刨去笔记的功夫）完成到一半时，发现已经耗费了约 $35 \times 8h$，于是我不得不重新估计 LADR 精学所需的总时间为 $70 \times 8h$。这一点对于有学时/学期限制/应试要求的线性代数初学者来说很不安全。更主观地讲，这是因为 LADR 更像是一本参考手册，而不是一本细致入微的自学读本；如果把 LADR 作为初学线性代数第一教材和自学读本来学习，会面临不小的困难。

以上或许能劝退相当一部分打算入门的线性代数初学者。S.Axler 说这本书作为第二遍学习线性代数的教材更合适。我认为理由就是，在校的科班生第二遍学习线性代数时，也已经学习过了离散数学、抽象代数、数论、数学分析等课程，这些知识储备统统会化作一个叫 "mathematical maturity" 的东西，让他们面对 LADR 的课文和习题不再少见多怪、茫然无措。据此，我进一步认为，对于完全的初学者，想要完成 LADR 的精学，要么有很好的天赋，要么有与之相匹配的 "mathematical maturity"，再要么，拿出足够的耐心和毅力。幸运的是，在坚持学习 LADR 的过程中，这三样会一同增益。就我个人来说：课文一次看不懂，就多看几遍，一天看不懂，就分三天看；习题一个小时做不出来，就隔六个小时再尝试，一天做不出来，就隔天再尝试。这确实让我收获了独特的学习体验和能力，我迄今也无法在别处得到，因此我很珍视 LADR，我愿意为此编撰一份电子辅助书并免费公开于网络中。这本身并不花费什么，因为实际的时间开销包括了很多不相干的额外项目：初学 LaTeX、调整代码架构、了解许可证选用，诸如此类的各种波折，也不乏戏剧性。

我在学习过程中碰到了很多重大误区：**第一章中**，我一开始误认为 $W = \complement_V U \cup \{0\}$ 是唯一使得 $W \oplus U = V$ 的子空间，但这压根就不是子空间，而且 C 节习题中也提示这样的子空间 W 不唯一。**第二章中**，我随意地将 "线性无关的序列" 等同于有/无限维向量空间的基，没有任何理论依据，我也并不懂什么选择公理。**第三章 B 到 D 节中**，我总觉得子空间是超脱有限维的存在；因为放不下第二章无限维向量空间的基的情结，我刻意寻找那些避开涉及基的解法，一些臆测的结论和容易就找到反例。**第三章 E 节中**，我似乎对商空间有什么误解，觉得 $v + U = v' + U$ 如同变戏法一样，把 v 中一切带有 U 的部分抹除掉，让 v 变得纯粹独立于 U，为此我还单门发明了 Pure V/U 并试着证明一些命题，甚至用它发现了 F 节 23 题无限维情况下不依赖基的解法。后来我猛然发现我最开始的想法多么荒诞，却仍然放不下 Pure V/U 的情结。这些挫折让我思维变得更加缜密，于是在学习抽象的**第三章 F 节**时比想象中的要顺利。

1 *Prove $\forall v \in V, -(-v) = v$.*

Solus: $-(-v) = (-1)((-1)v) = ((-1)(-1))v = 1 \cdot v = v$.

Or. Becs $-(-v) + (-v) = 0 \; \lor \; v + (-v) = 0$. Now by the uniqnes of add inv. □

---

2 *Supp $a \in \mathbf{F}, v \in V$, and $av = 0$. Prove $a = 0$ or $v = 0$.*

Solus: Supp $a \neq 0, \exists a^{-1} \in \mathbf{F}, a^{-1}a = 1$, hence $v = 1 \cdot v = (a^{-1}a)v = a^{-1}(av) = a^{-1} \cdot 0 = 0$. □

---

3 *Supp $v, w \in V$. Explain why $\exists ! x \in V, v + 3x = w$.*

Solus: $v + 3x = w \quad \Leftrightarrow \quad 3x = w - v \quad \Leftrightarrow \quad x = \frac{1}{3}(w - v)$. □

Or. $[Existns]$ Let $x = \dfrac{1}{3}(w - v)$.

$[Uniqnes]$ If $v + 3x_1 = w$,(I) $v + 3x_2 = w$ (II). Then (I) $-$ (II) $: 3(x_1 - x_2) = 0 \Rightarrow x_1 = x_2$. □

---

5 *Show in the def of a vecsp, the add inv cond can be replaced by $[1.29]$.*

Hint: *Supp V satisfies all conds in the def, except we've replaced the add inv cond with $[1.29]$.*

Prove the add inv is true.

Using $[1.31]$. $0v = 0$ for all $v \in V \iff (1 + (-1))v = 1 \cdot v + (-1)v = v + (-v) = 0$. □

6 *Let ∞ and $-\infty$ denote two disti objects, neither of which is in $\mathbf{R}$.*
Define an add and scalar multi on $\mathbf{R} \cup \{\infty, -\infty\}$ as you could guess.
The operations of real numbers is as usual. While for $t \in \mathbf{R}$ define

$$t\infty = \begin{cases} -\infty & \text{if } t < 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t > 0, \end{cases} \qquad t(-\infty) = \begin{cases} -\infty & \text{if } t > 0, \\ 0 & \text{if } t = 0, \\ \infty & \text{if } t < 0, \end{cases}$$

(I) $t + \infty = \infty + t = \infty + \infty = \infty$,
(II) $t + (-\infty) = (-\infty) + t = (-\infty) + (-\infty) = -\infty$,
(III) $\infty + (-\infty) = (-\infty) + \infty = 0$.

With these operations of add and scalar multi, is $\mathbf{R} \cup \{\infty, -\infty\}$ a vecsp over $\mathbf{R}$? Explain.

Solus: Not a vecpsp, since the add and scalar mult is not assoc and distr.

By Assoc: $(a + \infty) + (-\infty) \neq a + (\infty + (-\infty))$.

Or. By Distr: $\infty = (2 + (-1))\infty \neq 2\infty + (-\infty) = \infty + (-\infty) = 0$. □

---

7 *Give a nonempty $U \subseteq \mathbf{R}^2$, U is closd taking add invs and add, but is not a subsp of $\mathbf{R}^2$.*

Solus: ($0 \in U$; $v \in U \Rightarrow -v \in U$. And operations on U are the same as $\mathbf{R}^2$.) Let $\mathbf{Z}^2, \mathbf{Q}^2$.

----

8 *Give a nonempty $U \subseteq \mathbf{R}^2$, U is closd scalar multi, but is not a subsp of $\mathbf{R}^2$.*

Solus: Let $U = \{(x,y) \in \mathbf{R}^2 : x = 0 \vee y = 0\}$.

- *Supp U, W, V_1, V_2, V_3 are subsps of V.*

15 $U + U \ni u + w \in U$.   **16** $U + W \ni u + w = w + u \in W + U$.   □

17 $(V_1 + V_2) + V_3 \ni (v_1 + v_2) + v_3 = v_1 + (v_2 + v_3) \in V_1 + (V_2 + V_3)$. □

-    $(U + W)_{\mathrm{C}} \ni (u_1 + w_1) + \mathrm{i}(u_2 + w_2) = (u_1 + \mathrm{i}u_2) + (w_1 + \mathrm{i}w_2) \in U_{\mathrm{C}} + W_{\mathrm{C}}$. □

----

18 *Does the add on the subsps of V have an add id? Which subsps have add invs?*

Solus: Supp Ω is the uniq add id.

(a) For any subsp U of V. $\Omega \subseteq U + \Omega = U \Rightarrow \Omega \subseteq U$. Let $U = \{0\}$, then $\Omega = \{0\}$.

(b) Now supp W is an add inv of $U \Rightarrow U + W = \Omega$.

     Note that $U + W \supseteq U, W \Rightarrow \Omega \supseteq U, W$. Thus $U = W = \Omega = \{0\}$. □

----

11 *Prove the intersec of every collec of subsps of V is a subsp of V.*

Solus: Supp $\{U_\alpha\}_{\alpha \in \Gamma}$ is a collec of subsps of V; here Γ is an index set.

We show $\bigcap_{\alpha \in \Gamma} U_\alpha$, which equals the set of vecs that are in U_α for each $\alpha \in \Gamma$, is a subsp of V.

(一) $0 \in \bigcap_{\alpha \in \Gamma} U_\alpha$. Nonempty.

(二) $u, v \in \bigcap_{\alpha \in \Gamma} U_\alpha \Rightarrow u + v \in U_\alpha, \ \forall \alpha \in \Gamma \Rightarrow u + v \in \bigcap_{\alpha \in \Gamma} U_\alpha$. Closd add.

(三) $u \in \bigcap_{\alpha \in \Gamma} U_\alpha, \lambda \in \mathbf{F} \Rightarrow \lambda u \in U_\alpha, \ \forall \alpha \in \Gamma \Rightarrow \lambda u \in \bigcap_{\alpha \in \Gamma} U_\alpha$. Closd scalar multi.

Thus $\bigcap_{\alpha \in \Gamma} U_\alpha$ is nonempty subset of V that is closd add and scalar multi. □

- **Note For [1.45]:** If $\mathbf{F} = \{0, 1\}$. Prove if $U + W$ is a direct sum, then $U \cap W = \{0\}$.

Becs $\forall v \in U \cap W, \exists ! (u, w) \in U \times W, v = u + w$.

If $U \cap W \neq \{0\}$, then (u, w) can be $(v, 0)$ or $(0, v)$, ctradic the uniqnes. □

- **Tips 1:** Supp $U, W \subseteq V$. And U, W, V are vecsps $\Rightarrow U, W$ are subsps of V.

     Then $U + W$ is also a subsp of V. Becs $\forall u \in U, w \in U, u + w \in V$ since $u, w \in V$.

- *Supp $U = \{(x, x, y, y)\}, W = \{(x, x, x, y)\} \subseteq \mathbf{F}^4$. Prove $U + W = \{(x, x, y, z)\}$.*

Solus: Let T denote $\{(x, x, y, z)\}$. By def, $U + W \subseteq T$.

   And $T \ni (x, x, y, z) \Rightarrow (0, 0, y - x, y - x) + (x, x, x, -y + x + z) \in U + W$. Hence $T \subseteq U + W$. □

----

21 *Supp $U = \{(x, y, x + y, x - y, 2x)\}$. Find a W suth $\mathbf{F}^5 = U \oplus W$.*

Solus: Let $W = \{(0, 0, z, w, u)\}$. Then $U \cap W = \{0\}$.

     And $\mathbf{F}^5 \ni (x, y, z, w, u) \Rightarrow (x, y, x + y, x - y, 2x) + (0, 0, z - x - y, w - x - y, u - 2x) \in U + W$.

----

22 *Supp* $U = \{(x, y, x+y, x-y, 2x) \in \mathbf{F}^5\}$.

    Find nonzero subsps W_1, W_2, W_3 *of* $\mathbf{F}^5$ *suth* $\mathbf{F}^5 = U \oplus W_1 \oplus W_2 \oplus W_3$.

Solus:

  (1) Let $W_1 = \{(0,0,z,0,0) \in \mathbf{F}^5\} \Rightarrow W_1 \cap U = \{0\}$. Now $U \oplus W_1 = \{(x,y,z,x-y,2x) \in \mathbf{F}^5\} = U_1$.

  (2) Let $W_2 = \{(0,0,0,w,0) \in \mathbf{F}^5\} \Rightarrow W_2 \cap U_1 = \{0\}$. Now $U_1 \oplus W_2 = \{(x,y,z,w,2x) \in \mathbf{F}^5\} = U_2$.

  (3) Let $W_3 = \{(0,0,0,0,u) \in \mathbf{F}^5\} \Rightarrow W_3 \cap U_2 = \{0\}$. Now $U_2 \oplus W_3 = \{(x,y,z,w,u) \in \mathbf{F}^5\} = U_3$.

  Thus $\mathbf{F}^5 = \big((U \oplus W_1) \oplus W_2\big) \oplus W_3$. $\square$

---

23 *Give an exa of vecsps* V_1, V_2, U *suth* $V_1 \oplus U = V_2 \oplus U$, *but* $V_1 \neq V_2$.

Solus: $V = \mathbf{F}^2, U = \{(x,x)\}, V_1 = \{(x,0)\}, V_2 = \{(0,x)\}$.

- **Note For** "$\mathbb{C}_V U \cup \{0\}$": "$\mathbb{C}_V U \cup \{0\}$" is supposed to be a subsp W suth $V = U \oplus W$.

  But if we let $u \in U \backslash \{0\}$ and $w \in W \backslash \{0\}$, then $\left. \begin{array}{l} w \in \mathbb{C}_V U \cup \{0\} \\ u \pm w \in \mathbb{C}_V U \cup \{0\} \end{array} \right\} \Rightarrow u \in \mathbb{C}_V U \cup \{0\}$. Ctradic.

  To fix this, denote the set $\big\{W_1, W_2, \cdots\big\}$ by $\mathcal{S}_V U$, where for each W_i, $V = U \oplus W_i$. See also in (1.C.23).

- **Tips 2:** *Supp* $V_1 \subseteq V_2$ *in Exe* (23). *Prove* $V_1 = V_2$.

Solus: Becs the subset V_1 of vecsp V_2 is closd add and scalar multi, V_1 is a subspace of V_2.

    Supp W is suth $V_2 = V_1 \oplus W$. Now $V_2 \oplus U = (V_1 \oplus W) \oplus U = (V_1 \oplus U) \oplus W = V_1 \oplus U$.

    If $W \neq \{0\}$, then $V_1 \oplus U \subsetneq (V_1 \oplus U) \oplus W$, ctradic. Hence $W = \{0\}, V_1 = V_2$. $\square$

- *Supp* V_1, V_2, U_1, U_2 *are vecsps,* $V_1 \oplus U_1 = V_2 \oplus U_2$, $V_1 \subseteq V_2$, $U_2 \subseteq U_1$.
 Prove or give a counterexa: $V_1 = V_2$, $U_1 = U_2$.

V_1	U_1	
	V_2	U_2

Solus: Let $U_2 = \{0\}$. Give an exa that each of V_1, V_2, U_1 is nonzero. $\square$

- **Tips 3:** *Supp the intersec of any two of the vecsps* U, W, X, Y *is* $\{0\}$.
    Give an exa that $(X \oplus U) \cap (Y \oplus W) \neq \{0\}$.

Solus: $\big[$ Using notas in Chapter 2. $\big]$ Let $B_X = (e_1), B_U = (e_2 - e_1), B_Y = (\ ), B_W = (e_2)$.

- **Tips 4:** *Let* $V = U + W$, $I = U \cap W$, $U = I \oplus X$, $W = I \oplus Y$. *Prove* $V = I \oplus (X \oplus Y)$.

Solus: We show $X \cap Y = U \cap Y = W \cap X = \{0\}$ by ctradic.

    $X \cap Y = \Delta \neq \{0\} \Rightarrow I = U \cap W \supseteq \Delta \Rightarrow I \cap X \neq \{0\}, I \cap Y \neq \{0\}$.

    $U \cap Y = \Delta \neq \{0\} \Rightarrow I = U \cap W \supseteq \Delta \Rightarrow I \cap Y \neq \{0\}$. Simlr for $W \cap X$.

    Thus $I + (X+Y) = (I \oplus X) \oplus Y = I \oplus (X \oplus Y)$.

    Now we show $V = I + (X+Y)$. $\forall v \in V, v = u + w, \exists (u,w) \in U \times W$

    $\Rightarrow \exists (i_u, x_u) \in I \times X, (i_w, y_w) \in I \times Y, v = (i_u + i_w) + x_u + y_w \in I + (X+Y)$. $\square$

---

12 *Supp U, W are subsps of V. Prove $U \cup W$ is a subsp of $V \iff U \subseteq W$ or $W \subseteq U$.*

Solus: (a) Supp $U \subseteq W$. Then $U \cup W = W$ is a subsp of V.

(b) Supp $U \cup W$ is a subsp of V. Asum $U \nsubseteq W$, $U \nsupseteq W$ ($U \cup W \neq U$ and W).

Then $\forall a \in U \wedge a \notin W, \forall b \in W \wedge b \notin U$, we have $a + b \in U \cup W$.

$a + b \in U \Rightarrow b = (a + b) + (-a) \in U$, ctradic $\Rightarrow W \subseteq U.$ | Ctradic asum.

$a + b \in W \Rightarrow a = (a + b) + (-b) \in W$, ctradic $\Rightarrow U \subseteq W.$ | $\square$

---

13 *Prove the union of three subsps of V is a subsp of V*
if and only if one of the subsps contains the other two.

This exe is not true if we replace $\mathbf{F}$ with a field containing only two elems.

Solus: Supp U_1, U_2, U_3 are subsps of V. Denote $U_1 \cup U_2 \cup U_3$ by $\mathcal{U}$.

(a) Supp that one of the subsps contains the other two. Then $\mathcal{U} = U_1, U_2$ or U_3 is a subsp of V.

(b) Supp that $U_1 \cup U_2 \cup U_3$ is a subsp of V.

Distinctively notice that $A \cup B \cup C = (A \cup B) \cup (B \cup C) = (A \cup C) \cup (B \cup C) = (A \cup B) \cup (A \cup C)$.

Also note that, if $U \cup W = V$ is a vecsp, then in general U and W are not subsps of V.

Hence this literal trick is invalid.

(I) If any U_j is contained in the union of the other two, say $U_1 \subseteq U_2 \cup U_3$, then $\mathcal{U} = U_2 \cup U_3$.

By applying Exe (12) we conclude that one U_j contains the other two. Thus done.

(II) Asum no U_j is contained in the union of the other two,

and no U_j contains the union of the other two. Say $U_1 \nsubseteq U_2 \cup U_3$ and $U_1 \nsupseteq U_2 \cup U_3$.

$\exists u \in U_1 \wedge u \notin U_2 \cup U_3$; $v \in U_2 \cup U_3 \wedge v \notin U_1$. Let $W = \{v + \lambda u : \lambda \in \mathbf{F}\} \subseteq \mathcal{U}$.

Note that $W \cap U_1 = \emptyset$, for if any $v + \lambda u \in W \cap U_1$ then $v + \lambda u - \lambda u = v \in U_1$.

Now $W \subseteq U_1 \cup U_2 \cup U_3 \Rightarrow W \subseteq U_2 \cup U_3$. $\forall v + \lambda u \in W, v + \lambda u \in U_i, i = 2, 3$.

If $U_2 \subseteq U_3$ or $U_2 \supseteq U_3$, then $\mathcal{U} = U_1 \cup U_i, i = 2, 3$. By Exe (12) done.

Othws, both $U_2, U_3 \neq \{0\}$. Becs $W \subseteq U_2 \cup U_3$ has at least three elems.

There must be some U_i that contains at least two elems of W.

$\exists$ disti $\lambda_1, \lambda_2 \in \mathbf{F}, v + \lambda_1 u, v + \lambda_2 u \in U_i, i \in \{2, 3\}$.

Then $u \in U_i$ while $u \notin U_2 \cup U_3$. Ctradic. $\square$

Exa: Let $\mathbf{F} = \mathbf{Z}_2$. $U_1 = \{u, 0\}, U_2 = \{v, 0\}, U_3 = \{v + u, 0\}$. While $\mathcal{U} = \{0, u, v, v + u\}$ is a subsp.

1 *Prove* $[P]$ (v_1, v_2, v_3, v_4) *spans* $V \iff (v_1 - v_2, v_2 - v_3, v_3 - v_4, v_4)$ *also spans* V $[Q]$.

SOLUS: Note that $V = \text{span}(v_1, \ldots, v_n) \iff \forall v \in V, \exists a_1, \ldots, a_n \in \mathbf{F}, v = a_1 v_1 + \cdots + a_n v_n$.

Asum $\forall v \in V, \exists a_1, \ldots, a_4, b_1, \ldots, b_4 \in \mathbf{F}$, (that is, if $\exists a_i$, then we are to find b_i, vice versa)

$v = a_1 v_1 + a_2 v_2 + a_3 v_3 + a_4 v_4 = b_1(v_1 - v_2) + b_2(v_2 - v_3) + b_3(v_3 - v_4) + b_4 v_4$

$\qquad = b_1 v_1 + (b_2 - b_1) v_2 + (b_3 - b_2) v_3 + (b_4 - b_3) v_4$

$\qquad = a_1(v_1 - v_2) + (a_1 + a_2)(v_2 - v_3) + (a_1 + a_2 + a_3)(v_3 - v_4) + (a_1 + \cdots + a_4) v_4.$ $\qquad \square$

- *Supp* $(v_1, \ldots, v_m)$ *is a list in* V. *For each* k, *let* $w_k = v_1 + \cdots + v_k$.
  (a) *Show* $\text{span}(v_1, \ldots, v_m) = \text{span}(w_1, \ldots, w_m)$.
  (b) *Show* $[P]$ $(v_1, \ldots, v_m)$ *is liney indep* $\iff (w_1, \ldots, w_m)$ *is liney indep* $[Q]$.

SOLUS:

(a) Asum $a_1 v_1 + \cdots + a_m v_m = b_1 w_1 + \cdots + b_m w_m = b_1 v_1 + \cdots + b_k(v_1 + \cdots + v_k) + \cdots + b_m(v_1 + \cdots + v_m)$.
Then $a_k = b_k + \cdots + b_m$; $a_{k+1} = b_{k+1} + \cdots + b_m \Rightarrow b_k = a_k - a_{k+1}$; $b_m = a_m$. Simlr to Exe (1).

     Or. $\big[$ *Req U, W Subsps* $\big]$ Let $I = U \cap W$. We show $(U \cap W)^0 \subseteq U^0 + W^0$.

     Define $\chi \in \mathcal{L}(V/I, V/U \times V/W)$ by $\chi : v + I \mapsto (v + U, v + W)$.

     Well-defined: $v_1 + I = v_2 + I \in V/I \iff v_1 - v_2 \in I$

                 $\iff v_1 - v_2 \in U$ and $v_1 - v_2 \in W \Rightarrow (v_1 + U, v_1 + W) = (v_2 + U, v_2 + W).$

     Surj: $\forall v \in V$ suth $(v + U, v + W) \in V/U \times V/W$, becs $\emptyset \neq (v + U) \cap (v + W) = v + I \in V/I.$

     Hence $\chi' \in \mathcal{L}\big((V/U \times V/W)', (V/I)'\big)$ is iso. Now we try finding an iso of $U^0 \times W^0$ onto $(U \cap W)^0$.

     By (3.E.4), supp $\xi : (V/U)' \times (V/W)' \to (V/U \times V/W)'$ is iso.

     By (c) in Exe (37), supp $\Lambda_1 : U^0 \times W^0 \to (V/U)' \times (V/W)'$ and $\Lambda_2 : (V/I)' \to (U \cap W)^0$ are isos.

     Hence $(\Lambda_2 \circ \chi' \circ \xi \circ \Lambda_1) : U^0 \times W^0 \to (U \cap W)^0$ is iso. Now we see how it works:

     $\forall (\varphi_U, \varphi_W) \in U^0 \times W^0$, null $\pi_U \subseteq$ null $\varphi_U \Rightarrow \exists \psi_U \in (V/U)'$, $\psi_U \circ \pi_U = \varphi_U$, simlr for φ_W,

     thus $\Lambda_1 : (\varphi_U, \varphi_W) \mapsto (\psi_U, \psi_W)$. Then $\xi : (\psi_U, \psi_W) \mapsto (\psi_U S_U + \psi_W S_W)$, $\big[$ See notas in (3.E.2). $\big]$

     Now $(\psi_U S_U + \psi_W S_W) \xrightarrow{\chi'} (\psi_U S_U + \psi_W S_W) \circ \chi \xrightarrow{\Lambda_2} (\psi_U S_U + \psi_W S_W) \circ \chi \circ \pi_I,$

     which sends v to $\psi_U(v + U) + \psi_W(v + W) = (\varphi_U + \varphi_W)(v)$, which is $\varphi_U + \varphi_W$.

     Thus $(\Lambda_2 \circ \chi' \circ \xi \circ \Lambda_1)$ is the surj $\Lambda : U^0 \times W^0 \to U^0 + W^0$ defined in [3.77]. $\square$

Solus: $\varphi \in U^0 \iff U \subseteq \operatorname{null} \varphi \iff \varphi = \varphi \circ \iota$, by $\big[$3.B Tips $(3)\big]$. $\qquad\square$

Note: The nota $W_V' = \{\varphi \in V' : \varphi = \varphi \circ \iota\} = U^0$ is not well-defined $\big[$without a bss$\big]$.

$\quad\quad$ Simply becs W_V' have no info about the given U. Here is an informal explanation:

$\quad\quad$ Each liney map $T \in \mathcal{L}(V, W)$ that vanishes on a given nontrivial U has its $'P'$

$\quad\quad$ (though not uniq) suth $'U \oplus P = V'$ with $T : P \mapsto \operatorname{range} T$ being surj.

$\quad\quad$ Hence $\forall W \in \mathcal{S}_V U$, $U^0 = W_V'$. But given nontrivial $'P'$, the corres $'U'$ is not uniq.

$\quad\quad$ Fix one W_V', then U^0 is not uniq, with each U_k not equal to each other while each $U_k^0 = W_V'$.

Exa: Let $B_V = (e_1, e_2)$. Let $B_U = (e_1)$, $B_X = (e_2 - e_1)$, $B_Y = (e_2)$.

$\quad\quad$ Then $\iota_X : ae_1 + b(e_2 - e_1) \mapsto b(e_2 - e_1)$, $\iota_Y : ae_1 + be_2 \mapsto be_2$. Now $X_V' = Y_V' = U^0$.

$\quad\quad$ (1) For $V = U \oplus X$, let $B_{U_V'} = (\varphi)$ with $\varphi : e_1 \mapsto 1$, $e_2 - e_1 \mapsto 0 \Rightarrow e_2 \mapsto 1$.

$\quad\quad$ (2) For $V = U \oplus Y$, let $B_{U_V'} = (\psi)$ with $\psi : e_1 \mapsto 1, e_2 \mapsto 0$.

$\quad\quad$ Thus $X^0 = U_V'$ while $Y^0 = U_V' \Rightarrow X^0 = Y^0 \Rightarrow X = Y$, ctradic.

$\quad\quad$ To fix this, we must have a bss of V' as precond, which we'll see in the Note For Exa (31).

Note: *Supp U is a subsp of V. Then finding the corres subsp in V' firstly req another 'half' $W \in \mathcal{S}_V U$,*

$\quad\quad$ *while finding the corres subsp of V for a subsp of V' must have the another 'half' asumed as precond.*

31 *Supp V is finide and $B_{V'} = (\varphi_1, \dots, \varphi_n)$. Show $\exists ! B_V$ whose dual bss is the $B_{V'}$.*

$\quad\quad$ By Exe (4E 23), $V' = \operatorname{span}(\varphi_1, \dots, \varphi_n) = (\operatorname{null} \varphi_1 \cap \cdots \cap \operatorname{null} \varphi_n)^0 \Rightarrow U_k \cap \varphi_k = \{0\}$.

$\quad\quad$ Thus $\forall x_k \in U_k \backslash \{0\}$, $x_k \notin \operatorname{null} \varphi_k$ while $x_k \in \operatorname{null} \varphi_j$ for all $j \in \Gamma$.

$\quad\quad$ Fix one x_k and let $v_k = [\varphi_k(x_k)]^{-1} x_k \Rightarrow \varphi_k(v_k) = 1$, $\varphi_j(v_k) = 0$ for all $j \neq k$.

$\quad\quad$ Simply for each v_k, $\varphi_j(v_k) = \delta_{j,k}$ for all $j \iff$ for each φ_j, $\varphi_j(v_k) = \delta_{j,k}$ for all k.

$\quad\quad$ $\maltese$ $a_1 v_1 + \cdots + a_n v_n = 0 \Rightarrow$ each $\varphi_k(0) = a_k$.

$\quad\quad$ Now we prove the uniqnes part. Supp the dual bss of $B_V' = (u_1, \dots, u_n)$ is the $B_{V'}$.

$\quad\quad$ For each k, we have $\varphi_j(v_k) = \varphi_j(u_k)$ for all $k \Rightarrow v_k - u_k \in \bigcap \operatorname{null} \varphi_j = \{0\}$. $\qquad\square$

Solus: (a) Supp p of deg m has m disti zeros. By [4.14], $p(z) = c(z - \lambda_1) \cdots (z - \lambda_m)$.

If $m = 1$, then $p(z) = c(z - \lambda_1)$, and $p' = c$ has no zeros, done.

For each $j \in \{1, \dots, m\}$, let $q_j(z - \lambda_j) = p(z) \Rightarrow q_j(\lambda_j) \neq 0$.

Now $p'(z) = (z - \lambda_j)q_j'(z) + q_j(z) \Rightarrow p'(\lambda_j) = q_j(\lambda_j) \neq 0$.

If $\theta = \pi + 2k\pi$, then $T(w, z) = (-w, -z)$, $T^2 = I$ and the min poly is $z + 1$.

If $\theta = 2k\pi$, then $T = I$ and the min poly is $z - 1$.

Othws (v, Tv) is liney indep. Then $\text{span}(v, Tv) = \mathbb{R}^2$. Note that $\nexists b \in \mathbb{F}, T - bI = 0$.

Thus supp the min poly p is defined by $p(z) = z^2 + bz + c$ for all $z \in \mathbb{R}$.

$$L = |\vec{v}| \cos\theta \Rightarrow \frac{|\vec{v}|}{2L} = \frac{1}{2\cos\theta}$$

Hence $p(T) = T^2 - 2\cos\theta\, T + I = 0$ and $z^2 - 2\cos\theta\, z + 1$ is the min poly of T. □

Or. Let (e_1, e_2) be the std bss of $\mathbb{R}^2$. We use the pattern shown in [8.44].

Becs $Te_1 = \cos\theta\, e_1 + \sin\theta\, e_2$, $T^2 e_1 = \cos 2\theta\, e_1 + \sin 2\theta\, e_2$.

Thus $ce_1 + bTe_1 = -T^2 e_1 \Longleftrightarrow \begin{pmatrix} 1 & \cos\theta \\ 0 & \sin\theta \end{pmatrix} \begin{pmatrix} c \\ b \end{pmatrix} = \begin{pmatrix} -\cos 2\theta \\ -\sin 2\theta \end{pmatrix}$. Now $\det = \sin\theta \neq 0$, $c = 1$, $b = 2\cos\theta$. □

Or. $\mathcal{M}(T, (e_1, e_2)) = \begin{pmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{pmatrix}$. By (4E 5.B.11), the min poly is $(z \pm 1)$ or $(z^2 - 2\cos\theta\, z + 1)$. □

(a) Supp the bss is (v, w). Becs $\begin{cases} Tv = av + bw \Rightarrow (T - aI)v = bw, \text{ then apply } (T - dI) \text{ to both sides.} \\ Tw = cv + dw \Rightarrow (T - dI)w = cv, \text{ then apply } (T - aI) \text{ to both sides.} \end{cases}$

Hence $(T - aI)(T - dI) = bcI \Rightarrow T^2 - (a+d)T + (ad - bc)I = 0$.

(b) If $b = c = 0$ and $a = d$. Then $\mathcal{M}(T) = \begin{pmatrix} a & 0 \\ 0 & a \end{pmatrix} = a\mathcal{M}(I)$. Thus $T = aI$. Hence the min poly is $z - a$.

Othws, by (a), $z^2 - (a+d)z + (ad - bc)$ is a poly multi of the min poly.

SOLUS:

Then $ST(x, y) = 0$, $TS(x, y) = (0, x)$ for all $(x, y) \in \mathbf{F}^2$. Thus $ST = 0 \neq TS$ and $(TS)^2 = 0$.

Hence the min poly of ST does not equal to the min poly of TS.

Becs T has finily many eigvals. There exis a seq of number $\{\lambda_n\}$ suth $\lim_{n \to \infty} \lambda_n = \lambda_0$.

And λ_n is not an eigval of T for each $n \Rightarrow \dim \text{range}(T - \lambda_n I) = \dim V \neq \dim \text{range}(T - \lambda_0 I)$.

Solus:

Let $(v_1, \dots, v_n)$ denote the bss suth $\mathcal{M}(T, (v_1, \dots, v_n))_{j,k} = A_{j,k} \in \mathbf{Q}$ for all $j, k = 1, \dots, n$.

Denote $\mathcal{M}(v_j, (v_1, \dots, v_n))$ by x_j for each v_j.

Supp p is the min poly of T and $p(z) = z^m + \cdots + c_1 z + c_0$. Now we show each $c_j \in \mathbf{Q}$.

Note that $\forall s \in \mathbf{N}^+, \mathcal{M}(T^s) = \mathcal{M}(T)^s = A^s \in \mathbf{Q}^{n,n}$ and $T^s v_k = A^s_{1,k} v_1 + \cdots + A^s_{n,k} v_n$ for all $k \in \{1, \dots, n\}$.

Thus
$$\begin{cases} \mathcal{M}(p(T)v_1) = (A^m + \cdots + c_1 A + c_0 I)x_1 = \sum_{j=1}^{n}(A^m + \cdots + c_1 A + c_0 I)_{j,1}x_j = 0; \\ \quad\vdots \\ \mathcal{M}(p(T)v_n) = (A^m + \cdots + c_1 A + c_0 I)x_n = \sum_{j=1}^{n}(A^m + \cdots + c_1 A + c_0 I)_{j,n}x_j = 0; \end{cases}$$

More clearly,
$$\begin{cases} (A^m + \cdots + c_1 A + c_0 I)_{1,1} = \cdots = (A^m + \cdots + c_1 A + c_0 I)_{n,1} = 0; \\ \quad\vdots \quad \ddots \quad \vdots \\ (A^m + \cdots + c_1 A + c_0 I)_{1,n} = \cdots = (A^m + \cdots + c_1 A + c_0 I)_{n,n} = 0; \end{cases}$$

Hence we get a system of n^2 liney equations in m unknowns $c_0, c_1, \dots, c_{m-1}$.

  Prove $\dim \text{null}(T^2 + bT + cI)$ is an even number.

Solus:

Denote $\text{null}(T^2 + bT + cI)$ by R. Then $T|_R^2 + bT|_R + cI_R = (T + bT + cI)|_R = 0 \in \mathcal{L}(R)$.

Supp λ is an eigval of T_R with an eigvec $v \in R$.

Then $0 = (T|_R^2 + bT|_R + cI_R)(v) = (\lambda^2 + \lambda b + c)v = \left((\lambda + b)^2 + c - \frac{b^2}{4}\right)v$.

Becs $c - \dfrac{b^2}{4} > 0$ and we have $v = 0$. Thus T_R has no eigvals.

Let U be invarsp of R that has the largest, even dim among all invarsps.

Asum $U \neq R$. Then $\exists\, w \in R$ but $w \notin U$. Let W be suth $(w, T|_R w)$ is a bss of W.

Becs $T|_R^2 w = -bT|_R w - cw \in W$. Hence W is invarsp of dim 2.

Thus $\dim (U + W) = \dim U + 2 - \dim(U \cap W)$, where $U \cap W = \{0\}$,

   for if not, becs $w \notin U, T|_R w \in U$,

   $U \cap W$ is invard $T|_R$ of one dim (impossible becs $T|_R$ has no eigvecs).

Hence $U + W$ is even-dim invarsp under $T|_R$, ctradic the max of dim U.

Thus the asum was incorrect. Hence $R = \operatorname{null}(T^2 + bT + cI) = U$ has even dim. $\qquad\square$
